FOR "THE FRIEND."

Incidents and Reflections.—No. 182.

(Continued from page 40, vol. lxi.)

REPROOFS.

Rowland Hill once offended some farmers by saying "they were as bad as their very pigs." Several of them were assembled at a house at the bottom of the village, and when he happened to pass by, they called him in and demanded an explanation of his assertion. He immediately consented to give it. "Now," said he, "look at your pigs; when the acorns drop they do not go under the elm in search of them, but under the oak; and when they have swallowed all they can find, off they go, without giving a single look at the tree which has furnished their meal. So, you like your pigs, know where to go to look for your wheat and other produce; and when your barns are filled with plenty, like them you forget to look up to the Source whence all your blessings have been obtained."

A woman in New Jersey received into her family an intelligent stranger from a heathen country; whom she endeavored to instruct in the truths of Christianity. She was herself awakened to a sense of inconsistency with her religious profession by a query which her visitor put to her. The account of the circumstance, which she forwarded to the *Evangelist*, is as follows:—

"One day I sat conversing with him, he in very imperfect English, and I with a dictionary in his native language beside me, to which I had frequent recourse. A proverb of his country attracted my attention, and I read aloud: 'The heart of man is the same in all nations.' A silence followed, which was broken by the rather personal remark:

"Mrs. W., why do you, why do American ladies, wear ear-rings?"

"You can imagine the startling effect it had upon me when I tell you that a few weeks before a friend, whom I considered rather ultra in her religious notions, having reproved me for wearing these, to her, uselessly ornaments, I replied, rather impatiently:

"I am a Christian, but I certainly shall not be a fanatic. When God tells me to put them aside I shall do so, and not until then."

"You can readily understand the effect of this question, and from such a source. Unwilling,

however, to be convinced, glancing at an elegant chain attached to his watch, I replied:

"Probably for the same reason you wear that chain; they are pretty, and I like all things that are pretty—flowers, pictures, &c."

"No, no," said he, "my chain is of use. I think you told me that God made man all good. I think He did not put holes in women's ears. Yes, 'the heart of man is the same in all nations.' My countrywomen blacken their teeth, paint their faces. Christian women nake holes in their ears."

"The truth came home with power to my soul. Quietly unfastening my rings, I laid them on the table.

"Why do you do so?" said he, evidently perplexed by the act.

"O," said I, "God did make man good. He has told me to take these rings from my ears, and I obey Him."

"Quickly unfastening his chain from his watch, he laid it beside the rings; and, notwithstanding my efforts to induce him to resume it, he persisted in his determination of not wearing it again."

The *New York Tribune* describes a very effective reproof, which it says was administered in an office in that city the week before the account was published.

"Among those who occupy this office, consisting of a suit of fine rooms, are two high-toned Christian gentlemen. Some of them have held positions of eminence. To their office came a man who claimed a club acquaintance with one of them, and who, finding two or three of them together in the reception-room, began to tell an offensive story, illustrating it as he went on by reference to a map hanging on the wall, and standing necessarily with his back to the auditors. When he got through his story and turned to receive applause, no one was in the room but the type-writer boy, who had been busily at work all the time. The auditors had quietly taken themselves to their respective rooms, and the visitor had nothing to do but take his hat, and retire. That is a good way to listen to a vile story."

That the very presence of a person, without a word being spoken, may sometimes as effectually reprove those who are doing wrong, as if the condemnation had been expressed in eloquent and fitting language, is shown by an anecdote which is told of Andrew Thomson, a minister in Edinburgh. One Seventh-day night, in the house of one of the members of his congregation, a family of some note in the city, a midnight revel was going on. Thomson had been out late that night to visit a sick member of his flock. The narrative says:—

"On his return home, his eyes chanced to light on this house, whose windows were brilliant with the glare of festivity. The minister paused as he saw the shadows of the dancers on the window-blinds of the drawing room; he could hear the sounds of the music and the voices of revelry. Taking his resolution, he stepped up

to the doorway and rang the bell. Without speaking a word to the servant who opened the door, he went upstairs, entered the room, and stood up in the midst of the dancers.

"Had a spirit from the other world appeared, the party could not have been thrown into a state of greater embarrassment and confusion. The music ceased, the dancers stood still; a silence as awful as death followed, while the bold intruder surveyed the company with a stern glance. Not a word did he utter; not one tongue was moved to ask, 'What dost thou?' As the penetrating glance of reproof fell in turn on each one of the confounded revellers, every countenance fell, and the bravest quailed. The piercing eye and solemn presence having accomplished the work of admonition, the minister retired amid the same unbroken silence. It was a bold stroke, but God blessed it, and it was the beginning of a work of the revival of genuine Christianity and reformation in many a family in the Scottish metropolis."

Another form of silent reproof was that administered by Dr. Wadly, who was preaching to a small congregation on an extremely hot day, which created a general disposition to fall asleep. Perceiving that all but three or four were in this somnolent condition, the preacher conceived the idea of gradually increasing the length of his pauses, and of speaking in a perfect monotone, until finally every individual in the congregation was sound asleep. He then took his hat and quietly departed. This was scarcely fair treatment of the people, and if the result of the minister's drowsy manner had been that he had himself sunk into a slumber, it would have been even justice; but it is not probable that the circumstance would soon be forgotten by the congregation, when they awoke and found the preacher gone.

It is related of Samuel W. Kilpin, that one day, he passed a very profane man, and having failed to rebuke him, he awaited him in the morning at the same place. When he approached, Kilpin said, "Good morning my friend, you are the person I've been waiting for."

"Oh! sir, you are mistaken," said the man. Kilpin replied, "I do not know you, but I saw you last night when you were going home from work, and I have been waiting some time to see you."

"Oh! sir, you are mistaken, it could not be me, I never saw you before in my life, that I know of."

"Well, my friend," said Kilpin, "I heard you pray last night."

"Sir, now I know that you are mistaken, I never prayed in all my life!"

"Oh!" said Kilpin, "if God had answered your prayer last night, you had not been here this morning! I heard you pray that God would blast your eyes, and damn your soul!"

"The man turned pale and then trembling said:

"Oh! sir, do you call that prayer? I did, I did."

"Well, then, my friend, my errand this morn-

ing, is to request you to pray as fervently for your salvation as you have done for damnation, and may God in mercy hear your prayer."

The man from that time became an attendant on Kilpin's ministry, and it resulted in his early conversion to God.

The owner of the famous Wedgewood potteries, in the beginning of this century, was not only a man of remarkable mechanical skill, but a most devout and reverent Christian. On one occasion, a man of dissolute habits, and an avowed atheist, was going through the works, accompanied by Wedgewood, and by a young lad who was employed in them, the son of pious Lord C.—sought early opportunity to speak contemptuously of religion. The boy at first looked amazed, then listened with interest, and at last burst into a loud, jeering laugh.

Wedgewood made no comment, but soon found occasion to show his guest the process of making a fine vase; how with infinite care the delicate paste was moulded into a shape of rare beauty and fragile texture, how it was painted by skillful artists, and finally passed through the furnace, coming out perfect in form and pure in quality. The nobleman declared his delight, and stretched out his hand for it, but the potter threw it on the ground, shattering it into a thousand pieces.

"That was unpardonable carelessness!" said Lord C.—angrily. "I wished to take that cup home for my collection! Nothing can restore it again."

"No, You forget, my lord," said Wedgewood, "that the soul of that lad who has just left us came pure into the world. That his parents, friends, all good influences, have been at work during his whole life to make him a vessel fit for the Master's use; that you, with your touch, have undone all the work of years. No human hand can bind together again what you have broken."

Lord C.—, who had never before received a rebuke from an inferior, stared at him in silence. Then, "You are an honest man," he said, frankly holding out his hand. "I never thought of the effect of my words." J. W.

I WILL end my part herein with our most solemn confession in the holy fear of God. That we believe in no other Lord Jesus Christ than He who appeared to the fathers of old at sundry times and in divers manners, and in the fulness of time took flesh of the seed of Abraham and stock of David, became Immanuel, God manifested in flesh, through which He converted in the world, preached his everlasting Gospel, and by his Divine power gathered faithful witnesses; and when his hour was come, was taken of cruel men, his body wickedly slain; which life He gave to proclaim, upon faith and repentance, a general ransom to the world; the third day He rose again and afterwards appeared among his disciples, in whose view He was received up into glory; but returned again, fulfilling those Scriptures, "He that is with you shall be in you." "I will not leave you comfortless, I will come to you again and receive you unto myself," (John xiv: 3, 17, 18), and that He did come and abide as really in them, and doth now in his children by measure, as without measure in that body prepared to perform the will of God in; that He is their King, Prophet and High Priest, and intercedes and mediates on their behalf, bringing in everlasting righteousness, peace and assurance forever into all their hearts and consciences; to whom be everlasting honor and dominion. Amen.—*William Penn.*

A Visit to Plymouth Rock.

It is hoped that the following extract from a letter written hastily to some friends while waiting for a boat at New Bedford, may have sufficient interest to repay perusal.

I hope you will all henceforth look upon me with a due amount of reverence, for with these feet of mine I have touched the veritable Plymouth Rock. I have quaffed water from my hands out of the very brook where the pilgrim fathers quenched their thirst. I have, in fact, done all the proper things to do when one goes to Plymouth. Did I enjoy it? You know very well that I always enjoy everything, and I certainly did this. But I am compelled to confess that even amid such soul stirring surroundings, I flung myself on the ground with most undignified mien, and with wild words exclaimed that I could see no more glory in roasting at Plymouth than in a brick oven. Think of such sacrilege, but these are the facts. Hot! I think never was so hot before. The morning had been dull and heavy, and with admirable foresight I had provided myself with a heavy shawl, in case of rain. With this useful article on my arm, I dragged my wearied self about the sight of a sign hanging from an old time-honored building, advertising for about the best seat on flying across the street with an averted head, lest these words should again meet my eyes. Dinner was out of the question, so procuring some bananas, I lay under a tree on old Burial Hill and ate them, and tried to think where I was; but, oh, 'twas so hot. Before long, however, the sun became veiled with clouds, a breeze sprang up, and just as suddenly did I spring to my feet, and with fresh energy, began visiting the venerated scenes, with new found enthusiasm, and truly, no spot in America, has such interest for us.

I think the ride from Quincy, as we went along the south shore road, surpasses anything my eyes have ever beheld. I cannot tell you of its loveliness. Pennsylvania farmers who delight in straight lines, clean fence rows, and fields laid out at right angles, might turn away their heads at this wild luxuriance of nature; but as for me, I revelled in it. I saw no spot which I could not, with overflowing gratitude, pronounce perfect; for nature has here everything in her own wild way. Woods upon woods, mass upon mass; not a fence or pile of stones, but was vine-clad or banked with ferns; not a ditch but hid itself with a wild profusion of flowers and ferns, with the golden water lily peeping out from the leaves that seem to float upon the water, while blue forget-me-not fairly lined their sides in places; not a field but was full of buttercups and daisies, grass heads and clover. The little towns, some 25 of which we passed, looked so lovely with their quiet streets and dense masses of foliage, the roads winding gracefully away, every where shaded by large trees. I had before dreamed of such a country, but never expected to find it; and I could not sufficiently drink in its loveliness. I judge this season to be unusually fine, and vegetation uncommonly luxuriant. An old farmer on the train said "He da'sent leave his hoe in the ground o'er night, for fear it'd sprout."

The conductor was very kind, and often came and gave me points of interest; and here, let me say a good word for this Old Colony R. R., for surely the rate of progression is admirably adapted for sight-seeing, and if one is favored to find "an accommodation train" leaves nothing to be desired on that score.

Landed at Plymouth, I started at once for Pilgrim Rock, and must confess to being disappointed. True, I did not expect to find wild Indians or log cabins, or even

"Breaking waves dashing high
On a stern and rock bound coast."

Yet neither did I expect to see pilgrim rock, which they say—and I see no reason to doubt the statement—occupies its original position, fully 30 feet from the water, with a long wharf extending in a very utilitarian manner some 70 or 80 feet beyond it. Beside this there is above it a massive granite canopy, supported by four pillars, with iron gates enclosing it, so there is not much wild Indian effect about it. 'Tis hard, too, to reconcile the smoothly graded hill directly above it, with its broad granite steps leading down from the "Pilgrim Rock House," with the Cope's Hill, where were interred all those who perished during that first dreadful winter.

As I came up to the rock I saw a nice looking couple standing there, and we entered into a little conversation; just then a cabman came up, whom they engaged to take them around, and kindly invited me to accompany them, so I saw much without the exertion of walking. There is only one house standing that was lived in by any who came in the May Flower, and it stands a long way from the rock. There is one built of logs taken out of the old fort erected 1621, all the timber appearing still sound and good. One of the finest monuments in America is now nearly completed, and stands on a hill commanding the town. On the top is a gigantic symbolic figure of faith, 216 times life size. 'Tis of solid granite and cost over \$30,000, and is the gift of Oliver Ames, the present governor of the State. A man standing on the shoulder can just touch the thumb of the upraised hand. The driver rattled off a lot of measurements, but all I retain is the size of the neck which he said was 9 feet 9 inches in circumference. The names of those who came in the May Flower are inscribed on the rock below. Standing around it are four other figures emblematic of Freedom, Education, Law and Morality. Under these are scenes carved in relief in pure white marble, showing the embarkation, signing the compact on shipboard, the landing, and the treaty with the Indians; they are all perfect gems. After showing us these things the driver, left us at Pilgrim Hall, a fire-proof building which contains many articles of great value and rare interest, most of them having come over in the May Flower. There were also 3 immense paintings, the Embarking, Departure and Landing. I saw there the original manuscript of Felicia Hemans' celebrated poems. It would tire both you and me to tell all the contents of that hall, chairs, dishes, &c., &c. Here I left my kind friends, they going to a hotel to cool off, while I wended my way towards Burial Hill. But finding in the street a place where there is a spig—(how in the world do you spell it) where water was running out, and over it this inscription. "And there is a very sweet brook runneth under the hill side, and manye delicate springs of as good water as can be drunke," Wm. Bradford, 1620. Not contented with this, my curiosity was excited to find the veritable spring, so I went into a store near to ask after it. The man looked doubtfully at me, and said it was a hard place to get at. I told him that if it could be got at I thought I could find the way. He then indicated that behind a certain building I would find some stairs. I went as directed, and after climbing over piles of furni-

ture, found the steps; these led me into one of the most remarkable back yards I was ever in, into which was thrown every imaginable kind of rubbish, from straw mattresses to oyster shells. This was not the object of my search, however, but among it at length I found the real spring, and truly, without any poetry, its waters were delightfully clear and cool; numerous other springs also came out of the hill and ran down into the brook. From this place I went on to Old Bural Hill, the most delightful place I had seen, at least so I thought after I had cooled off. 'Tis a very steep ascent, and on its brow was erected the first rude fort, a log structure, commanding what is now Leyden Street, the first laid out by the colonists. Up this hill they must often have come. Think it of? Miles Standish, John Alden, Priscilla (and, who I should have named first, John Elliott, the missionary, the friend of the Indians, who desired they might rather be converted than killed.)

The grave stones here bear no earlier dates than 1670 or '80, for they had to be brought from England at great expense, and the colonists were long unable to afford it. I had seen some at Quincy apparently older, without name or date, only having a hollow depression in the stone. Inquiring of an old man who was moving near by, the reason of this peculiarity, he said, that they were erected before the art of cutting letters in stone was well understood here, and that the name was put in on lead, which was taken out to make bullets in revolutionary times. Another reason why there was nothing to mark the last resting place of those who were interred here at first, is, pathetically told by one of the early chroniclers, "They buried them on the hill, levelled the ground, and in the spring planted corn, that the Indians might not know of their great loss.

I have ever had a great regard for the memory of Adoniram Judson, the martyr missionary to Birmah. Judge then of my feelings, when I found here a monument to his memory, with marble slabs commemorative of his three wives. He had resided near here, and in our drive we had passed his house, and were told that after his departure for India, it was occupied by his sister, who had such an affection for him, that on his leaving her house for his last voyage, she had the door he went out at nailed up, that no mortal might cross the threshold after him. From this hill one has a magnificent view of Plymouth harbor, and can look far out upon Cape Cod Bay, and they say that on a clear day Province Town, on the end of the cape, is visible. Before you, a little to the left, lies Clark's Island, where the little band landed first, on Seventh-day night, and spent the First-day there; it was on Second day they came across in their little boat, and landed on the rock now so famous. The town of Plymouth does not impress you as being very antiquated, not nearly so much as Marblehead or Nantucket.

One other spot of interest I must not forget, Training Green, given to the town by an old woman before the revolution, now used as a play-ground by the boys of the high school. On this green were trained the soldiers of 5 wars, King Philip's, French and Indian, Revolution, War of 1812 and the Rebellion.

Favorably the threatened rain of the morning held off till just as I was approaching the depot for returning to my work at Quincy. As we pass out of the town, the last object which meets our view is a monument in course of erection in honor of Miles Standish. It is in the neighboring town of Duxbury, on "Captains

Hill," and occupies the site of his residence. Thus we bid adieu to the land of the Pilgrims, and its long to be remembered scenes.

I fully expected to have remained at Quincy longer, but was struck by an inspiration, or something of the kind, felt my work was done here for the present, paid my bill and was off at 6 A. M. for old Nantucket.

Extracts from the Memoranda and Letters of Ann Watkins.

(Continued from page 41, vol. 161.)

About the end of six weeks our faith about an outward habitation was brought to a very low ebb, but at last the good providence of God supplied us. My husband, discouraged at his want of success, came and sat in the room whither I had gone to rest, and after talking the matter over a little, we retired in stillness of mind, with our hearts prayerfully directed, I believe. Whilst thus engaged, our eldest girl rapped at the door, and informed my husband that a woman wished to speak to him, and I saw no more of him until we met at the tea table, when, to my surprise and astonishment, my husband told me that he had taken a house, had the key, and I must go and see it after tea.

Sophie Margory (the woman who introduced us to the house), offered her services, for tenancy for herself, husband, and daughter, as an interpreter and market woman. So clear was the directing Hand and guardian care of our Heavenly Parent, that we could not doubt, and gladly accepted the whole proposal. We looked upon the woman as sent to us by Providence, and attached her to us for the remainder of her life.

The house was an old, yet comfortable, Spanish residence, with commodious garden and out-buildings, situate in the Rue des Bouchers. In a few days we moved into it, and it proved a comfortable shelter for us during our stay in Belgium.

We found in S. M. the help we needed. She had been employed, I think, as an upper servant in an English nobleman's family, and was fairly conversant with English. She could speak Flemish best, and French tolerably. Her husband was a pensioner, and was lame and otherwise incompetent. He had been engaged in the Spanish army, I think; and that he was occupied as a courier, and could understand a little of seven languages. They had only one daughter living with them, a girl of sixteen, who went daily to learn ironing, quite an art in that country. They were very useful, kindly persons, and helpful to us in a variety of ways. Henri Margory was very partial to my little boy. The old man would take his pipe and walk about the garden, and T—— would constantly be at his side, evidently enjoying his company. One day, as I was sitting in my parlor, a rap came at the door. It was H. M. "Madam," he said, as he responded to the invitation "Come in." "I beg pardon, but I do believe there is a God over children, for little T—— has fallen on the stones and is hurt." (Our yard to the stables was paved with stones, some of the sharp edges upwards.) I took the opportunity of trying to strengthen his faith in God; and the impression remained with me pleasingly for some time.

We kept up our meetings on First-day, and in the afternoon, when my husband was at home, we had a meeting for reading the Scriptures and Friends' books, to which all that had any connection with either family were invited. This course of action was much respected and appreciated, and we had the humble satisfaction that it was not without its use.

I sometimes took walks with S. M., but whenever I made my appearance out of doors I was treated with rudeness and insult, so that at last I gave up going out altogether. Before then, however, we visited several of the chapels, which were superbly decorated, and contained many images and fine, large, life-like paintings. In one we observed model wax arms and different parts of the human frame hung before the image of a saint. These were to propitiate for accidents and the restoration of limbs or the wounded part.

There existed at that time a feeling of animosity between the people of Ghent and those of Bruges. One day my husband gave me an account of a sad circumstance. Two young women from Ghent had come over to teach a good pattern in lace-making. In the evening they took a walk outside the gates for exercise, when they were discovered, by their dress, to belong to Ghent, and were much insulted. They complained to the authorities, and the consequence was, two of the assailants were imprisoned and a third was publicly flogged. A short time after I was walking on the ramparts with S. M., when about twenty or thirty men and boys ran up the sides and threw dust and stones at me, with language I could not understand. We drew near a cottage, and I asked S. M. to go in. "Better not," she replied, "for they will break the windows." I walked ready to fall to the earth with my mind turned to my Heavenly Helper. At that instant who should appear in the distance but my husband, to whom I beckoned. My W. quickened his pace, and, as in a moment, my assailants vanished; he was very indignant and in vain tried to find out some of them. I pleaded for their ignorance and the matter was soon quieted. By the lower class my husband was taken for a priest, his dress being very similar.

We were now moving on very comfortably; for a few weeks we appeared to be carrying out the object for which we came, and my husband engaged a man to assist him. Just at that juncture a letter came desiring my husband's immediate attendance at the London house. I heard from him a day or two after his arrival there, and found his absence was likely to be longer than we at first anticipated. Ten long weeks I was as it were alone; the keen edge of the bitterness of those days has very much passed away, but it will be vivid in remembrance as long as I have power to think. Encompassed by trials and in a position in which I had not a friend to speak to, it seemed, at times, almost more than nature could sustain; but I may say with truth, although unworthy as I am, the Everlasting Arm was underneath, and very near for my comfort and upholding.

On the 2nd of Ninth Month, during the absence of my husband, my darling Elizabeth was born. My physician was a very skillful man, but worldly-minded, and tried to enter into a kind of conversation, at which my soul sickened. I was brought into deep stillness before God, and in the depth of my extremity I prayed aloud, and those about me were brought into stillness too. I believe I shall never forget the solemnity of that season. It so far impressed the mind of my physician that he waited upon me with all the kind attention of a father and a friend, calling upon me seven days afterwards without extra charge, when he had some religious conversation with me. After the return of my husband he called upon us and professed deep respect. All praise to thee, Father and Fountain of mercy and of blessing, for thy superintending care!

Everything was new to those about me, even the dressing of an English baby was quite a puzzle. I was preserved in a good degree of quietude, and enabled to leave that which I could not help, until I was strong enough to attend to matters myself. It was usual to name the child within twenty-four hours of the time of its birth, and, accordingly I had to allow it to be taken to the public office; I thought it would be at the cost of life, but my kind attendant promised me care, so she and H. M. took it, carefully wrapped, to the place assigned, but the officials not being at home, I had five francs to pay for them to call upon me. My dear child was well nursed, S. M. being very fond of her, and indeed she became a great favorite.

Whilst my W. was in London, a gentleman called to see him one afternoon. He sat down and spent about half an hour with me. His conversation tended to strengthen my faith, and cheer my drooping spirits. It was, indeed, a brook by the way. He was the proprietor of a [flax] comb manufactory, at Lille. He was one who deplored the debasing effects of Roman Catholicism, and tried to elevate the minds of his work-people. He established them as a little community, introducing a mode of worship amongst them, and was himself their pastor. In our conversation with him, we found he partook very largely of our views.

I could not well continue the afternoon readings on First-day, during my husband's absence. I usually sat down on First-day morning and on one other morning in the week, and a cure was exercised, I believe, that I should not be interrupted at such times. I remember, on one occasion, being remarkably struck with the conduct of S. M. As my husband's time was much occupied in London, I had but brief accounts from him, and at one time, my funds were so low, that I was in danger of not having enough for the support of my family. I retired to my chamber, and poured out my whole soul to Him without whose permission not a sparrow falls to the ground. When I went downstairs, my attendant met me, saying, "The Great Master has been with you, and so long as I have a franc you shall share it with me." I felt astonished, for I had endeavored carefully to conceal my real position from those about me, and my private exercise had not been vocal, so that I received this sympathy as coming direct from Him, who can try and prove, uphold and sustain us, according to his wisdom. The needful aid came the next day. "By these things men live." I believe this experience aided in strengthening me to meet future trials, which indeed were not a few, and to believe in and trust a superintending Providence, even in the affairs of every-day life. How often and how earnestly have I desired that this trust and dependence were more the experience of the thousands who toil for their daily bread!

At length my husband returned; business commenced in earnest, and our house became quite a busy scene. Butter was brought in from the markets, also from surrounding farmers, always under military surveillance. The different packages, either smaller or larger, were always stamped with Ave Marias, and the octroi and carriage had to be paid, there and then, in the presence of the military official. It was very difficult to get work-people to apply. They would take every opportunity to slip away, either for small quantities of gin, or to join the merry-makings in the street. Circles of men and women would present themselves playing,

"Thread the Tailor's Needle," "Oranges and Lemons," "Hunt the Slipper," and such childish sports. We were perfectly a-tonished, and had we not been eye-witnesses of these things, would scarcely have believed them.

(To be continued.)

FOR "THE FRIEND."

The Spiritual Possibilities of the Heathen.

The Society of Friends has ever held the doctrine that the love of God is so extended to all mankind, that no one of his children is so unfavorably situated, as to outward surroundings, that he may partake of salvation, if he will be obedient to those revelations of the Divine will which are impressed on his heart. This same doctrine is eloquently stated by William Taylor, a Methodist bishop, who is laboring in the interior of Africa. Some of his remarks, it is believed, will prove interesting to the readers of THE FRIEND.

"The Church of Rome was composed largely of converts from heathenism. In his letter to that church, Paul says: 'When the Gentiles, which have not the law—the Holy Scriptures, but the written revelation of God—do by nature the things contained in the law, these, having not the law, are a law unto themselves; which show the work of the law written in their hearts, their conscience also bearing witness, and their thoughts the meanwhile accusing or else excusing one another (Rom. 2: 14, 15). Is not this a realization of God's ancient prophecy and promise, 'I will put my law in their inward parts and write it in their hearts; and will be their God, and they shall be my people' (Jer. 31: 33). Hence all such 'show the work of the law written in their hearts, their conscience also bearing witness—show it in their tempers, words and deeds.

"They do by nature the things contained in the law." Can such an experience be attained by any virtue, or merit or work of human nature? Nay, the depravity of human nature and its utter inability to purify itself are the same throughout the world. 'By nature'—by a revelation of light and life from God, not through the medium of the Holy Scriptures, but through the visible media of God's works and ways [and through the direct impressions of his Spirit on the heart.] Facing the Gentile world, then, and through all the coming ages the Apostle declares: 'I am not ashamed of the gospel of Christ; for it is the power of God unto salvation to every one that believeth; to the Jew first, and also to the Greek.' The world then was constituted of Jews and Gentiles—the Greek represented the latter class.

"The Jew had a documentary basis of faith—the record of God concerning his Son—prophetic and historic, corroborated by the testimonies of saved men and women in the Scriptures, and the verbal testimony of the witnessing hosts of God's elect—a broad, intelligible, reliable basis of faith.

"The Greek had no such basis of faith; but, instead, had a manifestation of God to his soul, sufficient to enable him in his distress to cry to God, surrender himself in unreserved obedience to his will, abandon all hope of help from any other source, and receive and trust God alone. That defines the faith possible to the Greek, and that is the faith which brings 'the power of God unto salvation to every one that believeth,' whether Jew or Greek. 'For therein is the righteousness of God revealed from faith to faith; as it is written, The just shall live by faith—

Jews and Greeks alike, ascending to wider fields and higher planes of faith and of realization of Divine manifestations. Such possibilities involve a corresponding responsibility. 'For the wrath of God is revealed from heaven against all ungodliness and unrighteousness of men, who hold the truth in unrighteousness.' God has manifested the truth to them so clearly, and impressed it on them so indelibly, that it holds in spite of their ungodliness. This truth is the hinge of their responsibility as subjects of God's government; and their wilful resistance of it, the ground of their condemnation."

The Royal Palmist sang, a thousand years before the Church at Rome was born.—"The heavens declare the glory of God,"—not simply by astronomical star gazing, but by a manifestation of God in the people through these works of his hands. "The heavens declare the glory of God: and the firmament showeth his handy-work. Day unto day uttereth speech." God's day-school seven days in each week; "night unto night sheweth knowledge"—God's night-school seven nights in each week; God's universal public school. "There is no speech nor language where their voice is not heard."

Abel obtained the righteousness which is by faith, and "obtained witness that he was righteous, God testifying of his gifts." All this he obtained under the "light that lighteth every man that cometh into the world." Every man, therefore, under that same light and leading, could have been saved, for "God is no respecter of persons." And every sinner, from that day to this, could have been saved as was Abel, if he had followed Abel instead of Cain. No one ever perished because he was born with a sinful nature, but by a persistent suicidal rebellion against God.

Well, if God gives light and life adequate to salvation, why are the masses of mankind of adult years so ignorant and so unlike God? Let us go back and inquire of Paul. "That which may be known of God is manifest in them, for God hath shewed it unto them. For the invisible things of Him from the creation are clearly seen, being understood by the things which are made, even his eternal power and Godhead, so that they are without excuse. Because that when they knew God, they glorified Him, not as God, neither were thankful; but became vain in their imagination, and their foolish heart was darkened. Professing themselves to be wise they became fools, and changed the glory of the incorruptible God into an image made like to corruptible man, and to birds and four-footed beasts, and creeping things." They knew God, but in pride and self-conceit they willfully departed from Him. The unrestrained natural depravity of their hearts led them into the most debasing lusts of the flesh.

"By the offense of one, judgment came upon all men—the human race—to condemnation." "So by the righteousness of one, the free gift came upon all men unto justification of life." As the whole race of man went down together by the sin of the first Adam, so the whole race came up together by the redeeming work of the second Adam. Every child born, from Cain down, inherited from the first, a tainted, corrupted nature; but every such child comes into the world an heir to the gift of eternal life in Jesus Christ, covering everything in it or necessary to it.

The most glorious and blessed thing, beyond all comparison, that can be said of any man, is, that the God who made him is spiritually enthroned in his mind and heart.

LOVE IS LIGHT.

BY E. G. CHEVERTON.

"At eventide it shall be light."

My little girl, so brave by day,
Crows timid as the shadows fall,
I cannot charm her fears away;
My reasons have no force at all;
She pleads, with all her childish might,
That she may have a light.

I calm her fears and stroke her hair;
I tell her of the angels near—
Of God, whose love is everywhere,
And Christ, to whom each child is dear.
She hears, but only clasps me tight,
And begs me for a light.

But when I say it cannot be,
And strive to make her understand
Just why, she makes another plea,—
That I will stay and hold her hand,
She whispers, as we kiss good night,
"That's better than a light."

And thus, content, she falls asleep.
My clasps grow closer on her hand;
Musing: God doth his wisdom keep
In childish life, and in the breast,
That, in that other, darker night,
'Tis love that makes it light.

I, too, have shrunk in childish dread
From that dumb darkness that doth creep
About the room, the dring-bell,
And, fearful, felt I could not sleep
Without a light. I understand,
'Tis light to hold Love's hand.

From S. S. Timm.

CASCO BAY.

If e'er you sail on Casco Bay

When fields are green and skies are sweet,
And stretch the foam-capped waves at play
Where wind and sea touch hands and greet
As friend with friend, in rude delight,
Your soul, like birds at break of day,
Will rise for many a joyous flight

Midst summer isles of Casco Bay:
Of Casco Bay! Dear Casco Bay!
Where life is joy and love at play
Midst summer isles of Casco Bay.

Oh, wild and glad and circling far,
The ripples sparkle from your prow
As silver laughter from a star
When Venus decks the evening's brow;
And where the islands stand apart
The ocean waves roll in to pay
Some tribute from the sea's great heart
To gentle, queenly Casco Bay:
To Casco Bay! Dear Casco Bay!
Your soul imbues the salt sea spray
And sings with lovely Casco Bay.

Down smiling channels shadows run
And shimmer on the green-blue tides;
And, booming like a far-off gun,
Where Harpswell sea from sea divides,
You hear the breakers' sullen roar
And watch the waves ascend in spray
While all around, behind, before,
The white sails swell on Casco Bay:
On Casco Bay! Fair Casco Bay!
The white sails fill and bear away
The happy souls on Casco Bay.
—Benjamin S. Parker, in the Century.

GAL. vi. 2, 5.

I looked and saw two different companies
Who travelled the same road, but wide apart.
Each pilgrim had a burden at the start,
Which, as he journeyed onwards, grew in size.
These looked not on each other with a heart
Of sympathy, nor felt their sorrows rise
To see the names of such as would dart
Through the flushed countenance and blood-stain
Of fellow-traveller. None would lay his load
Aside, to help his brother up the hill;
And oft they pushed each other from the road;
And ever, as they journeyed, quarrelled still;
Their law was, "Each must his own burden bear."
Therefore their burdens grew to blank despair.

Such was this crew; how far diverse were they!
Who seemed a glourier had at the first look
And more had they to do, to watch and pray
And often study e'er a little book,
Besides each other's burden that they took
With gladness on their backs; and on the way
They yielded each to th' other; none forsook
The tired, or by the fall refused to stay.
None was so mean that all did not behold
In him a brother high in rank and place,
Whence the faint hearted daily grew more bold,
And those who lagged behind revived their pace.
Their law was, "One another's burdens bear."
Therefore their burdens grew as light as air.

T. D. Wolsey.

Natural History, Science, &c.

On Cross Fertilization.—The behavior of the flowers of *Cassia Marilandica* is furnishing an interesting study to botanists. It would appear that the pollen is so completely encased by the anthers, as to be seldom if ever liberated except by the aid of bees, who draw it from some of the anthers, while standing on the others. The pollen seems never to be released from the anthers used as a platform. Careful guarding of the flowers from insects results in complete barrenness. It is clear that insects aid in the fertilization; but this fertilization is by means of the flower's own pollen. It is not cross-fertilization that the insect accomplishes, and yet this is the supposed work given to the insects to do. Why could not the flower be permitted to fertilize itself, instead of having to accept the services of an insect to do its own work? The author believes that cross-fertilization is of no material benefit to the race of plants. Self-fertilized plants are as healthy and the races as strong as the cross-fertilized; and while the facts of cross-fertilization are admitted, he contends that the reasons generally given have only tended to obscure the mystery surrounding it.—*The Independent*.

Cypress Knees.—The Southern cypress tree has a fashion of throwing up from the roots excrescences of a slender, conical form known as cypress knees, the object of which has long been an enigma to botanists. As they seem to be more abundant when the tree is growing in swampy places than in drier ground, it has been thought an effort of Nature to obtain air. This explanation has become the generally accepted one, though how the plant is to obtain air through these thick, hard, woody structures, has never been explained. A recent writer contends that this explanation is erroneous. Under each of these ascending excrescences he finds a tap-root descending into the mud or earth, and he contends from this that the knees, as they are called, are the analogs of suckers in other plants, only that the branches or stems in the ascending portions have not been fully developed. Knees are therefore but abortive trunks.

Storks.—The stork is almost superstitiously beloved by the peasants of northern Germany and the Low Countries, and iron supports upon which he may build his nest are set on cottage gables in the belief that where a stork has his brood fire will never come. Travellers are often surprised when they see how tame the great birds become, following the agriculturist through the field and furrow, and often sleeping on one tall red leg close to where he is at work and within sound of the rattle of the passing railroad train. So fond is the Dutchman of having the storks about his inn, indeed, that he makes provision for its nests even in the centre of his bulb-fields. Here one may often see slender poles some 20 or 30 feet in height, supported by braces and bearing at the top a small round platform simi-

larly strengthened. On these the storks build their nests, and here they perch like sentinels protecting the beautiful crops.—*Garden and Forest*.

Signalling among Primitive People.—As is well known, the Indians of our continent use rising-smoke to give signals to distant friends. A small fire is started, and, as soon as it burns fairly well, grass and leaves are heaped on top of it. Thus a large column of steam and smoke rises. By covering the fire with a blanket, the rising of the smoke is interrupted at regular intervals, and the successive clouds are used for conveying messages. Recently R. Andree has compiled notes on the use of signals by primitive people, and finds that they are well-known in universal use. Recently attention has been called to the elaborate system of drum signals used by the Kamerun negroes, by means of which long messages are sent from village to village. While it was supposed that this remarkable system of communication was confined to a limited region, explorations in the Congo basin have shown that it prevails throughout Central Africa. The Bakuba use large wooden drums, on which different tones are produced by two drumsticks. Sometimes the natives "converse" in this way for hours, and from the energy displayed by the drummers, and the rapidity of the successive blows, it seemed that the conversation was very animated. The Galla south of Abyssinia have drums stationed at certain points of the roads leading to neighboring States. Special watchmen are appointed who have to beat the drums on the approach of enemies. Cecehi, who observed this custom, designates it as a "system of telegraphs." The same use of drums is found in New Guinea. From the rhythm and rapidity of the blows the natives know at once whether an attack, a death, or a festival is announced. The same tribes use columns of smoke (or at night) fires to convey messages to distant friends. The latter are also used in Australia. Columns of smoke of different forms are used for signals by the inhabitants of Cape York and the neighboring island. In Victoria, hollow trees are filled with fresh leaves, which are lighted. The signals thus made are understood by their friends. In eastern Australia the movements of a traveller were made known by columns of smoke, and so was the discovery of a whale in Portland Bay. These notes, which might be increased considerably, show the general existence of methods of communication over long distances—the art of telegraphing in its first stages of development.

Items.

Prohibition among Reformed Episcopalians.—The following resolution was adopted by the Synod of the Reformed Episcopal Church for New York and Philadelphia:

"Resolved, That the members of the New York and Philadelphia Synod of the Reformed Episcopal Church hereby record their unanimous and uncompromising opposition to the liquor traffic. It is an unmitigated evil, and as such should not be regulated, but destroyed. Its growing power warns us, unless we destroy it, it will destroy our free institutions. It is so fast increasing that the sovereign people's popular elections in our country, instead of being expressions of the people's will, are too often mere registers of the decrees of demagogues and liquor dealers. The traffic is one of the giant foes of our Christianity. It maims more souls than our churches save. Not only does it darken our land, but its shadows stretch across the seas and deepen the darkness that broods over beaten lands. This Christian country counteracts its missionary efforts by intoxicating drinks. Therefore, as Christian men and as representatives of a branch of the Church of

Christ, we protest that it is neither right nor wise to legalize this traffic. The only way in which a Christian government can deal with it is to brand as a crime, an evil which is so largely the cause of crime.

Mormon Missionaries.—The London Missionary Society has news from Samoa of the invasion of that troubled kingdom by a band of Mormon missionaries. Six of them have appeared and six more are on the way from Utah, and they say they are going to carry on a vigorous campaign in every village in the group. They appear to have plenty of financial support. The natives receive them cordially, but they have made an impression on European traders.

A New Religion.—A new religion has sprung up in Toungu, Burmah—a sort of mixture of Buddhism and Christianity. The founder is a timber merchant, Koh Pai Sah. The initiatory rite is a handful of rice from the hand of Koh Pai Sah, for which Rs. 30 is exacted from a man, Rs. 20 from a woman, Rs. 15 from a child. The new disciples keep the Christian Sabbath and abstain from strong drink. The adherents number several thousands.

Closing the Places of Business on First-day.—The Chicago correspondent of *The Presbyterian* writes to that paper:—

"It was the expected that happened when, a few days ago, the usual committee waited upon our new Mayor with the usual request for the observance of the Sunday-closing law by saloons, barbers shops and other places of business, and for the usual discussion of the propriety and possibility of the Mayor's doing what he pledged himself to do in his official oath. The Mayor talked with an apparent unquench in favor of law, decency, morality and such things, but he did not promise to enforce the law requiring the closure of saloons on Sunday. Although he has refused to do this, he has not refused to do this, and has heard this matter more or less discussed; if he had not discussed it every week of that time, he has not had time to consider the subject. He did not promise to take time either soon or during the next two years. And at the next city election the men who are in favor of "Sunday-closing," and who advocate it by eloquent speeches before the large assemblies, will repeat the old farce instead of offering before the people a ticket composed of reliable and estimable men in favor of "Sunday-closing" and "Sunday rest," and so winning a victory by making themselves felt as a power to be respected and courted. Along that road and not far ahead lies victory. It is not in this case found along any other road."

Moments of Samuel Morris and Theo. P. Cope.—The London *Friend* of Seventh Month, mentions that these Friends reached Stavanger, in Norway, in time to attend the annual meeting there of Norwegian Friends; and after its conclusion went to Bergen. There a large meeting was held, at which Marie Jensen, a Norsk Friend, interpreted very feelingly for Samuel Morris. A second meeting was held in the evening.

While at Bergen a visit was paid to one of the four Leper's Hospitals, which in all have some hundreds of patients.

W. Gladstone on Disestablishment.—Gladstone in his recent tour in England spoke quite plainly his opinions on the subject of Disestablishment. His position seems to be Disestablishment wherever and whenever the people are ready. He thinks that the people are ready for it in Scotland and almost ready for it in Wales, but not in England. "The most sanguine among you," he remarked, "would not presume to say that there has yet been in England a distinct pronouncement of the national voice upon the subject of Disestablishment." In reference to his own leadership in this matter he said:

"Naturally, at my time of life such a subject is placed beyond all possibility—all reasonable possibility—of contact with myself. If it ever comes, it will come to a prepared people. It will come without the bitterness which unfortunately has too much for our recent conflict on the subject of Irish privileges. It will come, I think, to the great religious community, which will have learned before that time to disavow all selfish dependence upon the temporal and secular arm, which will know that the

Establishment is one thing and that the Church is another thing, and which will have ample means undoubtedly, if the spirit be not wanting to provide, to fill up whatever void might be caused by the withdrawal of the support from national property which the Church may now be considered to receive."

These utterances are said to have made English churchmen quite indignant.

List of Agents.

We append herewith a list of AGENTS to whom application may be made, and who are authorized to receive payment for THE FRIEND.

Agents and others sending the names of new subscribers, will please be careful to state that fact distinctly. And in all cases of change of address, the name of the office to which the paper has been sent, as well as that to which it is to be forwarded thereafter.

THE FRIEND.

EIGHTH MONTH 3, 1889.

We have received from John Martenson, of 205 Oak Street, Chicago, Ill., copies of three publications, translated from the Swedish, and written by K. Waldenström, a professor of theology, and of Biblical, Hebrew and Greek, in the College of Gelle, Sweden. Some notice of the author is contained in one of these, which states that his works have had a very large sale in Sweden, and have awakened much thought and discussion in that country.

The Blood of Jesus. What is its significance? is a pamphlet of 48 pages, in which the author examines all the passages in the New Testament in which this expression is used; and endeavors to show that *Blood* is used in the sense of *Life*. To eat the flesh and drink the blood of the Son of Man, he regards as partaking of the Divine life. "Christianity," he says, "is not only new knowledge, gained in a way like all other knowledge, nor is it merely a new persuasion; no, but it is a new *spiritual* and *heavenly* life, which comes into existence by a new spiritual birth from above."

While in much of the pamphlet, Dr. Waldenström's views seem to approach to the spiritual views of religion held by the Society of Friends, yet there is a want of clearness in other parts. Thus, he speaks of the sinner, by faith, becoming a "partaker of the life which *Christ gave in death* for him." If he means by these words that we become partakers of the outward, physical life, which the blessed Saviour yielded upon the cross, it seems to us a fanciful, mystical notion. If he refers to that spiritual life and grace, of which Christ said, "I came that they might have life, and that they might have it more abundantly;"—the words do not seem to us well chosen.

The "Reconciliation" is a small book of 118 pages. The leading thought in it is that the love of God for mankind is the original procuring cause of man's salvation.—"God so loved the world, that He sent his only begotten Son, that whosoever believeth in Him might not perish, but have everlasting life." He endeavors to show that *reconciliation* to God is identical with being restored to a state of holiness, because living in sin is necessarily living in a state of hostility. That this redemption is effected by Christ, a measure of whose Divine life and power is bestowed on all who will accept Him and live in obedience to his commandments.

The largest of the three books is a series of Meditations on the 25th Psalm, entitled "*The Lord is Right*," which we have not sufficiently examined to form an opinion respecting.

HOW WE ARE SEEN BY OTHERS. The *Portland Transcript* publishes an article in which it discusses the changes which have latterly been taking place in the manner of conducting meetings in that part of the Society of Friends which has come under the notice of its editor. It says:

It has not escaped the notice of those who for a series of alternate years have attended or looked in upon the meetings of the Society of Friends in this city, that in some important particulars this religious Society has undergone a great change in its methods of conducting public worship. And this change is one that is much regretted by many of the Friends, who cherish the faith and traditions of the early days of the Society. The quiet waiting for the moving of the Spirit, the impressive silence that prepares the heart for prayer, the listening for the highest and truest utterances—this is missed in most of the Quaker meetings of the present time. It seems to many Friends as if the rush and hurry to occupy all the time with talk is destructive of the feeling of awe and reverence with which the soul ought to approach communion with the Divine Spirit. Real worship, they say, is not to be attained unless the heart is prepared by prayer. "It is the secret, silent heart within which true worship is experienced by each particular worshipper," says Dr. Vaughan, "and without this the sound of the loudest responses becomes at once a babbling and a nothingness." The very essence of prayer is in silence, and so also is it of praise. Quakerism, it seems to us, has no reason for its extreme silence as it goes up. This is most impressive peculiarity, and adopts the noisy ways of evangelizing practiced by some other sects. The organization of the Society of Friends may as well be merged in that of the Methodist, or of some other sect, if the very methods of these other sects that are in direct conflict with the methods of the primitive Friends are to be adopted—if permanent meetings are to be appointed and supported, if worshippers are taught that every minute spent in silence is a wasted minute, and if the soul that is feeling its way toward the Infinite is to be distracted, even by the sound of sweet music, from the still, small voice of the inward monitor. Wesley himself, in one of his hymns, utters this admirably expressed caution in regard to the abuse of music in public worship:

"Still let us on our minds be found,
And watch against the power of sound
With sacred jealousy;
Loudly swell the organ, damp our zeal,
And music's charms bewitch and steal
Our hearts away from Thee."

We have the charity to believe in the use of each and all of the Christian sects. Each meets some pressing need of the human soul. There is room for Quakerism in the world, and it has the power for good that has been abundantly manifested in the past. But do not let it be frittered away by weak compliance with the usages of other sects that are not in harmony with its distinctive principles. It is perhaps too much to hope that the Friends as a body will return to the exact paths in which they walked when they won their greatest triumphs, but they can refrain from taking the steps that will lead them directly away from their ancient road to heaven. The sainted soul of George Fox, if it has cognizance of the tendencies of his nominal followers in these latter days, must be greatly exercised and disturbed to see the Society of Friends adopting the methods of worship against which he so strenuously contended. Wesley, who has founded the method of the Episcopal Church, founded the Methodist Episcopal Church. Those who are now changing the methods of the Society of Friends might take a leaf from his book and start a Methodist Quaker Church, leaving the old-fashioned Friends, who desire not the change, to enjoy their ancient forms, or rather lack of form and method. We do not know that outside of talking of division, but it seems to an outsider to be inevitable."

The *Christian Union* reprints this editorial of the *Portland Transcript*, and adds comments of its own:

As we fear is the case, the article which we

copy from the *Transcript* of Portland, Maine, correctly describes the typical tendency in the denomination of Friends, it is high time either to call a new denomination into existence to emphasize that feature of spiritual life which the Friends did formerly but apparently do not now emphasize, or else it will be necessary—and this would be better, certainly—for other denominations to accept as a heritage the gift of silence which the Friends seem to be relinquishing. In no sphere of human experience is it more important to remember and act upon the aphorism that speech is silver and silence is golden than in the sphere of religious experience. Much talk without correspondingly great silence becomes chatter; and religious chatter, if not less profitable, is certainly more discordant than social or political chatter. Now, if Friends are to have some such worth to the many of a silent attitude, to the worth of a quiet spirit, to the experience that communicates itself only to him who hears and heeds the counsel, "Be still; and know that I am God"—if the Friends are going to abandon the listening attitude and be carried away by the passion to perpetual talking which is a sign not of a full but of a shallow mind, they should at least consider whether the symptom is not a grave one.

There are voices that are quiet and must be listened for; and we are too busy with our own thoughts, and make too great a buzzing oftentimes, to listen. He that would follow Christ as a teacher must learn to follow Him as a listener as well.

SUMMARY OF EVENTS.

UNITED STATES.—Over 200 Cincinnati saloon-keepers having agreed to keep open doors on First-day the 25th ult., over 160 were arrested for doing so. They all secured bonds and were arranged on Second-day before Judge Ormston. Nearly all demanded a jury trial and their cases were postponed indefinitely. Concerning the matter of repeated violations of the law by the same men, the court has decided to believe that the course of prevention is worth a pound of cure, and especially so in this matter. Therefore, in order to prevent the necessity of calling out the entire police force, as was necessary yesterday, I will fix the bond of any saloonist who violates the law next Sunday, and who is again arrested, at \$3,000. I believe that the energetic action of the authorities will do away with the open violation of the law by saloonists in the future.

The Senate of Rhode Island has passed the House License bill with several amendments. A clause prohibiting the keeping of a saloon within 400 feet of a school house was inserted.

In the North Dakota Convention on the 25th ult., the Committee on Temperance reported in favor of the submission of the prohibition question to a vote of the people at the same time the constitution is submitted. The report was unanimously adopted. The Whole, the report of the committee was adopted.

The Treasury Department has acquiesced in the opinion of the Attorney General, that Chinese can pass through United States territory in transit to foreign ports, and the practice of detaining them at the ports of call will be modified accordingly.

The Kickapoo Indian Commission met at Holton, Kansas, on the 24th ult., near the reservation, but, on account of the hostile attitude of the Indians, were unable to accomplish anything. The Commission was appointed to visit the reservation, and the sale of the reservation of 9000 acres in Jefferson and Brown counties. The Indians are unanimously determined to have no dealings whatever with the Commission.

The work of the Indian Commissioners at the White Earth Reservation, in Minnesota, is reported to be a success. The treaty has been secured for the agreement. This will open 3,000,000 acres to settlement.

The United States Fish Commission is advised of reports of the discovery of a cod bank on the Pacific, eight miles off Nestuca, Oregon, and 65 miles south of the coast. The bank has been secured for the purpose ordered to examine the location on its return from the seal islands this summer. It is said that the true cod has never before been found south of Puget Sound.

News from Ounalaska, by the steamer Bertha, which has arrived at San Francisco, confirms the discovery of a bank of three whaling schooners—James A. Hamilton, Otter and Annie. The vessels carried about 60 officers and men.

A fine bed of terra cotta clay has been discovered on a farm west of Topeka, Kansas.

It is said that the cotton crop of Texas this year will reach 2,000,000 bales, and that the corn crop will be enormous.

A largely attended meeting of wealthy and prominent citizens of New York was held on the 25th ult. in the City Hall, to arrange for the holding of a world's exposition in 1876, in commemoration of the discovery of America by Columbus. After an address by Mayor Grant, it was decided to appoint committees on arrangements, finance, permanent organization, legality, site and buildings, and the meeting adjourned, subject to the call of the Chair.

A heavy rain and wind raged for over two hours in Chicago, on Seventh day night, the 27th ult. The rainfall is reputed to have exceeded four inches. Some lives were lost, and the damage to property is now estimated at more than a million of dollars. There were 44 alarms of fire during the storm—many of them caused by lightning, but not from the destruction of the insulation of the electric light wires.

Very heavy rains are reported at Harrisonburg, Virginia.

A landslide has occurred on the Northern Pacific Railroad, near Missoula City, Montana. It happened at a point on the Yellowstone divide, where the trail skirts Yellowstone River, with the turbulent stream on one side and a high alkali bank on the other. Without warning or apparent cause this bank gave way, and the mass of earth for a distance of 300 feet along the trail, to the extent of 100 feet, slipped down into the river, completely burying the railroad.

In the year ending 6th month, 1880, 27,745 immigrants arrived at this port, while in the previous year the arrivals numbered 37,018.

Deaths in this city last week numbered 471, a decrease of 12 as compared with the previous week, and an increase of 12 over the corresponding period of last year. Of the whole number 237 were males and 234 females; 189 were children under one year of age; 65 died of cholera infantum; 39 of consumption of the lungs; 38 of marasmus; 28 of inflammation of the stomach and bowels; 25 of pneumonia; 19 of typhoid fever; 15 of inflammation of the brain; 17 of old age; 15 of nerve; 15 of debility; 11 of convulsions; and 6 were drowned.

Markets, &c.—U. S. 4½'s, 107; 4's, 125½; currency 6's, 118 and 120.

Cotton was quiet but firm at 1½ cts per pound for middling.

Wool.—Winter bran, choice and fancy, 34 and 34½ do, common to fine \$12.50 a \$13.75.

Flour and Meal.—Western and Pennsylvania super, \$2.75 a \$3.00; do, extra, \$3.00 a \$3.30; No. 2 winter family, \$3.40 a \$3.75; Pennsylvania family, \$3.00 a \$3.25; Pennsylvania extra, \$3.25 a \$3.75; Ohio, clear, \$4.25 a \$4.65; do, straight, \$4.75 a \$5.00; Indiana, clear, \$4.25 a \$4.65; do, straight, \$4.75 a \$5.00; St. Louis and Southern Illinois, clear, \$4.25 a \$4.65; do, do, straight, \$4.75 a \$5.00; winter patent, fair to choice, \$5.00 a \$5.50; Minnesota, clear, \$3.50 a \$4.25; do, straight, \$4.50 a \$5.00; do, patent, \$5.50 a \$6.10.

Grain.—No. 2 red wheat, new, 84 a 80½ cts. No. 2 mixed corn, 43½ a 44 cts. No. 2 white oats, 40 a 34 cts.

Beef cattle.—Extra natives, 4½ a 5 cts.; good do, 4½ a 5 cts.; medium do, 4 a 4½ cts.; common do, 3½ a 4 cts.; Extras, 3 a 3½ cts.

Sheep.—Extra, 5½ a 5½ cts.; good, 4½ a 5 cts.; medium, 4 a 4½ cts.; common, 3 a 3½ cts.; culls, 2 a 2½ cts.; Lambs—3½ a 7 cts.

Hogs.—Good light western, 6½ a 6½ cts.; heavy western, 22 a 24 cts.; medium, 6½ a 6½ cts.; extra heavy western, 6½ a 6½ cts.

FOREIGN.—Latest despatches, at the time of this writing, state that the debate on the Royal Grants, recently asked for from Parliament still continues in the House of Commons.

The Queen presents received by princess Louise of Wales were displayed at Marlborough house. The total value is \$750,000. The jewels alone are valued at \$620,000.

The Parnell Commission adjourned on the 25th ult. The 25th ult. was the golden wedding day of Mr. E. Gladstone and wife. The Queen telegraphed a congratulatory message to the distinguished couple, and the prince and princess of Wales and other members of the royal family sent letters to them. A large number of presents were received.

The Councils General of the Commissions General were held throughout France on First-day, the 25th ult. General Boulanger contested 451 cantons, and was successful in only about 12. Thiebaud a prominent Bonlangist, in an interview admitted the defeat of his party. He said it was clear that while general Boulanger

ger might be a plebeian force, he certainly was not an electoral force.

France of Seventh Mo. 23rd, says that the committee of the Senate Court is about to issue an order depriving general Boulanger, count Dillon and Henri Rochefort of all civil and political rights. This action of the committee is taken on the ground that they have conspired with the summons issued by the Senate Court to appear for trial on the charges made against them. This decision will render them ineligible to election in any office in France, and will also make any property they may own in France liable to seizure.

Transylvania and Bukovina, in the Seventh Month, 25th, swept over several thousand square miles of territory. Hundreds of persons were killed, the crops were destroyed and enormous damage was done to houses and churches. The destruction of Grosswald, Szeged and other places was completely ravaged. The Danube, Theiss and other rivers are filled with floating debris, in which are mingled the bodies of hundreds of men, women and children, together with carcasses of animals. Large numbers of churches and other large buildings and many small dwellings have been swept away, and along the banks of the Danube alone, 21 large mills have been destroyed.

It is stated that Germany and Austria have instructed ex-king Milan to restore the supreme power in Serbia in order to check Russian intrigues.

Many Christian families are arriving at Athens daily from Crete, having fled from the island on account of the uprising there. Two British men-of-war are expected soon at Suda Bay.

The Yellow River has again burst its banks in Shandong, inundating an immense extent of country. There is 12 feet of water throughout ten large Government districts. The loss of life and property is incalculable.

The government authorities at Pekin are dismayed, owing to the incapacity of the permanent staffs, foreign engineers and civil order to permanently repair the channel of the river is considered imperative.

A telegram from Ottawa says the Dominion customs returns, exclusive of British Columbia, for the year ended Sixth Month 30th, last, show an increase of \$1,000,000 in the value of exports, and a decrease of exports. The imports reached \$105,403,446; exports, \$86,014,550.

Rich coal mines have been discovered in the Mexican State of Guerrero. English capitalists are buying mines in the State of Hidalgo.

RECEIPTS.

Received from George Abbott, N. J., \$2, vol. 63; from Walter Griscow, W. Phila., \$2, vol. 63; from Deborah Sutterthwaite, N. J., \$2, vol. 803; from Martha B. Sheffield, R. I., \$2, vol. 63; from Caleb Wood, Phila., \$2, vol. 63; from Robert P. Gifford, R. I., \$2, vol. 63; from James Masters, William M. Parker and Rachel F. Parker, Pa., \$2 each, vol. 63; for Henry A. Lippincott, Phila., \$2, vol. 63; from Ruth H. Sharpless, W. Phila., \$8, being \$2 each for herself, Ann Harmer and Anna T. Goodwin, N. J., and Elizabeth H. Conly, Pa., vol. 63; from Jacob V. Edge, Pa., \$10, being \$2 each for Jacob Edge, Rebecca V. Pugh, L. Caroline Ash, Mary Kendall and Joseph Harrison, from George W. Henry Brown, Gtn., \$2, vol. 63; from Alice H. Carter, N. J., \$4, being \$2 each for herself, and for Sarah Ellen Carter, O., vol. 63; from Thomas S. Downing, Pa., \$2, vol. 63; from George P. Stokes, N. Remittances received after Third-day will not appear in the Receipts until the following week.

NOTICES.

A Teacher is wanted for West Grove Preparative Meeting School.

Application may be made to George R. Chambers, Mrs. James H. Jones or Z. Haines, all of West Grove, Chester Co., Pa.

WESTWOOD BOARDING SCHOOL.—A stated meeting of the Committee on Admissions will be held at the Committee-room, Fourth and Arch Sts., on Seventh-day the 27th inst., at 10 A. M.

J. NO. W. BIDDLE, Clerk.

WESTWOOD BOARDING SCHOOL.—Friends wishing to enter their children for the Fall and Winter Term, commencing Ninth Month 3rd, 1859, will please make immediate application to

J. G. WILLIAMS, *Sup't.*
Westwood P. O., Penna.

FRIENDS' INSTITUTE ROOMS, No. 1305 Arch Street, (to p. m., Broad Street Station), open from 9 A. M. to 10 P. M., afford to Friends visiting the city a convenient and comfortable place to deposit their packages or have their purchases sent to. The daily papers and other periodicals are on the table. Friends are invited to make free use of the rooms.

BOARDING SCHOOL FOR INDIAN CHILDREN AT TUNESASA.—A Friend and his wife wanted to take charge of the institution and farm, as Superintendent and Matron.

Friends who may feel for this service, address Aaron P. Dewees, Chester, Penna.
Ephraim Smith, 110 Pine Street, Phila.

MARRIED, Sixth Month 13th, 1859, at Friends' Meeting-house, Burlington, New Jersey, NEWLIS HAINES, of Hancock, to EVA B. DEACON, of Burlington Township, N. J.

DIED, at his home on the 22nd of Second Mo., 1859, JOHN D. JONES, in his 64th year. He was firmly attached to the doctrines and principles of our Society and necessarily a zealous and diligent member. He was absent from attending meeting. He had been in poor health for a long time but mostly able to get to meeting. When the summons came he said he was just waiting to cross over. He was an elder and member of Hickory Valley Monthly Meeting of Friends, Loudon County, Tennessee.

Third Mo., 12th, EDWARD BROWN, of Brooklyn, New York, with a quiet spirit and an unshaken faith in his Saviour. He was a member of the Society of Friends, and attached to its original principles. He resided at his residence in West Pittston, Pa., on Fifth Mo., 12th, 1859, Mary E. Embree, who was in the 91st year of her age, a member of Philadelphia Monthly Meeting for the Western District. In her early youth she accepted as her own by conviction the principles and testimonies of the Society in which she was brought up, and of which she was, through all her long life, a constant and faithful member. Her husband, the last fourteen years of her life her home was in a community where the Society of Friends was practically unknown, and she was undergoing in quiet efforts to make its doctrines understood, both by word of mouth and by dissemination of its religious publications. Although an almost constant sufferer from the autumn of 1858, she retained her mental faculties unimpaired to the last of her life, and her society was greatly sought by persons of all ages; children and young people being attracted to her no less than their elders. In an editorial notice of her death in one of the secular papers, the writer bears testimony—"Her keen sympathy and charitable disposition enabled her to gladden many a sad heart along life's pathway, and she will be widely mourned." On the 1st of Twelfth Mo., 1858, her illness suddenly assumed an acute form, and from that time she was confined to her bed, and unable to help. Her often intense suffering was borne with entire patience and sweetness of spirit. During the last few weeks of her life, when her voice had become worn to a mere thread, the watchers by her bedside, bending over to catch what she supposed was some request, often heard instead the whispered supplication, "Heavenly Father! take me." On the afternoon of Seventh-day, the 11th, she fell into a deep sleep, from which she passed away at early dawn of the next morning, as we have just seen, and the presence of Him whom, having often loved so long.

—, in this city, on the 10th of Sixth Month, 1859, JANE S. TAYLOR, in the 55th year of her age. An esteemed member of Northern District Monthly Meeting of Friends, Philad'a.

—, on the morning of the 17th of Sixth Mo., HANNAH LAMDRON, aged 78 years, 4 months and 20 days. The deceased was beloved by all with whom she mingled, and has left the consoling assurance to her survivors that her end was peaceful and happy.

Sixth Mo. 23rd, in New Bedford, Mass., at the residence of her son-in-law, James S. Kelley, PHEBE R. widow of Frederic B. Chase, formerly of Nantucket, in her 90th year.

FOR "THE FRIEND,"

Incidents and Reflections.—No. 183.

It is a matter of especial interest to meet with testimonies to the truth of the Apostle's declaration, that "The Grace of God, which bringeth salvation, hath appeared unto all men." One such I find in the following extract from a recent sermon by William Taylor, a Methodist Bishop, whose field of labor is in Africa.

You all want to know, in regard to the heathen, whether from my rather extensive acquaintance with them I find unmistakable evidence of a Divine enlightenment such as the Scriptures represent. I say, emphatically, yes.

I grant that the search for light amid their darkness is attended with difficulty, and can't be drawn out by question and answer. They do not receive it through the medium of a spoken or written language. They [are like children who] see a rainbow, and witness the sublimity of a thunder-storm, and receive impressions of beauty and grandeur never to be erased from memory; but when you address them in the language of science, and ask them to explain to you the colors of light and the currents of electricity, they can't tell you anything about it.

A Christian man once said to a poor slave girl in the South: "Do you pray?" "No, sah." "Did you never pray?" "No, sah; I can't read." He stood embarrassed for some moments, feeling that he had met a poor creature too ignorant to receive instruction.

Then said he: "Do you know anything about Jesus Christ?" "Oh! yes, sah; Jesus be my best friend. He save me from my sins. I talks to Jesus all day; and all through the dark hours ob de night, when I no can sleep, I be talking to my Jesus."

The Lord Jesus took me to his bosom from my trundle-bed, and revealed God to me in the pardon of my sins, and the joy of his reconciling love. I have never since had a clearer perception of God as my father and friend than I had as a little child. Some years later, when the Methodists came round preaching about justification, regeneration, adoption, and holiness, I never thought of identifying my simple experience of salvation with those big words.

When trying to sound adult heathen, we have the same difficulty as with children.

Ask a Brahmin why he worships an idol?

He replies: "Do you think I am such a fool as to worship a block of stone?"

"What then?"

"Oh! that's simply a tangible medium through which I worship the great Invisible."

I said to an old Brahmin in Calcutta: "I hope you are enjoying good health this morning?"

"Yes; I am thankful to say, that, by the great mercy and kindness of God to me, I am in good health."

He was in theory a pantheist; but, in simple conversation, the truth came out.

The untutored heathen of Africa have no vain philosophy by which to explain away their perception of God as a great personal being. They have their "greegrees," "charms," and "amulets," but they never pray to them,—they "cry to God in the day of trouble."

When a Kaffrarian dies, they dig a grave about two feet in diameter, and about five feet deep, and let the corpse down in a squatting position; but before they put him down, they seat him beside his grave to give opportunity for any who may wish, to have a last talk with him. They say that the man's spirit has left the body, but lingers near for a time for this last communication from friends or foes.

If a man is present, who has an unadjusted quarrel with him, he will approach him tremblingly, and confess his sorrow that the unpleasantness ever occurred, and that it was not settled long ago; then begs him not to come back to "with his children," or kill his cattle—just please drop it, and say no more about it.

Another will come and say, "My father died sixty moons ago. His body was buried in the forest near his village. He was a good man, and his spirit has gone to live in the bright home of Dahlah, [God.] When you get there, you will see my father, and I want you to tell him that you saw me"—then a confidential message is given him. Others will come in like manner, and lead down the departing spirit with messages to fathers and mothers in the final home of good people.

We learn from this, that these heathen believe that when the body dies it returns to dust, the spirit dies not, but lives on indefinitely; and that good spirits go and dwell with God in happiness.

Whence came they by this knowledge? They did not learn it from books—they have no books; they did not learn it from "a preacher of righteousness"—none there. They learned it from God in his primary school, and as these things abide in their minds as facts, and not as theories.

I will add a simple illustration of the possibility of a heathen's surrender to God, his abandonment of all hope in idols, angels, or men, his acceptance of God alone, and his trust in Him.

In the month of February last, I held a District Conference at Totaka, on Cavalla River, west coast of Africa. In the midst of a love feast we suddenly heard an awful screaming in the king's town, a little over a quarter of a mile

distant, followed by the wailings of the townspeople all that day, and the ensuing night. A great chief had died; a giant in size, and a man of renown among his people. He was one of the chiefs who had invited us to found a mission there, and "his mark" was on our articles of agreement; but we knew not his language, nor he ours, so as to enable us to speak to him of Jesus and salvation. Some of the heathen men there had been to sea, and learned a little "Kroo English."

Monday morning I went to see the dead chief. I was surprised to find him appearing as natural as life, just like a man in deep sleep, with a placid countenance.

I inquired about his death, and in their broken English they told me that all through the night of his struggle with death he was praying. That the chieftain lay on his mat in his hut with a taper throwing off light enough to make darkness visible, and every now and then he cried out, "Niswah! Niswah! O Niswah!" Then sinking into the silent struggle with death for a time; and then again breaking out, "Niswah! Niswah! O Niswah!" Later in the night he talked much to Niswah in subdued tones—"Niswah, I am your man. I belong to you, Niswah. I accept you, Niswah, I take you. I trust you, Niswah, I trust you." So he continued to talk to God by the only name he knew Him to have. If that poor fellow did not surrender himself to Niswah, what then? If he did not abandon all hope in every other helper, and receive and trust Niswah, what did he do? If the Lord Jesus would not help such a poor fellow, surrendering and trusting God as did that chief, then He was not the man of sorrows, sympathy, and salvation, I have always taken Him to be. "Man's extremity is God's opportunity." In such extremity, not necessarily a death extremity, a poor heathen may thus believe, and receive "the power of God unto salvation."

J. W.

Felt this morning, on first waking, the comfort of the consideration that the Christian religion is a religion of hope, and that it is the merciful design of the great Head of the Church that we should cherish hope both as respects ourselves and others. The discouraging views some religious and devoted people seem to think they are called upon continually to hold up, do not appear to me calculated to help themselves or the body. I have often been instructed in observing how little the first preachers of Christianity dwelt on their own trials,—on the contrary, how they endeavored constantly to stimulate those to whom they wrote to look towards the mark for the prize of their high calling. That discouragements abound we can not doubt; and they will thicken upon us in every direction if we are always poring over and magnifying them. Oh for more of the lively and efficacious faith that can remove mountains: for more of the spirit of love and of a sound mind!—*Maria Foz.*

Third Mo. 27th, 1841.

FROM THE CHRISTIAN ADVOCATE.

Some Peculiarities of Ceylon and of the Singhaless.

BY BISHOP C. H. FOWLER.

It seems hardly unusual to see people clothed with the minimum amount of cloth. This *sparseness* abounded in Japan and Southern China. One soon substitutes a good coat of tan for a coat or dress of cotton, and instead of criticising the native as a "naked barbarian" one winks away the streaming perspiration and thinks "how barbarous to wear such heavy clothing under such a sun." We are still prejudiced in favor of clothes.

When you come to the tropics bring your lightest, coolest clothing. The little children wear only jewelry; rings on the fingers and on the toes, and on the wrists, and on the ankles, and on the arms, and on the neck, and in the ears; in the top, in the middle, and in the lower end of the ears; and in the nose, on its sides and in its centre, and around the hips. This ring around the hips suspends a little shield, heart-shaped, two inches in diameter in fig leaf fashion. This jewelry is brass or silver; and with no other clothes, the brown little girl seems perfectly contented and happy. The women have a modest dress that exposes only the arms and lower part of the limbs and feet. One smiles to see a man, fully clad in pants, coat and regalia of office, sashes and epaulettes, with hair knotted behind the head and held back from the forehead by a circular comb of tortoise-shell, carrying himself like a prince or a steamboat captain, while his bare feet slip round in the fresh mud like the feet of young ducks. The native brown men look like most elegant specimens of bronze statuary.

We drove to the far-famed "Cinnamon Gardens of Ceylon." In appearance they are very like the hazel brush of the North-west, though their leaves are more rich and glossy. The bark is pure fresh cinnamon. The thought that cobras inhabit these places, and that the cobra's bite is yet incurable, made us contented to sit in the gharry, and allow the guide to pick some cinnamon branches, and knock the ants from them. These gardens are quite remunerative. The drive over a perfect road, winding through the gardens for miles, rests one rapidly after so many days of the sea.

Returning from the gardens we drive into the spacious grounds of the museum. On entering the elegant modern European building, we are confronted with native weapons and shields and bronzes in the hall. Here we see the precious stones of Ceylon—catseyes, rubies, sapphires, and pearls; also jewelry and coins. The collection is young and promising.

On the upper floor of the museum are seen some good zoological specimens. The spotted shark caught near Colombo measures twenty-three feet in length and thirteen feet in circumference. It is not a man-eater. Elephants abound skeletonized. One skeleton has the bad record of having killed ten men while being captured. Parrots of many kinds, but all speechless, sit on their silent perches. Monkeys seem ready to do everything, yet they never pass beyond being ready. Cobras with their hoods held aloft seem ready to show their length. Wild hogs vie with cheetahs in fierceness. Alligators, centipedes, and scorpions add to the unpleasant proofs of possible peril. After examining a case of venomous tropical insects, one is quite careful to look through his clothes before

putting his limbs through them. It is a relief to turn away to the long cases of wonderful and beautiful butterflies. Brazil is the land of butterflies, but we think Ceylon surpasses even Brazil in the size of its moths and the beauty and variety of its butterflies. There are classified twelve hundred varieties. Of these six hundred are peculiar to Ceylon. One covets the leaf-insect, five or six inches long, and quite like a frost-biten oak-leaf in appearance. Japan has fine varieties of butterflies, but nothing to compare with this steaming island.

On the porch is coiled up a ratan about an inch in diameter and four hundred feet long. There stands a marble Buddha showing quite good work for a generation five centuries before Christ, whose descendants can show nothing worthy of being called civilization. A mammoth granite lion many centuries old stands as an ancient prophecy of the coming of the real lion from Britain. Near Colombo, on the way to the great Buddhist temple, one experiences a new sensation in crossing a bridge of boats. It is four hundred and ninety-nine feet long, was built in 1822, and is not affected by the rain-fall.

Out in the center of the island one sees the great tea plantations. The bush grows about as large as our sage-bush on the plains, namely, two or three feet, or even four feet high. It is a dark green. The new leaves are a lighter color. The field is picked every week for nine months in the year. It is then trimmed; that is cut down very much as our hedges are trimmed down in the North. After trimming it takes some time for it to grow out again. In picking the design is to leave one small leaf and half another on each branch. The tea costs about 20 cents per pound when ready for the market.

Coffee plantations are fading out of the island. The bushes or trees had two severe trials with disease some years ago, but lately another enemy has proven too much for the industry. Just as land trees of one kind or trees, as oak or pine, and lets it die and produces another kind, so nature seems anxious to change off the coffee, and tea is coming in its place; that is, thrives under culture where the coffee died.

The acreage of the crops of Ceylon is reported as follows: Tea, 150,000 acres; coffee, 100,000; rice, 700,000; other grains, 150,000; coconuts, 450,000; other palms, 130,000; cinchona (quinine tree), 35,000; cacao, 13,000; cinnamon, 35,000; fruits and garden produce, 300,000. Thus three-fourths of the island are left for elephant and cheetah jungles, and for mountain ranges, and for untamed men, some of whom live in primitive barbarity and fierceness.

About the hotel on steamer days collect the race of dependents and beggars, who live on bananas and globe-trotters. They bow and beg, saying, "Dear Papa, I no got any papa or mama but you. Give your poor boy some money." This sounded odd when addressed to Carl, my fifteen-year-old son. Again they dance up a basket, saying, "Big cobra, see him dance." In a minute the basket is down, the man is playing on a reed instrument, and the hooded cobra (the most deadly kind) is swaying his head right and left with the music. One feels disgust and respect mingled for men who can perform such works.

The Rev. Mr. Bestall, Wesleyan missionary in Kandy, told us that his servants reported seeing a cobra in his grass field. After this had been seen several times he went for a snake-charmer, who came, and with his pipe played, walking back and forth over the field. At last he said, "There is a cobra here; I hear him." Soon the cobra came out of some bushes, and

rose up before him, swaying his head with the music, evidently charmed. Presently the cobra started off, the man darted after him, caught him by the tail with his left hand, slipped his right hand up the snake's body and caught it tightly about the neck, and carried it out of the field. Mr. Bestall kept it a few days and killed it. He said it was hard work to get the cobra from the charmer. The man was a Buddhist, and called it the "good snake." He believed it had a god in its head. Nothing less than a God could be so deadly.

A guide at a Buddhist temple, the Kelani, the seat of purest Buddhism, when asked, "If you saw a cobra killing a man, would you kill the cobra?" answered, "No; the cobra is god." "A cobra is very wisdom." In that temple we saw great images decorated with cobras for crowns and necklaces, and called the king and queen of the cobras. The old serpent has a strong hold of this world. He often appears as an angel of light. The Gospel and more knowledge must save these superstitious people from these deep distempers.

One occasionally sees a native with a mongoose, a small animal about as large as a wharf rat, built like a weasel, and colored much like a gray squirrel. This animal kills cobras for a pasture. For the price of a tame cobra the man will exhibit the fight. It always proceeds to the finish—the finish of the snake. The Gospel is the enemy of superstition and sin; with half a chance it will rid the world of these evils and curses.

Extracts from the Memoranda and Letters of Ann Watkins.

(Continued from page 1.)

My husband followed his business during the winter and spring, and his labors, I believe, under the Divine blessing, laid the foundation of our future success; but not so was it then apparent. In the Fifth Month my husband again went to London, but returned in about three weeks, and informed me that he had resigned his appointment, or rather, that there was not the means to carry it out, and that we must immediately prepare for our return to England. Startling as was the intelligence, I rejoiced, little dreaming of the trials that awaited us.

By the end of the same month, I left with my three children, after having made satisfactory arrangements with those who were about us.

The missionary or man of Christian influence visiting these parts, having letters of introduction, can, I think, form but little idea of the extent of the evil that abounds; then how much less able to apply the remedy. Laws, religious, civil, and military, prohibit much freedom, and hence a kind of spiritual slavery. Catholics and Protestants mingle together in social life, but for what purpose? To carry on pleasurable pastime and to fritter away time. Altogether a safe policy to secure peace as regards this world; but what is it in competition with Eternity? The leaders cause them to err and the people love to have it so. My heart is, and was sad; finds, and found, a refuge only at the footstool of Infinite Mercy, and takes comfort in the renewed, inspired hope, in the renewed, firmer belief in prophetic declaration that the knowledge of the glory of the Lord shall cover the earth, as the waters cover the sea; gradual in its unfolding, gradual in its workings, but certain and sure.

To know a people, we must live amongst them, associate ourselves with them in their every-day life, sympathize in their trials, their afflictions,

and their oppressions. To the poor, nothing is so illustrative of genuine religion and morality, as a consistent life and conversation. Words of the simplest character, unaided by forms and ceremonies, illustrating the Truth as it is in Jesus, are the most likely to meet their understandings. Step by step they need helping forward in the way to the kingdom. Many, no doubt, of the middle class would be glad in their hearts to shake off the trammels of Popery; but then there is the same fallen nature to contend with as in us all, a need of adherence to right principle; these need help. And what shall I say of those (the priests?) who apparently live by the death of others? They are as the ancient Cretans spoken of in the epistle to Titus, and need the sharp threshing instrument as a rod of discipline. And who is sufficient for these things? There is the declaration, Read it, O my soul, for thy comfort, and add to it thy fervent petitions, "I (the Almighty) will work, and who (or none other) shall let or hinder it." Christian traveller, as thou readest prophecy and art favored to imbibe any portion of its spirit, when thou readest the public records of the day, thou wilt regard with an understanding given thee from above, that wondrous working power that is causing, (by slow process, it may seem to thee) by his wisdom and discretion, the kingdoms of this world to become the kingdom of our Lord, and of his Christ. Praises, high praises, to his name forever!

TO HER SISTER S — K —

ALBION LIBRARY, BRUGES,
Fifth Month 21st, 1850.

To describe my feelings since being on the continent would be to say that I feel a stranger in a strange land; a stranger to its customs, habits and manners; everything and everywhere altogether strange and ungenial; disgusted with almost all I see and hear; have, however, to remark that I believe Divine goodness to have at times been very near and precious; and, unworthy as I feel, have been constrained to acknowledge Providential care.

After the return of the family to England, they met with some disappointments in their business prospects, which were hard to bear; of their situation at that time, Ann Watkins thus speaks:

This placed, we now had to begin life as it were over again. Many expedients were resorted to, but all seemed to fail; and we mingled our tears and prayers together, and felt that it was truly needful to walk by faith, even in the transaction of business affairs. We were at times in such outward straits as not to know where to look except to our Heavenly Father. He was merciful and gracious to us, meeting our requirements according to our need, and so remarkable were the interpositions of his Providence that I used to say, as surely as Elijah was fed by the ravens in the season of famine, so surely did the Almighty regard us in our low estate. Very painful and trying was our experience, and we were taught and brought to feel, in this season of affliction, that our help was in Providence alone.

One morning my husband returned home very early after breakfast, and sat down overwhelmed with discouragement. In vain I endeavored to rouse him (he had not told me that he was ill), I became alarmed, and ran across the road to enquire of a neighbor if she could recommend a

doctor. In a short time my W. said he must go to bed. The doctor came and pronounced it to be a case of rheumatic fever. I had several months of nursing before me, and could not afford any help, except a woman every fortnight or three weeks to wash for the day, besides a little nursemaid I had brought from the country.

We were mysteriously and wonderfully dealt with, and also very graciously. My faith was very often tried. At one time we wanted a dinner; it was sent, and that enough for twice. One First-day morning a basket of five loaves was brought to our door; at another time a quantity of groceries and preserves; at others wearing apparel; and so broad were the sympathies of our Friends, that in sixteen months we had received from time to time, sometimes in very small sums, as much as £40, just so much as was needful for our help until we were in a capacity to help ourselves. But between these receipts my faith was often closely tried, being not unfrequently reduced to the last shilling. Often have I retired from my family to wait upon the Lord, sometimes with a petition and at others with but the weight of my spirit's grief; and He who hears the sighing of the poor and the crying of the needy, instructed me to place my daily dependence upon Him.

In speaking of the dinner which "was sent and that enough for twice," A. W. refers to an incident which occurred when her husband was ill with rheumatic fever, and which she often related. One day, when he was feeling a little better, he made the remark that he thought he could eat a dinner if it was something very nice. He asked her what she had provided, but it was quite unsuitable for an invalid, and, much to her sorrow, she had not the means to procure anything better. While she was thus lamenting her inability to get him what he wished for, someone came to the door with a large plate of turkey, which was just what he could enjoy. It proved to be the turning point of his illness, and from that time his appetite and strength returned.

It may be easy to read these few remarks, and indeed, under the weight of that season of conflict, would I scarcely allude to it, were it not in the hope that my children or any to whom these lines may come, may seek to feel after a state of daily dependence upon the Source and Fountain of all our sure mercies. In the time when the aspect of the inward and the outward is comparatively smooth and untroubled, how sweet to feel the canopy of Divine quiet and humble assurance; how much more in the hour of deep conflict and extremity do we witness the healing virtue and all sufficiency of that Power, which is not only able and willing, but does administer to the comfort and help of his needy and poor children, as it is prophetically recorded,

"He shall deliver the needy when he crieth; the poor also, and him that hath no helper. He shall redeem their soul from deceit and violence; and precious shall their blood be in his sight. His name shall endure forever; his name shall be continued as long as the sun; and men shall be blessed in Him: all nations shall call Him blessed."

(To be continued.)

To repress a hard answer, to confess a fault, to stop, whether right or wrong, in the midst of self-defence in gentle submission—these sometimes require a great struggle for life and death, but these three efforts are the golden threads with which domestic happiness is woven.—*Selected.*

FOR "THE FRIEND."

The Word of His Patience.

The term Word, as used in the Scriptures, seems to have a variety of metaphorical meanings. It is frequently used as a teaching and leading power, which would lead us, if we would follow it, into the lost paradise of God. It appears that man after his creation, soon lost by voluntary disobedience to the Divine commandments, the glory and honor and immortality that was designed for him if he had stood the test. But there was, in mercy, a way provided for him to be restored, and regain that which he had lost by disobedience. But he was still to be tempted and tried. For our Saviour said, after He himself had taken flesh and dwelt amongst us, and after He had been tempted and tried: "In this world ye shall have tribulation," but He adds the encouraging language, "Be of good cheer, I have overcome the world." And He says to one of the seven churches of Asia, "Because thou hast kept the word of my patience, I also will keep thee from the hour of temptation which shall come upon all the world, to try them that dwell upon the earth." So we all have to be tempted and tried; but if we keep the word of his patience, and lean not too much to our own understanding, we shall be kept from falling, and in the end receive the crown of life which is laid up for those who endure temptation. So let us not cast away our confidence, which has great recompense of reward; for in due season we shall reap if we faint not. But we have need of patience, that after we have done the will of God, we might receive the promise. But if any man draw back my soul shall have no pleasure in him. For it had been better for such not to have known the way of righteousness than after having known it to turn from the holy commandments delivered unto them. So we have need of patience, that after having done the will of God we might receive the promise.

So let us run with patience the race that is set before us, looking unto Jesus, and not to man, who is unstable in all his ways. It is written "He that believeth shall not make haste," And David said, "I waited patiently for the Lord and He inclined unto me." And I believe if we, in our meetings for worship, would more patiently wait for the arising of his power, with our expectations more upon Him, and less upon outward helps, that He would more often incline unto us, and hear our cries for pardon and help, and establish our goings. But when we see some turning the leaves of their Bibles, and others of their song books, where is their faith? And when we see a minister arise with Bible in hand, does it not look like he wanted the letter handy in case the spirit should fail? Where is his faith and the word of his patience in waiting for the spirit! May "the Lord direct our hearts into the love of God, and into the patient waiting for Christ." But a patient, lifeless, waiting of itself will not do. We must add to patience, godliness, brotherly kindness and charity. Then we should find that the Lord is good to them that wait for Him. To the soul that seeketh after Him. It is good that a man should both hope and quietly wait for the salvation of the Lord. It is good for a man that he bear the yoke in his youth. He sitteth alone and keepeth silence because he hath borne it upon him."

But it is also good that our patient waiting does not degenerate into a dead silence instead of a living one. For it was while men slept that the enemy sowed his tares. And if we let a dead silence get the ascendancy, we may "fall into divers temptations," and prevent patience

WAR DISENCHANTED.

REVISED AND ENLARGED BY E. F. MARVIN.

"War is the business of barbarians."—Napoleon Bonaparte.
"I hate war."—U. S. Grant.

A gallant form is passing by,
The plume braves o'er his lordly brow,
A thousand thoughts that raised on high,
His song of triumph now,
Young knees are bending round his way,
And age makes bare his locks of gray.

Fair forms have lent their gladdest smiles;
White hands have waved the conqueror on
And flowers have decked his path the while,
By gentle fingers strown.
Soft tones have cheered him, and the brow
Of beauty beamed, uncovered now.

The bard hath waked the song for him,
And poured his boldest numbers forth.
The winecup sparkling to the brim,
Adds frenzy to the ardor;
And every tongue and every eye,
Does homage to the passer-by.

The cannon thunder strikes the ear,
An martial strain thro' the victory blend;
"Nearth battle flag the 'Men of Peace,'
Their benediction lend
To Pagan trophies of sabre sway,
With fronts of brass and feet of clay.

The gallant steed treads proudly on;
His foot falls firmly now, as when
In strife that iron heel went down
Upon the hearts of men;
And foremost in the ranks of strife,
Trod out the last drop of the life of life.

The warrior's stormy voice is heard,
To lend the charge with wraithy mien,
And brothers join in carnage dread,
Till darkness shrouds the scene,
Mid oaths and groans and cries to God,
And garments rolled in vital blood.

Dream they of these—the glad and gay,
That bend around the conqueror's path,
The horrors of the conflict day—
The gloomy field of death—

The ghastly slain—the severed head—
The mourners weeping o'er the dead?

Dark thoughts and fearful yet they bring
No terrors to the triumph hour,
Nor stay the reckless whirling
Of blended crime and power.
The fair of form, the mild of mood,
Do honor to the man of blood.

Men—Christians! pause—the air ye breathe
Is poisoned by your idol now,
And will ye turn to him an wreath
Your chaplets round his brow?
Nay, call his darkest deeds sublime,
And smile assent to giant crime!

Great King of Peace, whom we adore,
Look down with pity from above;
Oh, lift the awful curse of war,
And reign in peace and love.
Oh, come, Lord Jesus, quickly come,
Erect thy Kingdom and thy Throne!

—American Advocate.

AFTER having long spent much strength and labor to little purpose, I was one day lamenting before God, as I walked to church, the little fruits of my exertions. As I went along I was overtaken by a vine-dresser, who was going the same way. I took an opportunity of asking him how the missions were liked, "Sir," replied the peasant, "we all feel obliged to you for your kind intentions; we are all likewise sensible that everything you tell us is good, but you preach too long. We ignorant boors are just like our own wine-vats; the juice must have plenty of room left to work; and once filled to the brim, if you attempt to pour in more, even if it were the very best juice in the world, it will only be split on the ground and lost."—*M. Vincent.*

from having its perfect work. For we may give encouragement and support to the tares, which so much resemble the wheat, but only choke it and make it unfruitful. But the labors of those amongst us who resemble the tares may have a show of wisdom, in will worship and a voluntary humility which deludes the people, and satisfies them with the form of godliness without the power; as there is no waiting for the arising of the power in it.

But while I am speaking in favor of keeping the word of God's patience, I remember that there is a patience or indolence belonging to the natural or unrenewed man, which has the savor of death unto death, while the word of God's patience has the savor of life unto life. So I believe there is a false as well as a true in every thing pertaining to religion. A false rest and peace, and patience as well as a true. And God has promised to shake not only the earth but also heaven; and the false rests which Milton calls the paradise of fools. And I believe that there is a wonderful shaking on hand now, in which every thing that could be shaken will be removed, and that only which cannot be shaken will remain. But Babylon is built very much in the likeness of Zion, but by a far different spirit. And have we not Babel builders now, saying in effect one to another, let us build us a city and a tower whose top may reach to heaven, and let us make us a name. But are not such builders leading us into confusion? And are they not using many human props to keep us from falling, but which only add to our weakness? So without the interposition of Almighty power, our former building seems doomed to fall, and become the habitation of many unclean and hateful things. Brethren, these things ought not so to be.

DUBLIN, IND., Sixth Month 14th, 1889.

FOR "THE FRIEND."

Look through the different systems of organic life, and what do we behold but the most profound order and even mathematical exactness. See the various organs and functions placed in the same relative position, all beautifully and wonderfully adapted to the same relative purposes.

Through the different orders, genera, species and varieties of the fauna and flora of our earth, behold the marvellous economy of reproduction, each one producing nothing but its own original type. Bounteous feeding may develop greater growth or famine, and stint may dwarf the same class of beings down to mere pigmies, but still they show distinctly from where they originated; we may force a hybrid, but here nature rises up and asserts her laws, for here sterility begins.

In geology it is a most beautiful and interesting study to trace in hieroglyphic biography the same symbolical records written by the hand of the Almighty through each succeeding period, however short or however vast, from the primary gneiss and limestone to the alluvium of the present time, a mighty volume which every student of nature can read and interpret for himself.

Through the various features of nature, animate or inanimate, from the greatest to the most minute, what are the most striking lineaments that present themselves? Are they not government, order, adaptation and design? Who taught the bee the principles of the greatest economy of space? or instructed the spider in the construction of her true parallelograms? who showed the bird the approach of the change of the seasons and ordered his flight with the sun? In blinding darkness as in blazing day,
Guides the bold squadron in its trackless way.

"Twas He who hung these mighty systems of the universe in apparatus variety and whirled them with lightning velocity along the interminable path-way of heaven.

Even God alone the great creative source
Of life, of light, of being and of force.
Almighty author, all-sufficient whole,
Around whose throne these mighty centres roll.
Were every thought bright as the lightning beam,
With words of thunder, could we tell his scheme?
Where is the line at which existence ends—
Where! where the point where nothingness begins.
Say, where was water first obtained to sow
The seeds from which these mighty empires grew?
Even imagination's fruitful spring,
Cannot to aid us, one idea bring.
Our understanding was not made to soar
Amid the wonders of creative power.
It is a mighty man's wisdom cannot reach,
He cannot learn and therefore cannot teach.
The finest atom that may float around
As much a wonder as this vast profound;
To call from nothing one small grain of sand;
As to create this broad and fruitful land;
The slender flower unsheltered in the field,
As suns and planets heaven's high pastures yield;
The transient meteor swiftly shooting by,
As the bright comet flaming through the sky.
The subtle mind communicates its will
And teaches each nerve its function to fulfil;
And every muscle yields to the central soul,
As to crown all with an immortal soul,
All matter round us is from one great God,
Has been created, or has been forever:
One or the other of these only two,
Is all there is can possibly be true.
Admit the vast fecundity of heaven,
And all is lucid as the stars of even:
But blot that one eternal substance out,
And all is chaos, mystery and doubt.
Here we must rest, for all our powers combined,
Can never fathom the eternal Mind.
But if through mercy we should find the way
When passed the confines of earth's transient day;
Through these vast systems take our rapid flight
To brighter realms of uncreated light,
The soul enlarged perhaps may compass more
Of the deep wonders of creative power.

—CALEB S. COPE.

THE SHADOWY HANDS.

BY MARGARET J. PRESTON.

I watched him from afar, with eyes
That ached to see what perils lay
Closest along the jagged way—
What unsuspected ills might rise
To lure his ambushed feet astray.

I knew that he must press the path
Marked for each human soul, alone:
That he must meet the dangers strewn
Unhelped—that love the utmost hath
No charm against the tripping stone.

My lids were wet with anxious tears;
He dreamed not of the pitfalls spread
To trap his all too careless tread,
His thought was on the buoyant years
So flushed with sunshine overhead.

I could but fold my hands, and plead
That heavenly prescience, tender, sweet,
Would choose safe passages for his feet,
And, in his hour of straitest need,
Guide where the devious crossways meet.

But as I gazed athwart the night,
Whose doubt, like mists, around me clung,
The prayer was hushed upon my tongue:
Just where the way was blindest, light,
Star-like, was on a sudden flung.

And for a moment, circling round,
I felt the sweep of winged hands,
I saw the stretch of shadowed bands,
I heard a voice whose mystic sound
The rapt soul only understands:

"I charge you, bear him safely, lest
He dash his foot against a stone!"
The light was gone—the vision fad;
Comfort unearthly calmed my breast,
My darling did not walk alone!

—S. S. Times.

FOR "THE FRIEND."

When walking along the road leading towards Mt. Laurel, on the afternoon of the 12th of September, with the driver of a wagon, who had kindly invited me to take a seat in his vehicle. He spoke of a time, years before, when he was a thoughtless boy, and was in the habit of singing comic songs to his own amusement. One day, however, he had been indulging himself in that foolish practice, a person who had overheard him, called his attention to the unprofitable way in which he spent his time, and suggested that he should occupy himself with things of a more improving nature. This simple admonition made a considerable impression on his mind, and had been since profitably remembered. He added that he had learned to love the Saviour, and was trying to live so as to please Him. This little incident may prove an encouragement to some not to neglect what may seem very little services—*for we know not what blessing may accompany our efforts.* "In the morning, sow thy seed; and in the evening withhold not thine hand, for thou knowest not which shall prosper, whether this or that, or whether both shall be alike good."

My walk was enlivened by the motions and songs of the birds—Robins, Chimney Swallows, Sparrows, Maryland Yellow Throats, and Red-winged Black birds. These last build their nests in tussocks or low bushes amid the swamps, and when I was almost buried in the luxuriant vegetation of the low and marshy ground, a pair of these came circling over my head, and scolding, as is their custom, when any intruder comes too near the spot where their nests are placed and their young reared. The brilliant shoulder patches of vermillion red are confined to the male bird.

Perhaps the most showy of the flowers that in the marsh produced was the Turk's Cap Lily (*Lilium superbum*) with a number of orange colored bell-shaped blossoms hanging from its branches. This is the common species in our part of New Jersey. It differs from the *Lilium canadense*, which I had often found in Chester Co., Pa., chiefly, in having the petals of the flower more strongly rolled back; but the two species have a strong general resemblance, and are closely allied.

In one of the fields through which I passed were growing some of the Rough Cone-flower (*Rubbeckia hirta*), in which the dark-purple centre of the flowers prettily contrasted with the large deep-yellow or orange of the rays. But I was still more interested to find one of the plants, in which the flowers were without the rays, but their place had been taken by a row of green leaves surrounding the purple disk. It was a curious illustration of a well-known botanical fact, that the parts of a flower are modified leaves, and that under certain circumstances they will resume what may be regarded as their primary form. During the present season I had met with another illustration of this in a buttercup, in which some of the numerous stamens which the flower bears had been changed into petals, so that instead of one row, which this plant usually shows, there were several rows of the yellow petals. In fact, the plant had grown double; and this is an effect which has been produced on many plants by cultivation—such as roses, dahlias, chrysanthemums, &c.

A flower may be regarded as a modified branch of the plant, and its envelope and parts as leaves changed to adapt them to the purposes for which the flower is produced. This process

of modification or metamorphosis is traceable in all parts of the plant. "Thus," says Gray, "the same organ which constitutes the stem of an herb or the trunk of a tree, we recognize in the trailing vine, or twiner, spirally climbing other stems, in the straw of wheat and other grasses, in the columnar trunk of the Palm, in the flattened and jointed Prickly-Pear, and in the rounded, hump-like body of the Melon-Cactus. So, also, the branches harden into spines in the Thorn, or, by an opposite change, become flexible and attenuated tendrils in the vine, and runners in the Strawberry; or, when developed under ground, they assume the aspect of creeping roots, and sometimes form thickened root-stocks, as in the Calamus, or tubers, as in the Potato. But the type is easily seen through these disguises. They are all mere modifications of the stem. The leaves appear under a still greater variety of form, some of them as widely different from the common type of foliage as can be imagined; such, for example, as the thickened and obese leaves of the Ice-plant; and the intense scarlet or crimson floral leaves of the Painted-cup, and several Mexican Sages; the tendrils of the Pea tribe; the pitchers of Side-saddle flower and of the Nepenthes, which are leaf, tendril and pitcher combined. In our trees we trace the last leaves of the season into bud-scales; and in the returning spring we often observe the innermost scales of the expanding leaf buds to resume the appearance and the ordinary office of leaves."

In the bushy part of the swamp I was exploring were large numbers of the Swamp Rose (*Rosa Carolina*), with clusters of red flowers, the branches armed with rather stout and strong curved prickles. The stems which support the flowers, and the envelopes which surround them are covered with short erect hairs, whose tops are swollen into glands which secrete an odoriferous fluid.

Another shrub, generally growing out of the water, was ornamented with round balls of white flowers an inch or more in diameter. This was the Button-bush (*Cephalanthus occidentalis*).

FOR "THE FRIEND."

Friends. Their Early Faith. Is it Ours?

In reading the accounts that have come before me through various channels, of what has been and is taking place in different sections of our Society, my mind has been deeply impressed with the want of unity and harmony that now exists amongst us, so different from the condition of things that existed, when by the Lord's goodness we were gathered to be a people.

The want of the same living faith that animated our early Friends, has impressed me as lying at the root of the troubles that afflict us, and as the cause of so many deviations in practice amongst us.

If we would understand how we have lapsed from our first faith, we must be willing to go back and examine, in the light of truth, what the early Friends were gathered out of, and into what they were introduced, by the discovery of truth in their inward parts.

They were a people scattered up and down in the nation of old England, in a seeking state of mind, dissatisfied with the state of things that existed around them, and desirous of being brought into a closer acquaintance with the saving knowledge of God and of his Son Jesus Christ. Many of them sought to their fellows for counsel and instruction, to those accounted most learned in knowledge of Divine things, and

like George Fox, found them miserable counsellors, for the depth of yearning awakened in them was far beyond that which man could satisfy, but the Lord did satisfy the longing soul of G. F., and fill his hungry soul with his goodness, when He spoke the words unto him in his distress, "There is one that can speak to thy condition, even Jesus Christ."

Then it was that his mind was turned from man to man's Maker and Saviour, and it was then he was led to look up to God by a faith awakened in him of God's very nearness and presence, by which he realized a strength given enabling him to grasp the truth of God, in his ever readiness to help and sustain the trust of his trusting child.

And as like flows to like, so the like experiences in the many answered the one to the other, and they gathered as by one accord, to wait together upon Him whom their souls had thirsted after, and whom they found to be not far from any one of them, for in Him they verily moved and had their being.

This led from the outward form to the inner substance, and the blessed experience of the fulness that was to be known by silent and reverent waiting upon God, an ingathering of mind unto Him, to know his Spirit to subdue and control the roving mind, and to stay it in stillness and silent adoration, producing brokenness and contrition, as the sowing of themselves was given and a sense of God's unbounded goodness in Christ Jesus broke in upon their minds, so that the floors of their meeting-houses were often wet with their tears.

This was being brought into the experience of that living faith, which removes mountains of difficulty and opposition, and which enabled them to subdue all the suffering they did, as seeing Him who is invisible to the eye of the fleshly mind.

Being brought into a condition of dependence upon their Heavenly Parent, through the indwelling of Christ, they could no longer do as they listed or serve as they pleased, but in obedience were taught to wait for the leading forth of the good Shepherd, who had promised to go before his sheep, to lead and to guide in the way in which He would have them go; being thus led into a retiring disposition from the ways and spirit of the world, which were contrary to the purity and holiness of God.

The ground of all certain knowledge in the things of God, was to them by the Spirit of God. In the reading of Holy Writ, the true opener to their understanding was the same blessed teacher.

Then we see the necessity that was laid upon them to wait upon God, for the unfolding by the light of Christ in them, of knowledge to understand the mysteries of God's Kingdom, whose reign is in the heart, by which the life and conversation is regulated and controlled to the honor and glory of God. Apart from this, the profession of the name of Christ could do little for them, for it was by his life they were to be saved. And this was to them to eat the flesh of the Son of man and to drink his blood; and this, too, was coming to know his life broken for them by their being made partakers thereof; and this, too, was to know the one true baptism that doth save, which they proved to be by no elementary water, but by an effectual cleansing in the inward parts.

Thus did they come to know the law of God written upon the heart by the finger of the living God, and not only in a book as the Israelites of old did upon tables of stone outwardly, inso-

much that they could at all times and in all places meditate upon the law of God, and say in effect, how good is thy law, it is my meditation all the day and in the night season.

What placed such scholastically trained preachers, and such whose knowledge of Divine things could be bought by money and by study, have among such a people who had come to witness the fulfillment of the declaration, "All thy children shall be taught of God, and great shall be the peace of thy children?"

Such was their faith, and according to their faith they received immediately from God by his blessed Spirit, the teaching their hungering and thirsting souls needed, and were thereby fully satisfied.

What now is our condition, and what has brought us to our present low, divided and unsatisfying and unsatisfied condition, in the sight of God and man? What?

What was true of Israel of old, is true of professing Israel still, "Ye have," said the Lord, by the mouth of his prophet, "committed two evils, ye have forsaken me the fountain of living waters, and have hewn out to yourselves cisterns, broken cisterns, that can hold no water." This declaration doth reach down to the bottom of the malady and disease that is afflicting our whole people. For in proportion as we have turned to the teaching of man, and are found resting therein, and thereupon, have we turned aside from the true teacher and safe guide of our souls, and Him who alone can lead into paths of safety and of peace.

Whatever may have drawn us aside into by-paths and crooked ways, seeking an entrance into the kingdom other than by Christ and his crucifying power in the heart and soul, by which the unhallowed and ungodlike nature is crucified in us and taken away, are still but thieves and robbers; to such the porter openeth not, but such are permitted to gather in the outer court, and to please themselves with likenesses of the true. But it is the Bride that hath the Bridegroom, and these enter together into the inner chamber, and together they are still engaged with the invitation to the thirsty, seeking soul, turn in hither thou well beloved, leave thou the outer court, come thou to the Master's table, yea, eat and be satisfied, O, my well-beloved.

However humbling the process by which we may be brought, if *but* brought, into the presence chamber of the High and Holy One, what blessedness can be compared to it. Crosses, afflictions, trials, temptations, may abound, but the consolations of Christ and the ever-abiding Spirit of Truth, will still more abound unto and with those who are willing to press through all the crowd to touch the hem of his garment of mercy and compassion in that persevering seeking of soul that can be satisfied with nothing else, but the fulness of his grace that filleth all that is so emptied of self as to be prepared to be so filled by the fulness of his own presence.

As of old, so in the present day, there are very many who live and feed upon the experience of others, instead of pressing after the saving knowledge of God for themselves. These are the lean and barren souls who feed upon husks.

O that the awakening power and Spirit of the Lord might more and more bring us to a sense of our great need as a people, so that we might be led in secret to cry unto Him, under the sense and depth of our necessity, for then assuredly would the Lord hear our prayer, and give judges as at the first and counsellors as at the beginning, and Zion would then again rejoice, for verily our people would be fed, and that with the fin-

est of the wheat, and with honey out of the rock would He richly satisfy our souls.

When our Saviour appeared upon earth as a little babe, there were those who then waited for the coming of the Just One, and rejoiced in his appearance. There are those in these days whose longing is to know the power of Truth to break forth again in brightness and in beauty; among these, though the very least, the writer of this desires and seeks to be found, and with solicitude for his fellow-servants and travellers to a better country, seeks to do the little given him to do, to encourage to a faithful maintenance of dependence upon God, and his right and sovereign rule through Christ, by the Eternal Spirit, in the heart of the believer, keeping out of formalism which brings into bondage and the spirit of the world. As free men, yet not using our freedom to cloak unrighteousness, but as Christ's servants, ever ready to do his will in whatever way He may be pleased to call and to lead, so shall we glorify his holy name; and in the winding up of time, through his mercy may be known the joyous welcome of "Come ye blessed of my Father, inherit the kingdom prepared for you."

CHARLES W. THOMSON.

Seventh Month, 1889.

Natural History, Science, &c.

The Green Plant-Louse of Ohio.—This insect which has probably been introduced from Europe has wonderfully developed in Ohio the present year. It belongs to the same family as the green bushes, &c. It increases with wonderful rapidity plant-louse which infects all house plants, rose—a single louse in the spring may become an ancestor of millions by autumn. It feeds by plunging its beak into the stem and extracting the sap, and the grain, deprived of its nourishment, shrivels and is worthless. The wheat crop of Ohio has been seriously injured by it the present year. It has insect enemies which feed on it, and *Science* thinks, that by the end of the season, the outbreak will be so checked that there will be little danger of a repetition of the attack next year.

Curing Rheumatism by Bee-stings.—A Vienna paper says a Dr. Terc has been experimenting on the cure of rheumatism by bee-stings, with success. He has inflicted 39,000 stings, and keeps a colony of bees to be employed in this work.

Formation of Marshes.—The province of St. Petersburg is very rich in marshes covered with a thick carpet of vegetation, which conceals the water to the depth of several feet—sometimes twenty-five feet or more. Small lakes and branches of rivers are being continually transformed into such marshes. The pioneers in such transformation are flowering plants, whose roots and underground stems make a thickly woven floating carpet which soon covers the water. The water-moss (*Sphagnum*) soon invades this carpet; and when it has reached a certain thickness, buckelberry bushes, dwarf birch and other plants grow upon it.—*Science.*

The Lakes of San Joaquin Valley, California.—Owing to the diminished supply of water and the rapid evaporation of the three lakes in the upper San Joaquin Valley, they have shrunk greatly in size, and the water has become more strongly alkaline, so that in some of them the fish, turtles and even the mussels have died.

A comparison of an analysis in 1888 with those made in 1880, shows that the solid contents of the water in Lake Tule had increased very nearly two-and-one-half times. The fishermen state that

dead cat fish had drifted on the shore by the thousands. The perch, however, which they valued more as food, had apparently been but little affected. They are fine large fish, and when caught every one has a *shiner* in its mouth.

Poison in Cured Fish.—The Russian Academy of Sciences offers a premium of \$2500 for the best inquiry into the nature and effects of the poison which develops in cured fish. The competition is open to all inquiries, and the memoirs may be written in either Russian, Latin, French, English or German.

Diseases of Athletes.—People run away with the idea that gymnasts, athletes, wrestlers, are perfect Hercules, and cannot know disease, observes a Boston *Globe* writer. 'Tis a mistake. They undergo very universally, at times, severe tests of muscular exertion, and as a result of these efforts, combined with their irregular manner of living, are usually short-lived men, dying of phthisis and heart disease. Railroad employes are exposed to accidents, as well as various disorders of the nervous and circulatory systems, produced by the constant jarring to which they are subjected; in the case of engineers and firemen, by the sudden changes of weather, according to Duchesne, their health for the first few years improves and some gain flesh, but, to use his expression, they are as a rule tired out at 10 years' service, suffers at the end of 15, and after 20 years rarely are able to continue in the service. Many lose their eyesight, their hearing becomes dull, and pains in the lower limbs render walking or standing upright, tiresome and difficult. He attributes these symptoms to an affection of the spinal cord, produced by long standing and constant vibration of the locomotives.

Arrow Poison.—A letter from H. M. Stanley, read recently before the Royal Geographical Society of London, contained an interesting reference to the arrow-poison used by the natives on the lower Congo. Stanley says that several of his party, being hit by the arrows of the natives, died almost immediately, in great agony. The poison was found to consist of the bodies of red ants, ground to a fine powder, and then cooked in palm-oil. This mixture was smeared on the arrow-heads; its poisonous effects are due to the formic acid which is known to exist in the free state in red ants. This acid is also found in the stinging-nettle.

Items.

The Man or the Massacre.—"The statue," says the *New York Times*, "and erected in memory of Capt. John M. Doster of the Pequot Indians of Connecticut, and unveiled with imposing ceremonies at Pequot Hill, near Mystic, may be accepted as an honor to a brave and energetic officer who carried out in Cromwellian fashion the orders he had received. There appears to be a tendency, however, to assert a good deal more than this. Colonial historians describe the instances of murder and rapine on the part of the Pequots, in order to magnify the importance of Mason's raid and give some color of justice to the wholesale murder of men, women, and children surprised in their sleep. The wisdom of such claims is questionable, for they rouse people to examine the facts. Those who do not subscribe to the frontier maxim that 'the only good Indian is a dead Indian' are sure to be appalled as soon as they investigate the matter. And as if the past never could teach the present, our national treatment of the Indians has been a series of repetitions of the Massor affair—promises broken, charges trumped up, lands entered, outrages invited, and even some magnificent massacres. Truly it is needful to separate the man from the campaign, the individual from the greedy land grabbers whose toil

he was! Capt. John Mason may look in bronze upon a lovely stretch of counties from the height on which he stands, but if he can also look in spirit, and has learned anything during the last two centuries, he will curse the day when he set such an example to the following ages."

Of the justness of the cause, and friends of the Indian cause look with mixed pleasure upon the erection as that which now stands near the banks of the Mystic.

J. Russell Lovell, late U. S. Ambassador, on Anglo-American Arbitration.—"I cannot help thinking that the nation which invented government by friendly discussion and the nation which inherited the traditions and practice thereof are of all others the two which, after applying that method to the solution of the main question in dispute between them, should refer to an arbitrator the points about which they may still differ. Because England in the last century wished to rule as the colonies of all other powers were ruled; because seventy years ago she abused the pretension (then everywhere but here accepted as law) that to be born in a country involved the allegiance to that country; because she was the first to demand that the colonies should not forget that England has been and is, in the Old World, as truly the fortress and refuge of liberal thought and of a freedom both restrained and braced by law, as America in the New. To secure the largest infusion of Liberty which Order will bear, has been the aim of both countries. They may differ sometimes as to the relative proportion which should be given to the main ingredients of stable institutions should bear each to the other, and in special emergencies, whether, and if so, how much, it is desirable to increase the one at the cost of the other; but in essentials we are agreed.

"I can think of no greater calamity to the highest interests of mankind than that the heroic and kindred blood which has been so freely poured out in both countries in the cause of the rights and of the creed they hold in common, should be squandered in any fratricidal quarrel, dangerous to the very life of the theory of Government dear to both. Nor can I conceive of anything more fruitful of good consequences to the world, than that these two countries should be drawn even closer by mutual respect, and by sympathy in nearly related, or identical aims. Let them therefore, in the midst of that reasonableness which best befits and will best exemplify the height of civilization which they have reached, mainly in virtue of the political ideas they share.

"I know the difficulties in the way of establishing such a Court of International Arbitration, as is proposed, and of enforcing its decrees, if established. Do not believe them insuperable, and think that at least between America and England, such a tribunal would be feasible. Nay, I look forward with hope even to the day when every link in the chain of English-speaking communities which now girdles the globe with its channel of electric sympathy, shall have learned that the strength of each is involved in that of every other."—*Pa. Christian Arbitrator.*

Paul's advice to Timothy.—Paul's words to Timothy, on the wine question, are to be taken much as they would be if Paul had written, "Use a little essence of peppermint whenever you have another touch of cholera-morbus." They are words of medical counsel to a sick man. They go to show that a sick Christian ought to take medicine when he needs it; that wine is to be counted as a medicine; and that as such, as a medicine, wine ought to be taken very sparingly. The idea that these words of Paul justify the use of intoxicating liquors as a beverage is not worthy of a decent respect as our opinion, even though it were backed by ten sanhedrins of theologians. Paul also told Timothy to bring with him a cloak and some books. Who would claim that Paul enjoined it upon every minister to carry a Bible, and some water, and some bread, with him whenever he moved about on a clerical mission? When Mr. Gough was asked why he did not follow Paul's advice to Timothy on the wine question, his sensible answer was: "For two reasons. In the first place my name isn't Timothy. And, in the second place, nothing is the matter with my stomach."—*S. S. Times.*

Election of a Priest.—*The Rock* gives an account of a very curious case of popular patronage in a part of Birmingham, known as Deritend. According to the conditions on which the Church of St. John's was endowed, all householders are entitled to a voice in the choice of rector or incumbent. At a recent election there were three candidates—an old resident, the Rev. J. C. Sneath, the Rev. L. H. Davies, who "dropped down from the skies" upon the wondering electors, and the Rev. J. O. West, a "laborious, devoted" curate at Sparkbrook. Mr. Sneath was suspected of being a ritualist, but in his speeches—he made a campaign of it—he strenuously denied the impeachment. Among the inducements he presented to the electors to vote for him were, that he had "a most expensive commodity as grown-up daughters," (alluding to the grown-up daughters of the former incumbent); that he would not live at a distance from the church, as did the former chaplain; that he would have the "best curate money could procure;" and that he would entertain his friends, if elected, with "no dinner of six courses," but with a plain joint and a pudding, on the basis of the more recent, "no grown-up daughters or puddings," but gave the electors to understand that he was bent on reform. He hung the changes against "sleek deans and gaitered cacons," thus indicating that he would cultivate neither sleek nor gaiters. As to Mr. West, says *The Rock*, his "addresses were unfortunately more like sermons than election addresses," and they rested on the basis of the more recent. But he won notwithstanding. The poll stood: West, 6,972; Sneath, 5,938; Davies, 167. Evidently the people did not want a reformer. Each candidate was at an expense of from \$1,000 to \$1,500, "much mud was tossed about," and much "ill-feeling" was created. The yearly income is \$2,250.

THERE are two great extremes which many run into concerning the Holy Scriptures, in this our day; the one is, in those who think to have eternal life in the Scriptures—where it is not to be found (but in Christ); the other extreme is run into by profane persons who do not value them and esteem them as they are truly worthy, but in their pride and presumption, greatly slight them.—*Wm. Gibson* in 1678.

Agents.

It is requested that the following corrections be made in the List and post-office addresses of Agents, published last week:

Substitute the name of John Blackburn, in place of William H. Blackburn, E. Carmel, Ohio; the name of Asa Ellis, Westfield, Hamilton Co., Indiana, in place of Asa Ellis, Westfield, Hamilton Co., Indiana, in Anna E. Crawford change to Peterboro, Ontario.

THE FRIEND.

EIGHTH MONTH 10, 1859.

When the Christian is given with the many proofs that present themselves to his notice of the abounding of evil in the world, it may well reflect on the gracious promise and exhortation of the blessed Saviour, "Peace I leave with you, my peace I give unto you; not as the world giveth give I unto you, Let not your heart be troubled, neither let it be afraid." He who hath all power in heaven and on earth is able to control all things, and to make his cause to prosper according to his own all-wise plan; and man of himself can do nothing to hasten his work.

The success which attended the labors of the early ministers of our Society was very remarkable—at times, hundreds would be convinced in a single meeting, and turned to Christ within as their Heavenly Teacher. This was chiefly due to the unusual extension of Divine power, for it

was a time of renewed visitation to the people of England. These ministers well knew that it was not because of any ability of their own—but that the praise of his own work must be ascribed to the Lord of all. And feeling their dependence on the fresh extension of help from on high, they were careful to wait for a renewed command before venturing to go forth in the Lord's cause. Thomas Wilson, one of the eminently gifted among the early Friends, mentions, that when travelling in religious service in Ireland, "the motion of life in me for travelling ceased, and I durst go no further," and so he courageously "harvest work." And when a Friend in the army wished him to go along with him as a companion, he says, "I told him I durst not go, because the Lord had taken away the motion of life from me, and I must wait on the Lord to know his blessed will and good time, so I staid at my work."

We doubt not, that this honest-hearted servant of the Lord in this day, who are concerned to labor in the Divine fear, and in obedience to the Divine command, at times feel discouraged at the little permanent fruit or good results that are apparent from their efforts. Yet, such ought not to give too much place to despondency. "It is required of stewards, that a man be found faithful;" and if they faithfully follow the leadings of the Head of the Church, they will not miss their own reward of peace, and the Lord will bestow such a blessing on their labor, as He may see meet.

The foundation of all true religion is the revelation of Christ to every individual soul. This revelation is often manifested without human agency; and without it, all "evangelical work," or "missionary effort," will avail nothing to promote the kingdom of Christ. But may we not hope the time will come, when the Lord's work shall be more evidently seen, and "the plowman shall again overtake the reaper; and the treader of grapes, him that soweth seed;" and the hills shall melt and the Lord will have the praise in all places of his dominion? The Lord alone shall be exalted in that day."

SUMMARY OF EVENTS.

UNITED STATES.—A despatch from Victoria, B. C., announced the arrival there on the night of Eighth Month 3rd, of the schooner Black Diamond, seized in Behring sea by the United States revenue cutter Rush. A seaman was put aboard of her from the Kush, as sailing master, with instructions to take the vessel to Sitka, but the captain of the Black Diamond took her instead to Victoria, and the "prize crew" did not interfere. He was kindly treated, however, by the schooner's crew.

The business portion of the city of Spokane Falls, near the eastern border of Washington Territory, was completely destroyed by a fire which broke out on the night of the 4th instant. Twenty-five blocks, including all the public buildings and the Northern Pacific Railway freight warehouse and station, were burned, and the total loss is estimated at \$14,000,000. There were no fire engines in the city, and the Volunteer Fire Department had to depend on the firemen's personal exertions. The fire spread with such rapidity that a number of persons are believed to have perished.

Forest fires continue without abatement in Montana, and the smoke is so thick that at Helena the sun has been visible for only six days. The ordinary pressure of all kinds of property are estimated at \$500,000.

On Seventh-day evening, the 27th ultimo, Chicago was visited by severe wind-storms, causing the loss of about 20 lives, and of property estimated among the millions. A falling building crushed a cottage occupied by four families, killing eight persons, and injuring four others so seriously that two of them subsequently died in the hospital. It is said to have been the worst storm Chicago has ever known.

During last week heavy falls of rain in the Middle States caused great damage in New Jersey, New York,

Delaware and Pennsylvania. Northern New Jersey being apparently the chief sufferer. Fortunately no loss of life is reported. The heaviest loss in New Jersey falls on the county of Burlington, which has had three bridges, large and small. Some of these bridges cost at least \$10,000, and will have to be entirely rebuilt. This will entail an expenditure of at least \$50,000, and add very much to the burden of taxation. The farmers also say the outlook for them is particularly gloomy.

Coal fires were kindled in a fire-damp explosion in a Scranton (Pa.) coal mine, on the 24th ult.

The mules in several coal mines at Scranton, Pa., are to be superseded by electric motors.

The need of a new postoffice building for New York City has been pressed upon the attention of the Postoffice Department.

It's estimated that the Texas cotton crop will be worth \$34,000,000.

On the 1st instant the British steamship Westbourne arrived in this city from Carthagena, after a stormy passage of 22 days. She encountered mountains seas washing on board from every quarter, filling the stoke-hole and cabins, smashing the hatches, ventilators and life boats on the port side. Oil was used to still the waves with marvellous results.

Construction of the Rockcreek Sugar Refinery, at Reed Street wharf, in this city, is to be duplicated after the present buildings are completed, about the first of Ninth Month. This addition, it is announced, will give the doubled refinery a capacity for producing 4,000,000 pounds of sugar annually. It will also increase the amount of capital invested to about \$1,000,000 to \$5,100,000. The contract cost of finishing the first set of buildings, independent of the improved and costly machinery, is estimated at about \$1,500,000.

Deaths in this city last week numbered 442, which is less than during the preceding week of 420, less than during the corresponding period of last year. Of the whole number 212 were males and 230 females; 166 were under one year of age; 55 died of cholera infantum; 41 of marasmus; 41 of consumption; 28 of cancer; 25 of diseases of the heart; 25 of inflammation of the stomach; 22 of pneumonia; 16 of typhoid fever; 17 of inflammation of the brain; 16 of incontinence; 16 of pneumonia, and 12 of debility.

Markets.—U. S. 4 1/8, 119, 120, coupon, 107 1/2, 4 1/2; currency 65, A's, 135.

Grain.—Wheat, to supply and firm at 1 1/2 cts. per pound for middling upland.

REFINED SUGARS were firm and in fair demand. Wholesale prices were 9c. for cubes, 9c. for powdered, 8 1/2 c. for granulated, 8 1/2 c. for crystal A and 8 1/2 c. for confectioners' A.

MEAT AND MEAL.—Western and Pennsylvania super, \$2.75 a \$3.00; do., extra, \$3.10 a \$3.30; No. 2 winter family, \$3.40 a \$3.75; Pennsylvania family, old, \$4.00 a \$4.25; Pennsylvania roller process, old, \$4.25 a \$4.75; Ohio, clear, \$4.25 a \$4.65; do., straight, \$4.75 a \$5.00; Indiana, clear, \$4.15 a \$4.65; do., straight, \$4.45 a \$5.00; St. Louis and Southern Illinois, clear, \$4.25 a \$4.65; do., do., straight, \$4.75 a \$5.00; winter patent, fair to choice, \$5.00 a \$5.50; Minnesota, clear, \$5.50 a \$4.25; do., straight, \$4.50 a \$5.50; do., patent, \$5.50 a \$4.25.

GRAIN.—No. 2 red wheat, \$1.54 a \$1.84 cts.

No. 2 mixed corn, 34 1/2 a 44 cts.

No. 2 white oats, 31 1/2 a 32 cts.

BEEF CATTLE.—Extra natives, 5 cts.; good 4 d, 4 1/2 cts.; medium do., 4 1/4 cts.; common do., 3 d, 4 1/4 cts.; Texas, 3 1/2 cts.; Fat cows, 2 1/2 a 3 1/2 cts.

SHEEP.—Extra, 51 cts.; good, 4 1/2 cts.; medium, 4 1/4 cts.; common, 3 a 3 1/2 cts.; culis, 2 a 2 1/2 cts.; Lambs, 34 a 37 cts.

HOGS.—Good light western, 61 a 67 cts.; heavy western, 25 to 25 1/2 pounds, 61 a 67 cts.; extra heavy western, 60 to 65 cts. per hundred.

FOREIGN.—The Royal Grant bill was passed by the House of Commons on the afternoon of the 5th inst.

The Emperor of Germany, now on a visit to England, reviewed the British fleet at Portsmouth, on the 10th inst. He was crowned upon his grandmother, queen Victoria, the honorary title of commander of the Berlin Dragon Guards.

On the 3rd instant a battle took place between the Egyptian troops under General Grenfell and the derwishes near Wad-el-Jumi, near Toki. The derwishes were completely routed. Out of the 6000 men which Wad-el-Jumi took into battle only a few remain. These are being pursued by Egyptian cavalry, and a column under colonel Wedohouse has gone to Abusimbel to head off the retreating derwishes. Every Egyptian army derwish has been killed. The bodies of several hundred derwishes and a large num-

ber of wounded, making a thousand in all, have been brought into Toki. Refugees are arriving at that town. Egyptian loss in the battle was 17 killed and 130 wounded. Three British soldiers were wounded. The lot of captured arms of France for the Councils General is as follows: General Boulanger, 168,000; Republican candidates, 1,500,000; Reactionist candidates, 600,000.

The shah of Persia is visiting the French capital, and has been pleased with the attention shown him.

Two French men-of-war have been ordered to proceed to the Island of Crete.

Snow-storms and icy rains prevail throughout Switzerland. The mountain passes are partly blocked. Extensive losses are reported in Silesia.

The lot of captured arms of France for the Councils General is as follows: General Boulanger, 168,000; Republican candidates, 1,500,000; Reactionist candidates, 600,000.

According to the Calcutta correspondent of the London Times, a herd of 100 wild elephants have been captured in Mysore. The same correspondent states that there were 6000 deaths by snake-bites in the Northwest provinces last year. In the Madras, 10,096 cattle were killed by wild animals, and the loss of human life, 22,000; 60,000 animals were also killed.

Despatches received from Nagasaki states that a dreadful earthquake has occurred in the western portion of the Island of Kion Sui. The town of Kumamoto was destroyed. Thirty persons were killed and eighty injured; a vast amount of property was also destroyed.

FOR "THE FRIEND."

Incidents and Reflections.—No. 184.

COURAGE.

There is something very admirable in that courage which impels a man to the performance of his duty, no matter what dangers may be in the way, or what suffering may be occasioned thereby. How many hearts have been thrilled by the reply of Paul to those who endeavored to dissuade him from going up to Jerusalem, where he had been assured that bonds and imprisonment awaited him. "What mean ye to weep and to break mine heart? for I am ready not to be bound only, but also to die at Jerusalem for the name of the Lord Jesus!" Thousands since his day have been animated by the same holy courage, and have been willing to suffer the loss of all things, rather than to fall short in doing that which they believed was the Divine will concerning them.

George Whitehead mentions in his journal, that in the year 1665, the plague broke out in London, and many thousands died. He was then engaged in religious service in other parts of England, but felt it required of him to go to the city. He says: "It was a time of great calamity, sorrow and heaviness to many thousands of all sorts; and that which added to our Friends' affliction, was the hardness of our persecutors' hearts, their cruelty and barbarity in imprisoning and detaining many of them in prison, after the plague was greatly broken forth, and many people swept away by it.

"I had not then freedom, satisfaction or peace to leave the city, or Friends in and about London, in that time of great and general calamity, no, when the mortality was at the height; but was concerned and given up in spirit to stay among them to attend Friends' meetings; to visit Friends in prison and at their houses; even when many of them lay sick of the contagion, both in prison, and their habitations.

"Although it was judged the prisons were then infected and poisoned with the contagion, I was freely given up to suffer imprisonment; and on First-days took my night-cap in my pocket when I went to meeting, not knowing but I might be apprehended at some meeting and committed to prison. The Lord gave me faith to be resigned to his will, either to live, or to die for his name and truth's sake; and through all those dangers and difficulties, to bear my testimony in faith-

fulness to his blessed power and life of righteousness.

"Being then a witness of that love which casts out fear, through the great mercy and love of my Heavenly Father, manifest in his dear Son, I was not afraid to visit my friends when sick and in infected prisons. The Lord bore up my spirit in living faith, above the fear of death, or the contagious distemper; and my life was resigned in the will of Him who gave it."

A high degree of this courage may be manifested by those who are naturally timid, and who are by no means insensible of the risks they encounter; but in whom the sense of duty overpowers all emotions of fear. Such devotion to duty was manifested by Elisha Tyson, who lived in Baltimore in the early part of this century, and who devoted much of his time to rescuing from slavery those who were illegally held in bondage. Public sentiment had not then been fully awakened to the evils of slavery; so that E. Tyson's efforts met with little sympathy, but brought upon him the ill-will of many, and the charge of officious intermeddling, as well as often exposed him to personal dangers. The account expressed him to personal dangers. The account expressed him says, "Whenever he perceived the absence of a link in the chain of title to a slave, he filed a petition for the trial of the right, regardless of the vituperation and abuse, which, on these occasions, always flowed in plentiful streams. Indian origin, a free maternal ancestor, or the importation of progenitors from a foreign country, as they broke the fetters of bondage, were the objects of his inquiries. He took his measures with great caution, and never filed a petition till his own mind, at least, was free from doubt, as to the right of the slave to liberty. He is said, in the course of his life, to have been instrumental in liberating two thousand slaves!"

"Superior to fear himself, the terror of his name, and the firmness of his character, paralyzed the slave dealer. On one occasion, learning that a negro entitled to liberty was confined on board of a ship lying at anchor about a mile from Baltimore, just about to sail for New Orleans, he procured two officers and approached the vessel. When within hearing, he said to the dealer, 'I understand that a colored person in thy possession is entitled to his freedom.' Upon the trader's denial of the allegation, Tyson read some documents which described the negro's person and evidenced his manumission; but just at that instant, a breeze induced the captain to order the hoisting of the sails to put to sea. Sensible of the importance of prompt exertion, our philanthropist declared his intention to board, desiring the constables to follow him; when the dealer, unsheathing his dagger, swore 'that the first man that set foot upon that ship, was a dead man.' Without consulting the cold dictates of prudence, Elisha Tyson leaped on board, crying out, 'Then I will be that man.' The ruffian retreated in dismay, suffering his victim to be dragged from the hold where he was secured, without resistance, and without a

murmur. The trader was invited to contest his right to the negro in a court of justice, to which, he was informed, the case would be submitted; but aware of the worthlessness of his claim, or being obliged to depart, no opposition was made, and the man was restored to freedom.

In one of the dungeons in Baltimore, arranged for the reception of such wretches as were designed for transportation, "he ascertained that several free negroes who had been kidnapped, and destined for Georgia, were confined. Determining to liberate them, he solicited some friends to attend him; but they, aware of the danger, and believing an attempt at their rescue utterly hopeless, not only refused their assistance, but advised the relinquishment of so hazardous an enterprise. Having spent a great part of the night in vain efforts for aid, he set out alone at an advanced hour, to beard the tiger in his lair. Oaths, imprecations, and loud laughter, announced to him, on his arrival, the assemblage of several negro-traders, in gay carousal. He entered without hesitation, announcing thus the object of his visit—"I understand that there are persons in this place entitled to their freedom." "You have been wrongly informed," replied the leader, "and besides, what business is it of yours?" "Whether I have been wrongly informed, calmly rejoined the unwelcome visitor, 'can be soon made to appear; and I hold it to be my business, as it is the business of every good man in the community, to see that all doubts of this kind are settled'—at the same time approaching the door of the dungeon: 'You shall advance no further,' thundered the leader, placing himself in a hostile attitude, and uttering a tremendous oath. By an effort of strength, our hero broke through the arms of his opposer and hastened to the dungeon. At the door stood a sentinel with a cocked pistol, which presenting to the breast of Tyson, he swore he would shoot unless he desisted. 'Shoot if thee dare!' answered his collected adversary in an elevated tone, 'but thee dare not! cowardly as thou art—for well does thee know that the gallows will be thy portion!' The menacing pistol fell harmlessly to the side of the miscreant, and Tyson, seizing the light which he held in his left hand, entered the dungeon without further molestation. There he beheld several miserable victims of cruelty, one of whom was gagged. Upon inquiry, he was informed that a mother and two boys among them were free—that they had been decoyed away, and placed there with a view to perpetual slavery in Georgia. Assuring them of success, he went in pursuit of two constables, who, upon the execution of a bond of indemnity, rendered their assistance. The finale was, that the mother and boys were declared free; and one of the traders was convicted of their kidnapping, and sentenced to the penitentiary."

Elisha Tyson died in 1824, at the advanced age of 75. It is related that for two days his house was crowded with those who came to look at his remains; and that 10,000 persons of color walked at his funeral.

In those days of slavery, free people of color

were often seized and sold into bondage. To rescue such victims required much effort, and a willingness to endure reproach as meddlers and busybodies, which at this time we can scarcely appreciate. The late Thomas Shipley of Philadelphia, was one of those who faithfully labored in this field of philanthropy. Although then quite young, I remember well the feeling of prejudice to which he was subjected, and which it required much courage to despise. He died in 1836, and the poet Whittier wrote a beautiful tribute to his memory, of which the following stanza is descriptive of his character:—

"Oh! for that spirit, meek and mild,
Derided, spurn'd, yet uncomplaining—
By man deserted and reviled,
Yet faithful to its trust remaining.
Still prompt and resolute to save
From scourge and chain the hunted slave!
Unwavering in the Truth's defence,
Even where the fires of hate are burning;
Thy smiling eye, thy innocence
Alone upon th' oppressor turning!"

J. W.

Adjusting One's Mind.

"Aren't you tired?" said a young girl to her mother, as the mother kept on, hour after hour, at a piece of work.

"It isn't time to be tired yet," replied the mother. "When the work is done I shall be tired, I suppose; but I haven't time to think about it yet." And she kept on with even pace till the task was done.

Probably her physical ability was no greater than that of many a woman who hires her heavy work done because she thinks she isn't able to do it, when, if necessarily compelled, and she were willing to make a virtue of necessity, she would find her strength equal to her day. As a general rule, what we think we can do we find we can do, and that Napoleon wasn't so far out of the way when he said: "Impossible is a word found only in the dictionary of fools."

A young lady who can shop for hours a day, and days in succession, can, if she adjusts her mind to it, put the same mental and muscular impulse into sweeping, ironing, dish-washing, with no more fatigue in the one case than in the other. While going through the dull routine she can enliven her thoughts and emotions with repeating poetry, recalling historical scenes, composing stories, if she has a gift that way. A large part of *Uncle Tom's Cabin* was thought out while the gifted authoress was engaged in sweeping, washing dishes and caring for her family.

A dreaded task loses much, if not all of its terrors when we stand face to face with it, and "taking it by the horns," so to speak, map out a vigorous campaign and carry it vigorously into execution. Adjusting our minds to it is usually the hardest part of the whole thing. In this sense Solomon spoke wisely when he said: "He that ruleth his own spirit is greater than he that taketh a city."

If we could always have time to make up our minds for what comes, life would be easier than it is; but when a new set of circumstances and requirements are sprung on us in a day, as often happens, it is not infrequently difficult to meet the emergency in the best manner. The best we can do is to accept of Divine Providence and wait till our duty is made clear to us, as it will be, little by little, if we are patient and trustful. We must live "day by day;" and if we do thus live, "daily bread" sufficient for our needs will surely be given us.—Selected.

Extracts from the Memoranda and Letters of Ann Watkins.

(Continued from page 11.)

On a fine day in the First Month of 1852, my husband was able to take a stick and walk for a short time in the garden. We were speaking of our prospects for a livelihood, which were as yet hid from our eyes. My W. said, "Oh! I have faith that, as soon as I am able to work, something will turn up." And so it proved: a friend offered a situation as sub-traveller, which was thankfully accepted, and it proved to be useful discipline in the laying of a good foundation for ourselves in business.

I think it was about this time, before the cold weather had quite left us, that my husband and I were going to meeting in the morning; there was not another individual in the street that we could see, either before or behind us, when a man came out of an entry, and in a loud voice said, "Oh! that men would praise the Lord for his goodness."

"Ye feeble saints, fresh courage take;
The clouds ye so much dread
Are big with mercy, and shall break
In blessings on your head."

"That is intended for us," said my W.—, "How very remarkable and how beautiful!" said I, and we passed on thoughtfully. The man retired to the place whence he came and I saw no more of him. My husband made enquiry and found that he was a simple, half-witted man. So the lesson was received and the impression sealed upon our minds.

I endeavored to assist my husband in earning a livelihood, and also in meeting our back engagements (which we felt bound, as a matter of principle, to do if possible.) I therefore opened a select day school, which I carried on, I think, for quite two years. In 1853, having removed, I soon had to give it up, as my next door neighbor kept one. During this period many friends were extremely kind and sympathized with me, but I found no real help save in dependence upon God and my own exertions; I know not how else I got through. Strength extraordinary was granted me. I cleaned my house, attended to my school, and grappled with my difficulties with a power not my own. May all the praise be ascribed to Him to whom alone it is due!

About the year 1854, I began to travel in the work of the ministry. My mind was in these engagements often clothed in awful fear, lest I should move from under the puttings forth of the Heavenly Leader. This occasioned me often to move along in great quietude; but I found my faith according to my small measure lively, which I attribute to the work of Divine Grace. The good angel of his presence, pitying my weakness, led me by the hand.

My first visit was to the Quarterly Meeting in the compass of which I first resided after my marriage, Northamptonshire and Buckinghamshire. I have lively remembrances of how I was dipped into sympathy with some, and of how the spirits of others were repellent; but my good Master instructed me to a quiet walk lest I should offend the generation of his children.

We still endeavored to mind the pointings of best Wisdom as regards trade. At the end of two years (1853), my Wm. had obtained certain limited permission from his employer to carry on business, and at the expiration of four, he declined his situation and entered into business on his own account. There was something remarkable in this decision. My husband's employers, seeing that my husband was working

up a business for himself, thought it well to counsel him upon the matter, and very wisely placed the subject before him in the language of Scripture, "No man can serve two masters," and concluded by offering him an extended field of action. We consulted a Friend, who advised us to continue in their employ. We both felt differently, but could see no way just at that juncture of throwing up the present situation. With many tears and much conflict we at last yielded to sacrifice the little business that had cost so much to bring together. Mark our surprise! when my husband was just prepared to meet his employers at the time appointed, a rap came at the door and J— C— presented himself, offering his services as manager of the business, with the exception of book-keeping, correspondence, &c. A few minutes turned the scale, we accepting it as an interposition of Providence; and my Wm. waited upon his employers under very different feelings, and, with suitable notice, quitted their employ. We had passed through too much to feel at all clated by this change, but a part of the burden was felt to be removed which had so heavily rested upon us. I engaged [good assistance in the house], and felt more comfortable in a domestic way than I had done for a long day. It was still a life-struggle, but very remarkable to us was the guardian care of Divine Providence, helping us from day to day and from week to week in a manner past description.

At this period of my life I had many deep and close trials. Many are the sorrows and difficulties of the Christian traveller, even of an outward character, but He who saw the integrity of my heart towards Him, in condescending mercy not only helped me to combat with these, but also delivered me out of them all. Praises be to his name for ever!

In 1857 my youngest child was born, and we had to commit another to the silent grave. [She was born in Belgium], and died of scarlet fever at the age of seven years. She was a lovely child, the object of her dear Father's affection, and a great comfort to me, anticipating many of my small requirements and evincing a mind above her years. Once at meeting I felt engaged to say a few words, after which a cloud of discouragement came over me so that I longed to withdraw from my friends unobserved. E— came to me in the lobby and held up her little lips and kissed me, a circumstance so unusual that I immediately received it as a seal of our Heavenly Father's regard and tender love. I had an evidence on her dying bed of her very sweet state of mind, and doubt not she is gathered as a lamb into the Saviour's fold.

My Heavenly Helper strengthened me to exert myself after this event. My dear husband, being of a most tender and affectionate disposition, dwelt upon his loss; his health gave way, and before long he was again laid prostrate with rheumatic fever. During his illness, my dear brother J— W— paid us a visit. He being with my husband, I went to meeting one First-day evening. It pleased God to grant me a near approach to his mercy-seat, and to receive my prayer, and I went from that meeting in the humble belief that years (it might be the fifteen) would be added to my husband's life. When I reached home I asked my husband how he was. "I am so glad these are come back," said he, "for I have been brought very low, so low that I did not know whether I should live to see thee return, but I am feeling somewhat better now." I told him of the heavenly meeting I had had, and we were comforted together in the Lord.

Blessed and adored for ever be his excellent name! My W. was gradually restored to health. Our trials in business were of no small character, but our success was as obvious, and we were enabled, under Divine Providence, in the course of years to pay every one their due.

In the autumn of 1858 I visited the Quarterly Meetings of Cornwall and Devonshire, Sussex, Surrey and Hampshire, including the Channel Islands. At the commencement of this visit I felt so stripped and poor, it pleased my heavenly Father, in a social sitting in a family, to employ an instrument very unexpectedly to administer to my state. "Times and seasons are not at our command," said she, "fear not nor be confounded," with a little more of a loving character, at which I sobbed aloud.

The following extract from a letter to her sister S—K—, relates this journey:—

GUERNSEY, Tenth Month 4th, 1858.

We attended both meetings yesterday; I had service in both, brother S— added a few words each time, very comforting to my mind. We took tea with Mary Palmer and sister. We passed from there about seven and were introduced into a chamber of affliction, to a person not a Friend, and after sitting a while and giving expression to what arose in my mind, I approached the bedside of the pallid form and conversed with her; and, Oh! I think I can scarcely ever forget the deep and earnest tone in which she expressed the desire that she might know her sins forgiven, and a clearer evidence of acceptance than she had experienced. My sympathies were keenly alive, and I pleaded with her and we both felt, I believe, brought so near in spirit to the confines of eternity that I could scarcely leave her. We walked home and retired about half-past ten, but sleep fled from my eyes that you may 'st well suppose, and I think I shall never forget my visit to Guernsey as long as I live.

(To be continued.)

FOR "THE FRIEND."

In looking over some letters received some years since, I found the following from a Friend, that was then engaged in teaching:

"Some time ago there was a venerable man stopping here,—a Methodist minister—who was very much pleased with Friends' doctrines, and had read a good many of their works. He began talking to me of their merits, and I was under the shameful necessity of pleading ignorance, for I know so little of our doctrine."

What an illustration of parental neglect. How can well-disposed parents see their children growing up around them, and passing from them to the duties of life, without a good knowledge of the principles we profess; but such I am sorry to acknowledge, I believe to be too frequently the case.

Owing to this indifference on the part of some parents, we have no doubt lost valuable members. If such could be impressed with a just estimate of the importance of Friends' belief, they would surely be aroused from their state of lethargy.

In *Chambers's Encyclopædia*, under George Fox, I find this sentence: "The events of his life are of minor significance compared with the Christian doctrines he taught, which have moulded in a great degree the civilization of nearly two centuries," &c. Again, in the same work under Friends, "Finally, it may be safely asserted that mankind is more largely indebted to Quakerism for its present social happiness

and moral elevation, than to any other religious body in existence."

Yet, have we not many doing little to perpetuate or uphold such doctrines? To parents—on whom this responsibility largely rests—we would look, with the hope they may more generally discharge their duty in this important particular.

FOR "THE FRIEND."

The Solanum Family.

On the afternoon of Seventh Month 23rd, I visited a piece of woodland that lies on the western bank of one of the branches of Pensauken Creek, to obtain specimens of one of the members of the curious orchid family—the Rattlesnake Plantain (*Goolyera pubescens*). It is not abundant in our part of New Jersey, but I had before seen in this locality the clusters of thick leaves veined with white, which give them a rather striking appearance. To-day, I found the plants in bloom. From each cluster of leaves shot up a single stem whose summit was a spike of small greenish-white flowers.

As I continued my walk, I met with some low branching, rather coarse-looking plants, amid the dense vegetation of a field that bordered another piece of woodland. The leaves were in pairs, each one having another opposite to it; but very unequal in size. Below each pair hung a green bladder, containing a round berry of the size of a large cherry—glutinous to the touch, and of a mawkish sweet taste. It was the Ground Cherry (*Physalis viscosa*)—appropriately named, for *Physalis* is a Greek word meaning bladder, and *viscosa* is sticky, and the plant is covered with clammy hairs. In my younger years, I had often eaten of the fruit like other boys, who, although well-fed at home, seem to regard all wild fruits as so much large gain.

The genus *Physalis* belongs to the great Night shade family (*Solanaceæ*), in many of which the foliage and fruit are poisonous. In this genus, the calyx, or outer covering of the flower, after flowering enlarges and forms the bladder-like covering of the fruit. Gray describes 7 species of it as growing in the northern United States. In one of these, the berry is bright red. It is a native of the South of Europe and of Asia, and is eaten in many parts of Europe. Another species called the Prussian Goose-berry, is cultivated in many parts of the world, and its yellowish berries preserved in sugar make an excellent sweetmeat.

The Solanum family is a very extensive one, but principally grows in warm or tropical countries. Of the genus *Solanum* alone there are 850 species; and about 100 more, which are nearly allied to it; of this genus the only species native to the temperate regions of North America is the Horse Nettle (*Solanum Carolinense*), a weed with prickles along the mid ribs of the leaves. It is difficult to eradicate. It is said to have furnished the principal food of the Colorado Potato-beetle, until the extending cultivation of that vegetable brought its leaves within the reach of this voracious insect, and enabled it to follow the plant eastward until its travels were limited by the Atlantic Ocean.

Although the Horse Nettle is the only native *Solanum* which is found in our part of the country, yet there are several introduced species. Most prominent among these is the Potato (*Solanum tuberosum*), the Tomato (*Solanum Lycopersicum*) and the Egg Plant (*Solanum Indicum*), all extensively cultivated, and all furnishing food to the Potato-bugs.

In nearly all the plants of the Solanum family

poisonous principle is present in a greater or less degree. Among these poisonous plants are the Belladonna, Tobacco, Henbane and Stramonium.

The worst of the poison species is perhaps the *Asocautera venenata*, a large bush with fragrant flowers, found at the Cape of Good Hope—a decoction of the bark is used by the Hottentots to poison their weapons. The Thorn Apple (*Datura stramonium*) is a violent narcotic when taken internally. The seeds of another species (*Datura Tabata*) are said to have been used in ancient times by the priests of the Delphic Temple to produce those frenzied ravings which were called prophecies. Such a practice certainly obtained in the city of Sagomayo, where the seeds of the *Datura Singueiva* were used. Belladonna is supposed to be the plant which produced such remarkable and fatal effects upon the Roman soldiers during their retreat from the Parthians. Buchanan relates that the Scots mixed the juice of Belladonna with the bread and drink which, by their truce, they were to supply the Danes, which so intoxicated them, that the Scots killed the greater part of Sweno's army while asleep. The properties of Tobacco (*Nicotiana*) are well known. Its oil is one of the most violent of known poisons.

An extract of the leaves of the common potato (*Solanum tuberosum*) is a powerful narcotic. The genus *Capsicum* furnishes Cayenne Pepper which is principally its ground seeds.

The natural order of the Solanums includes the Tobacco, the Thorn-apples, the Petunias, the Hyoscyamus, the Belladonna group, and several others.

The most important of all the plants of this family is the common potato (*Solanum tuberosum*) which produces underground stems or tubers, which modified branches consisting of a mass of cells are largely used for food. These are not roots but enclosing starch granules and an albuminous juice. In general terms it may be stated that potatoes contain water amounting to about three-fourths of their weight. The native country of the potato is South America, where it is still found growing wild.

It seems wonderful that a family of plants which are naturally poisonous should contribute so largely to the food of man. Even the potato retains a little of the poisonous principles. This is removed by cooking, but the water in which they have been boiled is rendered unwholesome.

J. W.

William Taylor as Peacemaker.

A late paper, in giving an account of one of Bishop Taylor's journeys in the region of the Congo, has a pleasing incident to narrate concerning how he made peace between two tribes which were at war with each other.

The Bishop, with a small unarmed party, had left Pungo Andongo for Malange, sixty-two miles to the eastward. Malange is the easternmost of the Methodist mission stations. On the morning of the third day, the travellers were met by two natives bearing spears, who came from the near-at-hand town of Mambalungo. After the interchange of a few words the two natives set off rapidly in the direction of the aforesaid town, the Bishop's party following.

Soon the king came, attended by a body-guard of one hundred soldiers, armed for combat. His towns were at war with those of another tribe, a battle being any day expected. The Bishop without hesitation stepped up to the king and extended his hand to royalty, said, as he did so, "I am glad to meet you." The king

responded that he had heard of the old white man, well-digger, long walker, who speaks kind words, and wished to know what he proposed to do in that country. The Bishop, assuring him of the pacific and disinterested sentiments of himself and his people, and that he came amongst them for their good, the king then continued: "We have heard that the men of Kumby are coming to make war upon us. They lie between here and Malange. You will not venture to continue your journey before we have defeated them and brought about a peace?"

"Yes, O, king," replied the Bishop, "I shall go on as soon as I can. I am a friend to the people of Mambalungo and their king, but I am also a friend to the Kumbians and their king likewise. There is no danger for me from them any more than there is danger from you. There is One above me to guard and protect me."

"The white man's God is indeed very powerful," assented the king gravely, "and the white man speaks bravely and frankly. None other would I permit to pass from our town to the arm of the Kumbians. I believe you are my friend, and I will show you that I am yours."

Thereupon, the king calling his chief lieutenant, the ceremony of "blood brotherhood" between himself and the Bishop was gone through with.

The next morning Bishop Taylor pushed on, but it was not until within an hour of noon that any signs of the Kumbians were seen. A small party of warriors was then met, who proved to be an outpost of the advancing enemy. At first sight of the Bishop's carriers, the warriors fired a volley of arrows, with the result that one poor fellow fell with a shaft sticking into his breast. The warriors had not seen the white man. When they did so, they pressed forward, the Bishop and the trembling carriers awaiting them. They explained that though they had come from Mambalungo and its king, they were also the friends of the Kumbians and their king. The captain of the attacking party was disturbed, and said he would at once dispatch a messenger to the king's camp. The latter proved to be but two miles distant. The party was received by a detachment of perhaps two hundred men, and escorted silently to the king's tent. It was evident at once that the war upon Mambalungo was more of a foraging expedition than an attempt at conquest. The camp had been pitched several days, and on every hand were evidences of good living and the accumulation of contraband goods of various descriptions. There were heaps of ivory, utensils taken apparently from villages that had been destroyed, a few captives, articles of food and the like. From appearances the whole army might muster a thousand men. The Bishop was conducted, after a short pause, into the presence of the king, and stood with folded arms and awaited advances.

"White man," said the king, "you are welcome, although you come from Mambalungo." "Kumbaloo," responded the Bishop coldly, "I came from Mambalungo it is true, and I came as a friend to the Kumbians. See what your men have done to me," and he pointed outside, where the wounded carrier lay on the litter. The king was evidently disturbed.

"White man," he continued, "if what you say is true, then it is a bad day for the mighty Kumbaloo and his nation. If, indeed, we have injured a friend, it bodes little good for our war. But tell me, what do ye in this land?"

Then the Bishop explained, as he had to the king of Mambalungo, the purpose of his mission. Kumbaloo was gravely impressed. He

gave an order to an officer who stood by, and then addressed the Bishop.

"White man, I believe you come as a friend to Kumbaloo. It is a bad thing that we have done to you, and we must atone for it or withdraw from our war upon Mambalungo."

He stood for some moments in thought. The Bishop was inclined to argue that the war be abandoned, but he considered it best to wait developments. Presently the officer returned leading a large detachment of men, and in front was the party that comprised the outpost that had attacked the Bishop. The king looked up and said: "See, white man, there are the men who injured you. They shall all be put to death."

The Bishop raised his hand quickly and exclaimed: "No, Kumbaloo, the nighty, not so. The death of these will not atone. I want no one killed. Let them live, and do you and your army go back to your own country and live in peace."

"Tell me," he said, "did the people of Mambalungo send prepared for war?"

"They are thoroughly prepared," replied the Bishop, "and will meet you with a great force."

"We could destroy them utterly," insisted the king, "but one can do nothing against the desires of the gods, especially if the white man's fetich has been offended. Be it so; we will go to our country and wait a year. But for you, white man, we will supply a strong guard to take the place of your man. Men will carry you and him to Malange."

The rest of the day accordingly was spent in the camp of the Kumbians, and on the following morning the Bishop set out again, this time with a large party of attendants. He refused to be carried, however, and walked as before. When he arrived at the borders of Malange the escort stopped and bade him farewell. They went off to the northwest toward their own district, and the Bishop made his way into Malange with the assistance of some natives, who were working in a banana field near by.

Arrangements for the mission station were soon completed. The Bishop stayed in the town, working hard on the buildings and the land of the station until his co-workers came. He reported that the people of Mambalungo had disarmed and gone about their ordinary occupations, and that they gave the most extravagant praises to the Bishop for bringing the little war to an end. No sign of the Kumbians had been seen, except the marks of their old encampment.—*Messenger of Peace.*

We are in pain to make them (the children) scholars, but not men; to talk rather than to know, which is true eating. The first thing obvious to children is what is sensible; and thus we make no part of their rudiments. We press their memory too soon, and puzzle, strain and load them with words and rules to know grammar and rhetoric and a strange tongue or two, that it is ten to one may never be useful to them, leaving their natural genius to mechanical and physical or natural knowledge uncultivated and neglected, which would be of exceeding use and pleasure to them through the whole course of their lives. To be sure, languages are not to be despised or neglected; but things are still to be preferred. Children had rather be making of tools and instruments of play, shaping, drawing, framing and building, &c., than getting some proprieties of speech by heart; and those also would follow with more judgment and less trouble and time.—*Wm. Penn.*

Wisdom.

It seems there is both a heavenly and an earthly wisdom. Solomon appears to have had a large share of both. But we get our heavenly wisdom by a knowledge of heavenly things. And if any man lack wisdom, let him ask of God who giveth liberally to all who ask in faith and it shall be given him. And if any man lack earthly wisdom, let him ask of the wise and prudent of this world, or go to the colleges of men. But let him not think to find out the things of God by it: for they are hid from the wise and prudent of the world, and revealed only to the little ones in Christ. And when such as these seek they find; and when they knock, the door into the mysteries of the kingdom is opened to them, and they can exclaim with the Apostle, "O the depth of the riches both of the wisdom and knowledge of God!" And though they see at times that it is wonderful and past finding out by the natural man, yet they find it to be pure, peaceable, gentle and easy to be entreated, full of mercy and good fruits: without partiality and hypocrisy. But the wisdom and will of the unlearned man is as different as light is from darkness; for it is said to be earthly, sensual, devilish. For where envying and strife is, there is confusion and every evil work. But yet worldly wisdom is striving hard to get the ascendancy in our various churches, so called. But the machinery of God must be propelled by the power of God. For the world by its wisdom knows not God, as it has no Divine life or power in it. And how can it manage the affairs of God? But the Spirit and wisdom of God searcheth all things; yea the deep things of God. And this Spirit is in man, if we will receive it. And the inspiration of the Almighty giveth us understanding through it. But if we prefer our worldly wisdom, and fail to receive the inspiration of the Almighty, we remain under the influence of the same spirit, or image of the serpent, which our first parents received. So the heart remains to be deceitful above all things and desperately wicked. And the wrath of God is revealed from heaven against all ungodliness and unrighteousness of men, who hold the truth in unrighteousness: because that which may be known of God is manifest in them, and they will not heed it, but worship and serve the creature more than the Creator. So what will we do with the wisdom and will of God do us if we fail to receive it, or profit by it? For the gospel is the power of God and salvation of one such as believe in it, and receive and obey it. And to such it is both the wisdom of God and the power of God.

But we cannot serve two masters. If we prefer the wisdom and power of God, we can have salvation by complying with the terms. But if we prefer the wisdom and power of man, God will leave us to our choice, but send leanness into the soul. D. H.

DUBLIN, IND., Sixth Month 16th, 1889.

Concerning Perfection.—We [Quakers] do own the command of God, who said unto Abraham, I am God all-sufficient, walk thou before me, and be thou perfect. We say God was sufficient to enable him to keep his command; and we believe he did so. And we do believe the command of Christ, who said, "Be ye therefore perfect, as your Father which is in heaven is perfect." And we do believe it is possible to keep this command of Christ, by and through the virtuous spiritual presence of Christ in and with the believing diligent soul.—*Wm. Gibson, 1678.*

AT THE GATE.

"For, behold the kingdom of God is within you."

Thy kingdom here?
Lord, can it be?
Searching and seeking ever—where
For many a year,

"Thy kingdom come" has been my prayer,
Was that dark kingdom all the while so near?

Blinded and dull
With selfish sin,
Have I been sitting at the gate
Called beautiful,
Where Thy fair angel stands and waits,
With hand upon the lock, to let me in?

Was I the wall
Which barred the way,
Darkening the glory of Thy grace,
Hiding the ray
Which, shining out from Thy very face,
Had shown to other men the perfect day?

Was I the bar
Which shut me out
From the full joyance which they taste
Whose spirits are
Within Thy Paradise embraced—
Thy blessed Paradise, which seems so far?

Let me not sit
A loother hour,
Idly waiting what is mine to win,
Blinded in wit,
Lord Jesus, rend these walls of self and sin,
Beat down the gate, that I may enter in.
—*The English Psalmist.*

"AS AN EAGLE."

(Deut. xxxiii. 11, 12.)

The eagle, o'er her young presiding,
Stirs up their quiet rest;
Breaks in upon their sure confiding
Within their rock-built nest;
And taking them upon her wings,
She bears aloft those vessed things.

One moment on her pinions keeping
The eaglets weak and small;
The nest she turns and downward sweeping,
Though helpless, leaves them all
To battle and to try their wings,
And make themselves no less things.

She leaves them; but she still is eyeing
Their progress, weak and slow;
And when one falters in its flying,
The mother-bird doth know:
And quickly, on her outstretched wings,
She takes again those tired things.

O soul! the Lord thy faith is trying
When He stirs up thy rest:
And He would ever have thee flying
Toward what is good and best.
If thou shouldst falter, his strong wing
Is "underneath" thee, faithless thing!

—*Sunday-school Times.*

TO THE MARK.

'Tis a sharp rugged hill, that seems to mock
The climber's strength and skill, where rock on rock
Shoots sternly upward to the bending skies;
Yet right in front of these its steps arise—
And thou must climb!

Up, then, and linger not, thou sinner of God,
Fling from thy shoulders each impeding load:
Be brave and wise, shake off earth's soil and sin,
That with the Bridgeway thou mayest enter in,
Oh, watch and pray!

Soon shall the voice be heard, "Behold I come,"
That calls thee upward to thy glorious home,
That bids thee leave these hills, and takes swift wing,
To meet the hosts of thy descending King;
And thou must rise!

'Tis a thick throng of foes, afar and near;
All hell in front of thee, and in thy rear;
Yet fee thou canst not, victory must be won,
Ere fall the shadows of time's setting sun;
And thou must fight!

Girl on thine armor; face each weapon'd foe;
Deal, with the sword of heaven, the deadly blow;
Forward, still to onward, in the fight livine,
Slack not the warfare till the field be thine.
Win thou the crown!

'Tis a fair crown which never can grow old;
A crown of heaven's own everlasting gold;
Wages of service rendered here below,
Reward of battle for the conqueror's brow.
Win thou the crown!

—*Donar.*

Sowing in Gennesaret.

Remember where the parable of the sower
was uttered. Our Lord was sitting in the bows
of a fishing-boat drawn up close to shore, by
the plain of Gennesaret. The little plain, scarcely
four miles each way, is completely shut in by
lofty hills on three sides, from which deep gorges
open on to the plain, fertilizing it by little
streams, while a narrow, curving belt of silvery
silt, composed wholly of the *detritus* of shells,
fringes the edge of the lake. As he sat, he could
overlook the whole plain, which rises a very few
feet above the water. Probably he pointed his
hearers to a scene exactly similar to what I have
witnessed on the same spot. It was spring-time
then, in the beginning of February; for Gennesaret,
besides being naturally one of the most fertile
spots in the world, is extremely hot, lying as
it does, several hundred feet below the sea-level.
A large tract, from Magdala inland, had
been plowed and brush-barrowed. But it was
quite open. No part of the plain is enclosed;
and from the steep basaltic hills on the south
many huge blocks have in the course of ages,
become detached and rolled down on to the
plain, which is thus studded with boulders.

At this season, the plowed land of rich black
mud shows not a trace of weeds, and the brush-
barrow has swept a thin sprinkling of fine soil
on the black boulders. We watched the sower,
who went forth from a neighboring village to
sow. On his left arm he bore a soft pannier,
filled with seed-corn; and, as he stepped with
measured pace, he jerked forth from his right
hand, at every other step, a handful of seed, so
evenly that the fruitful sower seemed to drop
on every square inch of ground. Frequently a
narrow, beaten path intersected his line of march.
But the sower cannot but impartially sprinkle
the whole surface, whether it be path or thinly
covered rock. Behind him, at a respectful dis-
tance, followed a few rooks, accompanied by
jackdaws, sparrows, and other seed-eating birds,
picking up any grain that lay exposed on the
surface. In a few hours the whole was raked
over, and the sower's work was done.

I returned to Gennesaret the first week of
March. Sunshine and thunder-showers had done
their work. The green corn was a foot high;
but every here and there was a brown, bare
patch—a boulder, covered not now with moist
earth, but with dry sand. Worse than this, in
the very richest portions of the plain were thick
masses of herbage, far overtopping the wheat-
plants around. What was this? The strong
and rapidly growing stems of a prickly astragalus,
—a coarse perennial plant, which has very
deep roots, but dies down every winter. The
wooden plow had only scratched the surface,
and left these roots undisturbed. With returning
spring, the thorns had sprung up and choked
the corn. Had the improvident *fellahin* (hus-
bandmen) after last year's harvest, taken the
trouble to dig up the roots, they would not have
again lost their crop from the most promising
part of the plain.—*H. B. Tristram in S.S. Times.*

Remarks on Plainness.

SEELB. TRD.

To accuse any Monthly Meeting of frequently
preferring individuals for service in the church,
simply or chiefly for their exterior plain appear-
ance, is very unjustifiable. We imagine no one
can possibly suppose that a plain exterior is,
in itself, sufficient qualification for service in the
church; but other things being equal there can
be no question of its being a recommendation—
if it does not qualify, neither of itself, does it
disqualify. Whereas a *fashionable* exterior, with
or without the requisite essentials, must be, in
itself, a forbidding element in the character.

British Friend, vol. xxiv., p. 119.

Though no peculiar form of dress has ever
been prescribed by the discipline of Friends, yet
I have observed in my time, that with the con-
cerned and consistent members there was some-
what of a uniformity in their outward appear-
ance, dress, language, demeanor, &c.

I can but believe that Truth will lead in the
same way still. A departure from the simplicity
Truth leads into, or an independent course of
action in these matters, it is to be feared, will
bring difficulty, and be cause of weakness to
those concerned therein, and give occasion for
grief to the honest-hearted exercised ones scat-
tered up and down in the land.

It has been observed that where there was a
shortness or an indifference in any in coming for-
ward faithfully in these matters, that such never
attained to great things or stature in the Truth.

It is a serious and weighty matter to be con-
cerned in the faithful support of our christian
testimonies in regard to plainness of dress, ad-
dress, &c.: it requires that we be clean handed,
and good examples in these respects, that we be
endued with a right spirit and move under the
direction of best wisdom.

Where the youth as well as others are kept
in plainness, if many times proves a help to
preserve them from certain temptations, yet we
know that a plain dress alone does not make
the christian. There are many crosses to be
taken up, and many trials to encounter, but the
Lord our Helper and Deliverer will reward for
faithfulness, and "will make hard things easy
and bitter things sweet" to the willing and obedi-
ent soul.

THE house which Newton occupied on the
south side of Leicester Square, in London is still
standing, and his observatory is shown to visitors.
When he took up his residence there his next-
door neighbor was a widow lady, who was much
puzzled by the little she had observed of the
philosopher. One of the Fellows of the Royal
Society of London called upon her one day, when
among other domestic news, she mentioned that
some one had come to reside in the adjoining
house, who she felt certain, was a poor crazy gen-
tleman, "because," she continued, "he *deceit-
himself in the oddest ways imaginable*. Every morn-
ing when the sun shines so brightly that we are
obliged to draw the window blinds, he takes his
seat in front of a tub of soap-suds, and occupies
himself for hours blowing soap bubbles through
a common clay pipe, and intently watches until
they burst. He is doubtless now at his favorite
amusement," she added, "do come and look at
him." The gentleman went upstairs and looking
through the window into the adjoining yard,
recognized Sir Isaac Newton making his experi-
ments on the refraction of light on thin plates,
which is beautifully exhibited upon the surface
of a common soap-bubble.

Natural History, Science, &c.

An Adventure with Wolves.—“Mother, may I go over to Sally’s?”

Mother Whitney looked at the sun-dial in the kitchen, and then at the sky, with a glance at the thick pine woods that hemmed the little home in, before she answered slowly:

“Yes, dear child; but be sure and start for home early, for fear a bear or a wild-cat catch you.”

With a light heart little Betty sped through the woods to the home of her nearest neighbor. No doubt by this time the reader has guessed that our story has to do with the wilds of Maine or the forests of Michigan, or may be the thinly settled shores of Oregon; but it hasn’t. Betty Whitney’s home was in Massachusetts, and if her adventure did happen long years ago, and if her grandson, now an old, gray-haired man, did tell the story, it is just as true as if it happened yesterday.

Visiting was rare fun both for Betty and Sally, and with their patchwork, spinning, and innocent girlish chatter, and with the help of the cute little bear’s cub that frolicked about like a kitten, the afternoon slipped away, and all too soon it was time to go home. So the good-byes were said, and the little girl, starting down the path, was soon in the dense woods. “When fairly in their shade she found that the light of the late afternoon which had shone into the clearing was almost gone here, and, indeed, it was so dark that it seemed like night.”

Two miles, however, could be quickly passed by so fleet a maiden, and she sped on, shivering a little when the owls began their monotonous whoo-who-who, or when some frightened rabbit “thumped” the ground and then leaped away through the under-bush.

Half a mile was passed in safety, when off on the left she heard the well-known howl of a wolf. With the thought that somebody’s sheepfold was likely to suffer that night, she hurried on for another quarter of a mile, when again came the howl, and this time from behind. As she realized that the hungry creatures might strike her trail and follow her, she turned pale and cold, and glanced around wondering how she could get out of their reach. The trees here were huge pines, rising thirty and forty feet without a branch, and active as the child was, she could not climb any of them.

At this instant she remembered a small log-house scarcely a quarter of a mile farther on, in which no one lived, but which might afford shelter. Whether she were pursued or not, it would do no harm to run as far as there, so she started, and before half the distance was accomplished was glad enough that she had not lingered longer in doubt, for a chorus of howls came from the path in her rear, showing that the wolves were on her track.

Swiftly ran Betty with a sobbing prayer on her lips, and swifter came the pack of hungry wolves in full cry after her. In their flashing eyes and frothing jaws there was no mercy, and the child knew they would tear her limb from limb so ravenously as they did the lambs that fell in their way. Soon the cabin was in sight, but now the wolves were close to her and she could hear their hard paws striking the ground and their hoarse panting as they strained every muscle to overtake her. A moment later and she had burst in the door, and without time to close it, leaped up the ladder and sunk on the floor of the loft. The pursuing pack, close at her heels, filled the little house with their howls

of disappointment, and strove to spring up the ladder in pursuit. Seeing that there was still danger unless she removed the ladder, she put forth all her strength and, turning it over, threw off the wolf that was struggling up the rounds, and then drew it up into the loft, in spite of the strong jaws that snapped at it, and the frantic leaps that were made for lodgment upon it. Then she knelt down and prayed for help to come soon, and, sitting on the edge of the loft, watched the wolves.

There were eight of them, great, gray fellows, lean and hungry, and active as cats. Not one instant did they remain quiet, but circled round and round, leaping up at the loft, howling, and springing one over another. It frightened Betty to see them so determined, but through their very activity came her deliverance. The door which she had burst in so suddenly was a heavy log affair, and it now stood half open. As the wolves leaped up the side of the building, they often fell against the door, and little by little it swung to. Finally it shut tight. When Betty saw this she felt that her prayer was answered, and she could escape, and this is what she did. Opening a little window in the attic she put the ladder up, and then with a farewell look at the wolves that still were leaping and howling, she hurried down and ran home as fast as her little feet would carry her.

When she reached her own home and told of her adventure, you may be sure there was a real thanksgiving service of prayer and praise. The next morning her father and oldest brother went to the cabin, climbed up the window, and standing on the scaffold shot seven big, gray wolves. What became of the other? Well his cruel companions, frantic with hunger, fell upon him and devoured him in the night, and his bones were found gnawed clean on the floor of the cabin.—*The Little Christian.*

Sponge-Fishing of Florida is confined to the southwestern part of the coast, along the reefs, and to the extensive rocky shoals that lie between St. Mark’s and Anclote Keys. Accurately speaking, the sponge reef begins a few miles east of Apalachicola, and hugs the coast to within 50 miles of Cedar Keys. Then there is a break of 100 miles, after which it reappears and runs south without interruption to Key West and the Bahama Islands. This reef, a rocky ridge, sometimes of genuine limestone, but generally of coral, begins some six or eight miles from shore and continues out indefinitely. Wherever there is a rocky bottom sponges are said to be found, and the only reason why the fisheries do not extend completely around the gulf coast is that in places, as off the coast of Texas or Cedar Keys, this rocky bottom begins in water too deep to permit of profitable sponging. The average depth of water on the St. Mark’s reef at six miles from land is 16 feet. The sponges are in great abundance and of good quality, being much better than those from the coast of Mexico, but rather inferior to the Panama variety. The supply is practically inexhaustible, as they grow almost as fast as gathered, a sponge requiring only about two years to reach maturity.

Nearly all of the sponges used in the United States were brought from the Mediterranean until 1852, when attention was called to the immense numbers that were growing in Florida waters. As soon as it was found that the quality of these compared favorably with those of Europe, the merchants and fitters-out of vessels at Key West engaged very actively in the busi-

ness of placing them on the market. At first the best qualities were bought from the fishermen at the rate of ten cents per pound. As Mediterranean sponges became scarce and costly the Florida sponges came into more and more demand, and their value increased proportionately. After about 18 years’ fishing upon the known ground the supply began to fail. Then, in 1870, a new area of ground, larger than the old one, was discovered, and this gave a new impetus to the trade. In that year Apalachicola sent out a small fleet of sponge vessels, which has since been largely increased. During the past 18 years the business has been energetically pursued with good results.

The methods employed in the fishery differ greatly from those employed in the Mediterranean. Small divers go down and bring up the sponges. Small vessels, carrying crews of from five to fifteen men, are fitted out at Key West and Apalachicola, for trips of from four to eight weeks on the sponge grounds. The crews are paired off into small rowboats, or “dingies,” to catch the sponges. One man stands in the stern, sculling the boat, while the other kneels in the bottom amidships, with the upper half of his body leaning over the side, and scans the bottom of the sea. To aid the eye an instrument called a “water glass,” which is a common water bucket whose wooden bottom has been replaced by one of glass, is used by setting it in the water and thrusting the face as far into it as convenient. When a sponge is sighted the boat is stopped, and the kneeling man uses a two-pronged hook, attached to a slender pole 30 or 40 feet in length, to secure it. Considerable dexterity is required of both men. To cure the sponges they are first spread about the vessel’s deck in their natural upright position, so that they will die, and, while decomposing, allow the gelatinous matter to run off freely. When they have been several days in this position they are taken to the shore and thrown into the water in little pens, called “crawls,” where the remaining substance is soaked and squeezed out.

The spongers thus work on, day after day under a tropical sun that burns and browns the skin until one cannot tell a white man from a negro. It is a desperately hard life, more severe than any other that one can think of, and it requires men of no ordinary constitution to stand up to it. The spongers are, therefore, naturally an exceedingly muscular set.

The principal season for this fishery is the summer, from May to August, but the best conditions of the water are in winter, and a great deal of the fishing is then carried on with success. During the hurricane months of August, September and March, the vessels are nearly all laid up. The state of the weather greatly affects the result of the fishery. When the water is made rough and roily by long-continued strong winds, sponge catching becomes impracticable. In some years the fishery has been a complete failure, while in others it has been very profitable, always owing to the weather. As the natural beds of sponges have become scarcer, prices have advanced, so that even if a vessel does not secure as large a quantity in a given time as formerly, the financial result is about the same.

There are several varieties of sponges caught in the Florida waters. There are first, sheep’s wool, which sell for \$1 to \$5 a pound; second, yellow sponges, which sell for 20 to 60 cents per pound, and third, grass sponges, which are coarse in texture, and not durable, and sell for 10 and 20 cents per pound. When these are marketed they are trimmed and cleaned of sand and shells,

and then pressed into small bales of 100 to 120 pounds each, in which form they go to the wholesale dealers. Some attempts have been made during the past three years to cultivate the more valuable kinds of sponges, and in some instances the experiment has met with success. It seems probable that the future supply of the sheep-wool variety will depend upon some such action as this. Besides being scarcer along the sponge reef, this variety grows slower than the coarser kinds, and the demand for it is always greater than the supply.—*New York Times.*

THE FRIEND.

TWENTH MONTH 17, 1889.

It ought to be a source of encouragement to those who are laboring for the improvement of the world in any respect, that the good effected by their success extends to other points than that to which their efforts were primarily directed. In the complicated problems of human life and of civilized society, the collateral advantages may sometimes be equal to those directly arrived at. We recently met with the following paragraph in one of our exchanges, in which this connection between the different departments of moral reform is referred to:—

"The teetotaler holds that if intemperance were driven out of the land, then would follow education, cleanliness and religion. And, doubtless he is right. The educationist holds that if man's intellect were duly trained, it would lead him to avoid alcohol, to avoid dirt, and to avoid immorality! Doubtless he too is right. The religionist holds that if man can be taught his duty to his God, he will do it also to himself and to his fellow-man; and that education, cleanliness and temperance will be the fruits of his religion. Again, I say, doubtless he is right."

It is very easy for one, who becomes intensely interested in any special field of reform labor to expect greater results from his pet reforms, than either reason or experience can warrant. It would not be reasonable to hope for a perfect state of society, in every country where abstinence from intoxicating drinks is practised—because there are tendencies in man which, if unrestrained, will lead sober men to evil. Yet we have good ground to expect that an increase in temperance will promote other good fruits, and lessen wrongdoing. So that the two first propositions in the above extract must be received with some allowance. But we are warranted in believing that true religion leads to good fruits outwardly as well as spiritually. It is indeed the only panacea for all evil. He who by example and precept spreads its influence among men, is a benefactor of his race; and he who opposes its spread, is correspondingly injurious, even if his natural benevolent feelings lead him, as it did Voltaire, to endeavor to relieve cases of hardship and oppression.

It has been a source of satisfaction to notice of latter time an increasing disposition in the managers of some of the great railroads of this country, to lessen the number of trains run on the First-day of the week; and thus to give to many of their employees the opportunity for a day of rest from labor, and for the attendance of religious meetings. In its comments on this reform, *The American*, of Philadelphia, thus refers to one of the collateral matters connected with it:—

"The laws of nearly every State in the Union, following the English Sunday law of the reign of Charles II., forbid such labor on the first day of

the week. Whether those laws be wise, as most of us think, or unwise, as the railroads often seem to assume, it is very directly the interest of railroad managers to have them nullified, but a general respect for law can insure the safety of railroad property. It is of all property the last to be protected effectively by the police or other direct and material agencies of government. It stretches over much too long an area to be protected by any force less pervasive than a vigorous public opinion. And whichever way road sets its workers and the public an example of disregard for the law, either as to Sunday observance or any other point, it is doing its best to beat down the barriers of its own safety."

Does any thoughtful person believe, that if the people of Pennsylvania should so act as to indicate that, but little interest is felt by them in the cause of temperance, it will not be followed by an attempt to strip the judges of the discretionary power they now hold of granting or withholding licenses?—or else, that efforts will be made to secure the election of judges who will be more favorable to the wishes of the applicants for saloons? The interests of society are so bound together, that all our movements have a far-reaching effect.

We have received from the Law and Order Society of Philadelphia, an appeal for additional funds. It confines its operations to "the enforcement of Existing Law."

The appeal says:—

"During the past year our community has entered upon a new and most encouraging phase of social progress, through the enactment of the Brooks Bill, and the upright, impartial and patriotic conduct of our Judges in applying its provisions for the regulation of the license system, and through the diligent efforts of our Mayor and Director of Public Safety to prevent infractions of the law.

"At the same time it was impossible that so great a reform, supervening upon the state of things which prevailed before, should be fully effected at once, or without many secret, and even open, attempts to maintain the illicit sale of liquor. It has needed, and will continue to need, all the vigilance and energy of the police and of our Society, to watch, detect, arrest and punish offenders, until such unworthy citizens shall be convinced that our community is in earnest and means that this great advance in order and morality shall be maintained.

"Since the Brooks Bill came into operation our Society has, therefore, been unremitting in its activities. During many weeks of the spring, the energies of our officers were assiduously directed to providing the courts with information relative to the persons and places for which licenses were sought under the new law.

"We earnestly appeal to our fellow citizens to stand by us in our effort to maintain the ground we have gained. Our sole object, to which we strictly limit our action, is to secure the enforcement of existing laws. In this effort we ought to have and we believe that we have, the sympathy of all good citizens.

"Our expenses are necessarily heavy. We need at least \$10,000 to carry on our work the present year. But this sum will not seem large to those who estimate the pecuniary saving to our city of good law, thoroughly enforced, and the improvement in public order and decency which we are already beginning to witness, but which can only be maintained through the vigilance and unremitting exertions to the lovers of public welfare.

"The collection of the means we need, irregularly and without system, is troublesome and un-

satisfactory. We believe that the public will sustain us in asking the following systematic provision for our needs:

We ask twenty persons to give us, annually,	\$100 each,	\$2000
We ask forty persons to give us, annually,	\$50 each,	2000
We ask one hundred persons to give us, annually,	\$20 each,	2000
We ask two hundred persons to give us, annually,	10 each,	2000
We ask three hundred persons to give us, annually,	5 each,	1500
	Total,	\$10,000

Send check for subscription to DAVID SCULL, Treasurer, 125 Market Street."

SUMMARY OF EVENTS.

UNITED STATES.—A despatch from Tahlequah, Indian Territory, says that the prospects for the success of the Cherokee Commission are brightening, and the proposition to sell the strip meets with favor, because of the existence of a treaty under which the land could be transferred to the Arapahos and Cheyennes at a much lower figure than that now offered.

The Chippewa Indians, on the Gull Lake Reservation, in Minnesota, on the 5th instant, met the Northwestern Indian Commission and signed in a body. The territory secured thus far amounts to over four million acres of fine land for the Indians.

A despatch from Chamberlain, South Dakota, says that Congressional ratification of the Sioux treaty is not necessary, but that the ceded lands will be thrown open by proclamation by the President, upon receipt of the Commission's report.

The members of the Sioux Indian Reservation Commission arrived at Chicago on the 10th. Chairman Foster said that about 9,000,000 acres of land will be opened to the public.

A syndicate of Bismarck, Grand Forks and Jamestown capitalists has been organized to develop a new canal scheme that will reclaim upwards of 5,000,000 acres of arid and now useless land in North Dakota. The idea is to construct a canal from the Missouri River, at Bismarck, 1668 feet above the level of the sea, to Lake Traverse and Big Stone Lake, 800 feet above the level of the sea, with lateral canals by the various corners.

According to a Minneapolis despatch, the editor of the *Market Record* says the wheat crop of Minnesota and the Dakotas will reach 85,000,000 to 90,000,000 bushels, and be the best crop harvested in six years. According to the *Mercury*, Kansas has raised about 24 bushels of wheat to every man, woman and child in the State, this year.

Chicago now has a larger area, by forty odd miles, than Philadelphia.

A lump of ambergris, thought to be worth \$23,000, was found off Moshegan, by a Portland (Me.) fishing schooner on her last voyage.

A telegram from Geneva, New York, says that Professor Brooks observed his new comet on the morning of the 6th instant, and found it much brighter and the tail longer. While observing it a brilliant telescopic meteor passed directly over the head of the comet, leaving a fine trail of sparks, lasting several seconds.

Prohibition was defeated on the 6th instant in Floyd County, Georgia, by a majority of 600, in a total vote of 4000.

A heavy rain fell in the country around Washington during the night of the 6th instant. Great damage was done in Virginia, especially along the Washington and Ohio Railroad.

A number of experiments have been tried, with varying success, during the past week, with a recently announced elixir, the discovery of Dr. Brown-Sequard, of Paris. Certain kinds of the gutta pig, lamb or other animal, are macerated in a small quantity of water, and about one teaspoonful and a half of the fluid is injected under the skin of aged, debilitated or diseased persons. In many cases the result is reported as a remarkable rejuvenating effect and disappearance of neural stiffness and debility.

Deaths in this city last week numbered 492, which is 50 more than during the previous week, and 16 less than during the corresponding period of last year. Of the whole number 238 were males and 254 females; 122 were under one year of age; 61 died of cholera infantum; 54 of consumption; 25 of inanition; 27 of inflammation of the stomach and bowels; 27 of marasmus; and

27 of typhoid fever; 24 of convulsions; 21 of old age; 27 of diseases of the chest; 16 of emonorrhag; 15 of inflammation of the brain; 15 of debility, and 32 of cancer.

Markets, &c.—U. S. 4½, reg., 106½; coupon, 107½; 4½, reg., 128½; coupon, 129½; currency 65, 118 a 120.

COTTON was quiet but firm at 11½ cts. per pound for middling.

FREED—Winter bran, choice and fancy, \$14.25 a \$14.50; do., medium to prime, \$13 a \$14.

FLOUR AND MEAL—Western and Pennsylvania super, \$2.05 a \$2.50; do., do., extra, \$3.00 a \$3.50; No. 2, \$1.75 a family, \$3.00 a \$3.50; Pennsylvania family, old, \$1.00 a \$1.25; Pennsylvania roller process, old, \$1.25 a \$1.75; Ohio, clear, \$1.50 a \$1.70; do., straight, \$1.75 a \$5.00; Indiana, clear, \$1.50 a \$1.70; do., straight, \$1.75 a \$5.00; St. Louis and Northern Illinois, clear, \$1.50 a \$1.70; do., do., straight, \$1.75 a \$5.00; winter wheat, fair choice, \$1.50 a \$1.75; Minnesota, clear, \$3.50 a \$4.25; do., straight, \$4.50 a \$5.20; do., patent, \$5.50 a \$5.90. Rye flour was scarce and firm, 100 barrels choice sold for \$9 per barrel.

GRAIN—No. 2 red wheat, 83½ a 83½ cts. No. 2 mixed, 81 a 81½ cts.

No. 2 white oats, 54 a 54½ cts.

BEEF—Best, 74 a 7½ cts.; good, 7 a 7½ cts.; medium, 6½ a 6½ cts.; fair, 6¼ a 6½ cts.; fat, 6 cts.

MUTTON—Best, 9½ a 10 cts.; good, 9 a 9½ cts.; medium, 9¼ a 9½ cts.; fair, 9¼ a 9½ cts.; common, 8¼ a 9 cts.; do., 12 a 12 cts.

FOREIGN—Farnell's health is broken. His physicians have advised him to go to the south of France, and remain there until next summer.

Jane Coblen, the daughter of the famous Richard Cobden, of England, says that the Women's Liberal Associations of England number more than 16,000 members, and have become a powerful influence. There are forty-eight national societies of women in this country, with a direct membership of 500,000 members.

The largest is the Women's Christian Temperance Society, with about 250,000 members. Then follow the Missionary, the Peace, the Suffrage organizations, and philanthropic and educational societies. Twelve of these national organizations have joined with the National Council, which was formed to unite all the women societies of the nation into one great and powerful league.

Official returns of the French elections for members of the Councils General show that 949 Republicans and 492 Conservatives were elected. The Shah of Persia left Paris for Boden on the 11th instant.

By a slight storm, which broke out in the village of Sachsenberg Waldeck, and burned out the village was half destroyed. The losses are very heavy. The poor are the chief sufferers. Many families lost everything, and the greatest distress prevails.

On the 12th instant, the Emperor of Austria arrived in Berlin, where he will have to make an apparent detour by Emperor William of Germany. A despatch from St. Petersburg says: Well informed persons here do not attach any political importance to the meeting between Emperor William and Emperor Francis Joseph. It is only the relation between Germany and Austria do not require any explanation, and that the Austrian emperor's visit is merely an act of courtesy.

Mail advices from Japan, received in San Francisco, state that about 100 persons were drowned and 12,000 saved in the sinking of 250 cargo cases of cultivated land seriously damaged in four of the seven cantons, which suffered most from the overflowing of the river Chikugo, in Fukuokaken, by the recent heavy rains. Relief funds have been started in various parts of the empire.

A despatch from San Francisco says that the Chinese are swarming in by every Hong Kong steamer bound for Mexico. No less than 60 came a week ago, and 16 arrived on the 8th instant, all destined for Mazatlan and other ports. They are received without landing, and are sent on to Mexico, there to be smuggled out, but, once in Mexico, they do not interfere with the trade over the southern border of California.

Rich deposits of petroleum have been discovered in Tabasco, Mexico. Valuable coal mines have been found in the State of Guerrero.

RECEIPTS.

Received from Mercy Cope, O., \$2, vol. 63; from Martha Street, Philad'a., \$2, vol. 63; from William L. Bates, R. 1., \$2, vol. 63; from Mary Ann Jones, Gtn., \$2, vol. 63; from Charles C. Satterthwaite, Anne Hoopes, and Zebede Haines, vol. 63; from Charles B. Dickinson, N. J., \$2, vol. 63; for James M. Rote, Pa., \$2, vol. 63; from Abby Middleton, N. J., \$2, vol. 63; from Mary E. Howard, N. J., \$2, vol. 63; for Anna Thomas and Howard A. Mickle, vol. 63.

Remittances received after Third-day will not appear in the Receipts until the following week.

NOTICES.

A Teacher is wanted for West Grove Preparative Meeting School.

Application may be made to George R. Chambers, Margaret Cook, Jane Jones or Z. Haines, all of West Grove, Chester Co., Pa.

WESTWoods BOARDING SCHOOL.—Friends wishing to enter their children for the Fall and Winter Term, commencing Ninth Month 3rd, 1859, will please make immediate application to

J. G. WILLIAMS, Sup^r,
WESTWOOD P. O., Penna.

BOARDING SCHOOL FOR INDIAN CHILDREN AT TUNESSA.—A Friend and his wife wanted to take charge of the institution and farm, as Superintendent and Matron.

Friends who may feel a call to this service, address Mrs. Mary Ann Deves, Chester Co., Penna.
Ephraim Smith, 1110 Pine Street, Phila.

MARRIED, at Chestnut Street Friends' Meeting, West Chester, Pa., Third Mo. 14th, 1859, WILLIAM KERR, of Downingtown, and EVA HOOPES, of West Chester.

DIED, at the house of her son-in-law, Daniel Birdsell, at Croton Lake, Westchester Co., N. Y., Mary C. McLAUGHLIN, wife of James McLaughlin. She was stricken with paralysis on Seventh-day night, the 27th of Seventh Month, 1859, and expired on Fourth-day morning the 31st. She was deprived of her power of speech, and not able to leave any verbal testimony, yet we have no doubt that she has entered that rest that remaineth for the people of God. She was in the 79th year of her life.

Friends are invited to attend.

Service on Monday 20th, at his residence, Mount Holly, New Jersey, JOSEPH H. ROBERTS, a member of Evesham Monthly and Easton Particular Meeting, in the 67th year of his age.

FOR "THE FRIEND,"

Incidents and Reflections.—No. 185.

In the last number of this series, reference was made to the efforts of Thomas Shipley, of Philadelphia, on behalf of colored people who were illegally claimed as slaves. His energy and perseverance in this humane work were truly remarkable; and the amount of time and labor which he expended in it would seem incredible to one who did not know how fully his heart was enlisted in the cause. Among the papers which he left was a memorandum book in which he briefly noted, in the order of their occurrence, such instances of difficulty or distress as had claimed his care. This showed that 25 such cases had demanded his interference in the summer of 1836, from Seventh Month 16th to Eighth Month 24th. His biographer, Isaac Parrish, gives a particular account of one case, which was unusually important in those times, when a strong pro-slavery feeling animated too many persons even in the Northern States, because the issue of it was to secure to the colored people of New Jersey, claimed as slaves, the right of a trial by jury to determine the question whether they were legally bond or free, instead of leaving that momentous decision to a single magistrate. The proceedings, of which a statement was published in the Ninth volume of THE FRIEND, illustrate in a forcible manner the decision of character, self-sacrificing energy, and untiring perseverance of Thomas Shipley.

In his memorandum book already referred to, under date of Twelfth Month, 1835, he mentions that he spent eighteen days in the trial of A. Hensley, his wife and three children, who had been arrested at Mount Holly, N. J., as slaves by claimants from Maryland. Isaac Parrish's narrative says—that "Soon after the arrest of this family, information of the fact was sent to Philadelphia, with the request of aid and counsel from the 'Pennsylvania Abolition Society,' &c. Late in the evening a friend called on Thomas Shipley to inform him of the circumstance; he was lying on the sofa, suffering from a severe attack of head-ache, to which he was subject, and which always very much reduced his strength and spirits. When the business of the friend was made known to him, he seemed animated with renewed vigor, and listened attentively to the narrative; he entered at once into the merits

of the case, and expressed his determination to proceed the next morning to Mount Holly. He procured the aid of an energetic and distinguished counsellor, David Paul Brown, who, with his usual humanity and disinterestedness, in all cases where liberty is at stake, accompanied him and remained during the progress of the trial. The circumstances of the case were briefly the following: The woman and children had been regularly manumitted in Delaware by the father of the claimant, while the title of the father to freedom was less positive, though sufficiently clear to warrant a vigorous effort on his behalf.

"The first object of the counsel on the part of the alleged fugitive, was to prove the manumission of the mother and the children, and, as it was thought, the necessary documents for that purpose were collected and arranged. After the trial had proceeded, however, for a short time, counsellor David Paul Brown discovered a defect in the testimony on this point; the necessary papers, duly authenticated by the Governor and Chief Justice of Delaware, were missing, and without them it was impossible to make out the case. The fact was immediately communicated to Thomas Shipley—he saw that the papers must be had, and that they could not be procured without a visit to Dover, in Delaware. He at once determined to repair thither in person, and obtain them. Without the knowledge of the claimant's counsel, who might have taken advantage of the omission and hurried the case to a decision, he started on the evening of Sixth-day, and travelled as fast as possible to Dover, in the midst of a season unusually cold and inclement. On the next morning inquiries were made in all directions for friend Shipley; it was thought strange that he should desert his post in the midst of so exciting and momentous a trial, and at a time when his presence seemed to be particularly required. The counsel for the prisoners, who were aware of his movements, proceeded with the examination of witnesses as slowly as possible, in order to allow time for procuring this important link in the chain of testimony, and thus to procrastinate the period when they should be called upon to sum up the case.

"Fortunately, on the evening of the day on which Thomas Shipley set out upon his journey, it was proposed to adjourn, and farther proceedings were postponed until Second-day morning. At the meeting of the Court, in the morning, the expected messenger was not there, and the ingenuity of the counsel was taxed still farther to procrastinate the important period. After consuming three hours in debate upon legal points, &c., he who was so anxiously looked for, came hurrying through the crowd, making his way toward the bench. His countenance and his movements soon convinced the wondering spectators that he was the bearer of something important, and in a few minutes the mystery of his absence was revealed, by the production of the document which was the fruit of his labor. This document completely established the legal title of the mother and children to freedom, and

placed them out of the reach of their persecutors. This result was obtained greatly to the joy of the multitude, and to the disgrace and discomfiture of the miserable beings who were seeking to make property of a defenceless female and her innocent offspring.

"The constant exertion and fatigue endured by our devoted friend, in procuring these documents, travelling in the midst of winter, almost without stopping to take nourishment or repose, had produced a state of prostration, which brought on an attack of nervous headache, the severity of which caused his friends considerable uneasiness. This, however, was soon dispelled by the invigorating influence of sleep, and on the next day he was prepared for another campaign in the case of the distressed husband and father. It may be proper to remark in this place, that Judge H., before whom this cause was tried, was a Virginian by birth, and possessed all those prejudices in favor of the claims of slave-holders, which are engendered by the education and habits of those who are nurtured in the midst of slavery. However upright may be the intentions of such a judge, it will not be denied that in a doubtful case his decision might be influenced by the peculiar bias of his mind in relation to the parties interested; and hence the friends of the colored man, although convinced that the evidence was insufficient to establish his slavery, were seriously apprehensive that the mind of the judge would not be so readily brought to this point, and that his decision would be against them.

"To avert this calamity, his able and persevering counsel, D. P. Brown, suggested that a writ of *certiorari*, which would oblige the judge to remove the case to the Supreme Court, and a *habeas corpus* from the Chief Justice of the State, should both be in readiness when the decision of the judge should be pronounced, in order that if it should be unfavorable, the writs might be at once served, and thus oblige him to remand the prisoner, not into the hands of the claimant, but to the sheriff of the county, to be brought up before the Supreme Court, at its session in Trenton, for another trial.

"To procure these writs it was necessary to obtain the signature of the Chief Justice of New Jersey, who resided at Newark, and again Thomas Shipley was ready to enter with alacrity into the service. He saw the importance of the measure, and that it would require prompt action, inasmuch as the decision of the judge would probably be pronounced on the following day. It fortunately happened that a friend was leaving for Newark, in his own conveyance, and feeling an interest in the case, he kindly invited friend Shipley to accompany him. They left in the afternoon, travelled all night, and arrived at Newark by daylight on the following morning. The weary traveller was unwilling, however, to retire to bed, although the night was exceedingly cold and tempestuous, but he proceeded at once to the house of the Chief Justice. He called the worthy judge from his bed, offering the importance of his business, and the necessity of speedily

action, an apology for so unseasonable a visit. Chief Justice Hornblower, on being informed of the circumstances of the case, expressed his pleasure at having it in his power to accede to his wishes, and treated him with a respect and kindness which the disinterested benevolence of his mission was calculated to inspire.

"Having obtained the necessary papers, he left at once for Mount Holly, where he arrived on the following day, in time to place the writs in the hands of the sheriff, just before the decision of Judge H. was pronounced. Had he consulted his ease or convenience, and deferred his visit to Newark a few hours, or had he, as so many men under similar circumstances would have done, reposed his weary limbs after a cold and dreary ride of eighty miles, in order to enable him to return with renewed strength, he would have arrived too late to render this meritorious effort effectual. As it was he was there in time. The judge, according to the expectation of the friends of the colored man, gave his decision in favor of the slaveholders, and ordered poor Alexander to be given up to the tender mercies of the exasperated claimant. The decision sent a thrill of indignation through the anxious and excited multitude, which perhaps was never equalled amongst the inhabitants of that quiet town. The friends of humanity had assembled from all parts of the country to witness the proceedings in the case. Many of them were personally acquainted with the prisoner; they knew him to be a man of intelligence and integrity; he was an industrious citizen, and was universally respected in the neighborhood.

"While public feeling was in this state of excitement, we stepped the sheriff with his writ of *certiorari*; this he deliberately handed to the judge. It was instantly returned, and the stern officer who sat unmoved by a scene to which he was probably not accustomed, and conceiving, perhaps, his official dignity was impugned, still persisted in his determination that the prisoner should be handed over to his claimant. A writ of *habeas corpus*, signed by the Chief Justice of the State, and demanding the body of the prisoner, before the Supreme Court at its next term, was now produced!

"The astonished judge found himself completely flustered. He had exercised his authority to its utmost limit, in support of the claims of his slaveholding friends, and had given the influence of his station and character to bolster up the 'patriarchal institution,' but it was all in vain. Just as they supposed they had achieved a victory, they were obliged to succumb to the dictates of a higher tribunal, and to see their victim conveyed beyond their reach in the safekeeping of the sheriff.

"In the Third Month the case was brought up before the Supreme Court for final adjudication. In the meantime Thomas Shipley adopted vigorous measures to have the facts collected and arranged. He procured the aid of an intelligent and humane friend of the cause, who resided near Trenton, to attend, personally, to the case, and secured the legal services of Theodore Frelinghuysen, well known as one of the most gifted and virtuous statesmen of the age, and a warm and zealous friend of the oppressed. Under these happy auspices the case came before the Supreme Court, and gave rise to a highly interesting and important argument; in which the distinguished Frelinghuysen appeared as the disinterested advocate of the prisoner, and urged upon the Court his claim to liberty under the laws of New Jersey, in a speech which was one of his most brilliant and eloquent efforts, and

added another to the many laurels which his genius and philanthropy have achieved.

"The opinion of Chief Justice Hornblower was given at length, and is said to have displayed a soundness and extent of legal knowledge, with a spirit of mildness and humanity, well worthy of the highest judicial tribunal of New Jersey.

"By this decision Alexander Helmsley was declared to be a free man, and returned with rejoicing into the bosom of his family, and to the enjoyment of the rights and privileges of a free citizen.

"Thus terminated this interesting case, which for several months agitated the public mind of Burlington County, to an extent almost unequalled. It had its use in rousing the attention of many of the citizens of that State to a consideration of the outrages which might be practiced on her free colored inhabitants, under the shelter of the laws, and of the necessity of such a change in her code as should afford more perfect protection for these defenceless citizens.

"At the next session of the Legislature following the decision of this case, a law was passed, securing the right of trial by jury to persons seized as slaves—a law which places that State on an honorable footing with several of her sisters of the Confederacy."

Who can doubt that Thomas Shipley must have felt a peculiar satisfaction in the issue of this case, and that the blessing of him who was ready to perish, and the approval of our common Father, who neglects none of his children, must have amply rewarded him for his efforts?

T. Shipley deceased the 17th of Ninth Month, 1836, at his home in Philadelphia.

J. W.

The Home of the Ark.

BY H. B. TRISTRAM, CANON OF DURHAM

The choice of Shiloh as the home of the ark of the Lord, during the whole period from Joshua to the close of the Judges, is remarkable and instructive. That period was an epoch without parallel, in the previous or subsequent history of Israel, for its lawlessness, violence and misery. Yet, while the neighboring nations ever selected for their temples and religious centres some strong position, some fortified place or conspicuous height, the tabernacle of Jehovah was pitched in a secluded, sloping plain, surrounded on three sides by commanding heights, and from a military point of view, absolutely defenceless. Dearly as every true Israelite loved the ark of Jehovah, the centre of his nation's life, its defenceless site seemed to say to him, "Trust not in an arm of flesh. In the Lord alone is thy strength and thy salvation." The very position of Shiloh is suggestive of peace and security. I can recall scarcely any other historic sight in Palestine so exposed to attack in troublous times. True, it is now bare and desolate. There are now no vineyards, where the men of Benjamin could conceal themselves, and seize the unsuspecting damsels for their wives. A few scattered and weird-looking trees are the only features among the long, straggling stone heaps which relieve the barrenness of a spot utterly forsaken. Yet, throughout the vicissitudes of these stormy centuries, it was only at their close, and then not at Shiloh itself, that the sacred ark was taken. Shiloh itself remained a peaceful oasis. And so, amidst the records of warriors, and battles, and bloody crimes, we catch occasional glimpses of pastoral and quiet life holding its own in a stormy age, and of God-fearing families who clung to the

laws of Jehovah, in the retired nooks and secluded villages of Israel. Such were the households of Manohah, of Naomi and Boaz, and of Elkanah. God never left himself without a witness.—S. S. Times.

Extracts from the Memoranda and Letters of Ann Watkins.

(Continued from page 18.)

TO HER SISTERS S. K. AND M. N.

Tenth Month 18th, 1859.

I have felt it a high privilege to unite in that inward travail and exercise for the prosperity of Zion. I wish not to speak of myself, but by way of introduction to that weighty exercise which rests upon my spirit. I was introduced into this Society in very early life, almost in infancy. I am indebted to this Society for an education within its limits, but above all I am indebted to my Heavenly Father, who, on my leaving school, led me into a close examination of my own heart, and those views and practices which we, as a people, profess; and I can testify to the goodness and mercy, to the all-sufficiency of that wisdom and strength which have been near to preserve in heights and in depths, and to that Power which in seasons of extremity has been magnified to my humbling admiration. I do desire to sympathize with my fellow-professors in their trials and afflictions, and earnestly do I desire that the provings of faith may tend to individual refinement and attainment in holiness; but, beloved sisters, I have had to mourn in deep abasement of soul before the Lord, nights many and days many, because of the prevalence of a worldly spirit, and because there is a departure on the part of many amongst us from that plainness and simplicity which becometh the Gospel of our Lord and Saviour, Jesus Christ. My heart is sore pained within me, yea, my heart within me is desolate, because my people change their ways to please themselves, and regard not Me, saith the Lord, therefore will I sift them, as through a sieve, and great shall be the mourning and the lamentation in that day. But Oh! I do thankfully believe that these turnings and overturnings in the Church will tend to her purification, her stakes will be strengthened thereby and her borders enlarged, and a remnant will be preserved who will uphold the standard of truth and righteousness in the eyes of, or before, the people, and many will be brought out from the midst of forms and ceremonies to serve the living God, being prepared of Him to testify to the inward operation of the Spirit, which leads through deep and unfeigned repentance towards God and faith in our Lord Jesus Christ, to whom, through the medium of the eternal Spirit he ascribed salvation, honor, dominion, glory, and power, both now and ever. Amen.

In 1861, I visited the Yearly Meeting of Dublin; from that time to the year 1866, I visited many families and meetings, dear Ann Cadbury and my beloved sister, S. Kirkham, going with me in a few places. The sweet harmony of their spirits was truly encouraging, and we labored together in the love of the Gospel. My dear husband also accompanied me sometimes, and I always felt his judgment and counsel in religious matters to be wholesome and salutary to me. A close union in matters of eternal interest in the married state is unspeakably helpful and comforting. My partner in life always gave me up willingly for any little service to which I might feel myself called, and often were his basket and his store blessed on account of it. Many were our outward difficulties in those days,

yet a way was made, often to my admiration, in the care of my family, &c.

I visited the meetings of Essex and Suffolk, and also the families of Friends in Birmingham, by myself; the latter visit, which occupied nearly three months, was a very arduous undertaking, as my exercises were often deep and heavy, but I was enabled to wash and anoint in the presence of my brethren and sisters. The waters saw Thee, O God! The waters saw Thee. The depths also were troubled.

The following extracts are from letters written by Ann Watkins to different members of her family:—

"Our Quarterly Meeting was a low time to me. I thought there was a degree of life, but, as I believe, it did not rise into dominion. I long for a ministry like Geo. Fox's. I want a ministry that would tend more to strike at the root of what I conceive to be a worldly spirit. But here I must stop. I believe our ministry is degenerated into the mixture, and oh! I would that it were genuine. I would not like to find fault with my brothers and sisters in tribulation, or even with myself, that is, with our gift, but I would that our communications flowed more directly from the living Fountain, and such would be the case if we were not too much influenced by that with which we are surrounded."

Of a meeting at Chelmsford, she says: "It was a laborious time, but I thought there was a precious covering over us. I was enabled to speak of the sufferings of the true Christian believer and the support that would be mercifully granted to sustain and uphold when nature would seem ready to shrink, as there was a cleaving to Almighty Power with the desire of the whole heart turned unto the Lord. I was also enabled to bear my testimony against a superficial religion, and the necessity there is for us to yield to the convictions of the Holy Spirit which leads, &c. Towards the close of the meeting, I felt drawn to supplicate for every age and condition, but my soul was most earnest in the petition (in which I felt, as I reverently believe, a near access to the Throne of Grace) on behalf of one at the eleventh hour, that there might be a preparation witnessed through redeeming love and mercy. I thought the meeting ended under the solemn covering that prevailed, and I felt bowed in humble thankfulness."

"I think the present a day of great reasoning, and I am ready to fear many reason away their strength. I believe the testimonies our forefathers were called to bear were pure testimonies to the Truth and to the spirituality of Christ's kingdom upon earth, and are suited for the advancement of it. And if, instead of reasoning with that which is outward and visible, each one of us would seek to turn inward and dwell under the government of the Holy Spirit, we should feel ourselves placed in a restraint from the influence of a worldly spirit, even in a godly form, and be constrained to bear his cross in a life of self-denial and true holiness. In thus writing, I desire not to contend for peculiarity, however I may judge it best for myself that I should be peculiar, but I do most heartily believe that we could not, nay, we *should not dare*, to conform to the customs and fashions of this world; so that if there were not uniformity amongst us there would be that simplicity in dress, and those marks of the daily yielding to Christ, that the evidence of our belonging to Him would be unmistakable."

"Oh! how much to be deplored that the light of the Sun of Righteousness should in any wise be obscured by the light of human intellect. It appears to be of the nature of the strong delusion, from which we have need to pray for preservation. The gift of reason is indeed a precious gift, and, when illuminated with the light of revelation, does shine brilliantly; but, unaided by this superior light, it is comparable to a fallen star that has power to hurt and destroy (but not the true seed). 'If the light that is in thee be darkness, how great is that darkness!' Whilst I thus write, my spirit craves to be preserved from a judging spirit, but if in any wise I am favored with the spirit of judgment, it is mingled with the desire that the Almighty will in mercy plead with us as a people, and spare the flock; and in the light of vision my soul desires our prosperity, believing as I do that for a wise and good purpose we were raised up; and although we be sifted and sifted and brought to be as a very small remnant of what we have been, yet there will be those raised up to testify to the inward operation of the Spirit of Truth to unite with such as shall be left. This precious doctrine does not in any wise deteriorate from that great sacrifice which was made by Jesus Christ, but, as I apprehend, renders it effectual to the salvation of the soul. The Spirit guides into all Truth, convicts of sin, points to Jesus as the sacrifice for sin, gives power to accept of God's mercy thus offered, and helps to overcome sin, takes away its power or influence over us, and renders us able in the spirit of the little child to cry Abba Father, and leads on, in the obedience of faith, to full and perfect victory over the world, the flesh and the devil. Oh! the fulness and the freedom of that grace which God has so abundantly bestowed on us, that we may become his children, and if children, then heirs, heirs of God and joint-heirs with Christ. Great is the mystery of godliness, Christ manifest in the flesh, justified in the Spirit, believed on in the world, seen of angels, received up into glory."

In a letter to her sister S— K—, dated 3rd of First Month, 1865, in alluding to a sermon which she had heard, A. W. writes:—

"The preacher said that sanctification was nothing, that obedience was nothing, that holiness was nothing, calling upon us to look to Jesus Christ who suffered for us, and this simply looking to Him would help and sustain us. I cannot understand such doctrine. I know that without the mercy of God in Christ Jesus (and that is free and extended to all), we are lost and undone; but it appears to me a confusion of doctrine to preach in this way. Is it not a proof of our belief in the Atonement to yield obedience to the work of the Holy Spirit in our hearts; and are not obedience, sanctification and holiness, the result of dedication of heart and life to the service of Him, who hath bought us with a price, even with the price of his own precious blood?"

(To be continued.)

LITTLE acts are tests of character. The great things men do are published in the newspapers and heralded abroad. But the little things seldom get into print, and in them every man acts out his true character. For this reason the words one utters in his family, and the treatment he gives his apprentice or coachman, are surer indications of the spirit which is in him, than the \$5,000 given to missions, or the speech delivered on the floor of the Senate, or the book or poem written for 10,000 readers.—Exchange.

Peril From Glacial Reservoirs.

Now that the Conemangh horror is passing from mind, and the weakness of the South Fork Reservoir is coming to be celebrated in poetry, it may be both interesting and profitable to be reminded of the hazard that sometimes lurks in dams of another origin. A large part of existing lakes are of glacial origin. Some of these are formed by the ice itself, which occasionally pushes down one valley and across another, so as to form a temporary and very treacherous dam, liable to give way suddenly and spread ruin throughout the valley below. But the vast majority of lakes owe their existence to dams formed by the irregular glacial deposits of the so-called Glacial Period. In innumerable instances these have obstructed old water-courses, and so ponded the water back almost exactly as would be done by an artificial embankment of dirt.

Two or three instances of the hazard arising from ice dams proper, are the following, as described by professor Wm. M. Davis:

A famous case is that of the Gietzov Glacier, in the valley of Bagnes, south of Martigny, in 1818. The lake grew to be a mile long, 700 feet wide and 200 deep. An attempt was made to drain it by cutting through the ice, and about half the water was slowly drawn off in this way; but then the barrier broke, and the rest of the lake was emptied in half an hour, causing a dreadful flood in the valley below. In the Tyrol, the Vernagt Glacier has many times caused disastrous floods by its inability to hold up the lake formed behind it. In the Northwestern Himalaya, the upper branches of the Indus are sometimes held back in this way. A not-d flood occurred in 1835; it advanced twenty-five miles in an hour, and was felt 300 miles down the stream, destroying all the villages on the lower plain, and strewn the fields with stones, sand and mud.

But such dams as these, made by the actual presence of the ice, are of practical interest only to those who dwell in the neighborhood of actual glaciers. In the other class more danger lurks than has as yet been recognized. As just remarked, nearly all the lakes in America have been formed by deposits of the Glacial Period obstructing the old water-courses, so that nearly all the lakes of the Northern States and of British America are in reality glacial ponds. In few cases are there any barriers separating the pent-up waters from the lower lands below except such as were furnished by an indiscriminate dumping of dirt from the retreating edge of the great ice sheet. In few cases was there anything done by nature to insure security for the future.

The greatest ground of confidence in these dams, apart from that secured by actual examination, arise from the fact that so long a time has elapsed since the glacial deposits, that the weak points in the dams have, in most instances, been found out by the ceaseless action of natural forces. The streams flowing from these ponds have been at work for thousands of years, and it might be supposed that if any insecurity originally existed in the dams, it would already have disclosed itself. For example, Lake Erie is a glacial pond. The old outlet was from the mouth of Grand River into the head of Lake Ontario. But this was obstructed by glacial debris so that, on the retreat of the ice, the only feasible outlet was through the present channel of the Niagara. In this case the dam across the old outlet is so long and so secure that there is no danger from that quarter. The rocks are

also so continuous and hard along the line of the present drainage that no apprehension of danger can arise for many thousand years to come. It is still true, however, that the Niagara gorge is wearing back toward Lake Erie at a rate of about three feet a year, and the barrier will, eventually, give way.

Other glacial reservoirs may not be so securely situated; and it should not be beneath the notice of the guardians of the public safety to have attention paid to the matter. Two or three instances of actual catastrophes occur to my mind. When I was a boy I used frequently to visit what were called the Dry Falls, in West Haven, Vermont, which were near my early home. This was in a deserted channel of Poutlnry River. The falls had been about one hundred feet high, and were marked by numerous pot-holes, such as are constantly formed in water-falls. But the river now runs at their foot, instead of over the crest, as it did when the country was first settled. The story of the case was often told me, though I think it has never been published.

The water of the river, for some miles above the falls, occupied a sort of natural flume, being held up to the required level by glacial deposits, which partially filled an old preglacial channel. It thus came about that at a point two or three miles above the falls there was a place where the stream could easily be diverted so as to flow over loose glacial debris, instead of over the rocky projection which caused the cataract. Advantage of this was taken by an enemy of the man who owned the mill privilege. To injure his enemy this man went in the night, and by a few hours' work with the spade, turned the course of the stream, so that it ran into another channel around the falls. The ultimate effects of this were very far reaching. Not only were the falls left dry, but, there being no rock to prevent in the new channel, a gorge in glacial clay one hundred feet deep was speedily worn for a distance of many miles, and all the loose material carried into the lower portion of the stream, so as to entirely spoil the navigation of the stream in its lower course, and change forever the course of trade and industry in that region.

A second instance of a similar kind occurred in Northern Vermont in the early part of the century. There is still a locality there known as Runaway Pond. This is now occupied by an excellent farm; but formerly it was occupied by the water of a small glacial lake. This was high above the valley below, and advantage was taken of the water power afforded by the fall. The owner, desiring to enlarge slightly the outlet, so as to increase the flow, in an evil hour began to dig in the bottom of the outlet. His efforts soon uncovered some concealed strata of quicksand, and the water rushed through, and was soon beyond his control. The channel was speedily enlarged, and the whole pent-up mass rushed down upon the valley below, after the manner of that in the valley of the Conemaugh. Everything was destroyed in its way. Noting that the unsettled condition of the country prevented a disaster equal to that which has so recently startled the civilized world in Pennsylvania.

A third instance must be passed with a mere allusion. The citizens of Minneapolis were startled a few years ago to find that the falls of St. Anthony, whose water-power liberally has made their city, were likely suddenly to disappear. It seemed that the preglacial channel of the Mississippi formerly ran just west of the city

and turned off from the existing channel but a short distance above the present location of the Falls. At the rate at which the recession of the gorge was taking place it would require but a few years for it to reach this old channel, and then the Falls would disappear and Minneapolis would be left desolate. The citizens rallied, and first and last spent as much as \$500,000 in fruitless attempts to avert the calamity. Finally the General Government came to the rescue, and at great expense put a solid wall of concrete under the superficial limestone clear across the stream and a little way back from the present front of the Falls. This effectually checks the recession; but it shows how a man is compelled on every side to reckon with and remedy the defects of Nature.

I will not specify places, but I could mention them by the score, where it would not be out of place for the authorities to consider not only the state of the artificial dams which store up water-power, but where they should also look well to the natural barriers, storing up such a powerful and destructive agent; for in most of these cases these natural dams are nothing more than a mass of loose dirt dumped by the ice of the Glacial Period.—Prof. Wright in *Christian Advocate*.

OBERLIN, O.

STRENGTH FOR TO-DAY.

Strength for to-day is all that we need,
As there never will be a to-morrow:
For to-morrow will prove but another to-day,
With its measure of joy and sorrow.

Then why forecast the trials of life,
With much sad and grave persistence,
And wait and watch for a crowd of ills,
That as yet have no existence?

Strength for to-day, what a precious boon
For earnest souls who labor!
For the willing hands that minister
To the needy friend or neighbor.

Strength for to-day, that the weary hearts
In the battle of right may quell not;
And the eye bedimmed by bitter tears
In their search for light may fail not.

Strength for to-day, on the down-hill track
For the travelers near the valley;
That up, far up on the upper side,
Ere long they may safely rally.

Strength for to-day, that our precious youth
May happily shun temptation;
And build from the rise to the set of the sun
On a strong and sure foundation.

Strength for to-day, in house and home
To practice forbearance sweetly;
To stenter kind words and loving deeds,
Still trusting in God completely.

Strength for to-day is all that we need,
And there never will be a to-morrow;
For to-morrow will prove but another to-day,
With its measure of joy and sorrow.

THE CHAIN OF HAITI.

"Satan thriv his garland gayly
O'er a maiden in seeming play;
Sage experience whispers daily,
"Breat the chain while yet you may."
"Why," she cried, "is he but the toy,
Forned of many a fragrant flower;
Let me still its bloom enjoy,
I can break it any hour."

"Long she sported, freely, lightly,
In the bright and glowing chain;
'O! it clasp my heart too tightly!
I must break the toy in twain!
Vain resolve, the tie that bound her
Tightened 'neath her struggling will;
Fast the blossoms fell around her,
But the fetter lingered still."

ACROSS THE WHEAT.

You ask me for the sweetest sound mine ears have ever heard?
A sweeter than the ripples' plash or trilling of a bird,
Than tapping of the raindrops upon the roof at night,
Than the sighing of the pine-trees on yonder mountain height;
And I tell you, these are tender, yet never quite so sweet
As the murmur and the cadence of the wind across the wheat.

Have you watched the golden billows in a sunlit sea
of grain,
Ere yet the reaper bound the sheaves, to fill the creak-
ing wain?
Have you thought how snow and tempest and the bitter wintry cold
Were but the guardian angels, the next year's bread
to hold,

A precious thing, unharmed by all the turmoil of the sky,
Just waiting, growing silently, until the storm went by?
Oh! have you lifted up your heart to Him who loves us all,
And listens, through the angel-songs, if but a sparrow fall,
And then, thus thinking of his hand, what symphony so sweet
As the music in the long refrain, the wind across the wheat?

With its dulcet echoes, from many a lullaby,
Where the cradled babe is hushed beneath the mother's loving eye.
It hath its heaven-promise, as sure as heaven's throne,
That He who sent the manna will ever feed his own;
And, though an atom only, 'mid the countless hosts who share
The Maker's never-ceasing watch, the Father's deathless care,
That atom is as dear to Him as my dear child to me;
He cannot lose me from my place, through all eternity.
You wonder when it sings me this there's nothing half so sweet
Beneath the circling planets, as the wind across the wheat!

—Margaret E. Sangster.

FOR "THE FRIEND,"
One God—the Trinity.

The following statement of the views held by the Mennonites on this subject, is taken from their paper *The Herald of Truth*, published at Elkhart, Indiana. It is interesting and encouraging to meet with a statement of doctrine, so clearly expressed, and so much in accordance with the sentiments held by the Society of Friends.

The terms Unitarian and Trinitarian are used by many schools of theology, and it has been a matter of much discussion which of them represents correctly the Godhead, according to the Scriptures. Many Christian denominations have found it difficult to decide which of these terms represents their faith. While many claim with all vehemence that they are Trinitarians because the Scriptures plainly teach it, there are many others who are quite as sure that they are Unitarians on the authority of the Scriptures. While both claims cannot be right, may not both be wrong? It appears that teachers in the past centuries overreached the Scriptures, using terms and making definitions not found in the written Word. Neither the term or the idea of the Trinity as they have been accepted by many denominations and schools of theology are found in the Scriptures. The same is true of Unitarianism.

There are many texts that give the idea of the Trinity in a limited sense. But this idea carried too far, as do the Catholics and many others, becomes error that is damaging to those who hold it. There are also texts which convey

the idea in a limited sense held by Unitarians. But that idea also becomes error when interpreted, as many have done, to mean that the Father only is to be recognized as God.

The early Friends saw the error into which Catholic and Protestant Trinitarians had fallen. William Penn writes, "Before I shall conclude this head it is requisite I should inform thee, reader, of the Trinitarian doctrine: Thou mayest assure thyself it is not from the Scriptures nor reason, since so expressly repugnant; although all brochures of their own inventions strongly endeavor to reconcile them with that holy record. Know then, my friend, it was born above three hundred years after the ancient gospel was declared; it was conceived in ignorance, brought forth and maintained by cruelty; for though he that was strongest maintained his opinion, persecuting the contrary, yet the scale turning on the Trinitarian side, it has there continued through all the Romish generations."

The non-resistant reformers who came out of the Roman Church, many of whom became martyrs for their faith in Christ, saw the error of Romanism in calling God a trinity, and applying the name "person" to their several divisions of the Godhead, as well as did the early Friends, who published their faith a good many years later. A division of the Godhead or a multiplicity of gods is a heathen idea that has prevailed in all ages where there was belief in God, yet ignorance of the true God. Many believe themselves to be Trinitarians because they believe that Christ was God, and that the Holy Spirit is God. This does not follow by any means. We believe in the Father, the Son, and the Holy Spirit as three names of God, and three ways in which He has been manifested to the world, yet are not Trinitarians in the sense the term has been used and excepted for hundreds of years.

Unitarianism is accused of denying the divinity of Christ and the Holy Spirit. This it does to such an extent that many who would refuse to be called Trinitarians would also refuse to be called Unitarians. No, we are not Unitarians, as theologians have used the term, merely because we are not Trinitarians. Neither are we Unitarians as theologians have used the term, merely because we are not Unitarians. Then the question arises, What are we?

We are believers in the teachings of the Scriptures, taking them simply as they read, without coupling with them definitions which they themselves do not sanction. "God is a Spirit and they that worship Him must worship Him in spirit and in truth." That one Spirit is manifested in the Word and in the world as the Father in creation, in power, and authority. That same one Spirit is manifested in the Word and in the world as the Son in being born into the world, living in flesh, and accomplishing the work of redemption. That same one Spirit is manifested in the Word and in the world as God the Holy Spirit, sent down upon faithful believers in Christ, baptizing them into one saved body, the church, the bride of the Lamb.

We believe in one God, not in three gods, but we believe that He has manifested himself in three different ways for three different purposes; yet we are neither Unitarians nor Trinitarians. We still hold with the reformers and martyrs, in opposition to Romanism and that part of Protestantism which was not willing to renounce all her errors, that the terms "person" and "trinity" cannot according to the Scriptures be applied to the Godhead.

J. S. C.

Extracts from "Memoir of James Backhouse."

Writing to a friend in connection with his views of Gospel ministry, J. B. remarks, "It was many years from the time of my beginning to speak in meetings, before my Friends saw their way to record me as a minister; but I believe I was more alive to the causes of hindrance in myself than they were, and this kept me quiet and humbled under these circumstances. I have long endeavored to be very sharp-sighted to my own failings, and ready to make all the allowance for those of others which I could; and ready to hope, when they were painfully conspicuous, that they troubled themselves more than they troubled me. Whether I was mistaken or not, I think this has tended to open the door for me to plead with them, and as I have kept that mercy in view, which has passed over my own transgressions for Jesus' sake, I have been enabled to commend them to the same mercy, and to extol the marvellous loving kindness of the Lord, in providing such a way of return to Him for repenting sinners, as well as his great goodness in granting the help of his good Spirit to all who truly seek it, to enable them to walk in holiness."

"There is no doubt in my mind that our testimony, under a right exercise of mind, will find its way in the minds of others, much in proportion to the degree in which we ourselves walk in the Spirit, and consider ourselves, lest we also be tempted. We may point out the sinfulness of sin, and the danger of an unawakened state, and excite opposition in the minds of others, but if, as Ambassadors for Christ, we also become them in his stead, to be reconciled to God, I believe much of this opposition will not only give way, but will be succeeded by a hearkening to the message. Our worthy fore-elder, George Fox, though he so fully recognized the necessity of the putting forth of the Spirit in regard to ministry, often extended counsel to those who had received a testimony from the Lord, as to the exercise of their gifts, showing how conscious he was of the importance of the understanding being enlightened. And in this way, I believe we may still be helpful one to another, without improperly interfering with the gifts and exercises one of another, or of attempting to limit their diversity."

"I have apprehended that some who have begun well as ministers, have mistaken an extension of expression for a growth in their gifts. We were reminded in one of the Yearly Meetings of Ministers and Elders, 'That there were little gifts in many words, and great gifts in few words.' A long communication, to be what it ought to be, requires much matter, and a proportionate amount of the baptizing power of the Holy Spirit accompanying the exercise and the expression. Right exercise of mind, if expressed in simple terms, will I believe tend to edification, but if it be made more of than it is, or be belodged through unduly mystical expression, the edification will be diminished, and the church may be burdened."

"While not doubting that matter for expression is often brought before the mind of the party whose duty it is to utter it, in the words in which it is to be communicated, nor by any means wishing to interfere with right exercise of any kind, yet I had unity with a Friend who advised against an undue reading in the Old Testament, and of allowing the mind unduly to dwell on prophecy, instead of diligently reading in the New Testament, and meditating on the goodness of God, in the gospel of his dear Son, and seek-

ing to have the mind subjected to the government of Christ. I have no doubt if the counsel were followed, it would in some cases produce a change like that effected in the ministry of Apollis by the labors of Priscilla and Aquilla; they had unity with his gift before, but afterward it appears to have been exercised to better effect."

"The remarks I made on a certain occasion, were made under an apprehension of duty, and were designed for all who could profit by them, not excepting myself; for when I have any thing to say under an apprehension of duty, either in meetings for worship or discipline, it is my practice to consider how far it is applicable to myself, and in so doing I have often derived advantage."

"While we recognize with George Fox, the infallibility of the teachings of the Holy Spirit, it is important that with him, we also recognize the fallibility of those who have to be taught that 'we have our treasure in earthen vessels,' and that a needful degree of care is required to be exercised, lest the sound of these earthen vessels should be confused with that which is given to be communicated. Some of us have had many humbling lessons to learn on these subjects; but where there is a teachable, meek and humble spirit, this ought not to discourage us."

"The calmness in which the voice is preserved in a natural tone, is valuable also, in helping to keep the mind to the anointing, under which ability is received to clothe the exercise in words, according to the diversity of gifts, so that the expression may be with the Spirit, and with the understanding also."

"While Gospel ministry does not indeed consist in attention to voice and manner, but in a right exercise of the gifts of the Spirit, under its renewed anointings, voice and manner do require such a measure of attention as may prevent their diverting the minds of the hearers from what is spoken."

"'They are poor servants,' J. B. would remark, 'who require to be driven to their Master's work;' and truly he seemed ever on the watch to do his Lord's bidding, and to testify to his fellow-men the grace of God, and the blessedness of an humble child-like walk before Him. 'We should watch for opportunities to speak a word in season,' he would sometimes say, and this maxim he carried out to the benefit of many, not only in his home-life, but wherever he thought there was an opening for usefulness."

When feeling released from Norway, in the Twelfth Month, 1853, at the close of his second religious visit "the steamer 'Courier' had left for its last time for the winter, and the most likely passage for England was by a smack carrying lobsters and wild fowl. Having concluded to attempt a passage by this vessel, the 'Gowland,' we parted from our dear friend Endré Dahl, on the 22nd, he having been with us now 28 weeks, and having entered feebly into our exercises, and been a willing helper in the Lord's work."

"The following afternoon, the vessel having taken in its cargo of 9000 lobsters, we sailed. The registered tonnage of the 'Gowland' was about 40 tons; the central part of the vessel was a well, communicating by perforations in the bottom, with the sea; in this the lobsters were put, and the motion kept them from settling so as to injure one another. The master and crew five in number, fishermen from Barking, in Essex, were kindly attentive, and skilful navigators.

They all had their berths in the cabin, and took their meals there; this gave us a better acquaintance with them than would have been afforded in the usual arrangements of a ship. There is among this class much to encourage labor for their improvement. The cooking was done on the cabin fire, and the provisions, which were good, were taken in the rustic style of seafaring people of this class. A biscuit usually served for a plate, and each person used his own pocket knife. Tin dishes and pots, and a few stoneware mugs, formed the equipage of the meal chest, which served as a table. The drink on board was water of good quality, and morning and evening good coffee, in which they managed to have milk and cream, keeping these articles in bottles in the water of the wells. Our berths could not be commended for fresh washed linen, but they were warm and dry, and we were thankful for the accommodations thus afforded for us to return to England."

FOR "THE FRIEND."

"Quench not the Spirit.—Despise not Prophecies," 1st Thess. v, 19, 20.

These Scripture words have remained with me from time to time, with a feeling there may be some of us who are at times quenching the Spirit, not giving sufficient attention thereto, but more willing to set aside the day of their visitation till a more convenient season. Not taking heed to what they feel at times to be secretly made known: which it would be right to attend to, and which would lead to sweet peace. The cross is in the way, it is too heavy. But remember, dear friends, whoever you may be, the day of visitation will not always be extended, for we cannot command them ourselves, and let me entreat such not to despise these secret intimations, until it may be said as was formerly, "If I hadst known in this thy day, the things which belong unto thy peace! but now they are hid from thine eyes." Sad indeed would be the state of any to hear this language spoken in the secret of the heart, and I trust none that read these lines may; if so, the fault will be their own, for God willeth not the spiritual death of any. But it is with me to encourage some of us to more faithfulness, and to remember these things while time and opportunity are given, and let the time past suffice, and be willing to close in with what has clearly been made known. Let not the fear of man be your snare. When once you have given up and decided to take a step, the dear Master can take all that fear away. By a continuance in obedience, and being willing to bring sacrifices unto the Lord, you will find more of pleasure and more lasting happiness than you had before in following the ways of the world. The Christian's path is not a gloomy one, but on the contrary it is one of happiness; for he, or she, has a place of refuge to flee to in every time of need, a place which the worldling knows not of. These things are worth thinking of, and taking heed to, and such as do, will not find themselves to be following any cunningly devised fable, but the real truth. Therefore, "Trust in the Lord, with all thine heart, and lean not to thine own understanding," and the blessed Saviour will not be wanting on his part, but will teach those that are willing to follow Him what He would have them to do, and lead them into paths they have not known, and thus, by being faithful and obedient, you will go on step by step, and your understanding will be opened, and like the blind man, whose eyes the Saviour opened, you will see men or things clearly. Ah, the Christian's path is worth

striving for, because of the inward peace that, at times given, and the place of safety to flee to, the Rock of Defence, the sure foundation, the safe abiding place. And it is free and open to all that are willing to accept of God's saving grace, which has appeared unto all men. And God is no respecter of persons, but "all that will come may come, and take of the water of life freely." And again, the blessed invitation is, "Look unto me, and be ye saved, all the ends of the earth; for I am God, and there is none else," Isa. xlv, 22. This includes all, so that none need say, it is not worth while for me to try to make any change in my way of doing, for the way is free and open to all; and He, the good Master is just as willing to help one as another, no matter who. For He is still waiting to be gracious, and to gather lambs into his fold, the precious enclosure. Oh! for more bleating, and the Shepherd of the sheep will hear and tenderly watch over and care for such as these, and have a special regard for them, for he loves to hear the bleating of the lambs. Our blessed Saviour said, "My sheep hear my voice, and they follow me, and a stranger will they not follow." Then let some be more willing to listen to this spoken voice more than that of the stranger, and by taking heed thereto, and a continuance therein the reward will be sure. "Unto you, therefore, which believe He is precious." So that the writer of these few lines would encourage all who are strangers to these things, to come and try for themselves, while the day lasteth, and taste and see that the Lord is good, and know for yourselves that your Redeemer liveth, and I think none such will have to repent of it; but on the other hand rejoice that you are counted worthy, and are made willing to be as clay in his hands, to be moulded and fashioned as He pleases. Again I would say, "Quench not the Spirit. Despise not Prophecies."

E. C. COOPER.

PENNA., Seventh Month 29th, 1859.

General Washington and Friends.

The *British Friend* publishes the following letter of Edward Stabler, a prominent Friend in Virginia:—

Petersburg, Va., Tenth Mo. 20th, 1756.

In the spring there was an Act made for Drafting the Militia by Lot, in which Friends were not exempted, but on whomsoever the Lot fell upon were obliged to go as Soldiers or pay £10 to hire another man in their stead, and I am sorry to say the generality of Friends complied with it. Except seven young men who would not comply to go nor hire another in their stead, and so were taken by force and carried over the Mountains to the Army. And after they had been there some time I understood they were like to meet with cruel usage if they did not comply to bear arms, and tho' most Friends acknowledged it would be right for some to visit them, yet none seemed forward to go, as it appeared dangerous to travail over the Mountains at that time, the Indians having done much mischief in these parts, yet I could not be easy in my own mind without going myself, and use what endeavours I was capable of for their release out of Prison, where they had been kept close confined for about ten weeks. I had several good opportunities with Coll. Washington to open our principles to him, and reasons why we could not be active in the carrying on of War. He seemed very moderate before we parted, and inclined to favour them, but said as they were sent to him, by the Government he could not release them,

and had rec'd orders from the Gov'r [Dinwiddie] to have them whipped every day till they would comply. I requested him to omit putting the Gov'r's orders in execution till I could go and speak with him (wh. was upwards of 250 miles, part of the way through the uninhabited country and over very high Mountains), and four more Friends accompanied me to the Gov'r. We had a great deal of Discourse with him, and he promised that he would write to Coll. Washington to be favourable to them, wh. he did. I got them releas'd out of Prison when I was there, and to have liberty to go to some Friends' houses that liv'd about five or six miles distant, upon being bound for their appearance there when the Coll. rec'd orders from the Gov'r, but they were not called upon afterwards, no[r] anything required of them.

In reference to these young men, Washington wrote to Dinwiddie, "I could by no means bring the Quakers on any terms. They chose rather to be whipped to death than bear arms, or lend us any assistance, whatever, upon the fort, or anything of self-defense."

Natural History, Science, &c.

Telescopic Wires.—In many philosophical instruments very fine threads are used—such as those from the spinnerets of a spider; and in some observatories a special kind of spider is bred, so that a supply shall not fail. C. V. Bogs has invented a method by which even finer threads may be artificially made. He melts in an oxyhydrogen blowpipe flame a piece of rock crystal, which he draws into a rod; then taking this rod, he once more melts it, and drawing a fibre from it attaches that fibre to an arrow. Still holding the rod to the flame, the arrow is suddenly shot from a bow, and draws out with it a tiny hair of rock crystal which is hardly visible without a microscope.

Effects of Moisture.—Among the brilliant experiments often exhibited by lecturers on Chemistry, are those showing with what great energy phosphorus, sulphur and iron will burn if heated in an atmosphere of oxygen gas. It has been recently shown, that when the gas is thoroughly dried all these substances can be introduced into it in a highly heated state without combustion taking place.

Effects of Floods.—F. L. Oswald, in an article published in *Littpinnott's Magazine*, calls attention to the destructive effects of floods on the fertility of a country by the washing away of the productive soil. This effect he regards as largely increased by the destruction of the forests on the mountain slopes, which formerly detained much of the rainfall by their roots, &c., and thus made the drainage more gradual and less hurtful.

He estimates that within historical periods, "along the shores of the Mediterranean alone, some seven million square miles, once blest with abundant fertility, have been changed into worthless deserts." "With the disappearance of the forests began that era of denervation which has almost sealed the door of the 'dying continent,' and which has wasted the peninsulas of southern Europe. The melting snows, now no longer absorbed by the sponge-like carpet of moss and tangled roots, run off the hill-slopes like rain from a tile-covered roof."

Cyrenacia (the modern Tunis) had once a population of 10 or 12 millions; but the reckless destruction of the forests continued till 95 per cent. of the lowland area had been reduced to

absolute sterility. The same process is going on in southern Europe.

Lion-Hunting in Algeria.—A writer in *Chambers's Journal* describes the effort made by one of the hill tribes in Algeria to destroy a family of lions which had made their home in a cave among the rocks, and were rapidly decimating the herds on which they subsisted. "Night after night dire havoc was made by these fierce marauders, and the time had come when a determined stand must be made to avert utter ruin. Young and old, all indeed capable of bearing arms turned out; some few were handling long smooth-bored guns; but by far the greater part had only spears and yataghans.

"A large circle of spearman was now formed, and the men received instructions to converge gradually toward a rocky ledge in front of the cave. Amid much shouting and clash of arms, the lines were drawn closer and closer, while all of us who had firearms made as strict as possible for the cave. Before we had got within range, an enormous male lion showed himself; for an instant, shook his mane and vanished, to appear again when we had arrived at a distance of about 1,000 yards.

"A brisk but harmless fusillade was opened upon him by our Arab friends, and with a roar of defiance he withdrew once more into his stronghold; nor did he show himself again as we drew nearer and nearer, until we came to a halt about 200 yards from the cave. The narrow ledge leading up to it was separated from the hillside on which we stood by a deep gorge more than 40 feet wide. Above the ledge, toward a precipitous height, and every cleft or gully in the rocky wall around bristled with the arms of our spearman, having scope in every direction. Loud shouts and clamor were raised to draw forth our royal foes, but all in vain. After brief consultation, one dauntless youth volunteered to creep along the ledge, close to the cave, collect a heap of dry brushwood and fire it, so as to smother the lions out. A few moments, and the fire blazed up, sending a column of smoke into the cave. The effect upon the inmates was instantaneous and startling. Two mighty roars mingled in one, and lion and lioness bounded forth, one after the other. At first glimpse of them, my companion and I fired; but the movements of the mighty beasts were so rapid and incessant that both of us missed. Our Arab friends were peppering away with their firelocks, but also to little or no purpose.

"Suddenly, while the lioness charged down upon us along the ledge, her consort, with one mighty bound, cleared the gully, alighting in the very midst of the Arabs at his brink, and for the moment carrying all before him. We aimed carefully this time, as the lioness sprang upon us, and both our bullets took effect; but it needed a second dose of lead out of our breech-loaders to stretch her lifeless at our feet. We then hastened to the assistance of our allies. What a scene met our eye! Bleeding profusely from many wounds, but yet far from disabled, the furious male was making sad havoc among the crowd, as we drew near to finish him with our rifles. At that very moment the spearman were likewise upon him, and half a dozen lances were now plunged into him simultaneously, bearing him to the ground at last. He had killed five Arabs outright, and wounded fourteen more.

"Two young cubs, scarcely six months old, were found inside the cave half smothered by the smoke. These were sent to Algiers for sale."

Items.

Meeting at Parkerville, Chester Co., Pa.—Under an appointment made by the Committee assigned to the Western Quarterly Meeting, a meeting was held on Friday afternoon, Eighth Month 11th, at Friends' meeting-house at Parkerville. Some other public meetings were held in the neighborhood on the same day, which probably attracted some who would otherwise have been present. But the meeting was well attended, and was a season of Divine favor. The character of the vocal services in it showed that an earnest concern had been felt for the spiritual welfare of the people in that neighborhood; and fervent were the exhortations delivered, tending to stir up the audience to greater diligence in working out their souls' salvation, through the assistance of the Grace of God, without which nothing can be done.

Summer Outings.—The *Christian Advocate* says that many who make a profession of Christianity when at home, when they go into the country for the summer rest, live precisely as their neighbors who make no profession of religion. They go to no place of worship, but sit all the morning of the First-day of the week on the piazza, talking fashionable or political gossip, or reading the "Sunday paper" or the last novel; and in the afternoon will spend the time in sleep, or in strolling through the woods or along the shore; and do not utter a word or perform an act that would lead any one observing them to suppose they were Christians.

Friends' Books in Australia.—The Australian Friend, in speaking of Hobart, says:—"We have been much gratified by the receipt of a valuable shipment of Friends' Books from warm-hearted Friends in Philadelphia. They were sent to the care of the Editor A. F., for presentation to the Meeting Library, and are a very acceptable addition to our shelves. It is a real encouragement to receive such evidence of the kindly feelings of our distant brethren, and our best thanks are due to the donors.

Christian Chinamen.—There are about one thousand Christian Chinamen in California and Oregon. They contribute \$2,500 a year for Home Mission Work, and have sent two missionaries to China.

Tract Distribution.—A Friend, whose attention recently was turned to an encampment of soldiers, near the City of Philadelphia, felt drawn to distribute among them some tracts, the reading of which might make profitable impressions on the minds of some of the 600 men thus gathered together, with little to occupy their time. He was courteously received at the camp, and found efficient help in making the distribution. The tracts appeared to be well received. About 300 were thus put in circulation. What good results may follow is known only to Him who controls all things; but the servant, who was faithful in doing what he believed to be a required duty, we doubt not had the feeling of comfort which attends obedience to the calls of the Head of the Church.

THE FRIEND.

EIGHTH MONTH 24, 1859.

Those members of the Society of Friends who are endeavoring to graft upon its system the foreign and inharmonious element of a *paid* ministry, so far as they are successful will entail upon their successors difficulties with which heretofore we have been in a large measure free.

Although a man may really desire to promote the cause of Christ and the salvation of souls, yet when the question of pecuniary gain enters into his consideration, there is danger of it having an improper influence in deciding upon his course. Of this those who have been connected with churches which employ persons to preach for them, are perhaps more sensible than Friends are, who have not had the same experience.

A recent number of the *Christian Advocate* (Methodist) has an article on this subject, from which the following paragraphs are extracted:—

"When ministers seek certain positions from mere mercenary and worldly motives their course is unworthy, and their usefulness will be greatly abridged. It is to be feared that there are talented ministers in nearly all the denominations who have sought and found rich churches, large salaries, refined society, and great reputation, and by so doing have wasted their lives. They have their reward. Their career has been marked with splendor, their harvest is 'nothing but leaves.'

"There is a suspicion in certain quarters, which is no longer a secret, that the commercial element enters too largely into the ambition of certain ministers. No one is so bold as to say that the average minister is too well paid, but it is positively asserted that not a few ministers consider the amount of salary the measure of their grade. Some preachers who have been able to command high salaries make this point prominent when they are interviewed by committees with reference to prospective pastorates. They insist that they must have so much; they have never preached for less, and do not intend to, and that to accept less would be to decline in grade. It would be sad if the number who exhibit this spirit were large. Probably it is not. But it is a great evil, even though limited to a few, and will be sure to grow unless great grace shall interpose and prevent. That a minister's grade should be thought to depend on the amount of his salary is an alarming symptom of church life. That a minister whose talents enable him to do so should demand a certain amount on the ground of sensitiveness about grade is a shame. The sooner such peculiarly talented men seek employment for their great abilities outside of the pulpit, the better for the cause of Christ.

"Churches have a right to prefer one minister before another, but the wisdom which cometh from above is required in order to make a wise choice. The minister who possesses the most shining and popular qualities is sure to be sought after, but he may not be more useful than another whose gifts appear to be less popular. A preacher of far more than ordinary ability, who had toiled faithfully and successfully in his Conference for twenty-five years, said: 'When I see how churches bid for mere brilliancy in the pulpit, and underestimate solid work done by plain men, I feel like giving up the ministry.'"

SUMMARY OF EVENTS.

UNITED STATES.—Chief Mays, of the Cherokee Nation, has sent an answer to the letter of the United States Commission, discussing the proposition that the Indians shall cede a portion of their land. He asks for a proposition that the people can understand, and says the matter will be laid before the Council at its regular session in Eleventh Month next. The Commission has sent a suitable reply, stating the position of the Government more fully. The negotiations are practically suspended for the present, and the Commission, after a few days' rest, will go to the Chickasaw country.

The first bale of new crop upland cotton was delivered at Live Oaks, Florida, on the 13th inst., for shipment to Savannah. It was from W. R. Wilson, of Tallahassee, Fla. The business is chiefly in the hands of Hollanders.

The farmers of Warren and Sussex counties, New Jersey, say that the peach crop is half ruined, and the melons are almost totally so, owing to the heavy rains.

Georgia expects her fruit crop this year to be the largest in the history of the State.

Deer are reported exceedingly plentiful in Aroostook County, Me., even around the large towns.

Rich gold deposits are claimed to have been found along Bean Blossom Creek in Brown County, Indiana.

The forest fires in Montana have attained alarming proportions, hundreds of thousands of dollars' worth of timber having been destroyed, according to a Helena despatch.

Extensive forest fires are reported from Portland, Oregon, that city having been enshrouded in dense smoke for the past two or three weeks. Several farm houses have been burnt, and on the 12th inst. the settlement of Cedar Mills was wiped out, the people in some instances having barely time to escape.

Deaths in this city last week numbered 389, a decrease of 103, as compared with the previous week, and of 50 with the corresponding period of last year. Of the foregoing 100 were males, 199 females; 195 were under one year of age; 45 died of cholera infantum; 37 of consumption; 35 of marasmus; 24 of inflammation of the stomach and bowels; 22 of diseases of the heart; typhoid fever, 17; old age, 14; inanition, 13; cancer, 13; convulsions, 12; pneumonia, 11; debility, 11, and inflammation of the brain, 11.

Markets.—U. S. A's, 118, reg. 106½; coupon, 107½; 4's, 125½; currency 6's, 41's, 130.

COTTON was firm under small supplies; middling uplands 11½ cts. per pound; winter choice, \$13.25 a \$13.50; do, medium to prime \$12.4 a \$13.

FLOR and MEAL.—Western and Pennsylvania super, \$2.65 a \$2.90; do, do, extras, \$3.00 a \$3.30; No. 2 winter family, \$3.40 a \$3.75; Pennsylvania family, \$3.25 a \$3.55; roller milled, \$3.45 a \$3.75; western winter, clear, \$4.10 a \$4.50; do, straight, \$4.50 a \$4.75; winter patent, \$4.90 a \$5.25; Minnesota, clear, \$3.50 a \$4.00; do, straight, \$4.50 a 5.00; do, patent, \$5.25 a \$5.75. Rye flour was quiet and firm at \$3 per barrel for choice.

GRAIN.—No. 1 white corn, 43½ cts. No. 2 mixed corn, 43 a 43½ cts. No. 2 white oats, 30 a 30½ cts. BEEF CATTLE.—Extra, 5 a 5½ cts.; good, 4 a 4½ cts.; medium, 4¼ a 4½ cts.; common, 3¼ a 4 cts.; Texas, 3¼ a 4 cts. SHEEP.—Extra, 5½ cts.; good, 5 a 5½ cts.; medium, 4 a 4½ cts.; common, 3¼ a 4 cts.; culls, 2¼ a 3 cts. Lambs, 4 a 7½ cts.

HOGS.—Good light western, 6½ cts.; heavy western, 225 to 250 pounds, 6 a 6½ cts.; extra heavy western, 225 to 250 pounds, 5½ a 6 cts.

FOREIGN.—Attorney General Webster announced in the British House of Commons, on the evening of the 14th inst., that the Government had decided to amend the Tithes bill by accepting the opposition's proposal to have the tithes assessed on the occupiers, liable for the payment of tithes. This announcement was greeted with cheers by the Liberals.

Sir William Vernon Harcourt expressed his gratification. This announcement, he said, proved that the patience and arduous exertions of the Opposition had been successful. He said that the bill was now equivalent to the introduction of a new bill. The principle for which the Liberals had contended had been recognized. It implied an entire change of the whole system of tithes, involving immense interests and millions of money. He said that the Government's change of front the Liberals must ask to see, scrutinize the bill, when placed upon paper, before committing themselves to its acceptance.

Smith, the Government leader, admitted that it was desirable to postpone discussion on the bill until the next session.

On the 14th inst., the French Senate Court found Count Dillon and Henri Rochefort accomplices of General Boulanger in a felonious attempt against the safety of the State. It also decided by a vote of 100 to 67 to have the Senate Court rule against the accused, in connection with the Presidential crisis in 1887, constituted a treasonable attempt.

The Court found General Boulanger guilty on the charge of embezzling public funds, and refusing to appear at the Court. Under the circumstances the Court then sentenced General Boulanger, Count Dillon and Henri Rochefort to be deported to a fortified place.

A despatch from London, dated Eighth Mo. 16th, says: A manifesto signed by General Boulanger, Count Dillon and Henri Rochefort is published. It calls the action of the Senate Court a violation of arbitrary rule, calumny and mendacity, and declares that in spite of fresh coups d'etat preparing in the dark, the signers have continued to participate in the electorate of France.

A Berlin despatch of the 15th inst., referring to a recent battle a few days previously, says: "All the ac-

counts of the experiments with smokeless powder at the Spandau shan fight, concur in saying that no smoke was visible at a distance of 300 yards, and that no sound was heard beyond a slight tapping. A strange effect was produced by the spectacle of a large mass of troops, who were seemingly inactive, but really pouring forth a deadly fire.

A despatch from Crete says that Chakir Pasha, the Governor, has proclaimed martial law.

The onion crop of Bermuda, the chief export of the island, Consul Beckwith reports to our Department of State, has been so abundant this year that it has proved disastrous to the farmers and brokers. In consequence, money is scarce, and the outlook for the winter most unpromising. Potatoes, beets and tomatoes added nothing to the general prosperity. Trade in arrowroot is falling rapidly, and the growing of the root lilies for export to the United States is increasing.

The war in Hayti between the rivals Legitime and Hippolyte, is growing more and more bloody, and begins to look like a war of extermination. Prisoners are slaughtered like so many cattle. Hippolyte is steadily marching toward Port au Prince, the capital of the South and Legitime's stronghold, and the inhabitants of that town expect to see if an entrance is forced.

Petroleum in large quantities has been discovered in the State of Chiapas, Mexico.

RECEIPTS.

Received from Jacob Maule, O. N., \$2, 63, and for Asenath Bailey, \$2, vol. 63; from Daniel Williams, Agent, O., \$38, being \$2 each for Jacob Holloway, Asa Branson, W. Branson, O. Sidell, Edwin P. Robinson, Joseph Bailey, David Branson, William L. Ashton, Mary J. French, Maria Walker, Thomas Corow, Mary Chagler, Juliann H. Branson, Margaret Hobson, John C. Hodge, Mary Ann Holloway, Sarah Purviance, A. G. Holloway, Charles Stratton, and Henry Smith, \$2 each, for William Maria, Pa., \$2, vol. 63, from Joshua B. Hillman, N. J., \$2, vol. 63; from Lloyd Balderston, Md., \$2, vol. 63, and for George Balderston and Levi H. Atwater, \$2 each, vol. 63; from Benjamin Hinshaw, Lo., \$2, vol. 63, from Mary Ann Sharpless, E. Va., \$2, vol. 63, from Sarah B. Con, N. J., \$2, vol. 63, from Amey Roberts, Philad'a., \$2, vol. 63, for Hannah R. Hopkins, \$2, vol. 63; from Susan J. Yerkes, Fk'd., \$2, vol. 63; from Priscilla M. Lippincott, N. J., \$2, vol. 63; from John S. Lowry and Edward S. Lowry, Philad'a., \$2 each, vol. 63; from Dr. Edward Maria, Philad'a., \$2, vol. 63; from William Maria, Pa., \$2, vol. 63; from Thomas E. Smith, Agent, Io., \$20, being \$2 each for Jonathan Briggs, Evan Smith, George W. Mott, David Holloway, Albert Emmons, Elmina Mott, Chalkley C. Bates, Edward Edgerton, Benjamin L. Winters, and Joseph Edgerton, vol. 63; from Mary Wist, W. Va., \$2, vol. 63; from Lydia Roberts, Io., \$2, vol. 63; from Nathan Satterthwait, \$2, vol. 63; from David D. McCrewe, Agent, Io., \$8, being \$2 each for Sidwell Hedges, Ole T. Sawyer, Sigornth T. Rosdale, and Ole Tostenon, \$2 each, vol. 63; from John S. Lowry, \$4, to No. 32, vol. 63; from Mary S. Wood, N. Y. City, \$2, vol. 63; from Elwood Comfort, Mich., \$2, vol. 63; from Mary J. Foster, R. I., \$2, vol. 63; from Jane Baldwin, Kans., \$2, vol. 63; from Amelia Smith, O., \$2, vol. 63; from Elizabeth L. Roberts, N. J., \$2, vol. 63; from John M. Roberts, Pa., \$2, vol. 63; from George C. Fk'd., \$2, vol. 63, and for Marianna Eastburn, N. J., \$2, vol. 63; from Sarah Huestis, Agent, O., \$20, being \$2 each for Elizabeth Bowman, Elwood Dean, Thomas K. Smith, Harriet Rhoads, Ann Smith, David Smith, Fleming Smith, and John Sharpless, vol. 63, and \$2 each for James Edgerton, vol. 63; from George Satterthwait, Agent, Pa., \$20, being \$2 each for himself, Morris Cope, Isaac Good, Margaret Maule, Emily Pusey, Robert Lewis, Margareta J. Mercer, Hannah N. Edgerton, John Sharpless, and John P. Sharpless, vol. 63; from Josiah B. Roberts, Pa., \$2, vol. 63; from Edwin Fogg, O., \$2, vol. 63; from Pennell L. Webster, Pa., \$2, vol. 63; from Rowland Evans, Pa., \$2, vol. 63; from Phineas Pickett, Ind., \$6, to No. 52, vol. 63; from Almida B. Wroe, Io., per David Mills, \$2, vol. 63; from John S. Lowry, \$2, vol. 63; from Frank Leeds, Cal., \$2, vol. 63; from Joshua Brantingham, Agent, O., \$8, being \$2 each for Benjamin Kite, John Hoyle, Joseph Winters, Charles W. Satterthwait, Robert Harris, Joseph Masters, Uriah Price, Edwin Fogg, John H. Hapton, Ann Bowman, Geo. Edgerton, John S. Lowry, John S. Lowry, Geo. M. G. Mearl, Joseph Stratton, Beldia Stratton, Mary L. Test, Joshua Coppock, J. E. Bailey, Alfred Brantingham, Cyrus Brantingham, and William Brantingham, vol. 63; from Edwin Thorp, W. Remittances received after Third-day will not appear in the Receipts until the following week.

NOTICES.

WESTWON BOARDING SCHOOL.—The Winter or Long Term will open on Third-day, the 3rd of Ninth Month, 1859.

Conveyances will be at Westwton Station on the West Chester and Philadelphia Railroad on that day, to meet the trains that leave Philadelphia for Westwton of the Pennsylvania Railroad Company, at Broad and Filbert Sts., Philadelphia, at 7.09, 8.55 A. M., and 2.53, 4.55 and 5.51 P. M.

The Union Transfer Company will send for baggage to any place in the United States, and the following notice is left either at No. 338 Chestnut St. at the South East corner of Broad and Chestnut Sts., at the Baggage-room, Fifteenth Street, above Market, or at Market St. Ferry (north side); and will deliver it at the Broad St. Station of the Pennsylvania Railroad Company, at a charge of 25 cts. per trunk to be paid either when the order is given, or when the trunk is called for. For the same charge they will collect baggage from any of the other railroad depots, if the railroad checks held for such baggage are left at one of our offices at the Union Transfer Company above designated. In all cases it must be stated that the baggage is to go to Westwton Boarding School, Westwton Station on the West Chester and Philadelphia Railroad.

BOARDING SCHOOL FOR INDIAN CHILDREN AT TENNESSEE.—A Friend and his wife wanted to take charge of the institution and farm, as Superintendent and Matron.

Friends who may feel a call to this service, address Ephraim Smith, 1110 Pine Street, Phila.

FOR "THE FRIEND,"

Incidents and Reflections.—No. 186.

EARNESTNESS OF PURPOSE.

The energy and force displayed by a man who is thorough in earnest, and roused by some strong motive to the exercise of his full powers, is graphically described in the following narration: "There was a sea captain in command of an English vessel lying at Alexandria. He had left at home a wife and one child, a little invalid, Lucy. One day they brought him a telegram from England. He opened it leisurely thinking it was an ordinary message from his employers. This is what it said: 'My dear, I think it right to tell you that Lucy's worse.' At once all was bustle on board; all hands got orders which made them work their hardest. Goods not on board were left. Passengers flew to their places. Officers, sailors—all rushed from duty to duty, amazed at the pace of their captain's commands; and in a time which seemed incredibly short the ship was out of the harbor, and at their greatest speed the engines drove her to sea. All wondered what had happened. They did not know that into their captain's heart had entered those dreadful words, 'Lucy's worse.'

"The wind arose and the waves rolled mountains high, but amid the storm he kept the ship to her course. Malta was reached; but, to the moment, Malta was left again. 'Why this haste?' thought the Malta workers as they put cargo on board. It was those dreadful words, 'Lucy's worse.'

"The soldiers on the rock at Gibraltar, and the light-house man on Point Finisterre, wondered at the rate at which the ship passed out of the range of their glasses. 'She must have splendid engines.' But it was not the engines alone that made her glide so swiftly along; it was the fact that Lucy was worse. Away steamed the ship up the Channel, through the Dover Straits, round the Nore, up the Thames—till London was reached and the ship moored. That moment the captain was gone. Next day the papers announced the 'Wentworth' from Alexandria as having had bad weather, but having made the shortest voyage on record. They did not add the reason; had they done so it would have been a short sentence about a frail child—'Lucy's worse.'

"If John Foster had met with this incident

before he wrote his celebrated essay on Decision of Character, it might have furnished him with an additional illustration of that impulsive force which overcomes all obstacles, and presses forward to the accomplishment of a design to which every power of mind and body are for the time made subservient. Of the effects of such a strong motive, or "Ruling Passion," this writer says: "The utmost powers of the man are constrained into the service of the favorite cause by this passion, which sweeps away, as it advances, all the trivial objections and little opposing motives, and seems almost to open a way through impossibilities." As an instance, he narrates the case of a young man, who wasted in two or three years a large patrimony in profligate revels with a number of worthless associates, who called themselves his friends, and who, when his last means were exhausted, treated him with neglect or contempt.

"Reduced to absolute want, he one day went out of the house with an intention to put an end to his life; but wandering awhile almost unconsciously, he came to the brow of an eminence which overlooked what were lately his estates. Here he sat down, and remained fixed in thought a number of hours, at the end of which he sprang from the ground with a vehement exulting emotion. He had formed his resolution, which was, that all these estates should be his again; he had formed his plan, too, which he instantly began to execute. He walked hastily forward, determined to seize the very first opportunity, of however humble a kind, to gain any money, though it were ever so despicable a trifle, and resolved absolutely not to spend, if he could help it, a farthing of whatever he might obtain. The first thing that drew his attention, was a heap of coals shot out of carts on the pavement before a house. He offered himself to shovel or wheel them into the place where they were to be laid, and was employed. He received a few pence for the labor; and then, in pursuance of the saving part of his plan, requested some small gratuity of meat and drink, which was given him. He then looked out for the next thing that might chance to offer, and went, with indefatigable industry, through a succession of servile employments, in different places, of longer and shorter duration, still scrupulously avoiding, as far as possible, the expense of a penny. He promptly seized every opportunity which could advance his design, without regarding the meanness of occupation or appearance. By this method he had gained, after a considerable time, money enough to purchase, in order to sell again, a few cattle, of which he had taken pains to understand the value. He speedily but cautiously turned his first gains into second advantages; retained without a single deviation his extreme parsimony; and thus advanced by degrees into larger transactions and incipient wealth. I did not hear, or have forgotten, the continued course of his life; but the final result was that he more than recovered his lost possession, and died an inveterate miser, worth sixty thousand pounds. I have always recollected

this as a signal instance, though in an unfortunate and ignoble direction, of decisive character, and of the extraordinary effect which, according to general laws, belongs to the strongest forms of such a character."

The philanthropist Howard furnishes an example of equal decision, but directed to far more worthy objects. "The moment of finishing his plans in deliberation, and commencing them in action was the same. The law which carries water down a declivity was not more unchangeable and invariable than the determination of his feelings toward the main object."

There is something very elevating in contemplating the exercise of great decision of character, especially when it is governed by obedience to the Divine will, and directed towards the highest objects which can claim the attention of man,—the eternal interests of himself and of his fellow-beings. How many hearts have felt the force and dignity of the language of Paul, when he said to the elders of Ephesus,—"I go bound in the spirit unto Jerusalem, not knowing the things that shall befall me there; save that the Holy Ghost witnesseth in every city, saying that bonds and afflictions abide me. But none of these things move me, neither count I my life dear unto myself, so that I might finish my course with joy, and the ministry which I have received of the Lord Jesus, to testify the gospel of the grace of God." And afterwards, when at Caesarea, the disciples endeavored to dissuade him from the prosecution of his journey, he replied, "What mean ye to weep and break mine heart? For I am ready not to be bound only, but also to die at Jerusalem for the name of the Lord Jesus."

The history of the martyrs, who have sealed with their blood their testimony to the religion of Christ, furnishes many examples of this decision of character. Some of these witnesses for the truth, may not naturally have possessed much force of character, and may have been timid and shrinking; but being animated by the Spirit of the Almighty, and strengthened by the sure hope of eternal happiness, they "could do all things through Christ," their strength and their Redeemer; and rose superior to all the persuasions, threats and violence of those who endeavored to persuade them to desert their testimony.

In reading the annals of the early members of the Society of Friends, how often have our spirits been animated by the undaunted courage and unshrinking devotion to the cause of Christ, which were displayed by those humble, yet noble followers of a crucified Redeemer—to whom may properly be applied the language of the apostle—"of whom the world was not worthy." Such an one was William Dewsbury, who went to prison as cheerfully as to a palace, and esteemed the bolts and bars of his dungeon as jewels. Such were those faithful servants, who, in obedience to the Lord's commands, went to Boston to renebrate with those in authority there, against the barbarous laws which had been enacted against Friends and others, and who were hung by the persecuting magistrates.

Such were hundreds of others, who suffered long imprisonments rather than violate their testimony to the freedom of Gospel ministry by paying tithes for the support of the priests; who refused to take an oath, because Christ had commanded not to swear; and who went to their religious meetings even when they expected that they would be transferred from them to the jail.

In speaking of those times, George Whitehead explains how it was, that he and his friends were enabled to endure their multiplied afflictions. He says:—"In those days prisons and jails were made sanctuaries, and places of refuge and safety to us, from the fury of the tumultuous mob; although we met with but mean treatment and hard usage in those places of severe confinement, many times among notorious criminals; and although I suffered both in tumults and imprisonments, by hard usage in them, the Lord helped and sustained me by his Divine power and goodness, so that I was not weary of his service, nor my spirit faint in suffering."

During a long and unjust imprisonment in Edmundsbury Jail, he and his companions suffered much personal abuse, being often beaten by the jailor and his officers and by the prisoners, when drunk with the ale sold to them by the jailor; because these Friends refused to buy themselves, and protested against selling such liquors to the other prisoners. But, of that time of outward suffering, George Whitehead says: "In the comfortable enjoyment of the Lord's glorious Divine power and presence, several of us have often been made to sing aloud in praise to his glorious name; yea, his high praises have been in our mouths oftentimes, to the great amazement and astonishment of the malefactors shut up in the same ward with us. When walking therein, our hearts have been lifted up in living praise to the Lord, often for several hours together, with voices of melody. Oh! the sweet presence and power of the Lord our God, how precious to be enjoyed in prisons and dungeons, and strait confinements."

After being released from this confinement by order of the Protector, Oliver Cromwell, he was in a few months after taken out of a religious meeting and most unjustly ordered to be publicly whipped as a vagrant, under an old law. This was executed with great severity, the strokes of the whip tearing the skin and shedding blood, so that many of the bystanders wept to see the cruelty of the officers. Of his own feelings he says, "It is very memorable to me, how the Lord, by his Divine power, supported me, even while they were inflicting their cruelty and punishment upon my body; that even then my spirit was raised, and my mouth opened to sing aloud in praises to the Lord, my God, that He counted me worthy to suffer for his Name and Truth's sake."

Of many of the worthies of that day it may be said, as Thomas Ellwood did of George Fox, "He was valiant for the truth, bold in asserting it, patient in suffering for it, unwearied in laboring in it, steady in his testimony to it; immovable as a rock," J. W.

WHEN men refuse to hear the Gospel from the lips of a gracious but uneducated preacher, they remind us of the Spaniard in South America, who suffered severely from the gout, but refused to be cured by an Indian. "I know," said he, "that he is a famous man, and would certainly cure me; but he is an Indian, and would expect to be treated with attentions which I cannot pay to a man of color, and therefore I prefer remaining as I am."—*Spurgeon.*

Extracts from the Memoranda and Letters of Ann Watkins.

(Continued from page 27.)

VISIT TO THE MEETINGS IN IRELAND.

In 1866, I laid the burden of my spirit before Friends to visit meetings throughout Ireland. I was brought very low under this exercise; but I reverently and thankfully believe the presence of the Comforter was near to sustain and support me. When I mentally inquired, "How shall I proceed?" the answer from Him was, "I will open thy way before thee;" and it was carried out to the very letter.

I passed over the Channel with my husband; the day was beautifully clear, and the sun rose and retired to rest without a cloud. We were met at Kingstown by a woman Friend, at whose house we lodged two nights. On Seventh-day we journeyed northward, and reached the house of J. P. to dinner, after which they kindly conducted me to the meeting-house, it being the Meeting of Ministers and Elders at the commencement of the Quarterly Meeting for Ulster. I wended my way into the cloak-room where I felt that I was alone and unattended. Presently, I heard a woman Friend (Rachel Barnes) say to another, "Ann Watkins was expected," &c., and turning quickly said, "O here she is," and addressing me, asked, "Where didst thou spring from?" I replied, "I am here;" and feeling strength in the inward life, said, "I am come to visit the meetings in Ireland, and art thou willing to accompany me?" She replied, "I have thought of it, if Friends are willing." I marvelled in myself but said nothing; so unexpected an incident I had not in the least foreseen, and I was much humbled at the goodness and mercy of our Heavenly Parent to me, a poor worm. I was very cordially received by this meeting, and R. Barnes was approved as a fitting companion. This dear Friend was of a meek and quiet spirit, a true elder and helper in the work and service of the ministry, and was well acquainted with Friends and their meetings in Ireland. We were referred by the Quarterly Meeting of Ministers and Elders to her Monthly Meeting, which set her at liberty; and we travelled together and visited every meeting, with the exception of a very few which my sister, S. Kirkham, visited with me, she having come over to attend the Yearly Meeting in Dublin.

In view of this great work and my own littleness and insignificance and the smallness of my gift, I did feel a great shrinking from so arduous a service; but again was the language mentally heard, "Behold, I have given thee a witness in every place whithersoever thou goest;" and I felt as if I dared not neglect the opening of duty wherever it was felt with clearness, although I often felt myself as the least (if indeed worthy to be accounted such) in the Father's house, by the side of so many dear, valued and experienced Friends, from all of whom I received great kindness and tender sympathy. There were those who did not so regard me, but Divine Grace was near to sustain me, and when any opposition was manifested, a word of encouragement from a valued Friend, or otherwise an ability to study to be quiet and mind my own business, was a means of helping me to rise superior to these. I passed through a variety of experience; the spiritual condition of some I met with presented a phase quite new to me, and was only to be met by having a single eye to the gift in me, the power whereof was at times past expression; and I believed I understood in measure

the language, "My little children, for whom I travail in birth the second time until Christ be formed in you."

Although I was much united to Friends, I felt a fear and caution to rest upon my spirit in my walk amongst them. In one of their social gatherings, a Friend came to me and desired me to reprove a brother for using too strong language in conversation. I replied that as she had felt the burden, she was the right person to administer reproof, and encouraged her to do so. She followed my advice, and I was told by the individual reprov'd that the counsel was useful and effective.

How deeply did I regret the abundance of words sometimes used, as if they thought the Kingdom of God could be entered thereby! I remember at one Quarterly Meeting, a friend said to me at the close, "Words, words, abundance of words." I felt thankful she was so impressed, as it seemed a little to lighten my burden.

I returned home after an absence of eleven weeks, and found my dear husband and family well, and outward things prospering. "Behold, I have given thee a witness in every place" was a language that saluted my inward ear before I left home; and in the retrospect of this engagement these words present, "Thy Word was as a fire in my bones," "I passed through the land in Thy fear," "I have witnessed Thy preserving power." All the praise and the glory be rendered unto Him who leads forth, calls by name, and gives ability to follow.

The following particulars of the journey are principally drawn from letters.

At Cabra "we mingled with the poor of this world, twelve in number. I had an open time amongst them. After meeting, called upon an invalid, an aged man, to whom I spoke plainly, and hope the word found entrance; then upon a woman Friend, almost blind, living by herself in a cabin, but near a relative; she had passed through much. One circumstance by which comfort was administered when she was of a sorrowful spirit she spoke of with tears. She told us that one night she fell asleep, and that she awoke with hearing her name called, and believing it to be the voice of her Saviour, she became very cheerful and happy. By one of these families we were provided with a good tea, and afterwards the channel of communication flowed freely in the love of the Gospel toward two younger members of the family; it was truly a tendering time, and when we parted the blessing of the old man was very precious. The poor of this world, rich in faith and heirs of the kingdom: it is sweet to have fellowship with them."

At Mountmellick, she says, "the abundance of expression and the many appearances were remarkable to me. I expressed a few words, but I soon felt my enlargement and sat down. After that there was an effusion of no small length about the simply looking to Christ as all-sufficient, which R. Collins had before stated would not avail without a change of heart. How different my experience of to-day to that at Cabra. Surrounded by kind friends of many classes (as to outward position) I feel like a dry stick, not permitted that refreshment which my soul craves; but I am comforted in believing that some have been favored, and may I be willing to be so humbled as to be fitted for further service, if indeed any to be required.

"The evening meeting was, I think, quite as

painful as the morning, except that in my own particular I received help to enable me to testify to the work of the Holy Spirit, to show the nature of true repentance and of true living faith. Met with a deeply tried and concerned Friend after meeting, who accompanied us to the school reading, which was an interesting opportunity. I observed silence; some Friend kindly asked if I was clear; I replied, 'Yes, I think the poor children must be tired.'

At Cahir "the professors were for the most part gay and well-to-do, as regards the outward; and my service seemed somewhat contradictory to appearances, as I was led to minister to a deeply tried and afflicted state. It was a time of labor and of going down into the depths. Afterwards I reasoned with myself concerning the way I was led; but remembered there is often a great deal hidden from outward observation."

From the notes preserved by a Friend, of her sermon at Dublin, the following is extracted:

"My soul longs to encourage all those who sit alone and keep silence because of the desolations of Zion. For I verily believe that in a day to come there will be a gathering, even a flocking, to the standard. But it must be, my beloved friends, through individual faithfulness. For the Lord would have his people—his servants—to uphold his standard in a pure testimony."

"It is the *obedience of faith* that is required. Many have chosen their own way to their own destruction. But the Lord speaketh to thee by his Spirit in thy heart, calling thee to give up all and follow Him. And if thou be willing to follow Him in the way He would have thee to go, then shalt thou know thy faith strengthened; then shalt thou know, if thou art obedient to the manifestations of the Holy Spirit, as thou art able to bear them—thou shalt know a being led step by step, and shalt experience in his time an advancement in the way of holiness; but it will be by divesting thyself of that on which thy heart is set. Therefore, be thou willing now in the day of the Lord's power to give thy heart entirely unto Him, let the consequences be what they may, even though thou may have to say with Job, 'Though He slay me, yet will I trust in Him.' And He shall bring forth thy judgment as the light, and thy righteousness as the noon-day (Psalm xxxvii. 6), and shall set thee in a large place (Psalms xxxi. 8, cxlvii. 5); and thou may have in days to come, if thou yield obedience to the requirements of his Holy Spirit (and be enabled), to magnify the name of the Lord thy God."

Of Dublin Meeting she says: "It was very large, and several spoke, one or two at great length. How I long to hear Quaker doctrine preached in its fulness, its freeness and its wholeness. How much more do I value those precious effusions of the Spirit which do minister to the soul, than a long and eloquent address with discrepancies which cause suffering. Surely, hundreds are thirsting for the water of life, and are glad to catch at anything that looks pure, but may be only comparable to the standing pool, rather than to that which flows from under the threshold of the sanctuary. We dined at S. M.'s, and had an agreeable visit."

At the conclusion of her visit to Ireland, she remarks: "My heart is very closely united to many up and down in this land, to whom the precious cause is dearer than even life itself. These have the discerning eye, and do see and

mourn over that which is of a spurious character and tendency. The prayers and tears of these are as under the altar, and do arise, and will appear as a memorial in due time. There is much that will have to pass through the sieve, and, by the active measures of some, many additions are made that will have to undergo this operation; but how unspcakably precious is the declaration that not a grain of the precious wheat shall fall to the earth.

(To be continued.)

Political Economy in the Kitchen.

"Don't burn up those strawberry baskets." said a young political economist the other day. "And why not?" queried the wife, "I can get nothing for them, and they start the fire nicely."

"It is a wrong to the community," said the young man; "you destroy the fruits of labor wantonly. If you get no further good from them as they are, some one else may, and the body politic will be just so much richer by your saving them. Send them round to our grocer, give them to him, just for the principle of the thing, if nothing more."

On this same principle rags of all sorts should be saved and turned over to rag gatherers, even though the price paid for them is paltry. Paper manufacturers are embarrassed for want of suitable material for making the better grades of paper.

A writer in *Harper's Magazine* some months ago made an urgent plea to American housekeepers to save their paper and rags for the good of the public, if not for their own special profit. Old linen is often wasted when hospitals would be glad to make use of it; old cotton likewise. Newspaper that would amuse and entertain the sick and the poor who are not able to buy, are burned and thrown away.

Material that, if kept, will harbor moths or breed disease must be promptly disposed of, but it may often be so disposed of as to be a source of increment to the general good rather than an absolute waste. The cats in the back lot can make use of stray bits from the table; they must be kept alive, or a plague worse than their nightly concerts will multiply upon us, as we learn from the sufferings of our Dakota neighbors. What we cannot turn into the flesh of beasts, or by the chemical and vital principles of the soil and of vegetation transform into growths of various sorts, we may with a clear conscience commit to the flames and send it forth, reduced to its original elements, to begin a new cycle of beneficent activity.

Every cook, every housekeeper, is a political economist, whether she knows it or not, and she who is capable of taking an interest in the public welfare will not willingly waste anything that can be of use to anybody.

It is those who cannot and dare not do of themselves, that the Holy One will make use of, to do by and to do for, as seemeth good in his sight. The whole building or work is his; there is no tool to be lifted up upon it, but his own hand is to do it both immediately and instrumentally; and when that instrument knows and keeps its place, in lying by and keeping still till He take it in hand, and then minds the turning of his hand, the notions of his Spirit, in beginning, and in going on and in leaving off, then his wisdom and glory are the most manifest, and that servant lies down in most safety and peace.—*Lydia Lancaster.*

Address of the Yearly Meeting of Friends of Philadelphia in 1789, to President Washington.

TO THE PRESIDENT OF THE UNITED STATES.

The Address of the Religious Society called Quakers, from their Yearly Meeting for Pennsylvania, New Jersey, Delaware and the Western parts of Virginia and Maryland.

Being met in this our Annual Assembly for the well-ordering the affairs of our Religious Society, and the promotion of universal righteousness, our minds have been drawn to consider that the Almighty, who ruleth in heaven, and in the kingdoms of men, having permitted a great revolution to take place in the government of this country, we are fervently concerned that the rulers of the people may be favored with the counsel of God, the only sure means of enabling them to fulfil the important trust committed to their charge; and in an especial manner, that Divine wisdom and grace vouchsafed from above, may qualify thee to fill up the duties of the exalted station to which thou art appointed.

We are sensible thou hast obtained great place in the esteem and affections of people of all denominations, over whom thou presidest; and many eminent talents being committed to thy trust, we much desire they may be fully devoted to the Lord's honor and service, that thus thou mayest be an happy instrument in his hand, for the suppression of vice, infidelity and irreligion, and every species of oppression on the persons and consciences of men, so that righteousness and peace, which truly exalt a nation, may prevail throughout the land, as the only solid foundation that can be laid for the prosperity and happiness of this or any country.

The free toleration which the citizens of these States enjoy in the public worship of the Almighty, agreeable to the dictates of their consciences, we esteem among the choicest of blessings; and as we desire to be filled with fervent charity for those who differ from us in faith and practice, believing that the general assembly of saints is composed of the sincere and upright-hearted of all nations, kingdoms and people; so we trust we may justly claim it from others, and in a full persuasion that the Divine principle we profess, leads into harmony and concord, we can take no part in carrying on war on any occasion, or under any power, but are bound in conscience to live quiet and peaceable lives in conscience to one another, and peaceable lives in conscience to live quietly amongst men, contributing the freely our proportion to the indigences of the poor, and to the necessary support of civil government, acknowledging those who rule well to be worthy of double honor; and if any professing with us, are or have been of a contrary disposition and conduct, we own them not their establishment as a religious society, with fomenting or countenancing tumults or conspiracies, or disrespect to those who are placed in authority over us.

We wish not improperly to intrude on thy time or patience, nor is it our practice to offer adulation to any; but as we are a people whose principles and conduct have been misrepresented and traduced, we take the liberty to assure thee, that we feel our hearts affectionately drawn towards thee, and thy Presidency may, under the blessing of Heaven, be happy to thyself and to the people; that through the increase of morality and true religion, Divine Providence may condescend to look down upon our land with a

propitions eye, and bless the inhabitants with a continuance of peace, the dew of Heaven, and the fatness of the earth; and enable us gratefully to acknowledge his manifold mercies. And it is our earnest concern, that He may be pleased to grant thee every necessary qualification to fill thy weighty and important station to his glory; and that finally, when all terrestrial honors shall fail and pass away, thou and thy respectable consort may be found worthy to receive a crown of unfading righteousness in the mansions of peace and joy forever.

Signed in and on behalf of our said meeting, held in Philadelphia by adjournments from the 28th of Ninth Mo., to the 3rd day of the Tenth Mo., inclusive, 1789.

NICHOLAS WALN,
Clerk of the Meeting this year.

The ANSWER of the President of the United States to the Address.

Gentlemen,—I receive with pleasure your affectionate address, and thank you for the friendly sentiments and good wishes which you express for the success of my administration, and for my personal happiness.

We have reason to rejoice in the prospect that the present national government, which, by the favor of Divine Providence, was formed by the common counsels, and peaceably established with the common consent of the people, will prove a blessing to every denomination of them;—to render it such, my best endeavors shall not be wanting.

Government being, among other purposes, instituted to protect the persons and consciences of men from oppression,—it certainly is the duty of rulers, not only to abstain from it themselves, but according to their stations to prevent it in others.

The liberty enjoyed by the people of these States, of worshipping Almighty God agreeable to their consciences, is not only among the choicest of their blessings, but also of their rights. While men perform their social duties faithfully, they do all that Society or the State can with propriety demand or expect, and remain responsible only to their Maker for the religion or mode of faith, which they may prefer or profess.

Your principles and conduct are well known to me; and it is doing the people called Quakers no more than justice to say, that (except their declining to share with others the burden of the common defence) there is no denomination among us who are more exemplary and useful citizens.

I assure you very explicitly, that in my opinion the conscientious scruples of all men should be treated with great delicacy and tenderness; and it is my wish and desire, that the laws may always be as extensively accommodated to them, as a due regard to the protection and essential interests of the nation may justify and permit.

GEOR. WASHINGTON.

It is the Spirit of Truth [which leads the believers into all truth] that giveth a right understanding, and leadeth to a right use of the Scriptures. This Spirit was man's guide before the Scriptures were written: by it men were made holy before they gave forth the Holy Scriptures; this is the key which openeth them, and leadeth to a right use and application of them; but they whose minds are gone astray from this Spirit, who have not and do not learn of it, these do worst the Scriptures to their own destruction.—*Wm. Gibson, 1678.*

For "THE FRIEND."
Saving Christianity.

I believe that a heart-changing Christianity is the only religion that will save us. For it is with the heart that man believeth unto salvation; while it is only from the head or mouth that confession is often made, which may spring from self-exaltation, and lead away from salvation. For it is the spirit that quickeneth and gives life while the flesh or the head profiteth nothing in relation to spiritual things. And by a continued disobedience to the quickening spirit or will of Christ, His Spirit will cease to strive. For His Spirit will not always strive with man. He came to his own outwardly, and as many of them as received Him, to them gave He power to become the sons of God, even to them that believed on His name, so as to become co-workers with Him. And now He comes to his own, spiritually; and as many as thus receive Him inwardly so as to become co-workers with the striving of His Spirit for their salvation, to them He gives power to become his sons. But what good does the power that He gives us do, unless we use it: first in working out our own salvation, and then in working, in the ability that He gives, for the salvation of others around us. And as we thus work for Him in obedience to his will, we become partakers of the inheritance of the saints in light. But if a man does not work outwardly, he has no right to eat, and we might say the same spiritually. But in both cases of failure to eat, death is the result. And as the spiritual man wants to grow strong in the Lord and in the power of his might, that he can work for the Lord, so he must feed on heavenly things. And the Apostle says, "Ye cannot drink of the cup of the Lord and the cup of devils: ye cannot be partakers of the Lord's table and the table of devils." So if we want to be partakers of the cup of salvation, and eat of the bread of life, we must go to the table of the Lord. Or we have no spiritual life in us.

We cannot serve two masters. If we prefer the wisdom and power and glory of God, and comply with the terms, we can have salvation. But if we prefer the wisdom and power and glory of man, God will leave us to our choice, but send leanness into the soul. And in this leanness, and barrenness, we do not relish heavenly food—the appetite being depraved by the worthless rubbish of the world. But such as hunger and thirst after righteousness are fed from the table of the Lord. For it is the willing and obedient that shall eat the good of the heavenly land. Though they may be as a tried remnant; and like our blessed Redeemer was, despised and rejected of men, and at times can hardly find a place to lay their heads: while the multitude around them are faring sumptuously every day, and rejoicing in the works of their own hands.

When we enter a meeting for worship, with a hungering and thirsting multitude before us, where are we looking for a supply? Are our expectations turned to God? Are we looking to Him, and secretly craving that He may bless and break a portion of the Bread of life for our own refreshment? And if He should so command some one or more to hand a small portion to the hungering and waiting multitude, it would abundantly satisfy, if first blest by Him.

But are not far too many suffering their minds to wander to and fro in the earth in search of something to feed themselves or others on. And some are hunting through their Bibles or song books for something to amuse the multitude, But do we find vital Christianity in any of it?

We might just as well seek the living in the sepulchres of the dead. For we find nothing for the hungry soul to feed upon that will satisfy the cravings of the heavenly-minded man.

We have a great deal of religious activity—a variety of organizations, associations and agencies for doing good and saving souls, as some call it. All right, if we are led right. But are we not in it all, losing hold of the precious testimonies which we have long held to the spiritual nature of true worship? If we, in our missionary labors and meetings, depend on the leadings and guidance of the Holy Spirit, why should we be ashamed to wait for his mind as to the part we should take in helping to carry it forward? But if we join with others in their way of carrying on the revival and other meetings, where is the time or inclination for silent worship? Some seem to think that as they are so busy in saving souls, as they call it, that they will be excused without wasting much time in waiting upon God.

Our Christianity, if a saving one, must be in our accepting and using the activity of the Spirit and carrying it out in the ability that He gives. Then, as the activity of man, and the activity of the Spirit work together, it will all tend to the glory of God, and to the salvation of souls. And it will lead us away from the world's worship, and from all singing by note or tune, as a part of worship. And also from a one man, and a paid ministry, and from set prayers and all formal services under the cloak of worship. Then we will have more of an ear to hear what the Spirit saith unto the churches.

But while I believe in the sufficiency of vital Christianity, and that Christ within is our main hope of glory, and that silence is an essential part of true worship, yet I believe that a silence without the quickening influence of the Holy Spirit, is barren and dead; so I might say about all the formal, noisy worship. But a humble, vital Christianity, that is not only in word, but also in deed, is what we should depend on for salvation. D. H.

DUBLIN, IND., Sixth Month 25th, 1880.

SELECTED.

A HYMN FOR SUMMER.

We hail the gladsome sunshine,
The flow'rs bright and gay,
The streams that leap and sparkle,
Rejoicing on their way.
We bless the gracious Giver
Of all things bright and fair,
Who decks the earth and sky
With beauty every-where.

We hail the rich abundance
Of corn-fields far and near,
Of crops which soon will ripen,
The hearts of men to cheer,
We bless our great Provider,
Jehovah-Jireh still,
Who thus his ancient promise
To man doth now fulfil.

We hail the silver moonbeams
Which shine through peaceful night,
The stars which deck the heavens
In silent splendor bright;
We bless the great Creator,
The Lord of earth and sky,
Who reigns enthroned above them
Eternally on high.

We hail the name of Jesus,
The name that speaks of peace;
Of sin no more remembered,
Of joys which ne'er will cease.
We bless our great Redeemer,
Our Prophet, Priest, and King,
And with the holy angels,
His endless praise we sing.

IN DIRECTUM.

BY MARY E. C. WYETH.

Press on, dost thou complain, "The way is strait?"
 Ah, sweet, my love, 'tis love that made it so;
 Love worketh all this way, and 'tis the way,
 And rugged, flint-lined, sharp with many a thorn
 To tear thy garment, pierce thy skin, and aye
 To vex and weary thee from night till morn,
 As, pressing on, thy steadfast footsteps go
 Along the narrow way shut in by the strait gate.
 Yet O,

Press on. Though tears shall dim thy way,
 Though thy feet falter, though thy limbs are weak,
 Though few walk with thee, yea, though thou alone
 Of all thy kindred tread the narrow path
 That leads, ah! heavenly love, that leads his own
 To Him who ever ruddy and faithful footstep hath
 Trodden before them—yet press on, and seek
 The strait way's end, life's everlasting day.

Press on. And, pressing on, take heart of grace,
 Bless God, the way is strait, that thou may'st be
 Hedged in and safe from all maraudingills
 That throng, in various guise, the devious way,
 So broad and smooth, whose scum and laughter thrills
 Through all the moments of each sun-bright day
 And mirth and pleasure join in minstrelsy,
 Beguiling to the end of death's mad, heedless race.

Press on. Though few there be that hurying the gate
 Or strive to enter, though the furring crowd
 Through the broad way, O love, no step retrace,
 Turn not aside, do valiantly, be true.
 The toilsome journey ends at last, and grace,
 All grace of beauty lacking here, in new
 And tender radiance, will be near—embrowed,
 Thou'lt find where angel bands by coming wait.
 —Illustrated Christian Weekly.

MY KINGDOM AND MY QUEEN.

My kingdom has no dazzling throne,
 No palace grand upon it
 Yet 'tis as bright as e'er was known,
 Or sung in loyal sonnet.
 I've travelled east, I've travelled west,
 'Mid scenes of wealth and splendor,
 But this one spot I love the best,
 With all its joys so tender:
 No place so dear I've ever seen,
 For peace reigns here, and Love is queen.

Two subjects in my kingdom dwell:
 One has an eye of azure,
 And smiles upon her fair face tell
 Of pure and perfect pleasure;
 And one has hair of raven hue,
 And eyes of hazel beauty,
 And whate'er he may strive to do
 He always does his duty;
 And faithful they have ever been
 To her who is my household queen.

And as life yields me newer joy,
 And hope divine and humao,
 I see one now no more a boy,
 And one almost a woman.
 The bright days come, the bright days go,
 And each brings some new pleasure,
 And no spot on the earth I know
 Is richer with heart-treasure.
 Nor happier subjects e'er were seen
 Than in my home where Love is queen.

By no high-sounding, royal name
 Or title they address her,
 As cheerily, their eyes aflame
 With love, they kiss and bless her;
 But with a voice of gentle tone,
 Which joy gives rise to each other,
 They call her by one name alone,
 The hallowed name of mother;
 A name the sweetest known to man
 Since time and love their course began.

—Youth's Companion.

I HAVE no doubt but that the light and unfeeling manner in which the discipline in many instances has been exercised, has been an inlet to very great weakness in the church.—J. Edgerton.

Gibraltar.

As we approached Gibraltar by sea it was enshrouded in mists, and for a long time was barely discernible, when suddenly the vapors dispersed and the great mass, rising to a perpendicular height of fourteen hundred and thirty feet, came into view. It is about three miles long, of irregular width, about six miles in circumference, and rises from the ocean, and from a level plain scarcely five feet above the sea, at the head of the Straits of Gibraltar. These Straits are about forty miles long. Beyond them, at the west, is the Atlantic, and at the east the Mediterranean. Landings are extremely difficult, and we descended from the vessel into a small row boat which conveyed us on shore outside the gates, for Gibraltar is a fort, and the town an accident to it. The gates are shut every night at sundown and not opened until sunrise, in each case a gun from the fortress announcing the time. As the time of sunset changes each day, notice is placed upon the outer gates of the time of closing upon the evening of that day. No admittance can be obtained after the gates are shut, at least not without special permission secured with great difficulty. The first thing we had to do on landing was to obtain a permit to enter, which was good only for that afternoon. We were required to state how long we intended to remain and a general permission to stay and to pass in and out of the gates during the hours of the day was issued without expense. Formerly it was necessary for foreigners to exhibit their passports, but nothing was said to us upon that subject.

While upon the steamer, and even in the small boat, the harbor was stretched out before us, a scene of beauty. The most interesting object to us was a steamship flying the American flag, a rare spectacle in the harbors of Europe. We subsequently learned that it was one of our naval vessels, the *Enterprise*, an old wooden ship belonging to the fleet which is kept cruising in the various waters of Europe to protect American interests, and to give the officers the opportunity of learning and reporting what is going on in the naval world. It is managed in such a way as to make the positions of those assigned to this duty a prolonged excursion of the greatest luxury to the finest ports and watering places of the continent and adjacent islands. This ship had just returned from a summer cruise in the vicinity of Norway and Sweden and St. Petersburg, and after staying a few weeks at Gibraltar expected to repair to Villa Franca, near Nice, and within a few minutes' ride of Monte Carlo, to spend the rest of the winter.

The elevation of the rock of Gibraltar is so great that the town built upon its sides, at a short distance, looks much more like a painting than an actual assemblage of houses. They rise above each other in very steep terraces, and the direct approach to the various streets is by stone steps. The time taken in landing was so prolonged that we could enjoy these views very leisurely.

Gibraltar contains about twenty-five thousand inhabitants, of whom seven thousand are English soldiers; indeed, more than three-quarters of the entire population are connected with the garrison and military and other establishments of Great Britain. Many of the people were born on the rock, and those that were not (among the commoner sort) apply to those who were, the nickname of "scorpions." This is generally taken in good humor, and one citizen concerning whose native place we made inquiry responded that he was a "scorpion." Somewhat surprised at the

frank confession of what most persons would resent, I inquired what that meant, and thus ascertained the *was loquendi*.

Red-coated soldiers are seen everywhere, sometimes marching through the town under the command of their officers in larger or smaller companies; but when off duty they fill the cafes, go in and out of the liquor saloons, and are seen walking and standing like other citizens, giving a picturesque aspect to the place by the brightness of their uniform and their erect, military bearing. Barracks are in different parts of the limited portions of Gibraltar that are suitable for building purposes, so that wherever one wanders he is likely to meet soldiers or come upon vast military establishments. They are generally white-washed. The drilling ground is at the entrance of the Alameda. The people resort in large numbers to this magnificent garden, which is laid out in the English style, and filled with trees and flowers of every kind. As it is elevated some above the water, and at its background is the stern face of the rock, it is equally beautiful as a view-point and as commanding the bay, the shipping, the barracks, the town, the opposite coast of Spain, and the boundless expanse of waters to the westward, while it forms one of the most enchanting prospects from the deck of an approaching vessel.

The general trade of Gibraltar is said to have declined in recent years, but it has come into great importance as a coaling station. In 1886 four thousand seven hundred and six steamers entered the port, with an average tonnage of about a thousand, many of them being of the largest dimensions. In 1887 a half-million tons of coal were sold to them. In the month before we visited it four hundred and ninety-four steamers had touched at the port. As this coal is all brought over in ships the harbor presents a very lively appearance. In every direction great steamers are seen moored by the side of immense hulls loaded with coal.

While private gardens exist at Gibraltar, many plants common to the south of Europe, others to the north of Africa, some to Asia, and a few indigenous to the rock grow there, and great strength of vegetation is seen on the naked summits and in the interstices of the rocks which were once covered with vast forests. As a general statement it may be said that nothing necessary to support human life is produced in Gibraltar, so that the markets are of great importance. Fruits and vegetables come from Spain and Africa; beef chiefly comes from Barbary. It is amusing and instructive to visit the markets. The Moorish market is chiefly devoted to poultry. We passed through it, and on entering were greeted by the Moors with many signs of interest; but as soon as they discovered that we wanted none of their fowls they left us with a grunt similar to that uttered by the American Indian when he is slightly disgusted. In the general market there were displayed all the fruits with which we are familiar at home, and many others; among the rest, some very fine apples. The salesman perceiving us, called out in as good English as he could command: "Apples! fine apples. As we passed on he exclaimed: "American apples." This did not show that he discerned us as Americans, but was simply the compliment paid all through Europe to American apples. We have seen in France and Spain apples more beautiful and symmetrical in shape than are often found in America, so finely polished, and of such a peculiar form, that one would be tempted to affirm that they were wax. Indeed, a gentleman, travelling

with us, supposed they were wax, and did not touch them until investigation at a second repast made clear the fact that they grew on trees; but in flavor and juiciness they were far below any one of a score of varieties which can be found widely distributed through New England and the Middle States.

In these markets the most curious thing to be seen is the crowd: "Moors, Turks, Greeks, Jews, the Spanish smuggler, the Catalan seller, the red coat of the English private, all mingled together, bawling, disputing, bargaining, and cheating in their different tongues, ways, and gestures." A large number of Maltese have recently settled in Gibraltar, and they can be seen everywhere. They are somewhat disorderly and dangerous element. When in Malta, which is under British control and discipline, they are orderly enough, but away from that point their fiery, daring, and revengeful disposition shows itself. A few days before we arrived one of them killed a man and seriously wounded another, and was captured; a very easy thing to do in Gibraltar, it being impossible to escape except through the gates. These mingle with the notably concourse in the markets and add to the din and confusion of tongues. In the Alameda, which is the fashionable promenade, the contrasts of populations is equally striking.

Among the animals native to the rock, and still to be found, are the hares and rabbits. Monkeys of extraordinary size still exist in the inaccessible fastnesses. Visitors are very anxious to see them, and often have the privilege, except in cold weather. They have no tails, are harmless, but come down and rob the gardens when they can. They live on the roots of the palmettos and the fruits of the prickly pear. There are not more than twenty-five of them. They are a species to be found in Northern Africa, and there has been much speculation whether they originally existed there or were brought in by the Arabs. Those who hold that the rock was once connected with Africa make an argument out of the existence of these Barbary apes on Gibraltar in favor of that view. Andalusia was the Tarshish of the old times, and there was the descendants of the apes for which Solomon sent, as described in 1 Kings x. 22: "For the king had at sea a navy of Tarshish with a navy of Hiram; once in three years came the navy of Tarshish, bringing gold and silver, ivory, and apes, and peacocks." A native of Gibraltar told us there was one peculiarity in the habits of these apes, that no dead body or skeleton of any of them has ever been found. Whether they conceal them in caves or throw them into the ocean none can tell.—*J. M. B. in Christian Advocate.*

FOR "THE FRIEND."

Occultation of Jupiter.

If the evening of the 3rd of Ninth Month shall prove to be clear, the readers of THE FRIEND will have the opportunity of observing a very interesting and somewhat unusual occurrence. The moon will, in her easterly motion in her orbit, pass between us and the planet Jupiter, which, being nearly in opposition to the sun, and nearer than he often is to the earth, is shining brightly in the southern sky. As the moon enters her first quarter on the 2nd, she will of course present the appearance of a little more than a half moon, and the dark edge of our satellite will first enter upon the planet, and will gradually hide it entirely from view, the disappearance lasting nearly an hour.

While the sight may be watched with interest

with the unaided eye, it will be found that the use of a telescope, even of an ordinary spy-glass or field-glass, will add greatly to the pleasure of the observation. And if the spy-glass is mounted upon a stand, or screwed to a post or window frame with a clamp-screw (which may be obtained from the opticians) it will render it so much more steady than when held in the hand, that the satisfaction in the observance is greatly increased. The obscuration begins at 10 minutes before 10 o'clock.

W. EVANS.

Natural History, Science, &c.

A Derelict.—Nothing is more menacing to vessels on the high seas than a "derelict." Government and private charts may locate the exact position of reefs, rocks and treacherous shoals; but a drifting derelict is at the mercy of wind and waves, and its whereabouts can seldom be ascertained. The term "derelict" is applied to vessels that have been abandoned at sea, and left to sink or swim. All wrecks thus deserted do not sink so soon as the frightened sailors imagine. A volume of air is frequently confined in the hull, which is sufficient to float the wreck, with her decks just above or below the surface of the water. A portion of the cabin and hull is full of water, probably helping to confine the air in the lower holds.

Vessels loaded with light cargoes that will not sink are often abandoned after becoming water-logged. These make the most dangerous kind of derelicts. They float around, with their decks just awash, and form treacherous reefs for passing vessels to be wrecked on.

The great raft of logs, known as the Joggins timber raft, which broke loose on the Atlantic a short time ago, was practically a derelict of gigantic proportions. It was far more dangerous than all of the reefs and rocks along our New England coast.

Our Government a long time ago recognized the danger to which vessels were exposed from drifting derelicts, and every precaution has since then been taken to prevent any accident from them. About the only thing that can be done is to sink them. All government ships are under strict orders to do this, no matter where or when the wreck is found. All that is necessary to send the craft to the bottom, if she is held up by confined air alone is to send a solid shot through her sides. Sometimes several shots are required before the right place can be reached. If she is a water-logged lumber vessel something more than an ordinary shot will be demanded. Torpedoes are then usually resorted to, and the abandoned craft either blown out of the water or split in two below the surface. The lumber then floats away, and the dangerous wreck quickly finds its way to lower depths.

The courses which derelicts have taken in their aimless voyages over the ocean have been traced and published now and then by the Hydrographic Office. Passing vessels would meet the wrecks and report their discovery on reaching port. Government vessels sent out to find the derelict and destroy it would search around vainly, making wide circuits around the point indicated. Storms and winds would, however, carry the wreck far away in the meantime, and when next reported from she would be thousands of miles away. A chase after a derelict is thus a blind one, and often an extremely lengthy race. She zigzags around before the blind forces of wind and current until thousands of miles are often covered.

In former times the number of derelicts float-

ing about on our oceans were far more numerous than to-day. Wrecks that occurred along our coast then were allowed to drift out to sea before they could be secured. But to-day such abandoned ships are detected and destroyed before the wild forces of nature have swept them far beyond the ordinary cruising-ground. When once swept out into the remote sea, however, they are as dangerous to-day as they ever were.

A few years ago a derelict was discovered in the South Pacific, which gave cause for considerable amusement. It was during the time of the sea-serpent epidemic, when nearly every sailor returning to port had some story to tell about that monster. Several accurate and trustworthy reports came in along with the rest from the South Pacific Ocean. Here the monster had been seen, floating quietly on the surface of the water. The captains of several vessels had surveyed him through their glasses on calm days, when there was no possible chance of being deceived. The serpent was apparently sleeping in every instance, for there was no motion about him, excepting such as was made by the action of the waves. He was about three hundred feet long, with a tremendous head, and a long, tapering tail. It was finally discovered that these reports were not altogether erroneous. One captain was more daring than the rest, and on discovering the huge monster he directed his ship toward it, intending to learn more about it or die in the attempt. As he approached the monster the sailors became frightened, but the doughty captain would not turn back. He ran the ship close up to the side of the serpent, and got a good view of the terror of the ocean.

A little investigation had the effect of greatly relieving the frightened sailors. Instead of a sea-serpent the huge object was a derelict, strangely dressed up with sea-weed. The wreck had evidently been floating around for a long time. The decks were completely covered with seaweed, and trailing behind her for a hundred or more feet were great masses of this sea-grass, forming, as it were, a long, tapering tail. At a little distance off it had very much the appearance of a huge sea monster, and it did not seem so strange the sailors had mistaken it for one.

Another curious incident about derelicts was told recently by a naval officer, who had been stationed for many years in the south Atlantic. While cruising around in the ocean one day the vigilant eye of one of the officers discovered a derelict in the distance. The steamer's course was immediately changed, and her prow headed toward the wreck. A boat was soon put off and a crew sent out to examine the abandoned ship before blowing it up. As the rowboat approached the side of the floating wreck dozens of birds rose from it with loud cries and screams; others were perched on the broken spars and masts, and refused to fly until the men began to climb up the sides of the ship. Then they rose on heavy wings, and joined the rest in circling around the heads of the men.

The officer could not understand the meaning of the strange actions of the birds until he finally stepped on the vessel's deck. Then everything was easily explained. The birds had not only taken possession of the abandoned wreck for a roosting-place, but had also made it their breeding-place. In dry spots on the decks, and even in the cabin, were nests, containing either eggs or young ones. The birds had collected seaweed, hair, cotton and old rags, with which to make their homes comfortable. They had also been wise enough to construct their homes in

such works that the ordinary rolling of the vessel would not throw the eggs out. The derelict had really been the home of a colony of guilts, terns, and other oceanic breeding birds for some time. The officers sympathized with the poor birds, but their orders were to destroy all derelicts, and they were forced to blow the wreck up, nests and all. A stranger breeding place for birds was never before discovered.—*G. E. Walsh in The Independent.*

Items.

Exemption from Military Duty.—The *Herald of Truth* (Memphis) states that the Territorial Convention at Helena, Montana Territory, adopted a clause exempting the Mennonites (who are conscientiously opposed to war) from military duty. The *Herald* rejoices in this, partly because of the security it gives to their people in case of war; and partly because it places continually before the legislators and executives of the land the fact, that there is a class of citizens in the United States who are conscientiously opposed to bearing arms. A request was made by the Mennonites to the convention at Sioux Falls, Dakota, for a similar exemption, but was refused.

Will you give up your Wife?—The following anecdote is related by John W. Ray, a Methodist of Indiana, of his grandfather, John Ray, who became a travelling preacher among the Methodists in 1790. After preaching for ten years in Virginia and North Carolina, he made up his mind to marry and go West, which then meant into Kentucky. Among the stopping-places of the young itinerant was the home of a wealthy widow, the owner of a large number of slaves and the mother of an attractive young lady who made such a deep impression on him that he determined to make her his bride, never having thought of the possibility that it might not be easy to secure her consent. One evening he had a conversation on the subject, and she finally handed it to her: "Are you under obligations to any man?" "Are you in the spirit of slavery?" "Will you go West?" "Will you go with me?" Instead of giving him the desired response immediately, as he expected, she folded the paper carefully, left the room, and did not appear again until morning. To the surprise and perplexity of her lover, she then returned with a different air, and with a merry and indifferent air as though nothing unusual had occurred. When the suspense had become exceeding embarrassing he got the opportunity to ask her if she would now answer his questions. She asked for further time, but he insisted on an immediate response, as he was about to leave.

"Well," said the young lady, "I will give you no questions." "Will you give up your wife?" "Will you give up your wife?" Surprised and piqued by this inquiry, the young clergyman with an air of conscious importance replied, "No, not for the best woman on earth." "Then you can have my answer once for all," she said; "I will never marry a man who thinks more of his pipe than of me." This way of putting her feelings into a reflection, and the way of turning from his meditations to the lady and said: "Well, Elizabeth, if it is to part with you or my pipe, I give up the pipe forever." Elizabeth went West with him, the slaves were manumitted, and the pipe permanently abandoned. It is not improbable that many a young woman would take a similar stand if the gentleman with the smoking habit she seeks to marry should make her home his stopping-place for a few weeks before proposing marriage.

Martin Luther's Wedding-Ring.—When Martin Luther, who had been a monk, married Catherine Von Bora, who had been a nun, the very pious and "much married" king of England, Henry VIII., said it was "incest," and the Papal forces throughout Europe either denounced the marriage in wrath or jeered at it in derision. Times have changed and opinions have changed, and last month at a brilliant wedding in the city of New York, in the Roman Cathedral, the wedding ring of Catherine Von Bora was placed on the finger of a bride, and Archbishop Corrigan blessed the union so symbolized. The

bridegroom was John V. Dahlgren and the bride was—Drexel. The ring is an old heirloom in the Dahlgren family, whose ancestors were Swedes and Lutherans, though in later years some of the members have been converted to Rome. How this ring, which is a plain ring of silver set with a ruby, came into the possession of Dahlgren is not known, but it is asserted that it has been in the family for two hundred and sixty-four years. It is a genuine Protestant symbol. "I will bear witness to the gospel," said Luther, "not by my words only, but also by my works. I am determined in the face of my enemies, who already exult and raise the cry of victory, to marry a nun, that they may see and know that they have not conquered me."—*Propheterin.*

THE FRIEND.

EIGHTH MONTH 31, 1889.

Considerable labor has been expended by concerned Friends during the last year or two, in various parts of the territory occupied by Philadelphia Yearly Meeting, both among its own members and those who are not connected with it, tending to spread a knowledge of the truths of the gospel, and to awaken all to a renewed concern for their own growth in religious experience, and in a saving knowledge of Christ and his work on their souls.

We regard it as an evidence that the visitations of Divine love are still extended to this people, that the Lord has thus moved on the hearts of his servants, awakening a sincere concern for the good of others, pointing out to them lines of labor, in which it is his will they should engage, and accompanying their efforts with his blessing, without which their labor would be in vain. The recent sittings of the Western Quarterly Meeting, held on Fifth and Sixth days (Eighth Month 22nd, 23rd), were particularly cheering, both on account of the precious solemnity which prevailed in them, and from the earnest travail of spirit which was manifested, that the members of that Quarterly Meeting, and the people in those parts generally, might come under the government of Christ, and live in obedience to and communion with Him, so that they might be able, with joy, to draw water out of the wells of salvation.

In order that this Heavenly visitation should have its due effect, it was felt that the concern for the spread of the Redeemer's kingdom should not be confined to those in the station of ministers, or to others who might stand as it were in the foremost ranks of the people, but should descend to the hidmest of the flock—so that all might be united in watching over themselves, and in longing and praying for the increase of righteousness, and the growth of religion in the hearts of the people. As such a concern spreads and prevails in a neighborhood, there is reason to hope and believe that the Lord Jesus Christ, the blessed Head of the Church, will continue to bestow on his people the precious spiritual gifts which He dispensed in former years; both those gifts which are needed by each one for his own safety and growth, and those of a more public nature, for the edification of the Church.

At the meeting of the Committees of the Yearly and Quarterly Meetings, at London Grove, on the 22nd, a proposal for some further labor in the way of holding public meetings was made. No objection to the proposition appeared, but as several members of the Committees were absent, it was thought safest to defer the decision respecting it to a future meeting of the Com-

mittees. Comparatively few meetings for the outside public have been held during the past few weeks—partly, perhaps, because the hot season was not thought a favorable time for such gatherings. At present, we understand, one or more of such meetings are appointed to be held in four of the Quarterly Meetings. In entering on such services, it is very important that the true ground of all right religious labor should ever be kept in view—i. e. the moving of the Spirit on the mind, impressing it with a feeling that such labors are duties required by Him who has the right to order his servants as seemeth good unto himself. For it is the Lord alone who can make these opportunities spiritually profitable; and unless He qualify and strengthen his instruments, the most earnest labors of men can do nothing to promote his kingdom. Nay, we may go further, and express the belief that if our members and ministers drift into the habit of engaging in works and services of a religious nature, in accordance with their own inclinations, or influenced by a popular feeling that may prevail at the time, but without being led thereto by the force of the Spirit of Truth, drawing them to fulfill the Lord's requirements; their spiritual eyesight will be dimmed, and they will no longer be able to walk in the way cast up for the redeemed of the Lord to walk in.

But while believing in the reality of this danger, we desire that our members may be furnished with such clearness of vision, and such holy confidence in the Lord's leadings, that they may not commit the opposite mistake of withholding more than is meet, which teneth to poverty; but may honestly and faithfully cultivate that portion of his vineyard, which the Lord has entrusted to their care.

THOMAS A. CRAWFORD is appointed Agent for THE FRIEND, in place of Jehu Kite. Address, Damascus, Ohio.

SUMMARY OF EVENTS.

UNITED STATES.—Intelligence has been received that the revenue cutter, Richard Rush, seized the British schooner, Ennetta, with 600 skins, on Seventh Month 31st. The seizure of the Pathfinder and the Minnie is confirmed. The Pathfinder was the only vessel placed in charge of an American officer excepting the Black Diamond. The American schooner James G. Swan, was seized in Behring Sea on Seventh Month 30th, with 625 head of seal animals. The vessel's documents, firearms and skins were taken aboard the Rush and she was ordered to Sitka to be turned over to the American authorities. The captain, being without charts, and unacquainted with the Alaskan coast, proceeded to Port Townsend and surrendered his vessel to the cost of a cable line from San Francisco to New Zealand, by way of Honolulu and Tutuila, at \$10,000,000. It is suggested that the United States Government grant a subsidy for the purpose to the extent of guaranteeing 3 per cent. per annum on an investment of \$10,000,000 in bonds to be issued by a company incorporated under the laws of the United States.

It will be some time before settlers can go upon the Sioux reservation lands. Congress must ratify the agreement with the Indians before the President can proclaim the lands open.

Very early in the morning from San Diego, Cal., is carrying from 10 to 15 tons of honey.

The forest fires in Montana were checked and at many points extinguished by a heavy rain on the night of the 18th instant, which was general throughout the Territory. The 625 head of seals in over two months, fell over South Dakota, on the same night, relieving the anxiety of the farmers, who now say "corn is safe for a good crop."

The Washington Territory Constitutional Convention has adopted woman suffrage as a separate proposition, to be submitted to the people with the Constitution.

Governor Hutchinson, Attorney General Kellogg, Chief Justice Hildreth, and Supreme Justice Vinton and Johnston, of Kansas, have furnished for publication statements declaring that woman suffrage at municipal elections in Kansas has proved such a great public benefit that they advise other States to adopt it.

The Prohibition State Convention of Nebraska, which has closed its sessions in Lincoln, was of one mind in everything but the adoption of a resolution on the platform relating to the Non-partisan Amendment League, which evoked considerable discussion and some sharp personalities. A plank expressing sympathy with the movement was in length adopted.

A train containing Grand Army veterans and their friends, bound for the Milwaukee encampment, was wrecked near Streator, Illinois, on the morning of the 26th inst., by spreading rails, and six cars were thrown down an embankment, a distance of about 40 feet. About 50 persons were injured, many of them dangerously.

The captain of the steamer *La Gasconne*, which arrived at New York on the afternoon of the 26th inst., reported that, on the morning of the 21st, at 3 o'clock, in latitude 25°S, longitude 83, his vessel narrowly escaped colliding with a number of icebergs, the largest of which was 150 feet in height.

A telegram from Johnston, dated the 26th inst., says the water in the rivers there is getting very low, and a great deal of pestilence is reported as being exposed. The stench along the river bank is becoming unbearable; especially along the point and near the stone-bridge are the odors very nauseating. There are quite likely many dead bodies in the sand along the banks.

Deaths in this city last week numbered 126, an increase of 37 over the previous week, and a decrease of 28 from the corresponding week of 1888. Of the whole number 225 were males and 191 females: 145 were children under one year of age; 45 died of marasmus; 43 of cholera; 25 of typhoid fever; 25 of pneumonia; inflammation of the stomach and bowels; 21 of inanition; 20 of diseases of the heart; 18 of typhoid fever; 17 of old age; 13 of convulsions; 12 of pneumonia; 12 of old age; 11 of congestion of the brain; 10 of cancer, and 4 of paralysis.

Markets.—*U. S. 4's*, reg., 106; coupon, 107; 4's, 123; currency 6's, 115 a 130.

COTTON was in small supply and firm at 11½ cts. per pound for middling uplands.

FEED—Winter bran, choice, \$13.25; do, medium to prime \$12 a \$13.

FLOUR AND MEAL—Western and Pennsylvania super, \$2.65 a \$2.90; do., extra, \$3.00 a \$3.30; No. 2 winter family, \$3.40 a \$3.75; Pennsylvania family, \$4.00 a \$4.25; Pennsylvania roller process, \$4.25 a \$4.50; winter flour, clear, \$4.10 to \$4.50; do., do., straight, \$4.50 a \$4.75; Minnesota, extra, \$4.50; do., straight, \$4.50 a 5.00; do., patent, \$5.25 a \$5.75.

GRAIN—No. 2 red wheat, 82½ cts.; No. 2 mixed corn, 42 a 42½ cts.

WHEAT—No. 2, 81 a 82½ cts.

BEEF CATTLE—Extra, 44 a 45 cts.; good, 44 a 45 cts.; medium, 44 a 45 cts.; common, 3 a 3½ cts.; Texas, 3 a 3½ cts.; fat cows and heifers, 2½ a 3 cts.

SHEEP—Extra, 5 cts.; good, 4 a 4½ cts.; medium, 4 a 4½ cts.; common, 3 a 3½ cts.; culls, 2 a 2½ cts.

LAMBS; extra, 6½ a 6½ cts.; good, 5 a 6 cts.; medium, 4½ a 5 cts.; common, 4 a 4½ cts.

HOGS—Good light western, 61 cts.; heavy western, 275 to 290 pounds, 61 a 63 cts.; extra heavy western, 275 to 290 pounds and over, 61 a 63 cts.

WHEAT—On the morning of the seizure of Canadian vessels in Behring Sea the *London Daily News* says: "Secretary Blaine is in a manner committed to a policy of unfriendliness toward England. There are many signs, however, that in the present dispute he will not go so far as to close our ports as well as ours." The *London Spectator* says: "No nation has more strenuously denied and resisted the right of search than America, and there is none which has resisted it more successfully. In the present case, unless the United States will consent to a search of the American coast, which no one has yet asserted, it is not conceivable how the right to interfere can even plausibly be claimed."

The Nonconformists consider the collapse of the Times in Parliament as another step toward the disestablishment of the Church of England and the

application of the tithes to national purposes, instead of to one particular ecclesiastical body.

Parliament has ordered the appointment of a Sanitary engineer to inspect the prisons of Ireland, which are notoriously filthy.

James O'Brien and James Gilhooly, members of Parliament for Cork, have been convicted of holding a Nationalist meeting which had been proclaimed by the Government. O'Brien has been sentenced to two months, and Gilhooly to six weeks imprisonment, upon hard labor. Upon expiration of their sentences they will be asked to give bonds to keep the peace for six months. In the event of their refusing to give the required bonds they will be sentenced to two months additional imprisonment.

The London dock laborers have struck for higher wages and labor. Upon expiration of their sentences they will be asked to give bonds to keep the peace for six months. In the event of their refusing to give the required bonds they will be sentenced to two months additional imprisonment.

The London dock laborers have struck for higher wages and labor. Upon expiration of their sentences they will be asked to give bonds to keep the peace for six months. In the event of their refusing to give the required bonds they will be sentenced to two months additional imprisonment.

Despatches from Egypt say that a famine prevails at Khartoum, Kassala, Tokar and other river towns. The survivors are said to be feeding upon the bodies of the dead. About twenty deaths from starvation daily are reported at Tokar.

Orders have been given to place military cordons around the towns.

On the 20th inst. the City of Paris was visited by a violent storm. A thunderbolt struck the Eiffel Tower.

An influential German company has formed with a capital of 30,000,000 francs to complete the Simplon tunnel. The company has acquired two Swiss railroads from Lucerne. Italy will find 15,000,000 francs to possess one end of the tunnel.

A Vienna correspondent writes that the Austrian grain yield has decreased as follows: Wheat, 15,000,000 hectolitres; barley, 12,000,000 hectolitres; rye, 11,000,000 hectolitres; oats, 21,000,000 hectolitres.

A severe earthquake shock was felt throughout Greece on the 26th. Serious damage was done in several places.

There is every probability, says a financial contemporary, that Japan will shortly become entirely independent of other countries as regards its coal supply, since vast coal fields have been recently discovered in the island of Kyushu.

The Credit Bank, which the Russian Government established in 1886 to advance loans to the nobility on mortgages, has foreclosed on two thousand estates, which must be sold at auction at the end of the year.

Advices from Hayti of the 24th inst., report the end of the rebellion. King and Queen, and the Prince of Port-au-Prince on a French gun-boat, and on the 22nd inst. General Hippolyte's army occupied the capital. The U. S. steamer *Galena* has been ordered to Hayti for the protection of American interests, and sailed on the 26th, from New York for her destination. She will take the place of the *Kearsarge*, ordered home.

RECEIPTS.

Received from Hannah H. Savery, Pa., 10, being \$2 each for herself, Stephen H. Savery, George S. Melcher, and Thomas B. Taylor, Pa., and Thomas H. Savery, Del.; 63; from William Penn Evans, Cal., 56, being \$2 each for himself, Abraham Cowan, and Allen T. Lee, vol. 63; from Elizabeth Hunt, O., \$2, vol. 63; from Jane De Cou, N. J., \$2, vol. 63; from M. D. D. D., N. J., \$2, vol. 63; from John H. Ballinger, N. J., \$2, vol. 63; from John E. Darnell, N. J., \$2, vol. 63; from John S. Kirk, Pa., \$6, to No. 52, vol. 63; from George B. Allen, Pa., \$2, vol. 63; from William Bettle, N. J., vol. 63; from John H. Waring, Conn., \$1, to No. 52, vol. 63; from Samuel Conard, Gen., \$2, vol. 63; from Penelope Gardner, Kans., \$2, vol. 63; from Benjamin F. Douda, Robert Plummer, William Picket, James Steer, Jonathan T. Sidwell, and Elizabeth Steer, Joseph E. Douda, G. Hall, Jesse K. Livezey, Ann Williams, Hannah Stanton, Aaron Frame, Sarah M. Bailey, Barclay Smith, Albert H. Hoyle, Jesse Bailey, Samuel Walton, Beulah Roberts, William Stanton, Mary Davis, John Bundy, Elizabeth Bailey, Joseph Cowgill, John Bailey, Elizabeth Steer, and Lewis Taylor, O., and John G. Hoyle, Kans., vol. 63.

Remittances received after Third-day will not appear in the Receipts until the following week.

NOTICES.

WESTWON BOARDING SCHOOL.—The Winter or Long Term will open on Third-day, the 3rd of Ninth Month, 1889.

Conveyances will be at Westwonton Station, on the West Chester and Philadelphia Railroad on that day. To meet the train for Philadelphia, passengers for Westwonton of the Pennsylvania Railroad Company, at Broad and Fifth Sts., Philadelphia, at 7:09, 8:55, A. M., and 2:53, 4:45, and 5:51 P. M.

The Union Transfer Company will stop for baggage to Westwonton places in ticket-booking parlors. If notices be left either at New Chestnut St., at the South East corner of Broad and Chestnut Sts., at the Baggage-room, Fifteenth Street, above Market, or at Market St. Ferry (north side); and will deliver it at the Broad St. Station of the Pennsylvania Railroad Company, at a charge of 25 cts. per trunk to be paid, either when the order is given, or when the trunk is called for. For the same charge they will collect baggage from any of the other railroad depots, if the railroad checks held for such baggage are left at one of the offices of the Company above designated. In all cases it must be stated to the baggage station to go to Westwonton Boarding School, Westwonton Station on the West Chester and Philadelphia Railroad.

DIED, on Seventh-day, Seventh Month 6th, 1889, in Potstown, Penna., at the residence of his son-in-law, Edgar S. Cook, EDWARD BAILEY, in the 65th year of his age.

Incidents and Reflections.—No. 187.

UNEXPECTED RESULTS.

We are so unable to penetrate the future and foresee the results of our actions, or the consequences that will flow from the circumstances which surround us; that not only do we need a wisdom higher than our own to guide us, but we may be induced to complain of inconveniences which are really part of the designs of Providence for our protection or welfare.

A story is told of a merchant who was returning from market on horseback, with a sum of money in a valise behind him. The rain fell with such violence that he was wet to the skin, and he was ready to murmur at the weather and the discomfort it occasioned. He reached the borders of a forest, and to his terror beheld a robber by the road-side with a gun levelled and aimed at him. But the same rain which had wet him, dampened the powder that the gun did not go off; and putting spurs to his horse, he escaped the danger. When he found he was safe, thankfulness for the rain which had caused his preservation took the place of the complaining feelings in which he had before indulged.

Dr. Dwight, in his travels in New England, states, that soon after the county of Litchfield began to be settled by the English, a strange Indian arrived at an inn, and asked the hostess, as the evening was advancing, to provide him some refreshment; at the same time observing, that from failure in hunting he had nothing to pay, but promising compensation whenever he succeeded.

The plea was, however, in vain; the hostess loaded him with opprobrious epithets, and declared that it was not to throw away her earnings on such creatures as himself, that she worked so hard. But as the Indian was about to retire, with a countenance expressive of severe suffering, a man who sat by directed the hostess to supply his wants, and promised her full remuneration.

As soon as the Indian had finished his supper, he thanked his benefactor, assured him that he should remember his kindness, and engaged that it should be faithfully recompensed when-

ever it was in his power. The friend of the Indian had occasion, some years after, to go into the wilderness between Litchfield and Albany, where he was taken prisoner by an Indian scout, and carried to Canada. On his arrival at the principal settlement of the tribe, it was proposed by some of the captors that he should be put to death; but during the consultation, an old woman demanded that he should be given up to her, that she might adopt him for a son who had been lost in the war. Accordingly he was given up to her, and he passed the succeeding winter in her family, amidst the usual circumstances of savage hospitality.

While, in the course of the following summer, he was at work alone in the forest, an unknown Indian came and asked him to go to a place he pointed out on a given day; and to this he agreed, though not without some apprehension that mischief was contemplated. His fears increased, his promise was broken. The same person repeated his visit, and after excusing himself in the best way he could, he made another engagement, and kept his word. On reaching the appointed spot, he found the Indian provided with ammunition, two muskets, and two knapsacks; he was ordered to take one of each, and he followed his conductor, under the persuasion that he had intended him injury he might have despatched him at once. In the daytime they shot at game that came in their way, and at night they slept by the fire they had kindled; but the silence of the Indian, as to the object of their expedition, was mysterious and profound. After many days had thus passed, they came one morning to the top of an eminence, from whence they observed a number of houses rising in the midst of a cultivated country. The Indian asked his companion if he knew the ground, and he eagerly said, "It is Litchfield." His guide then recalled the scene at the inn some years before, and bidding him farewell, exclaimed, "I am that Indian! Now I pray you go home."

A young man of Norwich, England, had been told by an old woman who pretended to tell fortunes, that he would live to see his children, grandchildren and even great-grandchildren growing up around him. How far he believed her prediction cannot be told; but in musing over it, he thought that if he should live to such an advanced age, he would be likely to become a burden to his family, unless he stored his mind with interesting and profitable incidents and thoughts, which would enable him to interest the young people by their narration. This peculiar motive induced him to go that very evening to listen to the celebrated Whitfield, who was to preach that night.

The text selected by Whitfield was the language addressed by our Saviour to the Sadducees and Pharisees, "O, generation of vipers, who hath adorned you to flee from the wrath to come." In the course of his sermon, he stopped abruptly, and lifting up his hands exclaimed with great emotion, "Oh, my hearers! the wrath to come! the wrath to come!" The young man,

in describing the effect, said, "These words sunk into my heart, like lead in the waters. For days and weeks I could think of little else. They would follow me wherever I went." The issue was, that he soon after made a public profession of religion. The chain of events which followed from his going to listen to Whitfield were probably as unexpected to him, as the reward received for his kindness to the Indian was to the inhabitant of Litchfield.

A fable is related of a hermit and his olive tree, which illustrates how difficult it is for shortsighted man to know what really is best for him; and how wise it is in all things to be submissive to the will of God, and leave ourselves in his hands. The fable says: An aged hermit planted an olive tree near his cave; and then, thinking it might want water, he prayed to God to send rain. So, the rain came down and watered his olive tree. Then he thought a little warm sun would do it good; so he prayed for warmth and sunshine, and the sun shone, and it was very hot. Then, as the sapling looked somewhat feeble, the hermit thought, "What it now wants is a little frost to brace it." Accordingly he prayed for frost, and that night the hoar-frost covered the ground. But the olive somehow did not seem to thrive, so he thought that possibly a warm southerly wind might help it on; and he prayed that the south wind might blow upon his tree, and the hot south wind blew, and the olive died! Some days after, he was visiting a brother hermit, and he noticed that he had a remarkably fine olive tree. "Why, brother," said he, "how do you manage to get your olive tree to thrive so well?" "I don't know that I did anything specially to it, but I just planted it, and God blessed it, and it grew." "Ah, brother, I planted an olive tree, and when I thought it wanted water I prayed God to give it rain, and He sent rain; and when I thought it wanted sun I prayed for it, and the sun shone; and when I thought it wanted bracing I prayed for frost, and the frost came. God sent me everything that I prayed for, as I thought it wanted it, but my tree died!" "And I," replied the other, "just simply prayed that God would take care of my tree, and then left it in his hands to arrange the how and the when, because I felt sure *He knew what was best for my tree*, better than I did!"

Richard Cecil, riding with a friend one windy day, and the dust being very troublesome, his companion wished that they could ride in the fields, where they would be free from dust; and this wish he more than once repeated. At length they reached the fields, when the flies so teased his friend's horse, that he could scarcely keep his seat on the saddle. He now complained of a new evil. "Ah!" said Cecil, "when you were in the road the dust was your only trouble, and all your anxiety was to get into the fields; you forgot that the flies were there. Now this is a true picture of human life; and you will find it so in all the changes you make in future. *We know the trials of our present situation*; but the

next will have trials, and perhaps worse, though they may be of a different kind."

In illustration of the fact that, in the ordering of an overruling Providence, a comparatively slight incident may produce results of great importance to us, John B. Gough relates the following incident that befel his father:—

"During a retreat of the English army, when closely pursued by Marshal Soult, about the year 1809, my father, then about 30 years of age, was a soldier in the Fifty-second Light Infantry. He had been slightly wounded in the chest, and though his wound was not considered fatal, it was painful and irritating. The army had suffered fearfully from exposure, famine, and the heavy fatigues of an active campaign. I well remember my father saying to me, 'John, you will never know what hunger is till you feel the two sides of your stomach grinding together.' In that campaign, men mad with hunger fought like wolves over the half-decayed hough of a bullock; and often when one of these poor animals, overcome with weakness and starvation, was staggering as if about to fall, the ready knife was applied to the throat, and the fainting soldiers, eagerly catching the blood in their hands, and hardly waiting for it to congeal, made it take the place of food. In this retreat, my father threw himself out of the ranks, under the shadow of a large rock to die: he could go no farther. Lying there, he took from his inner pocket a hymn-book (which I have to-day with all the marks of its seventy years upon it), and began to read the hymn in which is the verse—

'When in the solemn hour of death
I own thy just decree,
Be this the prayer of my last breath:
O Lord, remember me.'

He made die—it seemed inevitable—though far from home, in a strange land. Suddenly a large bird of prey, with a red neck growing out of a ruffle of feathers, came swooping along, almost brushing my father's body with its wings; then circling up, he alighted on the point of a rock, and turned his eye on his intended victim.

As my father saw that horrible thing watching, and waiting to tear him in pieces even before life was extinct, it so filled him with horror and disgust, that he cried, 'I cannot endure this: it is too terrible. When I am unable to drive that fearful thing away, it will be tearing my flesh!' He rose to his feet and fell, then crawled and struggled away, till at length he crept into a poor hut, found safety, and soon after joined his regiment. Though he was very, very ill after that frightful episode, he recovered, and died in 1871, at the remarkable age of 94 years."

The celebrated engineer, Telford, stated to a friend, only a few months before his death, that for some time previous to the opening of the Menai suspension-bridge, his anxiety was so great that he could scarcely sleep, and that a continuance of that condition must have very soon completely undermined his health. We are not, therefore, surprised to learn that when his friends rushed to congratulate him on the result of the first day's experiment, which decisively proved the strength and solidity of the bridge, they should have found the engineer on his knees engaged in prayer. A vast load had been taken off his mind; the perilous enterprise of the day had been accomplished without loss of life; and his spontaneous act was thankfulness and gratitude.—*Smiles.*

Extracts from the Memoranda and Letters of Ann Watkins.

(Continued from page 35.)

During a visit in Lancashire and Cheshire, A. W. writes:

"Fifth of First Month, 1867. We went over the water on Fourth-day, and met Friends at Birkenhead at half-past nine o'clock. No voice was heard save mine, and I thought a little help was afforded to testify to the inward and spiritual appearance of Christ, at the same time subscribing to the record of his outward appearance. This has been my principal business the last three days in the meetings of Birkenhead, Liscard, and Southport; at the latter place a number of Friends were very loving and tender; at the two former, I thought Truth rose into dominion, but the hindering things produce coldness."

On the 15th "we drove to the meeting-house at Crawshawbooth, which is situated in a beautiful vale, and is a very pretty, romantic spot. It and the cottage adjoining were built in the year 1716, and cost £60. The workmen were paid two-pence a day as wages. But neither the antiquity of the place, nor the remembrance of good Friends that had preached there, nor any of the good deeds performed there of which we talked, could at all assist us for that occasion, and we had fresh to be still and labor for a piece of bread. I thought we were refreshed together, and we left the place under a fresh sense of the unmerited blessing."

"Hyde, First Month 26th. Since I last wrote I have attended the meetings of Stockport and Hyde, and am intending to go to Wilmslow this afternoon. [Speaking of the Friends with whom she stayed at Hyde, A. W. says,] He and his wife are convinced Friends, and have not received a school education amongst us. The husband appears to have a very unbiassed mind as regards the state of things amongst us, but is seeking to live near to the Principle, and believes, as we individually do so, and lead others to do the same, that things will be set right sooner than by any other course. I feel glad to have crossed the path of these Friends, as I think they are amongst the honest-hearted. "Let the postherds of the earth strive with the postherds of his Maker.' How great the need for us to mind our own business, and to seek to come under the regulating Power that we may be as the prepared vessel, fit for the reception of the heavenly oil; otherwise the work will be marred, the vessel injured, and not being able to receive the gift, loss will be the consequence. Oh! how I long that every one may be driven home, that here, we may be first muddled, mended or repaired, and then the service of each one will be helpful to the body, and there will be no room for jarring or jangling; no exaltation, but a standing still in the resignation, or a moving forward in the current of Divine life, in the healing virtue of whose waters many would be made perfectly whole."

In the year 1867, A. W. visited the meetings in the Quarterly Meetings of Buckinghamshire, Northamptonshire, Bedfordshire, Hertfordshire, Berkshire and Oxfordshire, and appointed several public meetings in different villages. In the course of the journey, she writes, under date of 2nd of Eleventh Month: "As regards the outward appearance, the state of things is truly discouraging, but I trust the principle is spreading. I feel encouraged in this belief, and see,

or think I see, through the vista of a few fleeting years, a flocking to the standard."

On 30th of Eleventh Month, she says:—"It was a beautiful morning, the sun shone brightly, and the hoar frost lay upon the ground; all that was outward and all that was inward appeared attuned to praise the goodness of the beneficent Creator, interrupted at intervals by a sense of much weakness and timidity, to be hushed again in the silence that reigned around, which preached an example of confiding trust; and the language did arise in my heart in the fulness of feeling,

What Thou dost to-day provide

Let me as a child receive;

What to-morrow may betide

Calmly to Thy wisdom leave;

'Tis enough that Thou dost care,

Why should I the burden bear?

We arrived at Thame about half an hour before the time of meeting at the house of Wm. Wheeler, a man advanced in years, habited in the garb of a Friend; his wife and daughter enlightened Wesleyans. We met in W. W.'s parlor, and were twelve in number, including D. B., S. K., and myself. Among those present were R. R., a member of our Society, a poor man but rich in faith, and, I believe, an inheritor of substance; B. M., one who appears to have passed through much in his early experience, but seemed to me to have taken up rest by the way, yet there felt to be a visitation and much of hope; and W. H., an original character, who came in his brown paper cap and coarse apron, has been drawn experimentally to faith in the doctrine of Divine Light or immediate illumination, and has been gathered from a dead practice to a living service. There was also a young woman who appeared tender. When we sat down I felt cast into an inward exercise, in which I humbly trust desires were raised, which, through continued mercy, found entrance in the ears of the Lord of Sabaoth; and in this inward exercise and travail I was engaged to labor with heart and soul amongst them, and I reverently believe the feeble effort was owned."

"In 1870, with my sister Susannah Kirkham and eldest son, I visited Scotland, and had liberty to attend some meetings in the North of England. I speak in deep humility, but I reverently believe the everlasting Wing of the Almighty was extended and a way was made for us to my great admiration. May I not ascribe all praise to Him who condescends to aid those who endeavor to serve Him, though we be as poor worms of the dust?"

[The following letters were written during this journey:—

"Penrith, 6th of Eighth Month, 1870. We have been favored to pass through Westmorland with a good degree of comfort and peace, holy help having been mercifully extended from day to day. Last Seventh-day we visited the Hall of Swarthmore. We noticed one room in particular (used now as a parlor), where Judge Fell used to sit with the door open and hear what Friends said in their gatherings; also the place where once was a balcony from which George Fox used to address the people. All is silent and still, but there yet meet together a small remnant who profess to testify to the Power which raised us up to be a people. The meeting-house stands at some distance from the hall, a neat and rather commodious building. Here we saw the chair once occupied by George Fox, and another once used by Robert Withers. The old Bible, with the chain attached to it, pleased me much. Our friend J. C. turned to

two passages of Scripture somewhat differing from ours.—Is there no treacle in Gilead, and I commend unto thee Phebe, our sister, a minister in the congregation at Cenchreae." On First-day we met at this house in the morning, and at the Temperance Hall in the evening."

"Guardsale is a meeting that has been reopened, about eight miles from Bridgfalls. Here we met with primitive Quakerism, minds drawn off from words into pure stillness. It was a memorable day, and our hearts were, I humbly believe, united together in the best of bonds. I rejoiced in Him who has given such power unto his poor, his lowly ones."

"Aberdeen, 12th of Eighth Month. We had a comfortable journey to Edinburgh, resting at Carlisle for some time, and had a lunch dinner. W. M. met us on the platform and kindly conducted us to his house, where we were very kindly entertained. I was led into a conversation which occasioned me some after conflict. I do feel it exceedingly incumbent as we pass along, much to suppress the freedom of the natural mind, and seek so to dwell near the Fountain of Life that even our conversation may be refreshed, as with heavenly dew."

"On First-day the meeting was very small, and there felt but little of an animating character; but my mind was humbled in the service of the day, as I was led to labor hard to testify to the Divinity of Christ and the inward and spiritual nature of his kingdom, and of the need there is of being broken to pieces in order to experience for ourselves that kingdom to be set up in our hearts. There was a reading meeting directly after the evening meeting, which, though good in itself, was, I thought, rather inappropriate so immediately after the solemn engagement of worship."

During her visit in Scotland she met with several evidences that the Spirit of God was working on the hearts of the people, and drawing some into a practical acquaintance with the spiritual religion professed by her own Society. In one case, "after a public meeting had been held, several of the villagers asked R. B. to allow them to meet in his barn in a usual way to wait upon God. Consent having been given, at the first meeting between fifty and sixty attended, but the steady attendance amounts to twenty, sometimes ten to fifteen more. They have been used to meet in R. B.'s kitchen in the winter. There is no reading or other preliminaries, but they simply sit in silence. One woman, who has suffered much for her adherence to what she believes to be right as a Christian, even in her views with regard to language and dress, without knowing anything of Friends, is a very remarkable instance of immediate teaching. She was in the practice of visiting the sick, and on one occasion, when calling on one who was near death, the clergyman was asked to pray, he answered that he had not got his book. The reply was made, 'If you need a book, here is one.' It was used, but the impressions received were not favorable to book prayer, and Nancy Ritson's mind was greatly exercised. She went home and came to the conclusion when visiting the sick, to seek to draw near in spirit unto God by the observance of solemn stillness. This was at first difficult, but she put aside other means and was blessed in her deed. She is now a member of our Society and occasionally speaks in this interesting gathering. We met in the barn on the evening of Fifth-day, about thirty-five present."

She remarks, in reference to the people of

Scotland—"I am satisfied there is a good seed in this land, and that there may be a noble testimony borne to the Truth; but perhaps the time is not fully come for its development."

(To be concluded.)

FOR "THE FRIEND."

A Visit to a Nelumbium Pond.

On the second of Eighth Month, I accepted an invitation to accompany some friends on a visit to a mill pond on Salem Creek, near Sharpstown, N. J., where that curious and beautiful plant, the Lotus or Sacred Bean (*Nelumbium luteum*) grows luxuriantly and in great abundance. A few years ago, a party who went there on a similar occasion, agreed to unite themselves into a very informal association called the *Lotus Club*, which at the proper season should annually meet at the place of their growth, and enjoy the sight of these magnificent Water-lilies. In the afternoon of the day the company assembled in the school-room at Woodstown, and listened to a talk or lecture on botanical subjects from some one of the party.

The Nelumbium grows also in a mill-pond near Woodstown, on the same creek; and at the meeting held this year, a committee was appointed to see whether arrangements could be made to lease the use of this pond, so as to protect the plants growing there, and also to introduce other kindred species, especially the pink-flowered East Indian one *Nelumbium speciosum*, held sacred by the Buddhists of India, and associated with ideas of Buddha, who is represented as reclining on a leaf or flower of the Lotus.

As we approached the pond, we saw a large expanse, probably acres, of its surface thickly covered with the great round leaves of the Lily; there were hundreds of the large yellow flowers in full bloom, and thousands of the buds and seed-vessels in various stages of development. Taking a small boat we pushed out among them, though they were growing so closely together that we could do little more than skirt the edges of this natural flower bed. The water was 3 or 4 feet in depth. The tubers and rootlets were sunk in the mud at the bottom, and the stems of the leaves and flowers were of corresponding length. Many of the leaves were floating on the surface of the water. They were of different sizes, but mostly about 2 feet in diameter, round, and with the stem attached to the centre. The dark green color, and the smoothness of the surface, rendered them almost as attractive as the flowers. Owing to some peculiarity of the upper surface of the leaves, water will not wet them, but, if thrown on to them, gathers in globules and rolls off, leaving the leaf as dry as before. This effect is produced by a coating of microscopic hairs or down, which, by retaining a film of air over the upper surface, prevents it from being wetted, when water is poured upon it. The Hindoos have a proverb founded on this peculiarity of the leaves, to the effect that the good and virtuous man is not enslaved by passion, nor polluted by vice; for though he may be immersed in the waters of temptation he will rise uncontaminated by them.

The long leaf stems were a little over half-an-inch in diameter, and at the point of juncture with the expanded portion of the leaf, divided into ribs which diverged from this common centre and supported the wide expanse of the leaf. I counted 23 of such ribs on a leaf, and observed that as they approached the border, they were subdivided into small branches; and that there were numerous cross branches connecting the main ribs. This structure is similar,

though on a smaller scale, to what is shown on the much larger Lily of South America—the *Victoria Regia*—which has such circular leaves from 6 to 12 feet in diameter, with the border of the leaf turned up for two or three inches, so as to form immense flat trays or saucers. The leaves of the *Nelumbium* have no similar up-turned edge, but lie flat on the water. As the stems lengthen, they gradually raise the leaf from the surface of the water into the air. Those thus elevated assume a somewhat dish-shape, being depressed in the centre.

The stems of the leaves and flowers contain many tubes running lengthways, as is the case with those of some other water plants. On breaking a piece of the stem and drawing the two fragments apart, a number of very delicate, white spiral threads are drawn out, to the length of a foot or more, before they part. These I suppose are spiral vessels, which have been coiled on the inner surface of the tubes which abound in the stems, making a kind of inside lining of them. They are quite numerous, and it is said in India they are carefully extracted, and used as wicks to burn before the idols in the temples.

The kindred species, *Nelumbium speciosum*, is no longer met with on the Nile where it formerly grew, but is found in various parts of Asia and Australia. Sculptured representations of it abound among the ruins of the Egyptian temples, and many circumstances prove the veneration formerly paid to it by the votaries of Isis. In India, Tibet, China and Japan, the plant was deemed sacred, and indeed is still employed in religious ceremonies.

On the upper side of the Nelumbium leaf, a light-colored spot may be noticed at the centre, which is destitute of the green color that prevails on the rest of the top surface. This is filled with breathing pores, which connect with the air-vessels in the stem. These pores are found in no other part of the leaf; although in most plants they are abundantly scattered over the surface.

The flowers of the Nelumbium have many petals or floral leaves. When these are expanded, they make a circular flower from 6 to 10 inches in diameter, of a yellow color, not unlike the shade of rich Alderney cream. The germ in the centre of the blossom is in shape, an inverted cone, on the flat top of which the fruit seeds are arranged. This central portion enlarges as the flower matures and passes away; and it becomes the seed-vessel, with a separate cavity for each seed, which finally lies loose in it—with its point projecting through a hole, reminding one of a pepper-box. These seeds are edible, and were an article of food among the Indians, as well as the tubers or root-stocks, which contain considerable starch.

The soft mud and the still water of the pond evidently suit the Nelumbium, for it grows so rapidly and spreads so much, that the owner of the mill had men at work at the time of our visit mowing off the leaves and flowers in a part of the pond, so as to check its growth, and keep open a channel for the waters, which he feared might be closed by the spreading of this plant.

In striking contrast with the huge leaves and flowers of our water-lily, was a small, delicate, white-flowered plant, belonging to the Parsley-family (*Umbelliferae*), which grew on the margin of the pond. The leaves were dissected into bristle-form divisions, not thicker than ordinary sewing thread. One of the stont, circular leaves of the Lily would have furnished enough material to have supplied a hundred plants of this Mock Bishop Weed (*Discopleura capitata*.)

After returning to Woodstown and dining, we spent an hour in the Academy building, listening to some interesting historical accounts of several plants, which produce substances that are largely used in medicine or for other purposes. Among these were Quinine and its allies, Indian Hemp, Cocaine, Opium, Cocoa, Patchouly, &c. The lecturer seemed to be full of information on his subject, so that he could with little effort pour upon his auditors a steady stream of valuable and interesting information.

J. W.

FOR "THE FRIEND,"

The True Wisdom.

I often feel, with much sadness of heart, that many who are "not far" from the kingdom are resting in the belief that all they have to do is to be quiet, and in God's own time all will come out right. I fear there are many who rest on the feeling that if they are to be saved, the Holy Spirit will do the work in his way and time. That they have nothing to do with it. Stop a moment, dear heart, and think. What saith the Scriptures? "Make your calling and election sure before ye go hence to be seen of men no more." "Woe to them that are at ease in Zion."

I know full well that the work is the Lord's, and the power is his to regenerate the heart of man, and to bring it from the state of a barren waste to that of a fruitful garden. And while the work of the Holy Spirit is thus the essential thing, He requires our co-operation; conviction is not conversion. We may be fully convinced of our sinfulness, but unless we yield, salvation full and free can never be ours. Very true is it that we cannot save ourselves, or in any way merit salvation. It is the knowledge of this fact which leads us to prostrate ourselves before Him who alone is able.

In another sense there is something we must do. It is for us to submit to that pleading voice. It is for us to seek after the true way; and those that seek shall find. It is for us to ask for knowledge and wisdom to rightly judge and rightly follow our Guide. It is for us, in all earnestness to say, "I will forsake sin and give my heart to thee." It is for us to say to Him, "I will let thee in, Lord Jesus."

The prodigal was a long time in want, with perfect knowledge of his sin and his need, but it was the action on his part that brought him home to his father's house. When he was ready to say, "I will," his father was ready to meet him. Oh, how many have been feeding for years on the husks, when they could have been nourished at their Father's table. There must be a definite surrender of the heart to God's control; and a true child of God should live under the daily realization that this surrender had been made; and that now, and henceforth, he or she does not live unto himself or herself, but unto Him who gave himself for them. Thus being made sensible by the witness within us, that "old things have passed away, and behold all things have become new, and all of God!" we are to realize that we have become indeed dead to sin, and therefore are to live no longer therein, but to be alive unto righteousness and true holiness. If, then, through the power of God and through the mercy of God, we have taken this step and yielded our hearts to Him, what does He say He will do? "Whosoever will come, may come," and "him that cometh to Me I will in no wise cast out." Having submitted our will to Him in loving confidence, we shall realize our peace to flow as a river, and his salva-

tion to be within us as a "well of water springing up unto everlasting life."

Arise! then, thou listless one: thou doubting one; thy Lord is waiting to bless thee. Arise! as did the poor prodigal; and say, "Thy face, Lord, will I seek." Let no one think, "I am too young;" the Master loves an early surrender; and the sooner thou comest to Him the longer thy life of Christian joy and trust will be. Come now, and give thy life, thine all to Him who hath done so much for thee. Thou wilt surely find that not one of his promises will fail thee, and that to trust Him in all life's journey, is sweeter far than all that earth can give.

SELECTED.

WHEN MY SHIP COMES IN.

BY ALICE WILLIAMS BROTHERTON.

Somewhere on the distant seas
Driven on by tide and breeze—
Blow soft, winds, and aid her
On her way to win—
There's a good ship sailing on
From the rosy gates of dawn,
Oh, what joy will fill my heart,
When my ship comes in!

Treasures richer far than gold,
Or than gems, my ship doth hold!
Half the store of wealth to tell you
I can scarce begin.
But with me, friends, you shall share;
There will be enough to spare—
Enough for one and all.
When my ship comes in.

When I sit (as here to-night)
Dreaming in the ruddy light,
In the embers of the hearth fire
I can almost see
Shape of every sail and mast
Of the ship that's sailing fast,
Drawing nearer, ever nearer,
On her way to me.

So what matter if to-day
I am poor and sad (I say),
Just a little longer waiting—
Till the day will bring my ship—
And I'll hasten to the shore;
All my sorrow will be o'er
As she sails across the harbor bar,
My own brave ship!

"But if (I hear you say)
Not to day, nor any day,
For all your hopeful waiting, friend,
Your ship should come?"
Oh, then, what will you do
When you find that unto you
Nevermore, across the ocean,
Will your ship come home?"

She will come, or soon or late,
Well I know it; I can wait,
For my captain's sailing orders
Are from One most wise.
So I sing as I sit here,
Every moment brings me near
The happy hour my ship will greet
My wistful eyes.

She will come! Ay, it may be,
When the summons comes to me:
"Earthlife here is ended, soul!"
Rise! Another life begin!"
When I take the angel's hand
And go downward to the strand,
I may see, then, first, across the bay
My ship come in—

Come in, and waiting stay,
While a voice on board shall say:
"Hasten, all is ready now,
We but wait for thee."
Swiftly then I'll board my ship,
And her moorings she will slip,
And we'll sail out on the ocean
Of—Eternity.

The Independent.

NO ROOM FOR JESUS.

O pleading life, crowded so full
Of earthly toil and care!
The body's daily need receives
The first and last concern, and leaves
No room for Jesus there.

O busy brain! by night and day
Working with patience rare,
Problems of worldly loss or gain,
Thinking, till thought becomes a pain;
No room for Jesus there.

O throbbing heart! so quick to feel
In others' woe a share,
Yet human loves each power inthral,
And sorrow treasures fill it all;
No room for Jesus there.

O sinful soul! thus to delude
The being God doth spare!
Blood-bought, thou art all more his own.
Heart, brain, life, all are his alone;
Make room for Jesus there—

Least soon the bitter day shall come
When vain shall be thy prayer,
To find in Jesus' heart a place;
Forever closed the door of grace.
Thou'lt gain no entrance there.

Confessing Christ.—For a Christian to confess his relation to Christ before men boldly is safer as well as more becoming than to attempt to conceal it. Dr. George F. Pentecost says that the next morning after he gave his heart to God he went to the office, where he was engaged in the study of law. In the hurry and confusion of getting certain papers ready for the court, an ink-bottle was overturned on the open pages of a court book. His old temptation to use profane language arose, but remembering what he had done the night before he found grace to overcome. He got the papers ready, sat down and cut the ink-stained pages out of the book and rewrote them. Others in the office looked on with surprise, and one of them said, "Well, you do take that cool," while the head clerk drew his spectacles down over his nose and offered to wager that Pentecost had attended the revival meeting the night before. Then came the crisis, and the young man answered: "Yes, gentlemen, I was there, and you who know me best know what need I had to go." The old clerk, an ex-judge, said: "Young man, that is right; I wish I had had the strength to do as you have done when I was young." Such a crisis comes to every one who becomes a Christian. The temptation to deny Christ before men will arise. He who yields in the slightest degree will sustain an incalculable loss. Happy the man who is not ashamed of Christ. Sinners will respect even though they may oppose him, and he will secure an immense advantage for the spiritual contests yet to come.

MATTHEW HALE, the great English jurist, was accustomed to retire to his closet for an hour of solitary communion with God before he took his seat upon the bench to try a case in court. He had learned that he wore the ermine as Christ's servant.

Abraham Lincoln said of himself, when he stood at the helm of state in the storm: "I have been driven many times to my knees by the overwhelming conviction that I had nowhere else to go. My own wisdom and that of all about me seemed insufficient for the day." He had learned that the directing of the affairs of a nation is a sacred function in which he had a right to ask for Divine guidance and support.

The Outlook.

SELECTED

BY RICHARD H. THOMAS, M.D.

It has been said that not to understand the past is to remain always children. In order to understand and to meet the needs of the day intelligently, we must watch the tendencies of present movements, and the result of similar movements in the past. It is important, also, to remember that the consequences of what we do, depend not upon our motives, but upon the nature of our actions. For example, many a man has poured cold oil on a slow fire to make it burn brighter. The intention was good, but the resulting explosion was just as disastrous as if the design had been evil. This fact applies to the movements among Friends to-day, and to no subject more emphatically than to that of the support and character of the ministry. The changes that have been introduced in some parts have been to a large extent promoted by men who in their feelings have been thoroughly loyal to the Society. In the reported discussion which preceded the adoption by Iowa Yearly Meeting of a minute advising particular meetings to support ministers as pastors, it was clearly stated, by those who favored the measure, that nothing was further from their intention than to do anything to hinder the free exercise of the ministry in meetings for worship by anyone on whom the Lord might call. They even hoped the result of this action would be to develop the exercise of this freedom, and referred to cases where this had been the result. The minute was passed as something that was needed in the present state of the meetings. These explanations and statements are doubtless perfectly true. What then? The end is not yet.

This step is simply the last one thus far taken on the road to a professional ministry, and that is why it is specially mentioned. If any deny that it is a step in this direction, church history, as well as the recent history of Friends, justifies me in my assertion. Look at the progress of the movement in our Society. We have one particular meeting after another, supporting some minister among them without secular labor, who is regarded by that meeting as its pastor, and who is expected to do pastoral work.* We see a number of our ministers assume the clerical dress, and some of them already allow themselves to be styled "Reverend." We find reports of committees in various Yearly Meetings speaking of the need of stationed pastors, and we now have the recent action in Iowa. In the meantime, one of the leading organs in our Society is teaching that a call to the ministry involves, generally at least, a call to leave off secular employments, and that it is as much our duty to support such as are called, as to pay clerks in our offices. Finally the importance of an intellectually trained ministry is insisted upon, and in certain places initial steps looking to this end have been undertaken. Is not all this sufficient to show the goal toward which we are advancing? Could the advance have been more rapid than it has been? And because the customs and doctrines of 200 years have not already been upset in every place where the new pastoral system has obtained, are we justified in saying they will not be overturned? Or are we to wait till everything is swept away before we protest? A little boy in Holland was able, by thrusting his hand into a little break in the dyke, to keep out the ocean until assistance came. Had he let that

little stream of water from the ocean flow on while he went to the village for help the whole country would have been flooded. We see our position. Every new step taken has been one away from the position of Friends, and of the early Church on the ministry, towards a professional clergy. We are not concerning ourselves with the motives or the reasons for these steps, we are dealing with the facts of the case.

Church history teaches the same lesson. Pastors, in the modern sense of the word, were unknown in the early days of Christianity. The separation between clergy and laity was then, as it is now amongst us, a gradual process. Again, Barclay of Beigate, in his recent work, points out that, in the time of the Commonwealth in England, other Churches besides Friends held that liberty of prophesying should be allowed to church members, and might be exercised fully in the congregation. Friends alone have retained this freedom. Why? Because they alone kept clear of professional ministers and outward "sacraments." Let us accept either or both of these, and we have seen the last of the true freedom of the Gospel ministry. It may survive for a time, but its fate will be sealed.

A line of separation between a regularly supported ministry and a professional ministry cannot long be maintained, if indeed it exists. If I am supported to do a certain work, that work becomes my business, and however earnest I may be in it, the fact that I am supported changes my relationship to those who support me. I am in a business sense become responsible to them for the service. Now, however much generous minds may rise above it, the introduction of a business or professional element is an injury to the work of preaching, both to the preacher and the congregation. While externally it enhances the minister's authority, it lessens his influences as a man, which is far more important than authority. It tends to make him less dependent upon Divine enlightenment for each occasion, and more dependent upon human preparation. It crushes out, as we have seen, the exercise of small gifts in the congregation, and, therefore, it would only be a question of time before the natural succession in the ministry would cease, and theological seminaries be absolutely required, and then the fully-developed professional Quaker clergyman result. What effect all this will have on the ministry of women remains to be seen. The indications are that it would have a discouraging one.

Such are the tendencies that are in active progress in certain parts of our Society. It now remains for us to answer the question: Are we to preserve our meetings for worship on their original basis? that is, are we to continue to hold them in dependence upon the Lord to choose whom He will to speak to us? We cannot long do this under any conceivable system of stated and supported pastors. As we value the one we must flee the other. But the maintenance of the freedom of the Gospel ministry must depend upon the faithfulness of all the living members. Every member who conscientiously disobeys the call of the Lord to service, either in meeting or out of meeting, is doing his or her share towards the pulling down of the free and spontaneous, and the setting up of the professional system. Every worker who teaches his hearers to look to him for their supply of spiritual food is doing the same thing. If we desire to take our proper place among the tribes of the Lord's people, the best thing we can do is to have sufficient faith in the truths we profess to apply them practically and consistently. Where

this is done we have the best example of division of labor in spiritual things with the smallest amount of machinery possible for the carrying on of the work. Numbers and wealth are of small moment. "Where there are three there is a church." I have known a congregation of but little more than three grow without a pastor to thirty, with very little outside help. The effect on the spiritual growth of the individual, when placed in a position of responsibility proportionate to his spiritual experience, is wonderfully helpful. According to the Quaker system which in this resembles that of the early Christians, every living member realizes this responsibility, and looks to the Lord for guidance in carrying it out. From the first also a vigorous life is encouraged, by teaching the converts that there is no man over them to lead and feed them; but that, while all are to be subject to and help one another, no one is to depend on the other, but on the Lord. We want strong Christian characters more than anything else; and shall we leave off the best means for developing them, because it is a means that requires for its right administration a life of special nearness to God? Shall we not rather live near Him and see whether that system of spontaneous work, which has always proved so successful when carried on by men imbued with the Spirit of God, will not again be shown to be of Him?

FOR "THE FRIEND."

George Fox's Gift of Land to Philadelphia Friends.

It appears from several letters written by Thomas Lower, of London, (step son-in-law of Geo. Fox) to Joseph Grown of Philadelphia in 1698, 1699 and 1700, that William Penn in 1681 granted to George Fox 1250 acres of land to be located in Pennsylvania; in consequence of which he was entitled to two lots in the city, and twenty acres of land in the city Liberties. Several years before George Fox died, he wrote to Friends here that he gave them his said lots and Liberty land for the public service of Friends, but he never received any answer to his letters.

Thomas Lower also sent to Joseph Grown an extract from George Fox's writings, expressing his mind and will respecting his temporal concerns (which writing was dated Eighth Mo. 2nd, 1686), as follows:—

"I do give my land in Pennsylvania, or above one thousand acres, unto Jos. Rouse, Thomas Lower, Daniel Abrahams, and their children, to be equally divided among them. But only sixteen acres of it I gave to Friends there, ten of it for a close to put Friends horses in when they come to the meetings, that they may not be lost in the woods, and the other six acres for a meeting house and burying place." This writing was not a part of George Fox's will, but only a memorandum. A copy of his will is printed in the "Fells of Swarthmore Hall."

In the Sixth Month, 1701, the above clause was read in the Monthly Meeting in Philadelphia, and a committee appointed to get the land confirmed to Friends in a location as near the centre of the city as possible, to answer the purposes proposed by the worthy donor. Wm. Penn returning to England soon after, nothing was accomplished before his departure; but Thomas Lower again took the matter up in England, and obtained from William Penn a promise that he would not fail to see George Fox's will performed to the utmost, and also locate the grant as near the town as the plan of the city would admit of.

* Now in 1889, there are said to be sixteen "pastors" in the limits of one Yearly Meeting.

In 1705 the Commissioners of William Penn granted to Trustees appointed by the Monthly Meeting in satisfaction of this claim, a tract of land in the city Liberties, containing twenty acres of ground, near Fair Hill meeting house; a lot on the south side of High Street, between Third and Fourth Streets, 33 feet front and 306 feet deep; a lot on the west side of Front Street between Sassafras (Race) and Vine Streets, 25 feet front and 426 feet deep to Second Street, and a lot on the east side of Front Street opposite the last named, 25 feet front and 250 feet deep to the Delaware River.

In 1758 a certain Godfrey Laycock arrived from England with a Power of Attorney from George Fox, of Polesworth, a descendant of John Fox, the eldest brother of George Fox (the founder) authorizing him to take possession of all lands in Pennsylvania which the latter had owned. Under this Power of Attorney Laycock attempted to act, but in the meantime a revocation of the power was procured from England, and the matter was dropped.

Some years afterwards John Fox and Tynningham Palmer came from England and produced a deed from George Fox of Polesworth and other descendants of John Fox, under which they claimed the real estate above referred to, and in 1765 issued a writ of ejectment against the tenant in possession of one of the lots. Efforts were made to compromise with the claimants, which proved unsuccessful, and the matter was about to proceed to trial, when the latter proposed arbitration—which was accordingly undertaken under a rule of the Supreme Court of Pennsylvania. Under this rule, if the arbitrators found that the claimants had a valid claim, and that in justice they ought to sell the same to the defendants, they were required to estimate the value of the same, and award the amount thereof to be paid by the defendant to the claimants in full satisfaction of the said lands. The referees found that the title to the lands was in the claimants, but that the defendants had an equitable title therein, and that in justice and equity the claimants should make conveyance of the lands to the defendants, upon payment of the sum of £500, lawful money of Pennsylvania; and that the deeds should contain covenants of warranty against the grantors and their heirs, and the heirs of George Fox, the original purchaser.

By deed dated 24th of April, 1767, Fox and Palmer executed a deed for the real estate in question to the trustees appointed by the Monthly Meeting, and to certain persons who had become purchasers from them (among whom was Benjamin Franklin), and thus this remarkable case was finally settled.

In addition to the £500, which the Friends were required to pay to grant the title to those proprietors, £45.6 were paid for expenses, making the total amount £545.6

Natural History, Science, &c.

Sand Showers.—A paper recently published by Denza, an Italian astronomer, treats of the sand showers which occur frequently in Southern Europe. In many parts of the Ligurian Alps and of Lombardy a short time ago, not only the vegetation but the roofs of houses, terraces, etc., were strewn with fine particles of dust after the occurrence of showers. This dust is readily collected. The writer's protracted observation of the phenomenon confirms the opinion already advanced by him, that the sand showers have

their origin in the North African deserts, whence they are borne by strong southern gales as far north as the Alps. Two cases observed support this conclusion. About the beginning of May, atmospheric waves of low pressure advanced from West Africa across the Mediterranean to Southwest Europe, causing a heavy rainfall as far north as the British Isles. In Sicily and Piedmont the showers were mixed with sand, and in other cases the foliage was covered by a layer of dust. On May 12th a violent sand-storm raged in the North Sahara, and this was soon followed by sand showers in Northern Italy.

June Bugs.—At the instance of the Government, the peasants living near the Tuchel-lands in West Prussia, have been waging war on the June bugs, which appeared by the million in the fir forests of that region a short time ago. Altogether 480,000 litres of the bugs were killed and collected. As every litre contained some 480 bugs, the total number gathered by the peasants was about 230,000,000. For every dead bug the Government paid one-thirtieth of a pennig, less than one-one-hundredth of a cent.

The Bite of Serpents.—Let us observe what happens when the rattlesnake means mischief. He throws himself into a spiral, and about one-third of his length, carrying the head, rises from the coil and stands upright. He does not pursue, he waits. Little animals he scorns unless he is hungry, so that the mouse or the toad he leaves for farts unnoticed in his cage. Larger or noisier creatures alarm him. Then his head and neck are thrown far back, his mouth is opened very wide, the fang held firmly erect, and with an abrupt swiftness, for which his ordinary motions prepare one but little, he strikes once and is back on guard again, vigilant and brave. The blow is a stab, and is given by throwing the head forward while the half-coils below it are straightened out to lengthen the neck and give power to the motions which drive the fangs into the opponent's flesh; as they enter, the temporal muscle closes the lower jaw on the part struck, and thus forces the sharp fang deeper in. It is a thrust aided by a bite. At this moment the poison duct is opened by the relaxation of the muscle which surrounds it, and the same muscle which shuts the jaw squeezes the gland, and drives its venom through the duct and hollow fang into the bitten part.

In so complicated a series of acts there is often failure. The tooth strikes on tough skin and doubles back or fails to enter, or the serpent misjudges distance and falls short, and may squirt the venom four or five feet in the air, doing no harm. I had a curious experience of this kind, in which a snake eight feet six inches long threw a teaspoonful or more of poison athwart my forehead. It missed my eyes by an inch or two. I have had many near escapes, but this was the grimmest of all. An inch lower would have cost me my sight and probably my life.

A snake will turn and strike from any posture, but the coil is the attitude always assumed when possible. The coil acts as an anchor, and enables the animal to shake its fangs loose from the wound. A snake can rarely strike beyond half his length. If both fangs enter, the hurt is doubly dangerous, because the dose of venom is doubled. At times a fang is left in the flesh, but this does not trouble the serpent's powers as a poisoner, since numberless teeth lie ready to become firmly fixed in its place, and both fangs are never lost together. The nervous mechanism

which controls the act of striking seems to be in the spinal cord, for if we cut off a snake's head and then pinch its tail, the stump of the neck returns and with some accuracy hits the hand of the experimenter—if he has the nerve to hold on. Few men have. I have not. A little Irishman who took care of my laboratory astonished me by coolly sustaining this test. He did it by closing his eyes and so shutting out for a moment the too suggestive view of the returning stump. Snakes have always seemed to me averse to striking, and they have been on the whole much malignig.

Any cool, quiet person, moving slowly and steadily may pick up and handle gently most venomous serpents. I fancy, however, that the vipers and the copperheads are uncertain pets. Mr. Thompson, the snake keeper at the Philadelphia Zoological, handles his serpents with impunity; but one day having dropped some little moccasins a few days old down his sleeve while he carried their mamma in his hand, one of the babies bit him and made an ugly wound. At present the snake staff is used to handle snakes.

I saw one October, in Tangiers, what I had long desired to observe—a snake charmer. Most of his snakes were harmless; but he refused, with well-acted horror, to permit me to take hold of them. He had also two large brown vipers; these he handled with care, but I saw at once that they were kept exhausted of their venom by having been daily teased into biting on a bundle of rags tied to a stick. They were too tired to be dangerous. I have often seen snakes in this state. After three or four fruitless acts of instinctive use of their venom, they give up, and seem to become indifferent to approaches, and even to rough handling.—*Dr. S. Weir Mitchell, in the Century.*

Items.

Effects of Intemperance.—The London correspondent of *The Presbyterian* relates the following striking and suggestive incident:—

"A lady has written a letter to a minister on the danger of the use of any wines. She painfully illustrates her views in the following manner:—'I was five persons—three brothers and two sisters—the children of intemperate parents. A sister had unfortunately inherited the craving, and before she was fourteen had taken to drink. The others became converted and did all in their power to cure their sister, but it was of no use. The sister at length married a good man, and children were born. But the cravings for drink were greater and greater, and at length she was sent to a home for inebriates, where she stayed a year. She left apparently, said the sister, a changed woman. Soon after, however, her husband caught a severe cold, and before going one morning drank a glass of hot whiskey, taking care, however, not to do so in the presence of his wife. Then, as his custom before leaving, he kissed his wife. At once the fumes of alcohol passed into her and in an hour she was a drunk and roaring woman. She went from worse to worse, and at last she left her husband and her children, one of them a cripple, through her drunkenness. The husband died a few years ago a white-haired and worn-out man, though not more than forty years old. Need I add, my dear sister, in how many ways he became her? Her story is that of Annie Chapman, one of the recent Whitechapel victims. That was my sister.'"

Ministerial Supply.—The Christian Worker says, Kokomo Monthly Meeting, Indiana, has appointed a committee on the supply of the meeting in that city with a pastor. For a few weeks visits are expected from different ministers, and in time they hope some one will be found, whose mind will be one with that of the church, to remain permanently with them.

It seems to us that both meeting and moisters must have widely departed from the principles of Friends as to ministry, before either could consent to such an arrangement. We will not some of the members of the meeting, who were invited to listen to the preaching of a candidate for the position of pastor, feel as George Fox did—who says, "When I heard the bell toll to call people together to the steeples house, it struck at my life; for it was like a market-bell to gather the people together that the priest might set forth his ware to sell!"

American Friends in Europe.—Samuel Morris and Thomas P. Cope, accompanied by Louisa Morris and Peter Puggell, visited Sovde, where, as usual, provision has been made for lodging them at the expense of the meeting. We were invited to listen to the food which they carried with them. On First-day, Sixth Month 30th, two good meetings were well attended, the house being full and some people standing outside. They also paid several visits to aged and infirm Friends, and on the following day had an opportunity of meeting with members only, whom they could then address more personally than was suitable in a mixed company.

After holding their Quarterly Meeting the Friends adjourned in a body to the Quay, where the time was profitably spent whilst our Friends named above were waiting for the steamer to take them back to Stavanger.

S. M. and T. P. C. also visited the island of Idso, going in the boat *William Tanner* thence to Iredt, where they were met by about 650 feet to visit an aged Friend, after which they were bound for Stakland, which would take three or four days. One dear old Friend had badly crushed two of his fingers, and whilst the doctor was dressing them his one fear seemed to be that he would be forbidden to go in the boat with our American Friends: the doctor did forbid it, but the brave old man would not be deterred by that, and he was sitting in the row—only to steer; all feel such confidence in his seamanship that it is a pleasure to have him.

On Seventh Month 4th the school examination was held at Stavanger. The children will not be likely to forget the occasion, as they were treated to cake and chocolate by our Philadelphia Friends.—*London Friend.*

Gambling on Ocean Steamers.—Ocean gambling notwithstanding public protest at various times, still continues on many vessels. A case has lately come to notice that calls for attention to the practice, and shows the need of decided action upon the part of owners and commanders of passenger steamers. The offence occurred on board of the *Etruria* during a late trip from New York to Liverpool. It appears that there was on board an "Egyptian manager of a New York insurance office," who inveigled a New York fruit merchant of Spanish birth into a game of chance, and at a single sitting succeeded in robbing him first of about seventy-five dollars and next of about five hundred dollars. The Spaniard saw neither luck nor skill in the operation and accused him of cheating. This caused a disturbance, which was, however, quieted by submitting the matter to a court selected from among the passengers. A regular trial was instituted, but the Spaniard was acquitted, and the case was "Proven." The accused man, nevertheless, felt the weight of public indignation, and was subject to such a severe and scornful boycott during the remainder of the voyage, that as soon as the steamer touched the Queenstown harbor he most unceremoniously and hastily left it. Were all who indulge in voyage-gambling held up to public scorn and derision as soon as they are seen, the practice, known, it would have a deterrent effect upon the sharps. But a truer and better way would be for the officers in charge to do their duty and protect those under their care against this species of robbery. They have the power and should exercise it. The companies should see that it is done. Gangs of gamblers are now pursuing their gains in various business, to regularly cross and recross the ocean, as is done, with the purpose of preying upon unwary victims.

Home Mission Work in Berlin.—The investigations into the condition of the people of Berlin have developed some remarkable facts. One of these re-

lates to a family of criminals, starting from two sisters, the oldest of whom died in 1825. The descendants from these were 834 in all. Of these, 799 had died on the criminal list. In this list were 106 illegitimate births, 154 were prostitutes, 17 keepers of houses of ill-fame, 142 were beggars, 61 were in almshouses, 76 had become hardened criminals, who had been sentenced to a total of 116 years of imprisonment. It was figured out that this family cost the state two million marks. Another city missionary found a family consisting of three generations of whom all, grandparents, parents and grown children, without exception, had been imprisoned for crime. Another missionary reported that during the past two years a certain tenement block had been peopled by about 2,000 persons. Of these, 65 had lived in unlawful wedlock, 230 were criminals, for the most part thieves, 80 were prostitutes, 120 were illegitimate children, and 25 cases of bigamy. Without correct statistics, could, no doubt, by a similar system of rigid investigation be duplicated in Paris, London or New York.

THE FRIEND.

NINTH MONTH 7, 1889.

The charges of bribery and corruption in connection with the Presidential election of last fall, were unusually numerous and positive—so much so, that we cannot avoid believing that there was some foundation for them. The *Public Ledger* of Philadelphia, which is neutral in politics, and cautious in its statements, sent out a correspondent prior to the election, to examine into the probabilities of its result. Its issue of Eleventh Month 5th, contained a letter from this correspondent, written from Indiana, which says, that in that State there were a large body of men, termed "floaters," "who hold their votes as so much merchandise, and who bargain for their sale with a brazen effrontery." These "floaters" are not confined to the ignorant and depraved. I have heard from men of both parties of instances where farmers possessed of property to the value of \$15,000 would dicker for the sale of their votes with the same earnestness that they would exhibit in the sale of their farm produce. These men prefer to obtain money from their own party. They claim attachment to one or the other party, and believe they have conscientiously performed their duty when they have first presented themselves to the managers of that side to which they lean. Many of them are reputable church-going men. Having ascertained the price being paid for votes, they proceed to realize, first applying to their own side. The managers of both parties are, of course, fully aware of this condition of affairs, and both make assiduous efforts to secure as many "floaters" as possible. The party newspapers and orators cry out against it, and charge criminality upon each other, while they are secretly aiding and abetting the villainy.

In reference to bribery in elections, Justice Daniels of the Supreme Court of New York, published a letter, in which he says:

"The vice—or crime, as it may be more correctly denominated—is one of appalling magnitude, having a direct tendency to undermine the foundation on which the national and state governments must be maintained, if they are to be maintained in the future, for they can scarcely stand only on the intelligence and political integrity of the voters themselves. If that is to be corrupted by the use of money in elections, then ultimately, and at no very distant period, the wealthy will buy the prominent and important offices. Men of moderate means, or without

means, and still possessing intelligence, experience, ability and unwavering integrity, must in that event retire from the political field. They will be as completely ineligible as though declared to be so by the Constitution, both state and national; and that will hand the Republic over to an aristocracy as surely as it would be if in legal theory it had been placed on that foundation."

It was probably a general conviction of the real existence of this "crime" against the State, which led to an effort in several of the Legislatures of the States, during last winter, to introduce a secret-ballot plan of voting, in hopes it would check the practice, as in that case those who paid for the votes would have no security that they would be cast in their favor, and thus would be discouraged from spending their money in that way.

It is righteousness that exalteth a nation—and the tendency of sin ever is to debase and destroy. A republican form of government cannot long exist and be carried on successfully, without there is among the citizens a good degree of religious principle, which will enable them to submit cheerfully to the restraints of government, and to reject everything which tends to lower the standard of truth and righteousness. A belief in this principle makes us uneasy with the evidences of corruption that are brought to light in the political conflicts of the nation; and leads to the desire that our well disposed citizens may not only keep themselves free from any participation in such transactions, but may unhesitatingly and openly condemn every thing which is tainted with corruption, no matter on what side, or in whose favor it is practised.

SUMMARY OF EVENTS.

UNITED STATES.—The statement issued by the Treasury Department, shows that the increase of the public debt during the Eighth Month amounted to \$6,076,622. Total cash in the Treasury, \$633,275,215.

The Agricultural Department has received a cable despatch from its agent in London, reporting that the international grain market, in session at Vienna, estimates the wheat crop of Europe lower than was expected. The crop of Russia and Hungary is reported to be especially bad.

The chemists of the Department of Agriculture have completed an investigation of baking powders. The result, among other things, shows that American people pay at least \$25,000,000 a year for baking powder, and that the cost of it to the manufacturers is less than a third of that amount.

The steamship City of Paris, which arrived in New York on the 28th ult., improved her own best time from Queenstown by 3 hours and 49 minutes. Her actual time reckoning by Greenwith time from Queenstown to Sandy Hook Lightship was 5 days, 19 hours and 18 minutes. She left Queenstown at 2.09 p. m. (Greenwith time) on the 23d. Her run for the first day was 432 miles; for the second, 433; third, 502; fourth, 505; and fifth, 508. The run from 2.09 p. m. (Greenwith time) on the 28th to 9.27 A. M. (same time) to Sandy Hook Lightship was 346 miles. The total distance travelled was 2788 miles.

Governor McLeate has issued a proclamation ordering an election to be held by the people of the proposed State of North Dakota, for the first, Third-day in Fifth Month, next, for the usual State and local officers, and for the adoption or rejection of prohibition, as well as the Constitution as a whole.

The schooner Landseer, the first of the Iceland fishing fleet, arrived at Gloucester, Massachusetts, on the 27th ultimo, with 155,000 pounds of fletched halibut. She reports that the summer on the Iceland coast was the finest ever experienced there. American vessels were not permitted to land fish with Gyver for it. The schooner Ben Hur also arrived at Gloucester from the Grand Banks with 200,000 pounds of codfish. Three other vessels brought an aggregate of 265,000 pounds.

The cigarette habit is sadly on the increase. The

BUSINESS.

Our blessed Redeemer commanded his disciples to lay up their treasures in Heaven rather than on earth; adding as a powerful reason for following this advice, "For where your treasure is, there will your heart be also. Our 'treasure' may well be understood to mean, that which is most precious, most desired and sought after by our hearts. He who lives under a continual feeling of the supreme importance of heavenly riches; and who is earnestly longing for a growth in grace and an experience of the saving work of the Spirit of Christ, will not allow the needful attention to outward business to so absorb his time and thoughts as to prevent him from seeking first that which is of the greatest value.

It is recorded of Stephen Grellet, that he was diligent in attending all his meetings at home, as they came in course; and, as he sought for the Lord's direction in the management of his outward concerns, and depended on Him alone for a blessing on his exertions, he felt it to be his duty to make way for his assistants in business also to attend their places of worship. He was in the practice of closing his store during the hours of meeting, making the needful arrangements on the previous day. In reference to this, he said, "I believe I never lost anything by that practice; on the contrary, I was often made sensible, that it was blessed to my soul, at least."

It was in accordance with the same righteous concern, that he declined to engage in various lucrative and extensive concerns in business, which were presented to his notice under very promising aspects, "feeling restrained," as he says, "by the limitations of Truth, from entering into any temporal pursuits which were likely to occupy his attention beyond a very limited period." In his case, these limitations were probably the more closely drawn because it was the design of his Master that much of his time should be spent in his service in travelling abroad to proclaim the truths of the Gospel, and to persuade men to submit to the visitations of the Lord's Spirit. But every one, who is desirous of being a servant of Christ will feel a limitation placed somewhere, and will feel that he is not his own master, but that he has been bought

with a price, and that it is his duty to glorify God by obedience to his requirements.

The custom of the Society of Friends of holding a meeting for worship in the middle of the week has often been a means of testing the degree of zeal of its members. Many of these have borne testimony, that even in outward things they lost nothing by faithfulness in the discharge of this duty; and there have been many cases in which disappointment has overtaken those who sacrificed it for business considerations. When I was in Ohio, in 1884, I met with two Friends living near Salem, who related to me their experience in this respect. One of them said, that on one occasion he was so busy, that he thought he could not spare time to go to week-day meetings. So he remained at home; but hurt himself so badly that he was laid up for three weeks unable to work! The other Friend told me that one year, during corn-planting time, he felt so hurried with business that he staid away from a week-day meeting, in order to attend to it. But having occasion to use his team, one of the animals, which was young, became excited, and ran off, so that his time was wasted.

So absorbing in many cases does the pursuit of business become, that it is always pleasant to meet with cases of those who endeavor to keep it in its proper place, and to remember the command of our Saviour to seek first the kingdom of heaven, and the righteousness thereof. A few years ago a Friend residing in Baltimore related to me an instance of this kind.—

At the time of a famine in Ireland, Friends in Baltimore took an active part in collecting funds and shipping provisions for the relief of the sufferers. A roughly dressed man, came one day into the office of the Friend who gave me the relation, and handed him \$30 in gold as a contribution to this object. It seemed almost more than it was proper for such a person to give, judging from his appearance. My friend explained to him that the money would all be used for the purchase and shipment of provisions; that the movement was under the charge of Friends; and that all the labor connected with it was being performed without charge. The man then took out his purse, and handed him \$30 additional. His name and residence were asked; and it was found that he was engaged in opening and packing oysters—a business then in its infancy.

A few days after my friend received a letter from Chicago, enclosing an order for \$300 worth of oysters; which his correspondent wished him to hand to some one whose business it was to pack and ship them. He accordingly went in pursuit of his new acquaintance, whom he found living in a humble house, with a shed or building in the yard in which his business was carried on. He arrived there about half past twelve o'clock, and on inquiring for the proprietor, was informed he could not be seen for about half an hour. On representing that he wished to give him an order for goods, &c., he was told the oyster dealer daily appropriated the hour from 12 to 1 o'clock for private communion with his

God, and that nothing of a business nature was allowed to interfere with this.

This explanation induced my friend to wait until he could be admitted. He said this man was very liberal in his donations to good objects; and that the Divine blessing rested on him and his business.

While many persons are in danger of having their time and thoughts too much absorbed in the prosecution of outward business, yet there is no doubt that sufficient employment of this kind is often a great advantage. It furnishes mental occupation, and makes it easier for the mind to avoid unprofitable thoughts. This idea was expressed by the late Elizabeth Evans in the remark,—"The earth helps the woman"—alluding to what is said in the Revelations, that the earth swallowed up the waters which the dragon poured out of his mouth. John Thorp, in one of his excellent letters, gives some advice to a correspondent which presents the same idea. He says, "To be pretty constantly employed in any way useful, according to thy ability, would make time less tedious, and the attempts of Satan less grievous. Improper, distressing and wandering thoughts, will not, I think, long afflict those who are usefully employed, and turn away from them. We can no more help wandering thoughts, than we can prevent the birds from flying over our heads; but we can prevent them from making nests in our hair." Somewhat similar must have been the feeling of the poet Cowper, when the sight of the thrasher plying his flail suggested the lines, which however refer more to the physical than the moral advantages of labor,

"See him sweating o'er his bread
Before he eats it. 'Tis the prime curse,
But sotten'd into mercy; made the pledge
Of cheerful days, and nights without a groan."

It is more an evidence of presumption than of faith, for a man to neglect a proper attention to his outward business in the expectation that his want of care will not be followed by its natural consequences. It is related that the celebrated Welsh preacher, Christmas Evans, was once discussing the potato question with his thrifty, diligent wife, and perhaps in a playful, but still in a characteristic way, said to her, "Catherine, you never mind the potatoes; put your trust in Providence and all will be well." "I'll tell you what we'll do, Christmas," replied Catherine, "you go and sit down on the top of Moelly Goe, waiting for Providence, and I'll go and hoe the potatoes; and we shall see to which of us Providence will come first."

Yet we must remember that where religious duty and outward prosperity seem to conflict, the former must ever have the precedence.

J. W.

THOSE only who are spiritual, who are in a good degree under the government of Christ, can to advantage be made use of in restoring such as may have been overtaken in a fault.—
Jos. Edgerton.

Extracts from the Memoranda and Letters of Ann Watkins.

(Concluded from page 43.)

In the year 1876 her husband died. She says—"He longed for a full evidence of acceptance, not so much for himself, he said, as he had this hope, but that we might be comforted concerning him. This evidence was mercifully granted before his death. About three days before he died he said to me, 'I feel quite clear' (meaning not mentally confused), 'for which I am thankful, and I have an evidence that, through the mercy of God in Jesus Christ, there is a place prepared for me in the kingdom of heaven. I am quite sure of this,' he added, 'or I should not feel as I do,' and he looked upon me with inexpressible tenderness. My soul was bowed within me, and I felt that a victory through Grace had been won over death, hell, and the grave."

To this loss, she alludes under date of Ninth Month 2nd, 1876, "Now, too, that my dear husband is removed, I feel renewedly the need of a preparation for eternity, and surely the best preparation is a life of holiness. Oh! for greater purity of heart and a more Christian life. Help me, O my Saviour, in the humble endeavor daily to pursue practical piety."

"Attended meeting this morning. I was exercised in spirit, lest the work of religion be not sufficiently that depth which gives an experimental knowledge of the nature and necessity of the new birth. I was led to speak upon the subject, and rather to urge amendment and holiness of life. I thought the testimony was received, but I felt poor and low, yet measurably sustained. The nature of true ministry appears to me of a momentous character. To be clothed with the Spirit of the dear Redeemer—to speak in his name in the life and authority of the Gospel—all seem needful qualifications for such service. O gracious Father, qualify for thy own work, preserve my mind from looking outward, and help me to draw near and to dwell near to Thee, the Fountain of everlasting strength."

"God is Light, and in Him is no darkness at all. If we walk in the Light as He is in the Light, we have fellowship one with another, and the blood of Jesus Christ, his Son, cleanseth us from all sin.' The Spirit of God moves on the minds of little children. As they are turned to the principle of the Light of Life within, they are accustomed to look at it as a testimony of the Love of God to their souls; and as they are obedient unto it, they receive a seal to that testimony, but if they reject it they are brought under condemnation for evil. In so far as I was able to receive it, this Light of Christ was made plain to my understanding when I was a little girl about five years old, at a meeting of the Society of Friends, when I was sitting by the side of my honored father."

"The Apostle John very clearly sets forth, in condensed form, how that from the beginning of the Word of God (the Light of Christ) shone into this world of ours, how that He shined in darkness and was not comprehended, but to us as many as received Him, to them gave He power to become the sons of God, that they might have life through his Name, which is his Power. As this Light, or working of God's Spirit, was co-operated with, it was the power of God unto salvation. We have many instances in the Old Testament where this was the case; and we may reverently believe many not recorded were partakers of the like salvation. The human mind,

ever intent to set up its own wisdom in Divine things, has put into words and invented a way; but it arrives not at the mystery, because it is a form without the power. But the work of the Spirit of God is an individual work; there must be an attention to this Light. He shineth in our dark hearts; He reproves for sin; He brings us under condemnation, less or more, according to the knowledge of his will. If we turn from sin, willingly to submit to his reproof, we shall be thoroughly purged through the sufferings, death and mediation of our blessed Lord and Saviour."

Second Month 18th, 1881. "The humble, depending soul, conscious of its own weakness, frequent by prayer, watching and waiting, in its inhalings of the Divine Spirit, gradually grows and is nourished by the Divine Life."

Second Month 25th. "In commending my soul, and the souls of those that are with me, to the care and keeping of our Heavenly Shepherd after retiring to rest, I felt more ability to pour out my complaint; but felt it needful to watch, even in the offering of prayer, and sought after silence, conscious that the all-seeing Eye would have respect to my condition without lengthened petition; and the comforting words of the Psalmist arose upon my spirit this morning, 'Cast thy burden upon the Lord and He shall sustain thee.'"

First Month 17th, 1882. "I remember when a child being not unfrequently called a good child. My understanding quickly testified, I am not good. What was it, O child! that was thus quick to correct and instruct thee? Was it not the Spirit of God? Was it not the Witness for Truth in thy conscience? What is his teaching now in thy sixty-ninth year? Is it not that in the flesh dwelleth no good thing? The gift of his Grace can alone help thee to walk before God in well-pleasing. He alone can help thee to maintain the watch, to continue the warfare. For Jesus Christ's sake, O Father! be Thou my help and my salvation, my rock of defence, my high tower during the remainder of my life."

Twelfth Month 31st. In looking back over the past year, I have to pen the gracious dealings of our Heavenly Parent. Much has transpired to commend Him to our notice as a good and bounteous Giver. With the exception of dear A., we have been favored with much help and comfort. Since last spring my own health has been tolerably equal; and some enlarged view of the Comforter has been granted; faith and confidence have been from time to time renewed, and a humble trust felt that, through the atoning Sacrifice all my past delinquencies have been covered. I do feel, deeply feel, that the work must go forward with fear and trembling, not unconscious, however, of the Ocean of Infinite Love."

Second Month 8th, 1884. Last evening I reproved my housemaid. These opportunities are very painful to me, lest I should hurt or wound unnecessarily the feelings of a dependant. This morning the enquiry has arisen, Is there anything in my conduct or conversation that could really prove a stumbling-block to those under my care? The question is a wide one. I am sensible of much imperfection; I have, therefore, need of unbounded charity. Gracious Father, illumine my understanding and direct my spirit. Create in me a clean heart, O God, and renew a right spirit within me. Restore unto me from time to time the joy of thy salvation, and uphold me by thy Spirit. Then will I teach transgressors thy ways, and sinners shall be converted unto Thee.

Third Month 9th. And I will pray the

Father, and He shall send you another Comforter, who shall abide with you forever. The Light of our present Helper covered my mind this morning, and my spirit was bowed in adoring gratitude for this manifestation of the Divine presence."

Third Month 14th. Oh! the wondrous love of God, in that He gave his only begotten Son, that whosoever believeth on Him should not perish, but have everlasting life; and this life is in his Son. Will we not give up all to obtain this gift? Will we not yield our hearts to an entire surrender, that we may live through Him! By so doing, the gift is rendered two-fold—the life that now is and that which is to come; for the gift of God is eternal life, through Jesus Christ our Lord.

First Month 15th, 1885. In magnifying the mercy that has followed me during the past year, and in retracing the Lord's goodness and dealings with me, my feelings are comprised, according to my small measure, in the 23rd Psalm, though I feel able but to lip the praise and the grace of the Heavenly Shepherd, and in a very limited degree to define that even which is within my heart. The care of the Shepherd over his flock comprises every kind of nurture. The grassy slopes, the barren wastes, the gentle streamlets, the restoring and the healing, the rugged and the thorny, the dark recess and the death-like vale, all help to portray the wise care and the benevolent oversight of an Almighty Protector. The flowing strain of Addison, beginning with life's earliest dawn, passing summarily through time and through eternity, perhaps will comprise, in addition to the Psalm (the type of my blessed Saviour) the whole of my spiritual experience, and my earnest longing for a joyful and never-ending consummation."

This was the last entry made in her journal. During the ensuing summer her health and strength declined, and during the last few weeks of her life she suffered much from weakness and nervous exhaustion, and her mental faculties declined with her bodily strength, though to the last she was generally able to recognize her children; and through all the wanderings of her mind, her sweet and happy state was often so apparent, and the theme of the wondrous love of God, through Christ, her Saviour, was so often on her lips, that it was felt to those who waited on her to be a pleasure and a privilege to be in her room.

The last few days of her life she was too ill for much expression, but would at times make remarks which showed that she was in the same calm, sweet state of mind. She appeared to be sinking all day on the 27th, and only roused a little sometimes at the sound of a voice she knew. She lingered in a quiet, almost unconscious state through the night, and passed away very peacefully on the morning of the 28th of Seventh Month.

A correspondent of *The Presbyterian*, in commenting on the assertion that "there is no absolute proof for any religious truth," after denying the truth of such a proposition, adds: "Because I saw no man make it am I to hold that the maker of a McCormick reaper must be entirely a matter that cannot be proved? When did it become illogical to assume that an effect must have an adequate cause; that no law has been self-producing? It seems to me that too much logic is making fools of some people in these days."

FROM "THE LONDON FRIEND."
A Trip to the Farnes Islands.

The Farnes Islands are a group of 17 islets and rocks lying between two and five miles from the mainland, off the east coast of England, opposite the county of Durham.

Here the steamer *Fofarshire* was wrecked in 1838, when nine persons were saved by the heroism of the light-house keeper and his daughter Grace Darling.

"The Farnes seen by Nature wonderfully adapted for bird-life; they consist of a cluster of numerous rocky islets, several of which have their tops covered with sea or bladder campion, which on our visit was in full flower and luxuriance, and a kind of sea grass, or strong herbage which, above high water-mark, makes a good shelter for the various species of tern; whilst others are chiefly bare rocks, ribbed in clefts and rifts, with but little herbage, and that chiefly small tussocks of grass exactly suiting the black-backed gulls and eider-ducks. Then there are two or three islands, as the Wames, which have a shallow top stratum of mould and heather, honeycombed with the burrows of the puffins. Then, again, there are the tall Pinnacles, four high rocks rising perpendicularly out of the sea at the south end of the Staples Island, peculiar and unique in themselves, inasmuch as their tops afford a wonderful nursery for the guillemots, hundreds of which covered every possible place, whilst, from their being so near to the next island, a fine vantage position is to be obtained for witnessing all their habits and ways. On these high precipitous cliffs small ledges exist, which are chosen by the kittiwakes for their nests, so that the observer has unequalled opportunities in such a position, of taking notes of this beautiful and interesting gull.

As may be imagined, this wonderful naturally constructed bird-land, being within an easy distance by steamer from several of our larger towns, would soon be rifled of all its bird-treasures, were it not that many gentlemen and naturalists, seeing and knowing this danger, have formed themselves into an 'association' for their protection; and in looking over a list of those who, for this purpose, have taken a lease of these islands, we were pleased to see the names of many prominent Friends. Four keepers (and two boats) are now maintained upon the Farnes, whose duty it is to preserve the wild-fowl, to note the number of rare nests, and to prosecute anyone who lands, or disturbs, or shoots, during the nesting and egg-season, unless he has a permit from the agent at North Sunderland.

Armed with such a document we paid two visits to these islands, one on the 20th and the other on the 24th of Sixth Month. The weather was lovely and the birds in perfection. There are lighthouses and other interesting objects to be seen around, and the memory of Grace Horsley Darling, and her heroic deed in saving the men from the *Fofarshire* steamer, hangs like a graphic picture over all that you see; but for the present article we have one absorbing topic to interest ourselves with, and that is, the birds themselves and their nesting.

We first landed upon the Home Island, and thence passed over to the Knoxes, and afterwards to the two Wide-Opens. These seemed chiefly inhabited by the various species of tern and eider-ducks; they were low rocks, which had a considerable crop of vegetation on their summits. As soon as we neared them, and the sound of our oars in the rowlocks reached the birds, they rose in one dense flock from off their nests

and eggs, a cloud of screaming terns, most beautiful in their easy flight, as in their agitation they surveyed us. It was difficult on these islets to avoid breaking the eggs with our feet as we walked amongst them, their color is so protective, and their nests only a slight dip in the shingle or sand. On these three islands the keeper told us there were over sixty eider-ducks' nests, and we found about forty more were distributed upon the Outer Farnes, so that over one hundred broods of this fine duck will help to repay some of the trouble and expense of protecting them here. Their nests are generally placed in a clump of grass under a boulder, and consists of about a large capful of beautiful dark eider-down, in the middle of which lie three, possibly four, creamish-colored duck eggs. Many broods were hatching, some were hatched, and some were swimming about off the point with the old birds, the old drakes in their fine plumage looking very handsome. Four couples of shielrakes and their young interested us much. As soon as they saw us in the distance they commenced making a peculiar sort of piping call; one parent going before, and one following after the brood, the young scuttling over the sand and rocks as fast as their little legs would carry them, whilst the old ones, as we drew nearer, threw themselves upon the ground, dragged their breasts along, trailed their wings, struggled and panted, and as they got into the water made all the appearance of drowning, so that they drew our attention towards them, whilst the little mites of ducklings hastened on, and at last, like little balls of down, were seen sailing out to sea—one old bird leading on, and the other protecting the rear, with the proud consciousness of having deceived us and saved their little family. A very fine brood of eider-ducklings we saw protected on the rocks in the same way, each one hiding in a cleft until clobbered off by the agitated mother and conveyed safely out to sea.

The study of the different young seabirds is very interesting. Perhaps the young kittiwakes form, as to beauty and loveliness, the exact opposite to the young of the cormorant; for they are delicate buffish white little chicks with an appearance of great innocence about them, whilst the young cormorants have a most uncanny look, devoid of feather, their skin like black india-rubber stretched over their little frames, and their eyes most wicked-looking. Milton compares Satan to a cormorant. The young terns and gulls each have a sweet beauty of their own—drab-looking, mottled, fluffy little balls, with the most intelligent eye, which makes you fall in love with them at first sight.

We now turned our boat's head for the Outer Farnes, and gave ourselves up to patience, and dreamland, for the wind would not blow, and our progress was slow; but as there is a termination to most things, so we found ourselves gradually crossing the next channel, which is about one-and-a-half miles wide, and nearing the Long-stone lighthouse, and the Harcar rock, upon which the ill-fated *Fofarshire* struck, in the tempestuous night of the Ninth Mo. 7th 1838. We landed on this rock, exactly where Grace Darling did. This is a grand rock for the lesser black-backed gull (there are also a few herring gulls), and here we experienced a new sort of pleasure and sensation, that of meeting with a foeman worthy of our steel. The proud and vigorous carriage of this bird, when its haunts are invaded, gives a wild impressiveness to the wild scenery around. There appeared to be hundreds of their nests about, chiefly in depressions, or forks on the ridges and furrows of the

rocks; a scanty bed of straw or dried stalks, on which lay in all their beauty, generally three eggs, dullish olive-brown blotched with black. We tried to gauge the nearness of the bird's approach to us, as he made his swoop at our heads, and concluded he frequently came within a yard; indeed the man assured us that his cap had been struck off his head on some occasions. Making a detour round you, and pausing a moment like a huge hawk about you, with a wicked leer, and a loud whirr, down he comes with a swift descent just swerving and rising again, as he apparently strikes you. To see them when fishing, or at rest, buoyantly sitting upon the water, gives you no idea of their great power of wing and exultant tones when irritated. On the Harcar we saw some oystercatcher's nests and one dotterell's. There must be oystercatcher's nests on the other rocks, but the men did not know of them. Like the wild cry of the curlew, the wild pipe of the oystercatcher adds much to the charm of solitude. From the Harcar rock to the two Wames is not far, and here we fell in with our friends the puffins, and saw them to perfection. Crossing over these two islands, our feet sinking through the turf at every step, we had ample opportunities of studying this beautiful, but comical little creature. All the earth seemed burrowed by them, and we were not long in disturbing many of their eggs, which were mostly at the end of the hole, not deep down, but about a foot under the surface, the burrows undermining the grass in all directions. The sea all round seemed covered with the old birds' fishing, whilst not a few anxiously surveyed us from the outskirts of their warren.

The Brownsan, Staples, and Pinnacles, were now severally visited, and certainly tend to keep up the interest of our visit; indeed we felt, like St. Cuthbert, that we could have given up our town-life, and gone to live among his ducks. The celebrated Pinnacles, as we have before said, are very unique, standing sheer out of the water, about forty or fifty feet high, very conspicuous, their summits whitewashed by the birds, and their utmost capacity covered with the guillemots, and a few razor-bills. The noise was most extraordinary, like the distant hum of some confused multitude. It is impossible to get upon these perpendicular rocks except by a long ladder, which has to be brought with much difficulty from a distance, planted upon one of the great spur rocks at the base of the Pinnacle, affording a precarious wet foothold to proceed on these Having ascended one rock, the ladder is drawn up and laid across to the next, the adventurous climber crawling over on hands and knees. Our companion informed us that only two ladies have ever been on the Pinnacles within the memory of man, and that these were two—Peases; but that, although they ascended one rock by the help of the ladder, they did not venture across to the next. On gaining the top of the Pinnacle, it was found impossible to place the feet anywhere without first removing the guillemot's eggs, which completely covered the head of the rock. Close by the Pinnacles on the high island cliffs from which they have been detached, the numerous kittiwakes build, making the air resound with their strongly articulated cry; and to watch these in their nesting processes gives you a wonderful sense of that Providence which preserves them. The kittiwake chooses and forms its nest on the steepest and boldest cliffs, in the most exposed situations, and on the smallest projections. There a little dry herbage is stuck, and there the eggs are laid and the two or three delicate little gulls are

reared. One inch over the edge of their awfully-placed home must consign them to destruction, and yet they are never killed, but sit and perform all their baby-life in the most perfect safety; whilst their first cousins, the young black backed gulls, as soon as they can walk, are waddling and staggering about over the low rocks which form their home, the object of wonderment and affection of all their fathers and mothers round about, who stand screaming at them in the most ludicrous manner, no doubt admiring their infant steppings.

Reluctantly leaving this enchanting spot, with the sea covered with our friends, we turned to the last object of our visit, the Megstone, inhabited by the cormorants, a rock which stands a good deal out of the group of the other Farnes, so that it is not so often visited as the other isles. It is a large lowish rock, with great stones all round, down to the water, and not very easy land upon, whilst in the centre, running from north to south, is a whitened high ridge rising up to some little height above the bare rocks all around. This ridge is the home and nursery of the cormorant, and certainly Nature has here exactly fitted a place for this uncanny sea-bird to rear its young. Jumping out of the boat upon the slippery stones and following our guide over the wet boulders, after some little difficulty we found ourselves underneath the rocky crest. Up we went, the effluvia and whitewash getting stronger and thicker at every step; we found ourselves at last, by a few vigorous leaps, surrounded with the young cormorants of all ages. The top of the rock was bare of vegetation, and on every little projection was a sort of nest, in which were two or three young birds, the larger ones, as we passed, striking at our trousers and looking very vicious, the smaller ones looking very ugly. But after a little acquaintance with them, and as we walked between their serried ranks, and fondled them, and put our fingers and hands into their open mouths, we thought if they had been a cleaner bird we could have made pets of them; perhaps they did not like our appearance, there is often a great deal of misunderstanding in our not being used to one another. Our guide told us that there were over one hundred and twenty nests all round us; a pretty little voracious dinner party, each of whose maws could take in at a gulp a considerable sized plaice or other fish, and whose digestion seemed as rapid as their open mouths and throats were capacious. We noticed on the Megstone several herons, some shags, and a few oystercatchers. The old cormorants kept well out to sea whilst we were on the rocks.

EDMUND CAPPER.

Seventh Month 2nd, 1889.

Walking with God.—Go to God as Enoch went, believing that He is, and that He is accessible, believe that He is not far off, but nigh. Believe that He is not hostile, but propitious. Admit Him into your house, that he may hallow it. Admit Him into your hourly occupations, that He may elevate and expedite them. Admit Him into your happy moments, that He may enhance them; and into your hours of anguish, that his presence may tranquilize and transform them. Let his recollected presence be the brightness of every landscape, the zest of every pleasure, the energy of every undertaking, the refuge from every danger, the solace in every sorrow, the asylum of your hidden life, the constant Sabbath of your soul. Learn, with all reverence for his greatness, but with equal reliance on his goodness—learn to

make the eye that never slumbers the companion of your nights and mornings, and the ear that never wearies the confidant of your weakness, your solitude, your ecstasy and your woe. Learn to have not one life for God and another for the world; but let your life be divinely devoted and divinely guided. Let every footstep be a walk with God.—*Selected.*

FOR "THE FRIEND."

PROVIDENCE.

As waves the grain-field in the breeze,
Or sway the lofty forest trees,
As passing winds across them blow;
So seems uncertain joy or woe.
Yet through creation's works there's still
A force, subservient to the will
Of Him who feels the flames of day;
Or lights the glow-worm's glimmering ray;
That guides the storm that waxes the wood;
Or leaves the breast, or swells the flood.
The sparrow flies at nature's call,
An eye Divine discerns its fall;
The lofty waves in freedom flow;
Thus far no father can they go;
If waves and sparrows are his care,
Shall I with them not claim a share?
Nebø shall stoop, and Bell bow down
Before the sceptre and the crown,
Of Him who kneels his people forth,
And carried Israel from his birth;
Who watched him in old age with care,
And brought him on to hoary hair.

Unto the Lord in faith they cried,
He did for all their wants provide;
And placed secure his care around them,
Whilst they sincerely trusted Him.
Affliction did their lot befall,
But He still brought them safe through all.
Behold them in the trying hour
Dependent on Almighty power,
Hemmed in by wilderness and sea
And Egypt's conquering cavalry:
Bold on their flank Balthazzer stood;
Before them rolled the Red sea's flood;
With On's dread chariots in their rear,
And Zerah's host approaching;
No earthly hand give them aid,
Or raise for them the dire blockade.
Onward the conquering armies came,
Around on every side the same;
Terror and anguish filled the host,
In human weakness hid no man
Had Egypt then no graves, they cry,
That thou hast brought us here to die?

Stand still, Oh Israel, and behold
What God to thee will soon unfold;
Yes, rest assured the Lord on high
The mightiest armies can destroy,
And shortly these that trouble thee
No more forever shalt thou see.
No cause is there for thee to fear
The glittering tall Egyptian spear;
The chariot, the horse, the proud
Neath Mars Kubru's woe shall lie,
Before another sun shall bring
His glory on their harnessing.

In awful doubt they could but wait,
So certain seemed approaching fate;
Whilst Pharaoh's host quiescent lay,
As certain of their trembling prey;
These proudly trust in shield and sword;
Those humbly looking to the Lord.
He opened wide the swelling wave
On which they stood so proudly;
But closed the way for Israel's sake,
On those that followed in their wake.
And can He then no longer hear?
Are his eyes dim with time and care?
Or why is not his power the same,
As wrapped Mount Sinai's summit in flame?
Has He no torch, no guiding hand,
As o'er Arabia's desert sand,
He led of old his chosen band?
Yes, those who do his holy will,
Can have the true Shiloh's sign;
To guide them safely on the road,
Through burning sands or boisterous flood,
Unto the Canaan of their God.

S. C. COPE.

WEST CHESTER, Pa., Eighth Mo. 26th, 1889.

ABDING.

I need not care
If days be dark or fair,
If the sweet summer brings delight,
Or bitter winter chills the air.

No thought of mine
Can penetrate the deep design
That forms afar, through buds and bloom,
The purple cluster of the vine.

I do not know
The subtle secret of the snow
That hides away the secrets of the violets
Till April teaches them to blow.

Enough for me
Their tender loveliness to see,
Assured that little things and large
Fulfil God's purpose equally.

How this is planned,
Or that, I may not understand;
I am content to know, in faith,
That all my times are in Thy hand.

Whatever share
Of loss or leniency or care,
Falls to my lot, it cannot be
More than Thy will for me to bear.

And come the less,
Whatever sweet things come to bless
And gladden me, Thou art its source
And sender of my happiness.

Add this to me,
With other gifts so free,
That I may never turn my face
In any evil hour from Thee.

Not on the sand
Of shifting faith and feeling stand,
But wake and sleep with equal trust,
Knowing my times are in Thy hand.
—Boston Journal.

True Loveliness.—A New York newspaper lately contained an account of a young girl in that city who, in attempting to give her hair, which was of a dull blue, a golden lustre, burned the flesh of her head with acid, and injured her sight for life. Another young woman in New Orleans, following the directions of some flashy society paper, in endeavoring to remove the moles upon her face, poisoned the flesh and died in great agony.

The use of certain hair dyes containing lead, in many instances has brought on affections of the brain. A well known American writer attributes an attack of typhoid fever, which left her an invalid for years, to her use of a popular anti-fat system of diet and violent exercise. She lost sixty pounds of flesh in a few weeks, but the sudden weakening of the tissues rendered her susceptible to the poison of typhoid, and unable to resist it.

How many of our girl readers have pored eagerly over the "remedies," prescribed by unscrupulous writers for ugly young women, and have been tempted to try lotions, the severe protracted fastings, the bandages, medicines, or screws, which are to remove their defects or large bones, leanness, or fatness, pimples, moles, crooked eyes or wide mouths? In no case is it necessary, according to the advertisements, to seek the advice of a physician; yet most of the remedies suggested are of the most dangerous kind in unskilled hands, and likely to increase deformity and to produce ill-health.

But putting aside the question of the utility of remedies to remove natural personal defects, an ugly girl should know that the surest way to keep her homely features or awkward figure in the remembrance of others is for her to constantly remember them herself. Self-consciousness is

disagreeable in a beautiful woman; in an ugly one it is intolerable.

Are those girls with dull eyes and large noses, then to give up all hope of pleasing their companions? By no means. A woman who for many years lead the highest social life of Pennsylvania, had neither fortune nor a remarkable intellect. She was stout, red-haired, small-featured and freckled; but her voice was sweet and low, her heart big enough to take in all the world, her sympathies wide, her tact infinite. She was simple, genuine and as unselfish as an innocent child. The ugly girl who cultivates such charms as these needs no iron braces to compress her large joints, nor diet of acid fruits to remove her plump cheeks, to make her lovely and beloved.—*Youth's Companion.*

The Highway.

BY H. B. TRI-STRAM, CANON OF DURHAM.

The idea of a highway such as we know and enjoy in Western lands is non-existent in the East. The only roads are tracks, winding deviously up and down the hills, or by the sides of the winter streams, the only engineers of which have been the laden asses and camels, who, for centuries treading each one in the footprints of its predecessor, have worn steps in the most slippery rocks, or beaten a hard path on the sands. Fences, of course, there are none; and should a boulder or even a clump of thorn-bushes, stand in the way, no one has ever dreamed of clearing one or the other, but the track simply turns round the obstacle. Along the plains, however, a ditch is frequently cut by the side of the path, which drains the water in winter, and the earth from which has slightly raised the track above the soft surrounding plain. It was not so in Roman times. Those mighty builders engineered and paved their roads even into the recesses of the Arabian wilderness. But these are all abandoned now, and the dislodged and upturned paving-stones render it impossible to use the highways along which the chariots dashed and the imperial legions tramped for centuries.

But it would ill consort with the Oriental idea of a monarch's dignity that a ruler of men should have to turn aside for any obstacle; and, when a royal progress is contemplated, heralds precede the cavalcade several days in advance, accompanied by hundreds of laborers requisitioned from every neighboring tribe or village. Twice it has been my fortune to see such preparations. Once the imperial heir of Austria was to visit the Pasha at Jerusalem. At that time there was not, as now, a carriage road from Jaffa (which is still the only passable track for a wheel conveyance in the country), and heavy rains had washed the road into a mere rugged water-course. A crowd of laborers and Turkish soldiers were sent forth to level the track with their mattocks and shovels; and their officers, prancing about on horseback, might be seen pointing to the heaps of detritus as they passed, and calling out, "Gather out the stones!" Thus the road was made straight and smooth for the time, but all to be washed away again by the next thunder-storm.

On another occasion the Wali of Damascus was about to make a state progress through his province towards Aleppo. A cloud of Bashibazouks (irregulars) pouched out in advance, a few hours before his highness was to start on his richly caparisoned steed, proclaiming with trumpet and kettledrum the advent of the great man. His tent equipage accompanied them,

and the tents were pitched, and the cooking-fire kindled at the appointed spot long before the shades of evening closed in. Though the road had been thus prepared, a further mounted body-guard immediately preceded him, heralding his approach, and forcing every traveller to stand aside till he had passed. One poor man, with his laden ass, was forced into the ditch (this was on the plain of Hamath). The kindly Wali saw the incident, halted, and ordered his people to help the man out. Then, looking round, and seeing a Moslem cemetery, with its tall grave-slabs, hard by, he bade them take two long stones and lay them across the ditch, to prevent the recurrence of such an accident. Some one deferentially remonstrated that they were gravestones, and would thus be put to a secular use. "Man," was the reply, "they cover the bodies of the faithful; and I am a believer, and await the resurrection. Their removal will lighten the labor of the faithful on whom they lie heavy when they are bidden to rise, while here they may save another son of the faithful from falling into the pit."

Thus unchanged are Eastern fashions since the day when Isaiah proclaimed, "The voice of him that crieth in the wilderness, Prepare ye the way of the Lord, make straight in the desert a highway for our God."—*S. S. Times.*

FOR "THE FRIEND."

Light and Darkness.

SECOND COR. VI. 14.

The Apostle asks the question, "What communion hath light with darkness?" And we might say none. Because spiritual light is from Christ, while darkness is from antichrist. And there is no fellowship between righteousness and unrighteousness. And as the darkness does not comprehend the light, so it does not believe in it. And what part has he that believeth, with an infidel? So light and darkness cannot dwell together, as they are contrary one to the other. So discord and confusion prevail, and every evil work, until a separation is made. And this separation is made only by God himself, who commanded the light to shine out of darkness, and who now shines in our hearts. But there is such a mixture now, since the fall, that the natural man, unaided by grace, fails to comprehend the light; or he may close his eyes against the light, and "call evil good and good evil, and put darkness for light, and light for darkness."

But "light is sown for the righteous and gladness for the upright in heart." While the way of the transgressor is hard, because while he walks in darkness he may stumble and fall. But the righteous have the glorious privilege of reaping the fruit of that light which is sown for them. And of walking in the highway of holiness where nothing will hurt or destroy. But to such as prefer darkness rather than light, the darkness becomes so great that the things which belong to their peace are hid from their eyes. While to such as receive it, and are obedient to it, it will shine more and more to the perfect day. Then as we walk in the light, as our holy Head is the light, we shall have fellowship one with another, and witness the blood of Jesus Christ to cleanse us from all sin; as that darkness and death and sin which separated us from God, are taken out of the way; being nailed to the cross, and crucified and slain: that the law of the spirit of life in Christ Jesus might rule and reign in us. But the intellectual light, or light of reason, which might be compared to the changeable light of the moon, is still left with us

for our use—though it should never be substituted for the true spiritual light which was designed to rule in God's eternal day. We have abundance of Scripture to prove that there is a false light as well as a true, and an outward or natural darkness, and an inward and spiritual darkness, which has now abundantly come upon us by our suffering mundane things to intervene between us and the Sun of righteousness, so as to eclipse the brightness of his shining.

But it is from Him that we receive our light and vitality and growth in grace; yet the god of this world is blinding the eyes, for it does look to me as if gross darkness now, is covering the minds of many who profess to believe. But Christ was sent to be a light to enlighten the Gentiles, and designed to be for God's salvation to the ends of the earth; whereof many are made ministers and witnesses. Paul was sent to the Gentiles, to open their spiritual eyes, and to turn them from the darkness within to the light within; and from the power that Satan has over us, to the power of God, that we might receive forgiveness of sins, and an inheritance among them that are sanctified by faith that is in Christ; but not by faith that is in man, nor in the wisdom and power of man. So we have light and darkness both before us. The one comes down from the Father of lights, in whom there is no variableness or shadow of turning. The other from the prince and power of the air; from whence spring all the vain and airy imaginations of man. We may spend years in fruitless search of fancied happiness, and never find it, but still remain in darkness unless we follow the leadings of Him who is the light and life of men; and who said I am the way, walk ye in it.

I believe that all the redeemed children of the Lord, have times of darkness and destitution permitted to come upon them, to try them, so as to prove whether they are on the sure foundation or not. For Christ said to his disciples, "in this world ye shall have tribulation," but He said to them, "be of good cheer, I have overcome the world." And I believe He will enable all his dedicated children, who are still somewhat in darkness, to overcome, as He overcame. But if our deeds are so evil that we prefer darkness rather than light, we shall be left in darkness, and die in our sins. So where He is gone, we never can go. For light has no communion with darkness. But I have a comforting hope that in the midst of a crooked and perverse generation, there is a remnant left, in most of our meetings, and in the different denominations around us, that are weeping when they remember Zion in her primitive brightness. But they are kept much upon background, and trodden, as it were, under foot by the wise and prudent of the world; and, like our holy Redeemer was, when He was personally on earth, despised and rejected of men; or like his dedicated and persecuted followers were, counted as the off-scourings of all things. But to such as these his language will apply, "Be of good cheer, I have overcome the world. And though they may have, for a long time, sat in darkness, yet now upon them his light has shined, and given them the light of God's glory, in the spiritual appearance of Jesus Christ, our crucified but risen Redeemer. D. H.

DUBLIN, IND., Seventh Month 4th, 1859.

THE external performance of religious duties will never make a Christian. A man may be baptized, like Simon Magus, and yet be in the bond of iniquity. A man may preach, like Balaam, and yet die among the enemies of God.

Railway Construction in Australia.

As I presume few of your readers know much about the details of railway construction, I will make some general remarks as to how it is carried on here.

The men are divided into gangs of from three or four to forty or fifty men, according to the nature of the work. Each gang has certain work to do, and does that only, moving camp as may be necessary. Thus, after the line is surveyed and pegged out, a piece-work gang is sent on, to form such of the banks and cuttings required as can profitably be done with barrows; also to take up the surface stone for concrete and ballast.

A concrete gang will next be sent to do any concrete work required, such as bridge abutments, culverts, &c.

Then a horse and dray gang, to do any portions of the line that may be too heavy for barrows.

Then follow the plate-layers, to lay the rails; the bridge-gang, to build the bridges; the pit-men, to fill the trucks with ballast, for the gangers-out, who distribute it along the line.

After that, the various other trades—carpenters, masons, &c.

Dams are formed, and water laid on, cuttings fenced, station buildings and cottages for the line repairers erected, until, at last, the repairing gang of three or four men are installed in their block of three cottages, and commence their solitary life, with about eight miles of the line to keep in repair. Their nearest neighbors being perhaps sixteen miles away, their sole connection with the world is the train, which usually travels past them, only slackening speed sufficiently to throw out their provisions, and to take any letters, which, attached to a hoop or stick, are held out for the guard to catch as the train passes.

Once a fortnight the "pay train" stops. The store-keeper and butcher travel with the paymaster, so as soon as the men are paid, they are on hand to receive their dues; and if from any cause the men are unable or will not pay, the general rule is that there will be no provisions sent for them during the next fortnight.

Last Twelfth Month, when I arrived at Warina, the present site of "head camp," it was a bare, flat, stony plain, about two miles long by one mile, bounded on three sides by a dry creek, with a few gums and wattles growing in it, and on the fourth side by a range of low sand-hills, and intersected by the rails which were just being laid. It is situated a few miles from the Peake Telegraph Station, and in about the same latitude as Brisbane.

Here now we have telegraph communication with the world; mails two or three times a week; many have their wives and little ones with them; the butcher and baker call daily; the doctor is within call; a library supplies us with literature; a religious service is held on First-day evening, and a literary and debating club meet on Seventh-day. Dancing-classes, cricket and tennis clubs provide an outlet for surplus energies, and the savings bank will take care of surplus cash. You will thus see that at head camp we form a little world of our own, and are yet in touch with the civilized world; or a few of us may be camped at some isolated spot, shut off from the world, our only communication being the train as it runs by, or if ahead of the rails, the visits of the inspectors and storekeeper.

For about eight months of the year, the climate

is, I think, very pleasant, the nights cool and generally calm, the days bright and warm. I have sometimes seen frost, but that is rare, and even on a frosty morning by 9 o'clock, one is glad to dispense with a coat. But the other four months are hot; for days and weeks the thermometer will range from 90 degrees to 120 degrees in the shade, and I have known it to be 127 degrees in the tents—but we do not seem to feel the heat as much as I have elsewhere. Both in Melbourne and Adelaide I have had to leave off work on account of the heat, yet I never have here, and I never heard of any of the gangs doing so. Some individuals may, but even on the hottest day the work goes on as usual. Why this is I cannot say. I suppose it is on account of the extreme dryness of the atmosphere. One might expect that during the summer the hours of work would be altered so as to avoid the heat of mid-day, but that is not the case, and the men would be against such a change. We feel the heat less while at work than when idle, and there is no shade for the majority of the men to rest under; the Government tents not being provided with "flies" (viz: awnings, forming a second roof over the tent) are like ovens. Trees are scarce, and such as there are throw little shade. One could here appreciate the "shadow of a great rock."

St. storms are of occasional occurrence, sometimes so bad as to stop work, while on the still summer days, when there is little or no perceptible breeze, whirlwinds, as we call them (that is, small whirlwinds), are frequent. I have often seen over a dozen of these columns of dust in sight at the same time. Flies are very troublesome, except in the hottest weather, when they disappear for a while.

On the whole the health is good, the essentials seem abstention from intoxicants, generous diet, and the best water that can be procured. Of course among from 600 to 1,000 men, besides women and children, some illness is to be expected, hence the existence of the hospital, to the support of which twopence in the pound is deducted from all wages, and all employees are entitled to advice and medicine free. And as our doctor is a great believer in "kitchen physic," he orders the men into the hospital on the slightest pretext, where they are well cared for.

One of the most fruitful sources of sickness among the men is poor living. Many men either can not or will not go to the boarding-houses—they cook for themselves as best they can. It is not every man who knows how to cook, and even those who can do not feel inclined to do much cooking after a hard day's work, so they make anything do, and get run down before they know it.

Intemperance is either directly or indirectly the cause of the bulk of the sickness among the men. But for the women and children the summer is very trying, the more so as adequate shelter from the burning sun cannot be provided, and many comforts that would make life easier for them are unobtainable, so that from one cause and another a few have passed away, and in travelling along the line a feeling of sadness comes over one at the sight of the lonely graves of those who had been laid to rest in these vast silent plains.

Bad water was at one time the cause of much illness, but at and north of Anna Creek we have had very fair water. It is all more or less hard, and contains a considerable amount of mineral salts, but nothing like some the men are obliged to use south of Anna Creek. We often drink from

one to four gallons of water per day, besides our tea at meals, so it can be easily understood that where that water contains up to 400 grains of mineral salts to the gallon, as some does, it must be very injurious. It is all very well to say we should not drink so much, but it seems necessary, and on the same principle as the water bag, the evaporation keeps us cool. Oatmeal is supplied in summer to mix with the water, and that seems the most suitable drink. The boarding-houses took to making sugar beer, but the sale of even that supposed harmless liquor is now strictly tabooed on, I believe, the doctor's orders.—A. S., in the *Australian Friend*.

Natural History, Science, &c.

The Slyness of the Crawfish.—"I recently observed," writes a correspondent of *Forest and Stream*, "a very cunning and ingenious trick of the crawfish (or crayfish) for catching flies. Sitting on the bank of a muddy pond, or 'borrow pit,' over the surface of which many small flies were swarming about, I observed that the crawfish came to the surface near the water's edge, and turning over on the side, the tail probably touching bottom, with claws and legs 'sprudling' about in the water, he assumed the exact semblance of dead creatures floating on the water. In a few seconds flies would alight on the apparently dead crawfish, and as soon as one got into the proper position there was a sudden and instantaneous flip, when the fish and flies would disappear together under the water. In a few seconds more he would again appear on the surface and go through the same manoeuvre with the same result. There were, perhaps, two or three dozen of them in sight at the same time, and all industriously engaged in the fly-catching game."

Eggs of Cod-fish.—"Of late it has been discovered that the cod and many other 'pelagic' fishes possess spawn that rises in the water instead of sinking as spawn usually does. But if it rose to the surface without some means of protection, the seaweed and the innumerable oceanic animals that live near the top or rise in calm weather only, would destroy the race of the cod in its billowy cradle. Nature has foreseen this, and given to the eggs of these fishes the very convenient property of invisibility. In other words, they are so transparent, so like a clear drop of water, that they deceive the eyes of bird, fish, and pelagic beast. It is only at a later stage, when the fry has emerged, that color enters into its make-up. But even then, all but a few of the most important inner parts are transparent, so that the infant cod has many chances of escape. In a week it has absorbed the yolk sack on which it feeds, assumed an upright position, grown two much longer fins than it would seem to need, and developed swiftness and intelligence enough to escape many of its foes. It remains near the surface and feeds on the immature young of the creatures that live on the sea-bottom.

A Plague of Flies.—Dubuque, Iowa, has suffered from an invasion by Mormon flies. The pests gathered about the gas and electric lights in great swarms, and people were compelled to abandon the streets. The flies came from the sand beds along the river, and are sometimes called sand flies. They are about an inch long, with broad wings. It is said that in many places along the street they were three inches in depth, where they had fallen dead. The stench was unbearable, and the health authorities employed several wagons in removing them.

Recovery of a Lost Ring.—The strange history of a ring was related at a fishing resort last week, and the story was investigated by a reporter of the *New York Sun*. It appears that in 1874 General Grant visited Greenwood Lake to fish. One afternoon he was fishing for pickerel, when he hooked a large eel. The slimy creature knotted itself with the leader, and in removing it a beautiful horse-shoe ring slipped from the General's finger and fell overboard. Banker J. Rithmelander Dillon visited the lake some weeks afterward, and killed a large pickerel. The idea occurred to him that he would like to taste a fish just out of the water, so his guide cleaned it, and they were about to row to shore to cook it, when the guide picked up the entrails, preparing to throw them overboard. To his surprise he discovered a ring, which proved to be the very ring which General Grant had lost some weeks before. So many apocryphal fishing stories are told, that the reporter called upon J. R. Dillon to inquire about this one. He was wearing the ring, and confirmed the story. He said that when he found that the ring had belonged to General Grant, he wrote to the family about it. Colonel Fred. Grant had replied that the family wished him to keep the ring he had so strangely found.

A Singular Explosion.—George Faheland and Thomas Hayes were recently dumping rock on the Luke Fidler culm bank, near Shamokin, when Hayes glanced down the bank, which is 150 feet high, and almost lost his senses on beholding a myriad of flames leaping high in the air from the centre.

Then a vast upheaval of blazing rock and dirt shot 50 feet heavenward. A beautiful transformation scene followed when a three foot thick and 50 foot wide stream of fire flowed down the bank like a stream, taking its course from the base through the lot and on toward the house of Patrick Boney, 100 feet distant, and in which were his mother, wife, and five children.

The dense volumes of smoke at this period obscured everything from sight for miles around for a minute, and when it passed away a mass of fire surged and tossed around Boney's home. As the flames were about to destroy the house another monstrous slide of dirt occurred and followed the path of fire until it reached the first mass.

The flames consumed the dirt rapidly, but a stream of rocks finally covered the fire, and together with a heavy rain, extinguished the flames. The inmates of the house were almost smothered with smoke and gas. The bank was fired several years ago by spontaneous combustion. For four months past wet dirt has been dumped just over the spot, where it now appears a fire has been smouldering for some time, and has eaten out a very large cavity, which was filled with gas. When the dirt became dry the gas escaped, causing this unprecedented explosion. The people are fearful that many other banks herabouts will explode and great loss of life ensue.—*Public Ledger*.

Items.

North Carolina Yearly Meeting convened on the 8th of Eighth Month, at High Point, N. C. L. L. Hobbs was appointed Clerk, and J. E. Cartland and Josiah Nicholson assistants.

The answers to the Queries represented that from 20 to 50 per cent. of the members attended the meetings for worship and discipline. Reading the Scriptures in their families was reported to be practised in about one-fourth of the families.

An appeal was made to be liberal in supplying money for Church purposes and for home mission work. One Friend thought there was no member of North Carolina Yearly Meeting who thought pay for services was unjust. Another said, he would, that if any minister did preach for a salary he ought to be turned out of meeting.

By the report from Guilford College, it appears that 191 students had been in attendance during the year, of whom about one-half were Friends.

Of the 2,368 persons attending First-day schools, 1,190 are Friends.

A discipline was agreed to so as to have the paragraph on Temperance read, "And also to refrain from selling in any manner, either through an agent or otherwise, fruit or grain to those who buy for the purpose of distilling spirits therefrom; and from the grinding as millers or mill-owners, any grain which they know to be for distillation; and that any who cannot be convinced of their error in the above-named offences should be disowned."

A new Quarterly Meeting was directed to be set up from Deep River Quarterly Meeting, to be called Yadinik Valley Quarterly Meeting.

A minute was adopted designating members of the Society from being employed in the collection of revenues for the government from the manufacture, sale and use of alcoholic liquors.

Much tenderness of feeling was manifested at the close of the Yearly Meeting, which took place with open shutters.

Russian Intolerance.—Largely separated from the contacts and interminglings of other nations, Russia has not caught the liberal ideas and tendencies of the age. Far in the rear of the march of the nineteenth century civilization, she concerns herself with her own aggrandizement, and is governed mainly by inherited principles of past generations. One in language, and one in religion are the rallying cries heard throughout her borders.

It was in 1870 that the late Emperor Alexander II. announced the national policy of bringing the entire population "under the same civil and religious laws and conditions." Ever since the trend of governmental action has been toward this accommodation.

Among the greatest sufferers from this Russian intolerance and oppression are the German Colonists in the Baltic provinces. Here are 2,500,000 Protestants, mostly Lutherans, under the persecutor's ban, who by all honorable and fair regard to covenant rights and privileges deserve immunity from governmental interference in their religious convictions and worship.

To understand the situation it is well to go back one hundred and twenty years. At that time it was thought needful to introduce a better class of settlers into the empire for the improvement of the peasantry. Accordingly the Empress Catherine, anxious to secure as many Germans as possible, guaranteed immunities to them and to their descendants, and their children were not to interfere in their religion and worship, and exemption from military service. Encouraged by these solemn stipulations many German Protestant peasants and others settled in considerable numbers "in the Baltic provinces, and on the Steppes and valleys of the Volga and other streams in the interior, and as early as the year 1760. Their numbers, their energy, thrift, enterprise and intelligence, rapidly increased in numbers and influence, and became a valuable part of the population of the Russian Empire. Up to 1870 they enjoyed their immunities without much molestation, except that occasionally some military duty was exacted of them. Then came the decree of Alexander II., annulling the original compact with the exception of ten years, when they must conform with the rest of the Russian people to the same educational, military and religious codes of the government.

This act of abrogation of covenant privileges aroused the just indignation of those who upon the strength of them had come into the empire, and who, at great sacrifice and at high cost, had secured farms, established industries and acquired homes. Seeing no possibility of redress, thousands disposed of their property at a great loss and found homes and freedom in our western States. But others,

unable to do so, have been subjected to a degree of repression and oppression on the part of the government and of the National Church galling to worthy manhood and Christian faith, and at war with Christian civilization as well with pledged governmental faith. The first telling move of Russia against the Lutherans was the prohibition of the German language in their schools. This was followed by "a suppression of various institutions of learning." Now comes the final crushing blow, announced in a despatch, Seventh Mo, 12th, from St. Petersburg, that "the government has totally suppressed the Lutheran Church in Russia."

The Independent, in speaking of this subject, says, "At bottom it is not a religious, but a political or rather nationalizing movement on the part of the Russian Government. It is an attack upon the German element of the three Baltic provinces. It has taken its shape and form from the fact that the Lutheran Church is the greatest conservator of the traditional language, customs, manners, spirit and character of the people."

THE FRIEND.

NINTH MONTH 14, 1889.

A recent letter from a Friend in the station of a minister, who resides in Indiana, expresses his views respecting the condition of our Society. They are quoted here in the hope that they may prove strengthening to some else-where, who at times feel weary of a continuous struggle against doctrines and practices inconsistent with the views of Friends, and are almost tempted to give up the conflict. The writer says:—

"There is much in our Society, especially in the West, of which I cannot approve, in this manner of conducting our meetings for worship. This has to me been a cause of much concern; and I believe, has had a tendency to the superficial rather than to the inward and heartfelt religion of our Saviour.

"But I have been more concerned because of some doctrinal teaching mainly on conversion and regeneration ('justification and sanctification.') Because I have no doubt many have been made to believe that they had attained entire a complete sanctification by one single act of faith, and that therein, every tendency to evil, or every vestige of human depravity (which is confounded with the 'carnal mind'), has been consumed, destroyed, or removed by the baptism of the Holy Ghost; but after a little they find themselves as human beings, very much as they were before; and finding themselves deceived, they turn away and become indifferent, or sceptical, or both. This has become the more popular teaching of late, but I cannot accept it, though having been an object of persecution on account of it for ten years; and in that time have not asked my Monthly Meeting for a minute for any service.

"It seems strange that our friends cannot judge a little by fruits or results. These who have been prominently instrumental in advocating this 'patent holiness doctrine' are the same men who have given so much trouble about the ordinances, and I suppose they will give Society no rest until they revolutionize it, or provoke a separation.

"The requirements of the discipline seem extensively neglected or ignored. In my own meeting, of over four hundred members, we have Masons, Odd Fellows, Grand Army of the Republic, Sons of Veterans, 'Women's Relief Corps,' and Daughters of Rebekah. Now how

stands our testimony against war, oaths, and secret orders?"

"Well, I did not intend to make so dark a picture, for there is some light. Out of the abundance of the head the pen writes."

SUMMARY OF EVENTS.

UNITED STATES.—On the 31st instant, forty car loads of seal skins, in three separate trains, making passenger line, passed through Cheyenne from San Francisco for the States. The seals were the first catch of the Alaska Fur Company for last year, and is bound for England. The time agreed upon for the delivery at destination is 18 days from San Francisco.

It is said that the largest bar of gold ever cast in the world was turned out at the United States Assay Office at Helena, Montana, on the 4th of this month. It weighed 500 pounds, and is worth a little over \$100,000.

While digging a well in the town of Ishpeming, Michigan, on the morning of the 9th instant, a man struck blue hematite ore at a depth of ten feet. The vein is said to be of extensive extent, and is considered a most prominent mining company who the mineral right of the land where the discovery was made.

The descendants of Benjamin Talbot, colored, lay claim to about 640 acres covering the central portion of the city of Logansport, Indiana. Talbot, while a slave, settled at Logansport 32 years ago, with McBane and his family, from Yellow Springs, Ky. He bought from the Government 640 acres of land, and lived on it until the passage of the Fugitive Slave law, when he abandoned his property and fled to Canada. He never returned to the United States, and spoke of it to his children, but long ago one of them put the matter into the hands of attorneys, who, upon examination, found Talbot's title indisputable. It is said the Wabash and Eel River Railroad, with valuable buildings on the Talbot ground, have already been conveyed. The entire property is estimated to be worth several millions.

The local option law was repealed in Floyd County, Georgia, last month, and the Prohibitionists claim that there was fraud in the election and have prepared a contest.

Great forest fires are reported in the Big Horn Mountains of Wyoming. Several ranches have been destroyed, and the loss is estimated at \$500,000. Two lives have been lost.

S. Austin Allibone, late of this city, died at Lerner's, Savannah, on the 24th instant. He was the author of the celebrated "Dictionary of English Literature," published twenty-five years ago; a work of such acknowledged correctness and fulness, that no effort has been made to supersede it.

Arrests for drunkenness in this city on the first day of the week, have largely increased since the election on the Prohibition question, on the 18th of Sixth Month.

The Atlantic coast of New Jersey, Long Island and Rhode Island, was visited by a severe storm of wind and rain, on the 24th instant. At Atlantic City the water was broken in several places, and some of the hotels were surrounded with water. Many of the electric lines were thrown down, and the city left in darkness. Damage was also done to some of the bath-houses.

It was estimated that there were 34 deaths reported in this city last week—175 males and 168 females—being 67 less than last week, and 22 less than the corresponding week of last year. Of the whole number 46 died of consumption; 26 of diseases of the chest; 25 of marasmus; 19 of pneumonia; 10 of cholera; 10 of typhoid fever; 10 of bowels; 16 of cancer; 15 of typhoid fever; 12 of cholera infantum; 12 of indigestion; 10 of pneumonia; 10 of apoplexy, and 9 of age.

Markets, &c.—U. S. 4½, 105½; 4s, reg, 127; coupon, 124; currency 76; 130.
COTTON was firm and in light supply. Small sales of middling uplands at 11½ cts per pound.
FLOUR AND MEAL.—Western and Pennsylvania flour, \$2.50 a \$2.75; do, do, extras, \$2.85 a \$3.25; No. 2 extra family, \$3.40 a \$3.75; Pennsylvania family, \$3.40 a \$3.75; do, extras, \$3.80 a \$4.00; stone ground, \$4.00 a \$4.50; western winter, clear, \$4.00 a \$4.50; do, do, straight, \$4.30 a \$4.50; winter patent, \$4.50 a \$5.00; Minnesota, clear \$3.50 a \$4.00; do, straight, \$3.50 a \$4.00; do, patent, \$3.80 a \$5.00. Rye flour is firm and in 125 barrels choice sold at \$2.00 per barrel.

GRAIN.—No. 2 red wheat, 79½ a 80 cts.
No. 2 mixed corn, 41 a 42½ cts.
No. 2 white oats, 26 a 26½ cts.

BEEF CATTLE.—Extra, 4½ cts; good, 4½ a 4½ cts; medium, 4 a 4½ cts; common, 3 a 3½ cts; Texans, 3 a 3½ cts; fat, 6 a 6½ cts.

SHEEP.—Extra, 5½ a 5½ cts; good, 4½ a 4½ cts; medium, 4 a 4½ cts; common, 3½ a 3½ cts; culls, 2½ a 3½ cts.

LAMBS.—Extra, 6½ a 7 cts; good, 5½ a 6½ cts; medium, 5 a 5½ cts; common, 4 a 4½ cts.

HOGS.—Good light western, 6½ a 6½ cts; heavy western, 6 a 6½ cts; extra heavy western, 5½ a 6 cts.

FOREIGN.—The strike in Liverpool ended on the 4th instant, the employers having conceded the advance demanded.

On the 23rd instant, Cardinal Manning, the Lord Mayor, the Bishop of London, and Sir John Lubbock conferred with the officials of the dock companies and shipping merchants of London. As a result of the conference, the dock directors agreed to consider a proposal for a sixpenny rate, to begin in First Month next. This time is fixed in order to allow a readjustment of charges to meet the added outlay.

The strikers' committee consented to advise the men to accept this proposal. After Burns and Tillett had held a consultation with the Strike Committee, the latter issued a manifesto stating that the strikers had rejected the compromise. Consequently the situation remains unchanged, though it must be recognized that the expressed willingness of the companies to accept on the first of First Month their employes' wage scale was a signal victory for the latter.

On the 23rd instant, a colliery explosion resulted in the death of 50 miners, only 14 of the 64 men at work in the pit having been rescued. The scene of the disaster was Pencuick, a small town within 10 miles of Edinburgh.

The Bishop of Marseilles, France, has issued a formal protest against the circular recently issued by the Minister of Justice, in which the Minister reminded the clergy that they are prohibited by law from taking part in elections. The Bishop affirms the rights of priests to intervene in elections and other political matters.

On the 6th instant, a large number of dynamite cartridges exploded in a cartridge factory in Antwerp. The latest report places the number of killed at 106, and of wounded at 79. Portions of the Bourse were struck by burning fragments and set on fire, causing a panic in the market. The explosion was caused by many persons passed the night in the open air, dreading to remain in their homes, owing to the explosions of petroleum, which occurred at intervals until next morning. The village of Austruyn, inhabited by about 1000 persons, was destroyed for hundreds of yards, and in its vicinity a building was blown away. All parts of the city show more or less damage, and portions have the appearance of having been bombed.

A decree has been issued in Pekin, ordering the beginning of work on the proposed railway to Hankow.

RECEIPTS.

Received from Richard Wistar, Philad'a, \$6, being \$2 for himself and \$2 for Richard M. Acton, N. J., vol. 63; from Elizabeth C. Evers, N. J., to No. 14, vol. 63; from Richard W. Hutton, W. T. to No. 6, vol. 64; from Ezra Engle, N. J., \$6, being \$2 each for himself, Josiah P. Engle, and Mary M. Wilkins, vol. 63; from Joel Thompson, Del., \$2, vol. 63; from Jonathan Wood, Agent, O., \$12, being \$2 each for Jonathan Brown, Elizabeth C. Evers, and Anna Vaughn, Jane Walker, and William Taylor, vol. 63; from William A. Fulghum, Ill., \$2, vol. 63; from William Robinson, Agent, Ind., \$14, being \$2 each for himself, Susanna Cox, Joel Hinshaw, Phariba Hill, E. J. Bardsley, Pickvay, and Elijah Peacock, vol. 63, and \$1 each for Thos. Gilliland, and Wm. C. Peacock, to No. 27, vol. 63; from Josiah L. Haines, Philad'a, \$2, vol. 63, and for Amy Middleton, N. J., \$2, vol. 63; from Samuel Fogg, Philad'a, \$2, vol. 63, and for Sarah Ann Rudolph, Pa., \$2, vol. 63; from Stewart Arnold, Pa., \$2, vol. 63; from Isaac W. Stokes, N. J., \$2, vol. 63; from Benjamin P. Brown, Agent, N. C., \$17, being \$2 each for Eli C. Copeland and E. Thomas Seip, vol. 62; \$1.50 each for Jesse W. Jessup and William J. Brown, to No. 52, vol. 62; \$2 each for William C. Evers, to No. 27, vol. 63, and \$2 each for William G. Snipes, James C. Chapman, Dr. John L. Outland, and Albert W. Brown, vol. 63; for Joseph Kirk, O., \$2, vol. 63; from Samuel L. Smedley, Jr., W. Philad'a, and William P. Smedley, Pa., \$2 each; from Joseph Evans, N. J., \$2, vol. 63; from David Wallace, O., \$2, vol. 63.

Remittances received after Third-day will not appear in the Receipts until the following week.

NOTICES.

FRIENDS' SELECT SCHOOLS.—These schools, under the care of the three Monthly Meetings of Friends of Philadelphia, will be held at the residence of Mrs. Thomas 140 N. 16th Street, above Arch, on Second-day, Ninth Month 16th, 1859.

The department for Boys continues under the care of John H. Dillingham; that for Girls in charge of Anna Walker; and both of them will be assisted by a corps of committed instructresses.

The Boys' and Girls' Primary Departments, will be in charge of Elizabeth W. Warner and Elizabeth N. Woolman.

The new School-house is well adapted for conducting a first class school, and great pains have been taken to provide all necessary comforts and conveniences. The heating and ventilation have been carefully attended to, and the cheerful and commodious character of the rooms, and the arrangements of the surrounding grounds are attractive. The scholars will have the benefit of a Reading Library, within the same enclosure as the School-house.

Children not members of our Religious Society are admitted, and the attention of Friends and others is invited to these schools, which afford the opportunity for education free from the disadvantages which appertain to many other seminaries. We earnestly solicit our members and our members who find the charges burdensome may be fully relieved.

The School-house will be open daily, on and after the ninth of Ninth Month, from 9 A. M. to 12 M., and from 2 P. M. to 4 P. M., teaching will be in attendance to give information and receive applications for admission.

All applications, whether for members or others, to be made to the Committee on Admissions.

Incidents and Reflections.—No. 189.

DREAMS.

In a social gathering in the City of Philadelphia, in 1851, at the home of that valuable minister, Sarah Hillman, the conversation turned upon the instruction which it pleases the Almighty sometimes to convey through the medium of dreams. Sarah related one which had visited her sister E.

E. dreamed that she and her sister Sarah had to cross a very wide river, and there was no means of doing so but by fording it. Her courage was entirely unequal to the task; so Sarah proposed to pass over before her, to show that it could be done. E. stood upon the shore and watched her sister, as she waded in the water getting deeper and deeper so as to hide progressively more and more of her person, till at last she was entirely hidden from view. E. then ran up the bank, so as to get a better view of the river, but could not see anything of her sister. After a time, however, her head began to show itself, and then her shoulders, and gradually more and more of her person came into view, as she steadily pursued her way; and E. soon had the satisfaction of seeing her sister safely landed.

She was far from being encouraged by what she had seen, and determined to find some more favorable place for crossing. So she wandered a long way beside the river, anxiously watching the waters; but to her dismay, the further she journeyed the more difficult and dangerous the passage appeared. She therefore concluded to go back to the place where Sarah had crossed, and make the attempt there, resolving to follow as nearly as she could in her sister's footsteps. Upon making the attempt the waters seemed to divide, so that she was mercifully enabled to cross the dreaded stream dry shod.

There were contained in this dream a caution against seeking some easier way to Heaven than that pointed out by the true Guide; and also encouragement to the wanderer to return to the right path, with the assurance that He who can make hard things easy is still mercifully disposed to make a way for his obedient children where they can see none; and to fulfil the promise, "When thou passest through the

waters, I will be with thee; and through the rivers, they shall not overflow thee."

In a letter to Richard Shackleton from John Thorp, is the following passage—"I have a mind to tell thy daughter a dream; for he that has one, thou knowest, the prophet says, may tell it, though I have told this to very few. It is a dream I had the night before I first appeared in a few words in a meeting. I thought I was intently engaged with some others, in some outward business, when, all on a sudden, a message was communicated by Divine authority, but I knew not well from whence the voice proceeded; however, the words I heard distinctly to this purpose: 'Cease, or thou must cease, from the business thou art now engaged in; there is another work for thee to do; for the Lord is about to work a more thorough reformation in the earth than any which has hitherto taken place;' to which I thought I answered—'Alas! how is it possible I can be of any service in, or contribute to this work, being so exceedingly poor, and destitute of every degree of strength and ability to do it;' and indeed I thought I felt myself so, when I spoke it, as much as ever in my life; unto which I thought the voice replied,—"Thy strength and ability will not be required; this work can only be effected by the strength and power of God.' Perhaps this may be some little encouragement; it is with that view I write it, that we should not sink under the feeling of our own insufficiency and weakness, but, in a state of humble dedication to the Fountain of our help, have our whole dependence and expectation from Him, whose is the work, 'of the power, the kingdom, and the glory.'"

In the *Occident* was published a few years ago, what was stated to be "a strictly truthful sketch," of a dream of a wealthy and intellectual woman, who related it to an intimate friend. She thought in her vision, that a form as gray and intangible as though made of fog, stood by her side and bade her follow. It made no audible sound, but was so intelligent and responsive that it seemed like a visible mind. "I was transported," she says, to the beach of an ocean, a long, low, sandy beach, with three waves almost mountain high, and as black as darkness, rolling in rapidly. Their surf touched my feet. The form, which had not left me, said, or seemed to say, for it never spoke:

"You have to enter these waters."

"I cannot," I replied, shivering with an awful fear.

"But you must; there is no escape," it said.

"Alone! Will no one go with me? I asked, with a dim consciousness that it must be as it said.

"Look and see," was the reply.

"I turned my back upon the water, and there, as far as my eye could reach, stood in various groups all the people whom I have known throughout my life. Faces of which when awake I had no conscious recollection now appeared, and with them all the associations of our ac-

quaintance. There seemed a multitude, and all were my friends. In some I saw the pensioners upon my bounty; in others, those bound to me by ties higher and more unselfish than those of mere gratitude; and a few were there whom I thought I loved as I did my own soul. Surely, some of all these would go with me. Accompanied by the form, I went up and down through this aisle of human beings, looking eagerly the question which all seemed to understand. None responded. Some hung their heads, others dropped their eyes as I approached, or turned aside. One friend with eyes like those of a pitying angel, looked full into mine, then stooped and enfolded her little boy, standing near, as though she said:

"But for him I would go with you."

"A dreadful heart-sickness overwhelmed me, and I said, 'Can it be that in all these years I have made no friend or lover who will now go with me?'"

"Then a reaction came. Pride seemed to give me the courage to say, as I addressed the form:

"I'll go! I'll go alone!"

"'Stop! think! Can you get none to accompany you? There is Jesus, the Christ, ask Him,' was the reply."

"'No, I have long since rejected Him, and now, in this great trouble to call upon Him would be contemptible in me. I cannot thus humble myself,' I answered."

"The form instantly vanished, and I plunged desperately, in the first wave and buffeted it. I came up nobly, and felt encouraged. As the second engulfed me I came to the surface, hoping, as I cast one sweeping look over the beach, that some one had relented and would join me, but to my amazement it was deserted. I was entirely alone. Then my courage left me. All hope was gone, and as the third wave rolled toward me I dropped into it helplessly, without a struggle—and awoke."

In early life she had given her heart to God, and had then "rested in his love like a confiding child in the arms of its mother." After her marriage, her husband became a political leader, and skepticism developed into infidelity. Her own convictions gradually yielded to the unfavorable influences to which she was exposed. Her husband died; and God, who had once been so near to her as a loving Father, had gradually become only a Great First Cause, to be recognized by and received in the higher region of the intellect; and the works of Renan, Strauss, Voltaire and Hume were read with avidity.

The friend who wrote the narrative says: "Four weeks after my last interview with her, there came a brief note to me saying:

"My precious mother has just died suddenly. I am in the first wave, and the horror of the darkness is awful."

"A violent nervous prostration followed, and with her family she went to the seashore for a summer's residence. Two months later I received another note, which read thus:

"Perhaps you have heard it all. My precious

boy! My loving little Donald was washed off a rock while fishing in the bay and drowned! The second wave has encompassed me, and I am in the blackness of despair."

"During the two years that succeeded, there was a struggle between her pride of intellect and stubborn will, and the never-ceasing wailing of the 'still small voice' which always said, 'Come unto Me and ye shall find rest.'"

"A few days ago she was my guest, and no one was ever more welcome. An aura of peace and perfect content emanated from her, and her smile was radiant with the light of a joy from within. Our friendship had long outgrown the barrier of conventionalty, so she said, in answer to my look of inquiry:

"It is all over. I have ceased to struggle. The finite against the infinite is an unequal contest at best, and such as I will ever be worsted in the conflict. The third wave—my utter helplessness—has confronted me ever since Donald's death. Last week I plunged into it with the despairing cry, 'Lord, I believe, help my unbelief!'"

In submission to the Divine will, she was favored to feel a measure of that peace of God, which passeth all understanding.

A missionary in China, while travelling in a Chinese boat, was much impressed with some remarks on Pride, which she met with in a book she was reading. They were probably instrumental in coloring a dream which presented itself to her mind soon after falling asleep in the evening.

She thought she was transported to Heaven, and the scenes of the Judgment-day were passing before her.

"Before us had risen a building which was made up of the actions, thoughts and words of a life, and beside it stood the person whose life is represented. In very conspicuous places were large bundles of good deeds. Indeed so many and so large were these that I felt a thrill of pleasure for the person standing there, and was surprised on looking at him, and then upon the faces of those near me, to see no pride or exultation, nothing but a most profound expectancy. As I wondered at this, the structure was in a blaze, and from the many places where had been the good deeds, the person himself appeared. Here, there, everywhere, he was visible; sometimes pushing himself almost entirely out of the fire, trying by every possible movement and contortion to make himself seen. It was perfectly evident that he did not fear the fire, but his every motion said, 'Here am I, look at me.' The mass blazed on and soon was all consumed—only a few ashes remained. All attention was soon turned upon the same spot again, where had risen another building much smaller than the first, and this too, was soon ablaze. The person of whose life-deeds it was composed was standing beside it, and I remember how sorry I felt for him that his life seemed to have amounted to so little. But as the fire burned on, the pile became a mass of burnished gold, and really seemed to increase in size and beauty as the flame became hotter. Then the fire died away, having accomplished its work, leaving gold and precious stones in such loveliness of arrangement as only heaven itself could furnish.

"And now pile after pile rose in quick succession, by each one of which the person whose life it represented immediately appeared, and then the fire applied its test. Larger or smaller as the buildings might be, I soon learned not to judge its real worth from its first appearance.

The saddest part of the test was the burning of those deeds which were to be seen of men, when the door by all possible contortions, strove to show himself in the burning mass. Often a small, unpretending structure loomed up into beautiful proportions as the fire burned on, and stood afterwards a grand testimony to the grace of God. Often a large, imposing mass of seeming good works showed, on the test of the fire, only the deformities of the doer of them, and at last there would remain little or nothing of it at all."

For days after awaking from her slumber the impression of the dream remained very fresh on her mind. It furnished an illustration of what the Apostle said to the Corinthians—"The fire shall try every man's work of what sort it is." J. W.

Women Working in Silesia.

From the report of the factory and mill inspectors, it appears that the number of women engaged at hard work, manual labor in mines and furnaces in Silesia, instead of diminishing, is actually increasing. In upper Silesia in 1887, seven hundred and eighty-seven more women were employed at furnace work than in 1886, while in textile factories the number of female employees had decreased. The inspectors consider the propriety of continuing to employ women at some of their present occupations in mines and the metal industries as at least questionable. In zinc furnaces they are employed in removing the product and the refuse; but this work, although better suited for men, is mainly in the open air and not injurious to health. In the morning, however, the women must tend the ovens while the place is filled with dust and zinc vapors, and their severe physical labor is performed in an overheated atmosphere, tempered only by dangerous draughts.

In the ore mines the women are employed mainly in the hoisting shafts and at pushing cars. At a depth from twenty-two to twenty-three yards the task of four girls is to hoist eighty tubs, containing from one to one and a half hundred-weight of ore each, to the surface in a shift of eight hours. That the work-women, in spite of the low wages, prefer this severe labor to domestic service is probably owing to their dislike of the restrictions placed on the house servants and their long hours of labor, whereas, in the mines, sixteen hours out of the twenty-four are entirely their own.

In the foundries, steel-works, and rolling-mills women perform day-laborers services, such as are not considered specially injurious by the overseers.

Doubts are expressed of the advisability of continuing to employ women in beet-sugar mills and refineries, inasmuch as their work is carried on near the centrifugal machines and in the centrifugal rooms, and is morally and physically injurious. In the Breslau and Liegnitz districts fewer women are employed now than formerly in sugar mills. In the sugar factories the long separation of the sex has at least been accomplished.

But the condition of female laborers in mines, furnaces and factories, although in some instances more degrading, is yet not so deplorable as that of the women and girls who endeavor to earn a livelihood by hand-labor in this city [Breslau, Germany]. As shown by the inquiries concerning women's wages set on foot by the city statistician, the earnings of girls in many branches of industry are not more than seventy-two cents to one dollar and nineteen cents per

week, while their average weekly expenses are not less than one dollar and fifty-cents, as follows:—Lodging, twenty-four cents; dinner, forty-two cents; breakfast, lunch and supper, fifty-three cents; contribution to sick fund, four cents; clothing, shoes, washing, fire and light, medicine, and various other necessities, thirty-two cents.

Unmarried women who live with their parents may be able to defray their personal expenses with an income of from seventy-two cents to one dollar and nineteen cents per week, but those who cannot depend on parental assistance must reduce their living expenses to the starvation point. In fact the inspector declares that the most of these working girls live in summer on black bread, cheap sausage, and herrings, with one properly cooked meal on Sundays. Whether this menu permits them to live on their earnings is at least questionable; at all events, it is not proper nourishment.—Henry Dittmar, U. S. Consul.

SELECTED.

I have been humbled this morning under a fresh sense of my many short-comings and transgressions; yet without hope in the Lamb of God, who taketh away the sin of the world, and has power to speak the cheering and consolatory words, "Be of good cheer, thy sins be forgiven thee." I trust amid my manifold frailties, there is a holding fast to the foundation. Even when the little bark is firmly anchored to the Rock, the tumultuous winds and waves will toss and sorely threaten it; but if the cable which fastens it to the anchor of holy hope, is that living, all-conquering faith, of which Jesus Christ is the only Author and Giver, the vessel will not be shaken loose or lost. In our daily avocations and intercourse with the world, there often arise trials and temptations which agitate and ruffle the mental currents, but where the soul is anchored on Christ, it is the surface only that is disturbed, and when the flurry subsides the anxious mind is often given to see, that underneath in the deep recesses of the heart, the stream of heavenly love and allegiance has been steadily and calmly flowing onward and upward to the gracious Author of all good. May the abounding mercy of the dear Redeemer animate me to watch and pray more earnestly against all that would agitate or disturb unprofitably, even the surface of the mental current, which should ever tend towards heaven and thing Divine.—Thomas Evans.

SELECTED.

Third Month 27th, 1841.—Felt this morning, on first waking, the comfort of the consideration that the Christian religion is a religion of hope; and that it is the merciful design of the great Head of the Church that we should cherish hope, both as respects ourselves and others. The discouraging views some religious and devoted people seem to think they are called upon continually to hold up, do not appear to me calculated to help themselves or the body. I have often been instructed in observing how little the first preachers of Christianity dwelt on their own trials; on the contrary, how they endeavored constantly to stimulate those to whom they wrote to look toward the mark for the prize of their high calling. That discouragements abound we cannot doubt; and they will thicken upon us in every direction if we are always poring over and magnifying them. Oh for more of the lively and efficacious faith that can remove mountains! for more of the spirit of love and of a sound mind! —Maria Fox.

FOR "THE FRIEND."

Notes on Geology of Delaware County, Pa.

Through the kindness of a friend, I have recently had the opportunity of visiting several of the quarries and other exhibits of the rocks of Delaware County. The first of these excursions was on the 6th of Eighth Month. Entering the carriage of my friend at Swarthmore Station, we went to the more southern part of the county. The Baltimore Central Railroad at Swarthmore and for some distance before reaching that spot, skirts the base of a high ridge or terrace of land, which overlooks the lower country to and beyond the Delaware River. This elevated land has the appearance of being the ancient shore line of the Delaware, or of the ocean, which in former ages may have washed its feet. The country lying between this and the river, is generally level, except where the streams of water have washed out valleys in it; and is covered with a few feet of clay, underneath which lies a bed of gravel. In the depressions of the valleys we come to the underlying beds of rock, exposed by the washing away of the clay and gravel which were deposited upon them when these low-lying lands were covered with water. In such localities were situated the quarries we visited—one of the largest of which was that known as Leiperville quarry. The rock was a Gneiss—similar to that found in many parts of southeastern Pennsylvania, composed of Quartz, Feldspar and Mica, and showing the layers or strata which distinguish it from Granite.

These quarries have been worked for a long period. Their proximity to tidewater has facilitated the shipment of the products, and the stone itself is of superior quality.

Some interesting minerals are found in this quarry, generally in places where the uniform texture of the rock has been disturbed by the effect of crystallizing forces acting with greater energy than usual, or under different circumstances. Where veins or layers of a different texture and appearance from the general rock present themselves, it is a hopeful indication of the presence of mineral forms, which will interest the mineralogist. The foreman of the quarry had felt interest enough in such matters to save such specimens as came in his way; and from him we obtained some interesting specimens. Among these were garnets, similar to those described in the notice of a visit to the quarries at Avondale, in Chester County, in a previous number of THE FRIEND (No. 37 of vol. lxi.); some large crystals of Tourmaline which had the appearance of having been broken across, and afterwards mended by a cement of quartz filling the fracture and joining the faces which had been separated. I was still more interested in finding among the curiosities of the quarry some specimens of Sulphuret of Copper (Copper Pyrites), not having before supposed that this mineral was to be met with in such situations.

Our intelligent guide pointed out the location of the old King's Road, which had been laid out from Philadelphia southward, keeping just far enough from the Delaware River to cross the different streams that enter it, above tidewater, so that they could be forded in days when bridges were not so abundant as at present.

Our next excursion was made on the 27th of Eighth Month. The principal point to be visited was an outcrop of Enstatite rock, in Marple Township, a few miles to the north of the railroad. On our way we came to a newly opened quarry of gneiss rock, which, from the abundance and whiteness of the Quartz and Feldspar in it, furnished a beautiful building stone.

The country north of the ancient shore line of the Delaware River is much more rolling in its character than that southeast of it, showing that it has been exposed for a longer period of time to the wasting effects of the elements, especially of the rains, which have hollowed out valleys in various parts of it and left a series of rounded hill-tops with depressions between them.

Another proof of the changes which this land has undergone, is found in the beds of gravel which exist wherever the elevation is above 400 feet. This gravel appears to be of the same character as that found in Southern New Jersey, and was probably deposited at the same time, at an age long subsequent to the formation of the rocks which underlie it. Originally, it probably spread over almost the whole of Delaware County; but in the changes which have taken place, it has been removed from all but the higher portions. As the area it covers is now comparatively limited, much of the surface must have been removed by the elements.

We found an additional proof of the wearing away of the strata in the lumps of Quartz rock which abounded in some places. It is a common occurrence in quarries of Gneiss, or in the strata which are exposed in railroad cuttings or on hill sides, to see veins or layers of Quartz intersecting or interposed among the general strata. Where flint-stones (Quartz) abound in the field, they must have come from such veins in the strata that formerly existed. These strata have yielded to the corroding action of the chemical and mechanical forces of air and water, and been washed away, leaving behind them in loose fragments the more indestructible Quartz, which formerly existed in veins.

In such observations and reflections we found entertainment and instruction, till we reached our destination about noon. Our guide turned into the yard of a comfortable looking farmhouse, and obtained permission to put his horses in the stable, while we explored the wood hill where the Enstatite rocks protruded from the surface. The man at the barn said it was the law of the place that no horses were to be put in the stable without being fed; and so he hospitably took care of the animals which had been doing us good service.

Enstatite is a mineral somewhat similar in composition to Serpentine, which is a compound of Silica [Quartz] Magnesia and water. Enstatite differs in not having water, so that it is composed of Silica and Magnesia. The specimens we procured showed it to be principally a mass of flattened tabular crystals, very coarsely intermingled, and of a dark gray or black color. It was probably owing to this intermingled structure that it was very difficult to break; and it required a vigorous use of the hammer to detach suitable specimens. It appears well able to resist decomposition, and this accounts for the manner in which it is left projecting in the air—the more easily decomposed rocks which originally surrounded it having been removed, while it remains. The remarkable mass of projecting rocks, called Castle Rock, on the upper waters of Crum Creek, is Enstatite, and its prominent appearance is due to the same cause.

Many of the loose rocks which had been scattered on the side of the hill had been gathered into broad stone walls, and on the top of these were piled smaller stones. Among these were some interesting specimens of cellular and crystalline Quartz, such as are often found accompanying serpentine deposits. From their appearance, one would suppose that waters holding quartz in solution had penetrated crevices in the

serpentine, and there deposited the quartz— which sometimes appears in delicate plates as thin as paper, and at others in a more massive form lining the opposite sides of a cavity, the centre of which is occupied with beautiful groups of small crystals, often in small rounded masses, like bunches of grapes. As specimen after specimen was transferred to our carpet bags, we found it was easy to load ourselves with as much weight as it was convenient to carry.

J. W.

William Grover.

William Grover, the son of William and Elizabeth Grover, was born at Brighthestone, in Sussex, the 15th of the Eleventh Month, 1752. Very few particulars are known of his early life. After leaving school, he was placed as an apprentice with Edmund Rack, a Friend, who was a retail country shopkeeper, at Bardfield, in Essex. Soon after the expiration of the term, he engaged himself as an assistant to Samuel Day, who was also a member of our religious Society, and in a similar business, and who lived at Stansted Mount-Fitchet, in the same county. After serving him with diligence and integrity for several years, he became a partner in the concern, and resided there during the remainder of his life. He inherited some paternal property, his father having died when he was young; but, at the same time, he found it necessary to pursue his engagements in business, and was esteemed an upright tradesman, of kind and respectful manners; one who was careful, in all things to act as becomes a member of our religious Society. He continued in trade until within a few years of his decease; and though diligent in attending to these, the necessary cares of life, he was not engrossed with them; possessing a well-regulated and pious mind, he may be said to have pursued the concerns of time with eternity steadily in view.

He was very exemplary in the fulfilment of his duty to his Maker, by a constant attendance of religious meetings, when of ability; in which his solid deportment indicated great reverence of spirit and fervency of desire to gain access to the Fountain of all Good; and, on these occasions, we believe that his mind was often enriched with the incomes of Divine love and peace.

He was a great lover of retirement and meditation. The frequent reading of the Holy Scriptures was also a source of instruction and comfort to him; and this practice he was often tenderly engaged to recommend to others, as one of the means by which they might be strengthened and encouraged to advance in the Christian path.

Perhaps few have been so much favored with the prevalence of love: it seemed to be the constant clothing of his mind, and was evinced towards all classes of society. The youth, especially, were the objects of his tender solicitude, for whose early attention to the proofs of instruction, and their growth and establishment in the Truth, he felt an unremitting concern.

Highly valuing the care which our Christian discipline provides, and manifesting a deep concern for its being rightly and impartially exercised, he at the same time discovered much caution and tenderness in cases of delinquency, cherishing feelings of love and compassion, when judging of the errors and weakness of others. He was very anxious that all the meetings, established for transacting the affairs of our Society, should be held under the influence of Christian love, and in the fear of the Lord:

being convinced that, were this the case, they would often be times of solid instruction.

Believing, as he did, that our predecessors had been called to uphold a pure and perfect standard of Christian doctrine, he was deeply solicitous that this might in no way be lowered by Friends of the present day; and that they as individuals, and the Society as a body, might endeavor so to act, as to bring others to see and to acknowledge the consistency of our profession with the Gospel dispensation.

Our dear and honored friend was particularly pleased with the society of young persons; and to many of this class he was endeared by the sweetness and affability of his manners, conversing with them in a way which secured their confidence and esteem. He felt tender solicitude for them, in thinking of the temptations to which they were peculiarly exposed; and whether any hints which he offered to these, were designed to encourage them to persevere in the right way of the Lord, or to check the early appearance of a departure from Christian simplicity, they were expressed with so much love, that they have found a ready entrance into the heart. Highly valuing the approved writings of our Society, he often recommended them to the attention of those in early life. He promoted also their perusal of works of literature and useful information; but saw a danger in the young and inexperienced entering much into the religious opinions of others. Yet he was far from being illiberal in his views, often gratefully acknowledging his belief, that sects and distinctions are lost in the Divine sight.

Whilst believing, as he did, in the Divine authority of the Holy Scripture, he was very desirous that these records should be properly designated, and that men should not confound the possession and distribution of the Bible, and the mere knowledge of its contents, with the partaking of those living waters which flow immediately from Christ, the Fountain of Life—of that bread which cometh down from heaven, and which, when received with a lively, operative faith, enables us to work out the salvation of the soul with fear and trembling.

The expressions of a religious nature, that our late dear friend uttered towards the close of life were not numerous; but they all partook of that humble, yet confiding and peaceful character, that distinguished him when in health, and bespoke a mind looking towards heaven, of which he said, he had "had a pleasant view, particularly of late;" and that he was "favored to feel very little condemnation." At different times he thus expressed himself: "The prevailing desire of my mind has been, for many years, that I might close in peace. I have had many blessings, many temptations and many trials in my time, but have been mercifully helped through them." At one time, evidently under great tenderness of spirit, he observed, "The shadow of Divine mercy is very broad," and at another, when conversing about his illness, he said, "It is a source of great consolation to know that He who formed us is near."

In the afternoon of the day preceding his decease, he expressed himself to the following effect: "There is nothing so precious, whether in youth or in age, sickness or health, as a sense of the Divine presence and love. I have had great cause thankfully to believe, that the protecting arm of kind Providence has been with me all my life long, from my youth up;" and after a pause, added, "It is my greatest desire that my sun, which now seems nearly set, may go down in brightness, without a cloud;

relying only upon the goodness of the Almighty, who can change a life of suffering for one of comfort and endless happiness—who can make a deathbed as a bed of roses. Yea, I bless thy holy name, thy presence and love can make a deathbed as a bed of roses." Afterwards he said, in nearly these words: "My life seems fast closing, and my afflictions nearly at an end. I have been greatly afflicted, [alluding probably to his illness], but doubt not that it has been unspoken, unerring wisdom, that I have been thrown, again and again, into the furnace, which is no doubt, designed for my further refinement. Oh! may all the purposes of the Almighty be fulfilled. Oh! what a precious state is that, where nothing is wanted but the celestial gate to be opened. All praise I ascribe unto the Lord's holy name."

He was enabled to bear, with great patience and Christian fortitude, the extreme sufferings which he endured within a short time of his death; but, for a few hours before the close, he was mercifully relieved from all pain, and his end was remarkably peaceful. He died the 11th of the Tenth Month, 1825, in the seventy-third year of his age.

(To be continued.)

THE BELL OF JUSTICE.

BY ROBERT L. BANGS.

There was a king long years ago;
His name historian doth not know.

He lived beneath Italian skies,
A noble monarch, just and wise.

That he might serve his people well,
In a high tower he hung a bell.

He who was wronged had but to ring
The bell of justice, for the king

Was bound to make the humblest prayer
The subject of his royal care.

At first men rung it every day,
Rotted at last the rope away,

And, growing shorter by degrees,
Swayed lightly to each passing breeze.

For many a month it idle hung,
No longer needed. No one rung

For justice; men had learned to fear,
And dreaded now the bell to hear.

At length a wandering grape-vine clung
Tight to the rope that idle hung.

And firmly held it, sweetly grasped,
As if one hand another clasped.

A starving horse, turned out to die,
One summer day was passing by,

And browsing where the grape-vine hung,
The bell of justice loudly rung.

Straightaway a royal herald came,
And saw the horse, half-starved and lame.

He told the king who rung the bell,
The monarch answered: "It is well.

"The brute for justice doth appeal;
For starving brutes I pity feel;

"Go seek his owner out for me,
And tell him this is our decree:

"On long as he lives this horse must fare
On oats and grass of his. Beware!

"If he again for justice call,
My wrath shall on his owner fall."

Would God to-day there were a bell
That brutes could ring, and thereby tell

The story of their cruel wrongs,
And win the justice that belongs

To every creature, great and small;
For God their Maker loveth all.

LITTLE ACTS OF KINDNESS.

Little acts of kindness
Trifling though they are,
How they serve to brighten
This dark world of care!
Little acts of kindness,
O, how potent they,
To dispel the shadows
Of life's cloudy day!

Little acts of kindness,
How they cheer the heart!
What a world of gladness,
Will a smile impart!
How a gentle accent
Calms the troubled soul,
When the waves of passion
O'er it wildly roll!

You may have around you
Sunshine if you will,
Or a host of shadows,
Gloomy, dreary, chill.
If you want the sunshine,
Smile, though sad at heart;
To the poor and needy
Kindly aid impart.

To the soul-despairing
Breathe a hopeful word;
From your lips he only
Tones of kindness heard.
Even give for anger
Love and tenderness;
And in blessing others
You yourself will bless.

Little acts of kindness,
Nothing do they cost;
Yet, when they are wanting,
Life's best charm is lost.
Little acts of kindness,
Richest gems of earth,
Though they seem but trifles,
Priceless is their worth.

HARVEST.

BY MARGARET E. SANSTON.

We said, when the spring was late,
And the bitter winds were chill,
It were vain in hope to wait
For the leafage on vale and hill.

We were fain to mock at ruthless fate,
And were slow the fields to till.

We thought, when the summer rain
In floods from the rifted skies,
Was sweeping the upland and the plain,
Aslant before our eyes,
Our labor hard is a waste, and vain
Each needless sacrifice.

But to-day, O fools and blind!
There are purple grapes on the vine,
And the smell of the fig on the warm south wind
Is sweet as the breath of wine,
And the sheaves the reapers go forth to bind
Are a gift from the Hand Divine!

We never had need for fear,
We had only need for trust;
Ever our lives to our Lord were dear,
And ever his ways were just;
If our faith had but been strong and clear,
We had scorned the moth and rust

Of our shivering doubt and dread—
Nor all on our way had come,
With, many a time, a drooping head,
And lips for sorrow dumb.
Dear Lord, we are humbly comforted,
In thy harvest's splendid sun.

Pardon our trick of grief!
Give us faith to be glad and gay
In the seedtime as in the time of the sheaf;
Make us joyful every day.
For alas! alas! in our unbelief,
It shames us when we pray.

FROM "THE CHRISTIAN ADVOCATE."

Burnham the Astronomer.

BY W. S. B. MATHEWS.

One of the most curious examples of success that has come under my notice is that of the Chicago astronomer, S. W. Burnham, now of the Lick Observatory. The narration reads like a romance, but it is strictly true. About the close of the war Burnham was in New Orleans as a correspondent of a Chicago newspaper. He happened to be strolling along the street one day, when he passed an auction store where the seller was offering books. Stepping in with his companion, Burnham negligently bid twenty-cents for a lot of books then up. The entire lot was knocked down to him at this price. It consisted of school-books, and among them an atlas and geography of the heavens. Burnham knew nothing about astronomy beyond the meager notions of ordinary graduates of the public schools, but the pictures in the atlas took his attention, and he carried this part of his purchase home with him. He presently began to devote a part of his evenings to the work of identifying the constellations visible in that latitude. Soon he bought a little telescope of one inch aperture, by the aid of which he materially improved the accuracy of his observations, and enlarged the field of his studies. He bought other books upon astronomy, and soon found himself where he needed the higher mathematics. These he got up, and exchanged his one inch glass for one of an inch and a quarter. He was now back in Chicago, occupied daily in Court stenography, and carrying on a short-hand business of general reporting—the firm being Burnham & Root.

The Clarks were erecting the great eighteen-inch telescope for the Dearborn Observatory. Burnham lived within two blocks of the place, and he did a great deal of hanging around and asking questions during the process. Finally he asked Alvin Clark what he would charge for a six-inch glass. The price was cut as much as possible, the amount being about \$800, I believe. Burnham ordered it, and in due time received it. This must have been somewhere in 1872. It used almost all his money to pay for the glass, leaving little or nothing for mounting it and adding the various appliances needed for making it valuable as an instrument of precise observation. He procured a large stick of timber, which he set in the ground of the back-yard like a post. Upon this he mounted his glass. He bought two wooden cisterns for holding rain-water. Placing one of these above the other, and cutting a door in the floor of the upper, he had a two-story observatory about thirteen feet high, which only needed a practicable dome to make it available for astronomical purposes.

Librarian Poole has told me of the curiosity he felt regarding the meaning of this queer structure in his neighbor's back-yard across the street, when he took a house in Groveland Park, some time in 1878. The boys of the family found out that the strange man who lived there used to spend a large part of his nights in the tower. One day the dome happened to be left with its opening turned toward Dr. Poole's house, and the mystery was solved. From this grew his acquaintance with Burnham.

It would far outrun my space if I were to describe the queer contrivances which Burnham improvised for taking the place of expensive apparatus needed but beyond his means; for example, he could not afford a sidereal clock,

and it was therefore impossible for him to keep his glass on a star without continual adjustments. He met this difficulty by a contrivance as ingenious as it was homely. Procuring samples of the different kinds of quicksand, of which Chicago has no lack, he selected one which suited his purpose; and taking a large tube, he filled it with sand, placed it vertically, and regulated the flow of sand from the aperture below by means of a little gate. At first he caused this sand to turn a little water-wheel of shingle and twine; this in turn was geared into another, which moved the glass slowly and evenly, like a clock. Later, however, he simplified the matter by causing a lead-plunger to follow the sand in the tube. This was connected with the point of the telescope and moved it with the star.

The results of Burnham's original observations were immediate and astonishing. In 1873 he sent a list of 81 new double stars to the English Royal Astronomical Society, and they figure in the *Astronomical Journal* for March, 1873. In May there are 25 more; in June, 1874, 47 new stars; in all, about 300 new double stars were discovered in the first two years' use of this six-inch glass. Burnham began to be celebrated everywhere but at home. He was made honorary member of the English Royal Astronomical Society, the German, Italian, and one after another of nearly every prominent astronomical society in the world.

While Burnham was becoming so celebrated abroad he was almost unknown at home. He was refused admittance to the Dearborn Observatory, on the ground of ignorance, at the time when, for more than two years his discoveries had made him an honorary member of the chief astronomical societies of Europe, and when he was in close correspondence with the leading astronomers of the world, and when, as *The Times* very properly said, the great Dearborn telescope was doing no more for the cause of science than two joints of stove-pipe in an attic.

Perhaps one of the most curious things about this part of Burnham's career is the success with which he concealed his mental preoccupation from those who were about him every day in Court and on the street. Two anecdotes will illustrate this better than anything else. Dr. Arthur Edwards told me that his first acquaintance with Burnham dated back to 1872, or thereabouts, when he engaged him to send a shorthand man to Detroit to report a sermon by Bishop Simpson. The acquaintance grew, and he saw Burnham frequently and talked with him about almost everything but astronomy, upon which nothing at all was ever said. This went on for four years or more. Meantime the *Northwestern Christian Advocate* had reprinted from the English reports frequent lists of double stars discovered by a Chicago astronomer named Burnham, without the least hint of its being this Burnham. At length it happened one night that Dr. Edwards and wife occupied seats at one of Proctor's astronomical lectures next those of Mr. and Mrs. S. W. Burnham. Just as Proctor arose to speak, the identity of the names flashed across Dr. Edward's mind, and he leaped over to Burnham in great excitement, and said:

"You don't mean to say that you are Burnham the astronomer?"

Burnham was equally excited, and at the close Proctor said to Dr. Edwards:

"I am dying to know what it was that you whispered to Burnham, just as I began to speak, which excited both of you so much."

Dr. Poole, of the Newberry library, gave me another, in which General Leake, late District-Attorney here, was the person concerned. One day after Burnham began to be celebrated, General Leake said to Dr. Poole:

"How does it happen that knowing almost everybody in the city of any prominence, I never happen to meet Burnham the astronomer, whose name I see so often in the papers?"

Dr. Poole replied, "You do know him, and see him every day."

Upon denying it, he reminded him of the wry little stenographer in Judge Drummond's Court.

"What, *our* Burnham!" exclaimed General Leake. "I have known him for twelve years, and we have talked about almost every other subject under the sun, but I never heard him say a word about astronomy. I never dreamed of such a thing."

Mud Pies.—The fascination mud pies have for children is very great and by no means unaccountable. The material is abundant, cheap, obedient to the touch, and possibly there is a subtle attraction of like to like, for of dust and ashes are we all compounded.

If mud were not dirt, if it didn't soil the faces and hands and stain the clothes of the little devotees, the objections to letting them play in the dirt would be very much lessened. Those mothers who wish to indulge their children in making mud pies without soiling themselves can easily do so if they will procure a number of pounds of potters' clay from the nearest pottery. It can be used over and over again, and will afford unlimited scope for inventive genius and childish fancy. The children using it should have a box or table under some shelter out-of-doors, for half the charm of making mud pies is that it is done "*sub Tere*"—under the open sky. A calico or linen apron over their clothes will be sufficient protection.

City children who cannot find any mud to make pies of may make clay pies to their heart's content in a corner of the back-yard or of the house-top, with an awning over them to protect them from the hot sun. From mud pies they will aspire to higher forms of plastic art, and imitate in clay the various objects with which they are familiar.

It is a great injustice to children to keep them dressed up in fine clothes and within conventional bonds when they might, in suitable attire be free to roam through the woods and pastures, climb trees, wade in the streams, pick berries, and taste the delight of wild life. They are far happier in making the acquaintance of birds and rabbits and squirrels and insects in their native haunts, so far as such acquaintance can be made, than in reading about these things in the most elegantly illustrated books written in the most enchanting style.

Let them, boys and girls, get unburned and scratched with briars; let them go barefoot, if they will, and stub their toes; let them get bruised and banged up to a degree. It won't hurt them. A few days in the house will bleach their faces white again, the scratches will get well, the joys will heal, the bruises will go away, but the joyous memory of the good times they had in these days of freedom with nature will never leave them, and the vigor they gain by being brought close to the embrace of mother earth will help them, as it did Anteus in his battle with Hercules, to renew successfully their struggles with the tasks put upon them at school.—*Selected.*

A Quaker Meeting-house in Wales.

AN OLD STRUCTURE NEAR THE ORIGINAL BRYN MAWR FARM.

Two centuries ago the religious teachings of William Penn reached the inhabitants of these secluded glens, were examined, believed, and accepted by a sufficient number to form a Society and to build a meeting-house. Witnessing for truth and righteousness and growing in numbers aroused the persecuting spirit of the clergy of the established church, who secured the aid of the civil magistracy to suppress the pestilent heresy and the godly example of these true and faithful disciples of Christ, a thorn in their flesh, and a swift witness against the prevailing vices and ungodliness of the times, which they made no special and effectual effort to discourage or suppress. Suffering from persecution, many of these Quaker families emigrated to Pennsylvania and settled near Philadelphia.

In an old and interesting book, "A Collection of Memorials Concerning the People Called Quakers," printed in Philadelphia originally, but reprinted in London, 1788, loaned by a friend, I find many facts illustrating the principles, character and sufferings of those good people who lived in the vicinity of this town; and by a personal visit to their old meeting-house and cemetery my interest has been deepened. Following an up-hill and winding road three miles, we reached, on the mountain side, a farmhouse called "Tyddyn-y-Gareg" (rock farm) an old, antiquated, dilapidated building, where two hundred years ago a Quaker family lived, and near which is the old Quaker graveyard, surrounded by a stone wall five feet high. The graves are unmarked, but there are several head-stones of recent date, with Welsh inscriptions. The last Quaker burial was some fifty years ago. The meeting-house, 30 by 25 feet, of rough stone, gray with age, is a little distance from the graveyard. It is now called "Tabor," and is used as a house of worship by the Congregationalists.

Between this sacred spot and the town is a hill farm called "Bryn Mawr" (great hill), where an ancient and esteemed Quaker named Rowland Ellis lived. He was born in 1650 and "convinced of the truth" in 1671, united with the Quaker Society, and on account of his testimony suffered five years of imprisonment. In 1680, this true disciple of William Penn, because he would not violate his conscience by taking the oath of allegiance, was arrested. The judges before whom he appeared and stoutly refused, condemned him to suffer a long imprisonment, and said, "That in case the Quakers refused the second time to take the oath, they should be proceeded against as traitors, the men hanged and quartered and the women burned."

Rowland Ellis, released from prison in 1686, went to Pennsylvania, brought land a few miles out of Philadelphia, and came back for his family. He called his new home after the farm on which he had lived in Wales, "Bryn Mawr," which is now the name of a station, with beautiful surroundings, a few miles out on the Pennsylvania railroad. Rowland Ellis was a minister, distinguished for his piety and service, an able advocate for civil and religious liberty, the doctrine and discipline of Society, and the best interests of humanity. He died at the house of his son-in-law, John Evans, in 1729; was buried at the Plymouth burying ground, and of whom it is said, "He rests, enjoying the reward of the

righteous, and his works follow him."—*Dolgelley Letter in Cincinnati Commercial Gazette.*

The foregoing, cut from a secular paper seems to have been written by a correspondent who was travelling in Wales. It is interesting as giving some account of a district in that country whence many of the early settlers of Pennsylvania came.

It may be added that the house which Rowland Ellis built in Merion in 1704, and in which he resided till his removal to the east side of the Schuylkill, is still standing about as it was in his time, and in good condition. In early days the religious meetings of Friends in that part of Merion were held in this house, and in some instances marriages were solemnized there. It afterwards became noted for being the residence of Charles Thomson, Secretary of the Continental Congress. He occupied it for a great many years during the latter part of his life, and died there in 1824, at an advanced age.

It was in this house that that eminent man performed the work of translating the Bible from the Septuagint, the first translation ever made in America. It was published about the year 1809, and is esteemed a most valuable work. G. V.

BRYN MAWR, Ninth Month 6th, 1889.

FROM "THE WESTERN FRIEND."

Many people realize that it is a time of business depression, so great as to constitute what is often called "hard times." To a very large number the cause of this seems to be a mystery; but there is no mystery to those that are willing to see the things that now operate to produce this state of affairs. The annual expenditure of the people of this nation for tobacco is six hundred millions of dollars, and for alcohol liquors, nine hundred millions, or one thousand five hundred millions of dollars, expended as a *useless* waste for articles which require the smallest amount of capital and labor to produce of any others in all the lists of articles manufactured in our country. If this waste was expended in the purchase of clothing, food, books, or in building and furnishing homes for the people, the increased demand for everything in these lines of manufacture would be so great that every laboring man in this nation would find employment at good wages. It would add an impetus and volume to trade and manufacturing in this nation, and put money in circulation equal to a great war.

For twenty years this *waste* on alcohol and tobacco has gone on increasing in this nation, until its grand total has reached the considerable sum of more than twenty billions of dollars; and yet men affect to be surprised at the present "hard times." It is the legitimate result of this national folly. This is the great economic side of the temperance reform that both business men and laborers must comprehend before times can get much better. If these "waste bills" could be saved to the legitimate avenues of trade and manufacture, prosperity would smile upon this nation. But the law is fixed that a man cannot have his money and spend it at the same time, and it is equally true that he cannot *waste* it for tobacco and liquor and have it to spend for needful improvements and necessities of life.

With a large number of people this business aspect of the temperance reform is of more weight than the moral aspect, as a means of arousing interest in the prohibition of the liquor traffic, and in the tobacco reform, and we believe it ought always to be kept in view along with

the moral. It seems clear that until this people are aroused to see these results of the wastefulness of the tobacco and liquor evils, and use the power which our Government has put into their hands for their own relief, by the prohibition of the liquor traffic and the checking of the tobacco habit, that their punishment is both just and unavoidable; and it will continue to increase with every coming year until this power is exercised. The influences that operate for evil, both moral and economic, are so many and so great, that the time has come when no one rightly concerned for the cause of truth and the prosperity of the people can longer be indifferent about these things. Henceforth the whole weight of our numbers and influence should be cast with no uncertainty on the side of prohibition and the reform of these evils.

Natural History, Science, &c.

Sycamore Blight.—The *Journal of Mycology* states that the blight which has been so abundant on the sycamore tree in various parts of our country during the past three years, is caused by a fungus. In some cases the trees have been killed by it, and in many others the growth of the early part of the year has been completely destroyed. The sycamore is extensively planted as a shade tree, and its wood is used extensively for making tobacco boxes. It is stated that one mill on the Embarras River, in Southern Illinois, has within a few months received orders for 11,000,000 feet of sycamore lumber.

Smut Fungus on Grain.—Among the preventive measures against this enemy of grain is the steeping of the seed in diluted copper sulphates, which poisons the delicate filaments springing from the spores of the fungus before they can penetrate the substance of the seed.

A Lion Lamed by its own Claw.—The fine lion Jupiter, at the Clifton Zoological Gardens, Bristol, which is nearly eleven years old, having been cubbed in the gardens in the year 1877, was noticed last week to have a claw on the left fore paw growing into the flesh of its foot, which was gradually laming the animal. The lion was evidently in pain, and it was deemed advisable to remove the claw. The novel operation was performed on Seventh-day morning, when a close travelling cage was introduced into the den, and placed against one of the sliding traps in the partition. The animal having been introduced to enter the cage, it was removed to the floor of the building and another cage, but of different construction composed solely of iron bars, placed endways to the door of the first cage, and the two firmly lashed together. After some little trouble, the animal was got into the second cage, which was so narrow as not to admit of its turning round. Heavy inch-and-a-half planks were then inserted between the bars, and the lion tightly wedged in. Up to this point he had submitted quietly, but on the introduction of the planks he spluttered them up as easily as though they had been matchwood. At last he was firmly wedged in, and a little time was given him to cool down. A favorable opportunity for the operation occurred in a few minutes, his paw being partly through the bars. The head keeper, Blunsden, who was waiting with a powerful pair of nippers, seized the opportunity, and the offending claw was promptly removed. The operation, which was conducted by Dr. Harrison, treasurer of the gardens, was absolutely necessary, as the claw had already grown more than half an inch into the foot, and would probably have killed the animal.

Hard Woods.—The relative hardness of woods is calculated by the hickory, which is the toughest. Estimating that at 100, we get for pignut hickory, 86; white oak, 84; white ash, 77; dogwood, 74; scrub oak, 73; white hazel, 72; apple tree, 70; red oak, 69; white beech, 65; black walnut, 65; black birch, 62; yellow and black oak, 60; hard maple, 56; white elm, 58; red cedar, 56; cherry, 55; yellow pine, 53; chestnut, 52; yellow poplar, 51; butternut and white birch, 43, and white pine, 35. According to this formula, woods possessing a degree of hardness equal to only about 40 per cent. or less than that of hickory should not be classed as hard woods. Such woods are, however, limited in quantity, and are not of sufficient importance to justify a classification, and the trade will continue to construe hard wood to mean everything except white pine.

One cord of air-dried hickory or hard maple weighs about 4,500 pounds, and is equal to about 2,000 lbs. coal. One cord air-dried white oak weighs about 3,850 lbs., and is equal to about 1,715 lbs. coal. One cord air-dried beech, red oak, or black oak, weighs about 3,250 lbs., and is equal to about 1,450 lbs. coal. One cord air-dried poplar (whitewood), chestnut, or elm weighs about 2,350 lbs., and is equal to about 1,050 lbs. coal. One cord air-dried average pine weighs about 2,000 lbs. and is equal to about 925 lbs. coal.—*Scientific American.*

Overthrowing a Chimney.—By an ingenious method, a chimney one hundred feet high by ten feet square on the Gasnold mills property, New Bedford, Mass., was recently thrown down. It was undermined by knocking out the bricks on two sides and shored up by planks placed in the apertures. These planks were liberally strewed with tar and kerosene. When the time arrived for felling the chimney, the planks were set on fire. As they became sufficiently burned to cease to support the chimney, the mass settled out of the perpendicular, and then cracked and fell with a crash to the ground. The bricks at the top were scattered over quite an area, but masses of brick for a length of two feet or more to the height of sixty or seventy feet clung together and did not break up.

The Lady Bug.—The State Board of Horticulture of California have imported Australian lady bugs to fight the cottony scale which is now doing so much damage in the orange gardens of that State. The scale is the bug's chief article of diet, and this method of saving the orange trees has succeeded where all others have failed.

Butter Extractor.—A Swedish inventor has patented an application of the centrifugal system of separating cream from milk, by which the butter can be obtained at the same operation. This he effects by introducing into the churn where the milk is placed, a trundle-wheel which agitates the cream so as to allow the butter particles to separate from the milk in which they are entangled; and the butter is thus delivered free of impurities.

Items.

The Cause of Peace among English Clergymen.—At the gathering of the Canterbury Diocesan Conference, held in the Seventh Month, Canon Westcott introduced a discussion on the Church's duty to promote the peaceful settlement of international disputes.

The Archbishop of Canterbury said, "It is the duty of the Church to promote on earth a real spirit of peace, and to use every means at its disposal to

spread that spirit, in order that the practice of it may also spring up."

Canon Westcott spoke of the *brotherhood of nations*, and said: "It follows that every duty which is recognized in our private dealing with another, every virtue which ennobles the intercourse of man with man, every aim which gives dignity to personal effort, every aspiration which brings enthusiasm to personal sacrifice, all the sweetest and illuminating and noblest and most analogous place in international relations. And again, every vice which we indignantly condemn among ourselves—arrogance, deceit, overbearing violence, self-seeking—remains a vice, however imposing may be the scale on which it is displayed. As Christians, then, we oppose war not simply as a means of evil and fertile in suffering—for truth's sake we could bear our own sacrifices and greater pains—but because it hinders what has been made known to us as the Divine counsel, for the progress of man, both in its methods and in its results. It tends to give sanction to modes of action universally condemned in private life; it encourages virtues with unworthy or, at least, questionable motives; it is the form of self-assertion maintained by force; it leaves behind a sad heritage of discontent to the vanquished and of arrogance to the victor; it separates with a legacy of bitterness those through whose generous co-operation the end of creation must be reached."

A Non-conformist in Church.—The vicar of Farlam, Cumberland, England, invited a Primitive Methodist minister to preach in his place of worship in the Fifth Month last, on a special occasion. For this he has been taken to task by his bishop, who tells him, it must not happen again. The vicar pleaded as an excuse that the sermon was not delivered from the pulpit, but from the lecture or reading desk. But the bishop decided that it was out of order to admit any dissenting minister into one of the meeting-houses of the Established Church.

Dispute about Consecrating a Burying Ground.—A new cemetery having been laid out near Huddersfield, England, the Burial Board objected to having it "consecrated," on the ground that such an act would give to the rector of the Established Church the right to excommunicate persons, opening graves, &c. The rector contended that it was compulsory under the Burials Act to have a portion of the ground "consecrated."

Mennonite View of Camp Meetings.—The *Herald of Truth* (Mennonite) says:

"Mennonite Camp Meeting.—In an exchange we read the notice of a camp meeting under the above caption, and herewith enter our protest against the use of the word in this connection. The camp meeting is a thing unknown among orthodox Mennonites. It is a discipline of the church does not recognize anything of this kind, and is absolutely prohibits it. And it sounds very strange indeed, to hear any one speak, or to read of a Mennonite camp meeting. The Mennonites have houses wherein they worship, and so have most other bodies, and it would be well if all the houses of worship of the Mennonites as well as of other denominations, could be well supplied with such a service. There was a time when it was necessary for people to hold their worship in the woods, in caves, or some hidden, out-of-the-way place, in order to avoid being discovered by the persecutors. That necessity does not now exist, and he who desires in quietude and in the fear of the Lord to edify himself, and enjoy communion with God and with his fellow saints, will rather seek the quiet service of God's house, than the boisterous and exciting scenes that usually accompany the services of the camp meeting."

African Revival.—We have seldom heard, says the *Indian Witness*, of a more striking illustration of the power of vital Christianity than is found in the news which reaches us of a great revival among the Boers of South Africa. It is not merely that a religious revival has taken place among them; the miracle reported is that the Boers have learned how to love the Zulus, and that the two races worship together and work in harmony. It is truly a miracle not only to make a Boer regard a Zulu or a

Kaffir as a man, but to love him as such and join him in serving the common Father of all.

THE FRIEND.

NINTH MONTH 21, 1889.

The following extract from a letter from an aged Friend in Ohio, it is hoped may prove an encouragement to some of those who are endeavoring to labor in the Lord's cause.

"I have from season to season read accounts in THE FRIEND, of the appointment of meetings in various places throughout your land—some amongst those who are not members of our religious Society—and the accounts have been encouraging. If such committees are appointed under a right and living exercise, and are livingly concerned to seek for a qualification by the Head of the Church, I do not fear that it will run into the fast lane.

I feel very much interested in the welfare of Philadelphia Friends, and according to my measure have craved for your Yearly Meeting that it may be preserved and kept as a shining light in the world, and to all other bodies of Friends. I do, however, look upon such an appointment, as above alluded to, as a very responsible one; and I surely believe neither ministers nor others can labor in the Church availing for gathering into the true fold, only as they themselves experience the fresh anointing from on high, according to the declaration of our holy Redeemer, "Without me ye can do nothing." I have craved that those who may feel the truth to be precious, may be faithful to do their whole duty; so that they may be found clear in the Divine sight. Some of us are now far advanced in life, and according to the course of nature cannot remain much longer on the stage of action, which brings solemn reflections on my mind, and my desires are that the mantle may fall upon the young and rising generation, that thus there may be a succession of faithful standard-bearers raised up in the militant church, in the places of the fathers and mothers who are passing away from works to rewards."

SUMMARY OF EVENTS.

UNITED STATES.—Prof. C. H. F. Peters, of Litchfield Observatory, Hamilton College, discovered an asteroid on Eighth Month 25th. The new planet ranks as No. 287 in the asteroid group. The first computations appeared to show a perhaps unprecedented path in astronomy—that a portion of the new asteroid's orbit was within a portion of the orbit of Mars. An Associated Press reporter who interviewed Professor Peters at his observatory on Seventh-day, found him engaged on a second computation of the new planet's orbit. The Professor was of the opinion that when this was completed it might show that asteroid No. 287 had, after all, an orbit entirely outside that of Mars, although it is, perhaps, the nearest asteroid to the sun yet discovered.

Captain Marshall, of the schooner *Landsker*, which has just returned to Gloucester, Mass., from a fishing voyage to Iceland, reports the finding of new fishing grounds, 28 miles northeast by east of Skagastrand, and 30 miles north-northeast from Siglofar harbor. They are from five to six miles wide, and 14 to 16 miles long. The water varies in depth from 35 to 50 feet.

Samuel S. Cox, a distinguished member of Congress from New York City, died on the evening of the 10th instant, aged 65 years.

The storm on the Atlantic coast continued with much severity until the 12th instant. At the Delaware Breakwater and in its vicinity, 29 vessels were driven ashore, and about 40 lives lost. At Atlantic City, many of the bath houses and considerable of the beach walk, were swept away. The damage at this place is estimated at \$200,000.

A despatch from Hot Springs, Yellow Stone Park, received on the 12th inst., says that during the last two or three hours there have been great convulsions of nature, and subterranean commotion was followed by tremendous explosions of gas and steam in the upper geyser basin. As a result, all the system is in active outbreak, the large geysers being especially depressed. The Giants and Gigantes are vigorous activity, as are many others which have long lain dormant, and were supposed to have been extinct. Scientists explain that all of this phenomenal outburst is directly traceable to and connected with the atmospheric and submarine concentrations of the great electric current that prevailed along the Atlantic coast simultaneously.

The great retail dry goods and notion house of Bamberger, Bloom & Co., in Louisville, Kentucky, was destroyed by fire on the night of the 15th. The loss is estimated at nearly \$1,000,000. Six firemen were killed by falling wall.

It is estimated that the 80,000 Americans who have visited Europe this season have paid to the companies for passage both ways upwards of \$10,000,000.

It is said that the new four masted ship, *Ellsworth*, bound for the California coast, will carry 1,031,900 gallons of refined oil, valued at \$292,872, carries the largest cargo of oil ever sent at this port (Philada) in a sailing vessel.

The Philadelphia Market Company, which is about to apply for a charter, has, it is stated, acquired title to the site for a fair on the west side of the Schuylkill River between the river and Thirtieth, Chestnut and Market streets, and intends to put up an immense market-house for wholesale and retail dealers and housekeepers generally.

Deaths in this city last week numbered 352, which is 9 more than during the previous week, and 6 less than during the corresponding period last year. Of the foregoing 202 were males and 150 females: 40 died of consumption; 27 of marasmus; 23 of diseases of the heart; 19 of typhoid fever; 18 of pneumonia; 14 of cholera; 13 of inanition; 12 of apoplexy; 11 of old age; 11 of cholera infantum; 10 of debility, and 9 were drowned.

Markets, &c.—U. S. A's 130s; 106; 4; reg. 127; compon, 128; currency 67s, 11s 4/10.

CORFUS is in small supply and firm, at 11 1/2 cts. per pound for the following brands:

FEED—Winter barn, choice and fancy, \$13.50 a \$14.00; do fair to prime, \$12.50 a \$13.00.

Flour and Meal.—Western and Pennsylvania stone, \$2.50 a \$2.75; do, do, extras, \$2.85 a \$3.25; No. 2 extra, \$2.75 a \$3.25; Pennsylvania family, stone ground, \$3.70 a \$4.00; Pennsylvania roller process, \$4.00 a \$4.40; western winter, clear, \$4.00 a \$4.25; do, do, straight, \$4.25 a \$4.50; winter patent, \$4.50 a \$5.00; Minnesota, clear \$3.50 a \$4.00; do, straight, \$4.25 a \$4.85; do, patent, \$5.00 a \$5.55. Rye flour was scarce and in fair demand, at \$3.00 per barrel for choice.

GRAIN.—No. 2 red wheat, 79 1/2 a 80 cts.

No. 2 mixed corn, 41 a 24 1/2 cts.

BEEF CATTLE.—Extra, at 47 cts; good, 44 a 45 cts; medium, 34 a 41 cts; common, 24 a 34 cts; fat cts; 41 cts; 2 a 3 cts.

SHEEP.—Extra, 5 a 6 1/2 cts; good, 4 1/2 a 4 7/8 cts; common, 3 1/4 a 3 1/2 cts; culls, 2 1/4 a 3 1/2 cts; lambs, 4 a 4 1/2 cts.

HOGS.—Good light western, 6 1/2 a 6 3/4 cts; heavy western, 6 1/4 a 6 3/4 cts.

FOREIGN.—Through the intervention of Cardinal Manning and the Lord Mayor of London, the great dock strike in London was ended last week; and most of the men have resumed work the present week. The wages demanded by the men are to be paid, commencing on the 15th inst.

It is estimated that the cost to London as a whole has been not less than \$10,000,000, and the consequent depreciation of the various dock securities amounts to \$5,000,000 more; but this huge loss represents the purchase of a most valuable and every vital lesson to ship-owners and merchants generally, who are the real backbone of London's commerce.

John Burns, the most prominent leader of the strikers, has refused to contest the Dundee vacancy in Parliament for the coming year, and has revealed to be the true one, that if he did successfully, it would look like claiming and accepting a reward for his efforts on behalf of the dock laborers; this is considered to be thoroughly characteristic of the man. It is stated that his later speeches to the strikers after their success was assured, were full of intelligence and value, and that his exhortations to them to treat the episode as a turning point in their

existence and to devote themselves hereafter to better lives, and greater attention to their wives and children, and the making of brighter homes, were received with more earnest cheering and cries of "We will!" than had greeted any of his earlier utterances of defiance.

A scheme is announced for the construction of a ship canal to connect Edinburgh and Glasgow. The capital is placed at £7,000,000.

Another expedition is about to leave England in search of sunken treasure. This expedition, which has the recognition of Lloyd's, is to proceed to the west coast of Africa to attempt to recover the specie, gold dust and ivory, which went down in the African steamer Gambia some twelve years ago. The valuables were in the steamer's main room and safe, and it is the belief of the promoters of the expedition that the safe is intact with the money, &c. Inside. A diver is expected to have recovered a few years ago, about \$10,000 worth of ivory from the vessel.

The latest Government report concerning the wheat crop of France, shows that 7,160,000 hectares were sown this year, against 6,975,134 hectares last year. The crop is estimated to be 11,111,215 hectolitres against 98,740,758 hectolitres in 1888.

Estimates of the loss by the recent fire in Antwerp, range from 25,000,000 to 35,000,000 francs. No public buildings was injured. The damage to the Bourse is insignificant. Corvillain, the proprietor of the cartridge factory, has been arrested for the recent disastrous explosion occurred, has been arrested.

The *Mouvement Geographique* states that Henry M. Stanley is marching toward Mombasa, after fighting his way through the hostile country of the Umjoro and Uganda tribes and conquering the natives. He has been authorized by the British Government, the British East Africa Company over the country from the upper Nile to the East coast. The paper declares that it is doubtful if Emin Pasha, to whose relief the Stanley expedition was originally sent, is accompanying him. Several proceedings that were begun in 1490, in Poland, to decide the ownership of 40 acres of land, have just been concluded.

The entire bench of Judges, district and circuit, of Riga, have been arrested for using the German language after they had been ordered to use the Russian.

RECEIPTS.

Received from Abel Walker, Kan, \$2, 63; from Thomas Driver, Cal, \$2, 63; from Ezra Stokes, N. J., \$2, 63; from Levi S. Bowles, Agt, \$2, 63; from John Ames, N. Y., \$6, being \$2 each for himself, Joel C. Paxson, and Phebe Humphrey, vol. from Russell Taber, Io., \$2, 63; from Hannah 2, Twitcheil, O., \$2, 63; from Sarah W. Bacon, N. J., \$2, 63; from Maria C. Newkirk, Philada., \$2, 63; from Richard Mott, Agent, \$10, 10; \$2 each for John W. Mott, Thomas E. Mott, John W. Wood, and William P. Young, vol. 63, and \$2 for John Hampton, to No. 27, vol. 64; from Mary P. Smith, Kan, \$2, 63; from Susan F. Hoxie, Mass., \$2, 63; from William C. W. Jr., Phila., \$2, 63; from George Briggs, Io., \$2, 63, and for Ole Watland, \$2, 63; from Thomas McNichols, Kan, per Levi Bowles, Agent, \$2, 63; from William Penn Evans, Cal, \$4, being \$2 each for J. William Patterson, and Caroline Cope, \$2, 63; for Dr. F. E. Stewart, Del, \$2, 63; from John W. South, Philada., \$8, being \$2 each for herself, Edward L. South, Walter South, and Robert Burton, vol. 63; from William Harvey, Agent, Ind., \$12, being \$2 each for William A. Sully, Sally Allen, Ashley Johnson, Mahlon Johnson, Esther Betts, A. K. Van, Stanton, and Henry E. Deas, O., \$2, 63; from Rebecca P. Brooks, Philada., \$2, 63; from Millin Cooper, Philada., \$2, 63; from Thomas Waring Md., \$6, being \$2 each for himself, William Waring, and Lydia Waring, vol. 63; from Samuel Deas, \$2, 63, and for Henry E. Deas, O., \$2, 63; from Margaretta M. Cooper, N. Y., \$2, 63; Whitson, W. Philada., \$2, 63; from Thomas W. Fisher, Pa., \$8, being \$2 each for himself, John G. Haines, Levi S. Thomas, and Charles Grimshaw, vol. 63; from Samuel W. Stanley, Agent, Io., \$4, being \$2 each for Rebecca P. Brooks, Philada., \$2, 63; from Rebecca P. Brooks, Philada., \$2, 63; from Millin Cooper, Philada., \$2, 63; from Thomas Waring Md., \$6, being \$2 each for himself, William Waring, and Lydia Waring, vol. 63; from Samuel Deas, \$2, 63, and for Henry E. Deas, O., \$2, 63; from Margaretta M. Cooper, N. Y., \$2, 63; Passmore, \$2, 63; from Mark H. Buzly, N. J., \$2, 63; from George Blackburn, Agent O., \$12, being

\$2 each for Robert Miller, Edward Stratton, Miriam French, Sarah S. Winder, Rachel C. Stratton, and Eliza French, vol. 63; from Jane H. Pickering, N. J., \$2, vol. 63; from Sarah T. Warrington, N. J., \$2, vol. 63.

Remittances received after Third-day will not appear in the Receipts until the following week.

NOTICES.

RACHEL MARY THOMSON having removed from West Philadelphia to 1319 Wynkoop Street (above Spruce) Philadelphia, wishes to inform her friends that she will be glad to undertake type-writing of any kind or hand copying, and will endeavor, by care and attention, to secure the confidence of those to whom she may entrust her with her work.

Envelopes for advertising or other purposes addressed promptly and on reasonable terms.

If any of our Quarterly or Monthly Meetings should have on hand a surplus of the "Extracts from the Minutes of the Yearly Meeting for 1889" will they please return them to Friend's Book Store, 304 Arch Street, in care of Jacob Smedley?

FRIENDS' SELECT SCHOOLS.—These schools, under the care of the three Monthly Meetings of Friends of Philadelphia, will re-open in the new School-house 140 N. 10th Street, above Arch, on Second-day, Ninth Month 16th, 1889.

The department for Boys continues under the care of John H. Dillingham; that for Girls in charge of Anna Walton; and both of them will be assisted by a corps of competent instructors.

The Boys' and Girls' Primary Departments, will be in charge of Elizabeth W. Warner and Elizabeth N. Woolman.

The new School-house is well adapted for conducting a first class school; great care having been taken to provide all necessary comforts and conveniences. The heating and ventilation have been carefully attended to, and the cheerful and commodious character of the rooms, and the arrangements of the surrounding grounds are attractive. The scholars will have the benefit of Friend's Library, within the same enclosure as the School-house.

Children not members of our religious Society are admitted, and the attention of Friends and others is invited to these schools, which afford the opportunity for education free from the disadvantages attending tuition to many seminaries. The terms are moderate, and Friends who find the charges burdensome may be fully relieved.

All applications, whether for members or others, to be made to the Committee on Admissions:

- Edward Maris, M. D., 1106 Pine St.
- Caleb Wood, 614 Pine St.
- S. Mason McCollin, M. D., 1823 Arch St.
- Sarah E. Smith, No. 1110 Pine St.
- Rebecca C. Shoppard, 459 Market St.
- Juliana R. Tatam, 2123 Arch St.

DIED, on Sixth-day evening, Eighth Month 27rd, 1889, of his late residence, 404 North 40th street, Canada, ADAM SPENCER, in the 75th year of his age. Deceased had been a minister among Friends for forty years, and during that time had travelled a great deal in that capacity. By the removal of his dear Friend, a great loss is sustained, both by the Church, which is deprived of one of its most earnest workers, and by the family, which has been bereft of a devoted husband and father. Throughout his illness he was very cheerful and bore the extreme suffering, accompanying his disease, with patience and resignation. During the last few weeks he had been able to say, "He had no choice whether to die or to live; he left it to his Creator to do as He deemed best." His conversation was chiefly of Heaven, and he departed this life, leaving with all the full assurance that his end was perfect peace.

At his late residence, 404 North 40th street, West Philadelphia, on the 7th of Ninth Month, ELLIS PENNINGTON, son of Daniel and Letitia A. Pennington, of West Grove, in the 46th year of his age. He was a member of the Monthly Meeting of Friends of Philadelphia, for the Western District. He bore his long and painful illness with patience and resignation, and his relatives and friends have the consoling hope, that through Infinite love and mercy, he has been permitted to enter a mansion of peace and rest.

FOR "THE FRIEND."

Incidents and Reflections.—No. 190.

"SEEK PEACE WITH ALL MEN."

A few years ago an intimate friend related to me some of the experiences of a cousin, a Presbyterian woman, who had spent several years during or after the civil war, in the employment of a Missionary Association, mostly in different parts of the Southern States, looking after the interests of the freedmen and Indians, and conducting schools for their benefit. One of these narratives so interested me that I requested my friend to procure it for me in a written form. She accordingly wrote to her cousin, who sent a reply dated Eighth Mo. 23d, 1883, from which the following is extracted.

I will cheerfully comply with thy request; but how that little request carries me back to the past! I cannot begin to tell thee how many things are recalled. After reading thy letter I seem to see myself "way down South." I fancy I can almost hear the thunder of cannon, and see many sights too terrible to think of. Strife, fire and sword, blood and carnage, all about me; or rather like a fearful "Panorama" passing before me, in which I see the ripest fruits of many battle-fields, ambulance, stretchers, hospitals with their long rows of cots, all filled with suffering, sick, wounded, dying and dead. Oh what pen picture can describe the sighs, the groans, the agony of those sufferers; or how can mere words convey to the present generation even a faint idea of the terrible times and scenes of 1861-64—ruined cities, desolated homes, destitute widows, starving orphaned children: Oh it was terrible. Even now I shudder, and tears unbidden start as I recall some of the terrible scenes I witnessed.

At last the enemy surrendered, the war was over, but its effects were still felt; and I find myself trying to make my way over and among the ruins of over three thousand buildings which, before the war, were a part of Atlanta, the "Gate city" of the South; hundreds of the families—crippled, limbless men, destitute widows, helpless children, had returned to find their former homes in ashes, nought but a portion of the chimneys left standing, and here they had camped. White and colored were here, all equally destitute; but to the colored race freedom had come, that was

a boon they had long been praying for, and were rejoicing though they scarcely knew what the word freedom meant—still they were hopeful and happy; and it was cheering and pleasant to see their bright faces and listen to many of their experiences.

The incident there mentioned occurred in Atlanta, Georgia. Uncle Billy was a good old man, a Baptist preacher; Sue, his wife, was much younger, and was a *shouting* Methodist; each thought their way the *right* way, and each labored to convert the other. Uncle Billy was quite proud of his young good-looking wife. Sue was equally proud of her old gentleman (as she always called him), for he was a leader in the Baptist Church; he could not read, but could quote Scripture for almost every occasion. Sue had a high temper, but uncle was very patient with her. He feared his dear Susan would be lost, not on account of her temper, but for want of true baptism (immersion). We often heard him praying for her. He would say, if she *would* not be buried in baptism (go under the water) with Christ, how could she expect to rise to glory with the Lord. We often heard warm discussions on baptism between them. For several weeks Sue had been very kind to a poor cripple, who used to crawl to our gate when hungry. On a rainy day, I told Sue to have him come into the kitchen by the stove, while he ate the fragments saved for him. He came in, and when his plate was empty he put it on the stove-herd. Sue was cooking dinner, and as he shuffled himself away, a cover fell off of one of Sue's boilers, fell on the plate and broke it. I heard the racket, and went out. Sue was in a perfect rage. She said he broke the plate: he said he did not. She said, if he said he did not it was all the same as saying "she told me a lie"; and that made her terribly indignant, so much so, that she threatened to kill him if he ever came into the kitchen again. I tried in vain to pacify her; her indignation was too great for her to bear anything. Weeks passed by. The cripple would not venture inside the gate—a plate of fragments was carried out to him.

Then came a Sabbath morning when Sue told me they would have communion that day, and she asked for a quarter to put into "De Treasury of de Lord." We had tried to have a reconciliation between them, which had thus far only seemed to increase the bitterness on Sue's part. This morn I talked to her again, but she said, "Bless your dear heart, I would if I could. Sometimes I think I will forgive him, but every time my eye lights on him I think, 'dat black nigger call me, a preacher's wife, a liar.' I get so mad again, and so I jest cluded I will not look at him: *no more* I will." After some further talk with her, I read portions of the 18th chapter also of the 5th chapter of Matthew, to her. She left me, saying "Bless you honey, I would if I could, but I wont *never* look at him again."

During the next hour I was surprised to see Sue coming up the street in a full run. She rushed into my room all in a perspiration, saying "Oh honey, please give me 'nother quarter,

quick please, fore meetin's out, and de debil comes. I tell you all 'bout it when I come home. Glory to God!" She was so excited and *happy*, and out of breath, that I did not know but she would get to shouting, so I asked no questions, gave her the quarter, and she went away on a run.

After the meeting was over, she told me that as she went to meeting, "She seen dat *poor* cripple lying on the commons; and as she passed near him, she turned her back on him; and *right off* something said to her, 'Sue, what for you turn your back on dat poor black cripple?' An look all round, and wonder who dat speak so to me, nobody round me, I begin to feel *soarey*. Then I try to listen to de preaching; but *no*, dat poor black cripple, dat broken plate and angry Sue, stand fore my eyes all the time, and my quarter getting so hot it most burn my hand; and then I hear something say, 'Sue, jest so Jesus will turn his back on you.' And I almost screamed out, and bless you, honey, I *jest* remembered what you read to me; and I say, *I'll do it*, an I jest run out of meeting to find the cripple. Then I run fast to him, and say, 'Benny, I see sorry, forgive me, and here is a quarter for you; and to-morrow you jest come to the mission-house, I give you good dinner, and we'll splane it all.'

Accordingly, the next day we had a long conference in our kitchen. Just before I left them, the cripple said, "Aunt Susan, you a good woman, what for you get so mad sometimes?"

"Dunno, Benny, 'pose de debil gets so big in my heart sometimes, I can't help it."

"Yes, I spose so; but, Aunt Susan, if you didn't open de doa (door) he could'n't get in."

"Dats so," said Uncle Billy, "always remember to keep de doa shet, and de debil will not trouble you."

I left them in the midst of Uncle Billy's lecture on watching and praying, in order to keep the devil at a distance.

Surely it was the blessed influence of the Spirit of Christ operating on the heart of this quick-tempered woman, that enabled her to see that she must not cherish hardness and ill-will towards any; and so humbled her, that she could ask forgiveness of the poor cripple whom she had driven from her presence. Those who have yielded submission to Divine requirements which were greatly opposed to their natural wills, can understand somewhat of the joy and peace which followed her submission to the same constraining power.

The "peace of God, which passeth all understanding" is bestowed by Him only on those who are willing to lay all upon his altar. A writer in *The Evangelical Visitor* says: "I well remember when I first set out in the service of God, He demanded a small thing of me in the way of changing my dress; but I was not willing. It seemed to haunt me wherever I went, until the Spirit of God spoke to my heart on this wise: 'If you were to come to Heaven's door, and it should be said to you,—because of your

unwillingness in this small thing you cannot enter—what would you then give to come back and do your work over again?"

The *Christian Advocate* recently published a communication from one of its contributors which shows how much an unacknowledged offence may interfere with happiness and mental peace. It says:—

"My mother frequently sent me to the store on small errands. She would give me just the amount of money the articles cost, so that in coming back I would only have the parcel to take care of without having my attention diverted from it by the change.

"In time I became quite expert in such work, and would let myself loiter in at store windows to see the goods displayed; of course, wasting mother's time while I did so. As temptation to do worse follows the commission of a sin, and as looking at what is out of reach goes before the desire to have, and the resolve to possess. I saw candy for sale, my mouth watered for it, and my fall followed quickly after. I reflected that when I went for some sugar, getting that at a cent a pound less than mother told me to get, would leave some change. So I entered the grocery store, bought seven cent sugar, instead of that at eight cents, and came out with the change in my hands. The strength of my desire for the candy was more powerful than the fear of being seen going in or out of the candy store, or of having the candy found in my possession. I succeeded so well the first time that I repeated the theft and the purchase several times. Sin is hard work. I had to choose candy that had not a strong flavor, as mother might detect me by the smell, and it had to be of a kind I could eat quickly, and it must be eaten carefully, else my general sickness might betray me.

"I was never found out, but the burden of concealment grew very heavy till one day I thought it would be as easy to take some pennies out of mother's purse. As I knew this was stealing outright, I soon reached the conclusion that I was a thief. Part of my difficulty was gotten over by my honest spending the money I was trusted with just as I was directed. Mother was pleased that she got a better value for what I spent than had lately happened, while I kept my guilt secret to myself. It was several years before the load was removed, when I found peace with God in Christ, and only then my mother was told. How gladly she would have forgiven me at the time had I confessed it then! And what trouble I would have spared myself! The knowledge of that guilt of mine was as heavy upon my childish heart as is that of a hidden crime, committed in darkness by one whom the world believes to be honest."

J. W.

"The religious education of youth goes to the very foundation of character, and mothers have largely delegated it to any young person who happens to teach a Sunday class; thus resigning the sweetest and strongest part of their influence—that part which, when their children are old men and women, will keep them in the way they should go, or bring them back to it. Sunday-schools for poor neglected children are a heavenly thought, but no Sunday-school can take the place of a good mother, who gathers her children around her knees and, out of the fulness of her love and the worship in her heart, teaches them what is good and what is evil. Better far for a man or a woman to be so taught than to sit at the feet of a Gamaliel."—*A. E. Barr, in North American Review for Fifth Month.*

An Address to the Youth.

FOR "THE FRIEND."

Once I was young like you are, but now I am old, yet my interest for the rising generation has not left me. You are now entering upon the busy scenes of life: the world with its many snares and cares is spread out before you. You have already seen that good and evil are both in the world; and that there is right and wrong in human actions, and I believe that you have often found that there are two contrary spirits striving in you; the one inclining you to that which is good and right, the other to that which is evil and wrong. So that when you have good, evil is present with you. But you have the power of choice as to which you will be led by. So you have constant need to watch and pray that you enter not into temptation. But the power that inclines us to good, is over all the powers of evil, and we become servants to whichever we yield ourselves servants to obey.

The good teaches us to deny all ungodliness and worldly lusts. The evil leads us to follow the lusts of the flesh, the lust of the eyes and the pride of life, which are not of the Father, but of the world that lies in wickedness. The good spirit leads us through the cross into the strait and narrow way of life: while the evil spirit permits us to go in the broad way of the world, and to comply with its ways in worship, dress and language. And also in its ostentatious shows and vain amusements.

And now, my dear young friends, I speak from a degree of experience, being now near 88 years old.

"I've passed through many a wild extreme,
That youth and youthful folly knows;
And tasted deeply of the stream
That round the shrine of folly flows."

But never found the joys of God's salvation there. But my preservation has been in God's great and unbounded mercy, and is marvellous in my eyes. So let me entreat you while in the younger walks of life, to use the grace that is given, and make straight paths for your feet, lest that which is lame and ready to fall be turned out of the way, but let it rather be healed. Strive to follow peace with all men, and holiness, without which no man shall see the Lord.

"Let all bitterness, and wrath, and clamor, and evil speaking be put away from you." And the God of grace will be with you that when the conflicts of this present world are over, you may have an inheritance among the saints in light. But beware of what the world calls fun. It fills the mind with that which kills the growth of righteousness, and leaves no room or relish for heavenly things. Also beware of too much self-indulgence, or an inordinate gratification of the flesh, which was against the soul. But let innocent amusements and a friendly sociability have their proper place and encouragement, as they belong to the pure nature in man.

The prophet says, it is good for a man that he bear the yoke in his youth. He often sitteth alone and keepeth silence because he hath borne it upon him. And Christ says, "Take my yoke upon you, and learn of me; and ye shall find rest to your souls." So if we take his yoke upon us, and learn of Him, all will be well. He will teach us what to indulge and what to deny. And we will find that his ways are often ways of pleasantness, not of sadness; and that his paths are paths of peace. But the way of the transgressor is hard; and has only the promise of the life that now is, which is temporal, while the righteous have the promise of the life to

come, which is eternal. So let me now, in all tenderness and good will, further warn you against the many snares of the enemy, and one which perhaps the most deceives the professors of Christianity, and which has of late entered largely among us as a people, is the fascinating effects of music, which tends to lure the emotional part in man, and exalt it above the simplicity of the Gospel, and above the true knowledge of God; and to please the creature more than the Creator. But it is evident that there are two kinds of singing, and two kinds of music,—the one is from earth, and the other from heaven. The one which originates from earth is only a counterfeit of the true, and is put to tune and note by the wisdom and art of man, and is played or sung by the unsanctified children of mirth, which makes artificial music of it all, instead of the spiritual music of heaven. And I find no authority for using it in worship, either in the New Testament, or in the writings of our forefathers.

But it was abundantly used under the old outward dispensation, which was a figure of that which was to come in Spirit and in Truth. While the singing of the heart which we sometimes witness in the silence of all flesh, is without audible sound, but a sweet and refreshing melody of the heart. Though it may, at times, break forth in audible words to the tendering and refreshing of those who are hungering and thirsting after righteousness, and may be outwardly sung, when Divinely called for, by saints on earth. But it is a song which no man can learn except those who are redeemed from the earth.

So now, my dear friends, especially those who are in the slippery paths of youth, let us all seek to learn this heavenly song, or melody of heart, which breathes peace on earth and goodwill to men. But let us not be deceived, God is not mocked. I greatly fear that a large portion of the customary singing which we now hear, and which is claimed to be from the Spirit of God, is only from the spirit of man, and tends to the gratification and exaltation of man, and not to the glory of God.

DUBLIN, IRE., Seventh Month 10th, 1889.

FOR "THE FRIEND."

Balm—Treatle.

I was interested in Ann Watkins' account of her visit to Swarthmore, particularly her note of "George Fox's" chained Bible.

The translation which gives us the word "Treatle" seems somewhat strange to modern readers, but the matter will be found simple enough when we look up the meaning of the word. Its original meaning was "An antidote against the bite of serpents, or against poison."

The word *Balm*, substituted in King James' version, has nearly the same meaning, "An aromatic ointment, used for soothing pain or healing wounds." If we will turn to the chapter in Jeremiah in which treatle or balm occurs, we will see the full meaning of the use of these words.

"Moreover I will send cockatrices and serpents among you, which will not be charmed, and they shall bite you, sayeth the Lord."—*Jerm. viii. 17.* Wycliffe's rendering is "werst corderes."

George Fox's big Bible was the Bishop's Bible—printed by order of bishop Parker—in Queen Elizabeth's day. This Bible is often quoted from in our early Friends' writings.

W. KITE.

FOR "THE FRIEND."

Westtown.

The first long session, following the experiment of a summer vacation has just commenced, it is thought, under favorable auspices.

There were entered for admission 123 boys and 126 girls, but it is quite probable there may be a few who may fail to get there, on both sides of the house; there being quite a number from other Yearly Meetings.

The interest in Westtown and for its proper management is manifestly undiminished among the members of Philadelphia Yearly Meeting. The number of applicants for admission on the gratuitous fund, both in our own and from other Yearly Meetings, is considerably in excess of the income of that fund to pay for, but in some instances a part of the expense is paid by the applicant, which is a relief to the fund, and makes more to be admitted.

The wardrobes sent with some of the pupils are not infrequently found to be quite unsuitable to be worn in a school where plainness and simplicity is the rule, and when some articles have to be taken away, it causes painful feelings to the children as well as to those who have this delicate but important duty to perform. If parents and others would refer to the printed rules sent out with each paper of admission, and comply with the recommendations contained therein, it would avoid many uncomfortable feelings.

The improvements now being made of enlarging the building containing the electric light works, the teachers' residence at the foot of the lane, and the construction of the Telford road to the station on the railroad, very much absorb the time and attention of the Superintendent and the available working force of the neighborhood; as soon, however, as it can conveniently be accomplished, it is contemplated to have walks made through the girls' grounds, some 10 feet in width and of sufficient elevation to shed the water freely on both sides, so as to invite outdoor moderate exercise even in inclement seasons. As the principal session is now to commence in the autumn, and gathering nuts is a favorite occupation with the young, it is proposed to provide a variety of nut-bearing trees, both by planting new ones and grafting upon those already growing upon the grounds.

Whilst, however, these additions, designed to increase the physical comfort of the large and interesting family gathered there are being carried out, it is very important the original concern so clearly felt and manifested by our forefathers in the establishment of Westtown, viz., that of a religious, guarded education should be held first in view. We undoubtedly believe that all of our testimonies have their foundation in the unchangeable and everlasting Truth, the use of the plain language and simplicity in dress included. Very earnest is the desire of those charged with the responsibility of watching over its welfare, that all these testimonies shall be maintained there in their original purity and completeness. This is the only safe ground to stand upon; just as soon as watchfulness in these particulars is relaxed, and they not maintained, we descend to the level of other institutions of learning, if indeed, we do not fall below them. True charity towards others does not imply a weak conformity to the world.

Some ninety years have now passed away since Westtown was opened as a boarding school for the children of Friends, during which period more than 11,000 pupils have passed out from under its sheltering care. It is an interesting

circumstance to observe among the pupils, the value of some who, justly appreciating the children of their own education there, desire their children should be so trained, although they themselves, in their intercourse with the world, have departed widely from our testimonies in regard to plainness of dress and language. It is cause for reverent thankfulness that during that long period there has been raised up in each generation those who were qualified to watch over and rightly conduct its affairs with discretion and satisfaction. That it may long continue to be, "as a garden enclosed;" and that those now charged with this responsible trust may be enabled through Divine assistance to hand it down to their successors, unimpaired in its usefulness and unshorn of its strength, is very earnestly desired; and this can only be done by watchfulness unto prayer unto Him who has so manifestly cared for it, from its first inception down to the present time.

A valued minister, member of another Yearly Meeting, in writing of Westtown and its usefulness to the Society, expressed in substance, "the belief that the unwearied enemy was endeavoring to undermine the standing of Philadelphia Yearly Meeting, and that his approaches were being made through Westtown Boarding School."

W. P. T.

WEST CHESTER, Pa., Ninth Mo. 7th, 1889.

FOR "THE FRIEND."

In the introductory chapter to a work recently published, entitled, "Lives of the Fathers," by Frederic W. Farrar, one of the most celebrated dignitaries of the Church of England, the author, in the course of a most interesting account of the Catacombs at Rome, in which he refers to the many inscriptions and symbols remaining in those subterranean excavations, the work of early Christians, uses the following significant language—language which evidences how much of what is claimed to be of early origin in some of the Christian denominations, of the present day, is really only the invention of comparatively modern times.

"I have not mentioned the cross, because if the cross occurs at all in the catacombs, it is only in the disguised forms of the gammadias and the monograms of Christ. The earliest certain Latin cross is on the tomb of the empress Galla Placidia, A. D. 451. Nor is there any realistic picture of the crucifixion till the ninth century, at the earliest; nor any certain crucifix till the sixth; nor any portable crucifix (it is said) till many centuries later. From the representations of the Dead Christ the early believers shrank as from an impiety. To them He was the Living not the Dead Christ,—the triumphant, the glorified, the infinite, not the agonized Christ in that one brief hour and power of darkness, which was but the spasm of our eternal glorification. 'It is Christ that died; yea, rather that is risen again, who also maketh intercession for us.' 'I am He that liveth and was dead, and behold I am alive for evermore.' To them the atonement was not only the crucifixion but the whole work of Christ from the incarnation to the session at the right hand of God. To them the predominant conception of their Lord was ever that of 'the Incarnate Word, the Present Friend, the Prince of Peace on Earth, the Everlasting King in Heaven.' What his life is, what his commandments are, what his judgments will be,—these things occupied their thoughts more than his earthly humiliation. Their contemplations were turned less exclusively to what He once did, than to what He is doing now, and what

He requires us to do. And without going so far as to say, with a great living writer, that 'the fall from that faith, and all the corruptions of its abortive practice, may be summed up briefly in the habitual contemnation of Christ's death instead of his life, and the substitution of his past sufferings for our present duty;' we may truly say, that the thought of the dead Christ in his agonized humanity, can never be accepted as a complete or exclusive view of Him; can never, without deep harm, be dissevered from the thought of Him in his eternal triumph and glorious majesty in the heavenly places."

William Grover.

Continued from page 69.

Extracts from some "Meditations and Reflections" left by William Grover.

Fourth Month 12th, 1792.—Oh! for a sincere love and attachment to that pure and undefiled religion, which stands in a filial devotedness of heart to do the Lord's will, and in a reverent, holy travail of soul, to be made truly acquainted with what his will is; that so we may not be deceived, under an apprehension that we are fulfilling the Divine will, when we are rather frustrating it by doing our own. This, I believe, may be the case, even in things which may have a good-like appearance.

Sixth Month 13th, 1799.—I believe it is good for young men to make a point of devoting a small portion, at least, of every day, to read a little in the Bible, and endeavor after a little calm and quiet in their minds. Something may be presented to the minds in these short seasons of inward calm, which may a little nourish and cherish the Divine life in the soul, and make room for the love of God to prevail a little; and so, as this love is cherished and found to grow, the love of the world, and earnest desire after it, will lessen, and the soul be prepared to take its chief delight in something spiritual and heavenly.

I think I see a great danger in Friends getting into easy circumstances: it renders them not so strong and able to endure hardness as good soldiers. I believe all we have must be at the Divine disposal, and so felt by us, before we can be fully qualified to endure all things that may be required of a disciple of Christ, in filling up his lot in the militant church.

First Month 25th, 1812.—It is a precious thing to have a belief and feeling produced in our minds, that we are under the Divine gracious care and protection. Perhaps I have not sustained more loss, or religious disadvantage, any way, than I have for want of more diligently minding the very gentle intimations or calls to inward stillness. A feeling of a connection with the Fountain of Good, is, above all things, to be prized; and this feeling is utterly out of our control or command, and consequently to be accepted with reverence and cheerfulness, whenever vouchsafed. We cannot prize it too much: it is a treasure in prosperity; it is a treasure in adversity; it will be emphatically a treasure when the awful moments arrive for us to bid an eternal farewell to the things of time and sense.

Fourth Month 1st, 1814.—How many ways to involve the mind in a continual something that seems plausible; and so not keep it up just in readiness to hear the call, to hearken to the voice, or yield to the gentle, inclining influence of Divine love; an influence often so soft and silent as to be very, very easily put by, quashed, lost, forgotten.

Fourth Month 27th, 1818.— ———— Covers-

ing this morning on the politics of Europe, concluded with this beautiful sentiment: "that there is nothing substantial and satisfactory but the *Supreme Good*; in it, the deeper we go, and the more largely we drink, the better and happier we are; whereas, in outward acquirements, if we could attain to the summit and perfection of them, the very possession and enjoyment palls."

Eighth Month 1st, 1824.—It is a great comfort, when past seventy, to be pretty well, so as to enjoy the bounty of kind Providence and endeavor to improve the further portion of time allotted; so that we may, through mercy, be ready for the final, awful change, when it comes.

Tweelfth Month 8th.—How unspcakably worthy our love, our allegiance, our seeking after, and our more frequent communion, is the Spirit of Truth. How ought it to be [sought after] from day to day, and through the day, so as to raise and bear up our minds above the things of time, even whilst we are necessarily engaged in them; seeing they are all very uncertain, and we may be taken from them, or they from us, very unexpectedly. In such case, to have our minds previously well acquainted with Divine love, and, as it were, enwrapped with it—what a treasure!

Third Month, 1825.—This morning I have a somewhat luminous view of the nature and preciousness of the Gospel ministry and other rightly religious exercises. God is the inexhaustible fountain of all good; there is no goodness but what comes from Him, consequently nothing for poor human nature to plume itself upon. This Divine power goes forth in such manner, time, and degree, as is consistent with its own infinite wisdom and goodness; in displays of beneficence, mercy, and blessing to its creatures: sometimes in immediate communications of light, life, and Divine virtue and sweetness to the souls of individuals, for their own advancement in the path of salvation; and sometimes in precious gifts of qualification, for the benefit of others, the edification of the church, and for other religious services.

By how many and how various means do we get broken down, and gradually prepared for our eternal separation from this frail and uncertain state of being; and how exceedingly is it to be desired that we may all so improve the time of health and bodily ability, as that, when sickness, pain, and affliction are measured out to us, we may be favored with that sweetness and peace which bear up the mind above the waves, and enable us to say, the rod as well as the staff of the Lord's goodness, are our comfort and our rejoicing.

(To be continued.)

SOME men are dreaming of an ideal condition of government and society in which systems of trade and education and domestic life will be complete, and labor and capital properly adjusted, and no one will be able to infringe on the rights and privileges of others. Some one has written a book in which this state of things is described. Many expect this social and political perfection to be attained by some sort of machinery of government, and to be maintained by the enforcement of law. But the outward life of individuals and communities will never rise higher than the inner life of character and manhood. The ideal condition hoped for will take form where ideal men and women have been developed. So soon as the masses know what is right, and have the disposition to do right, the wrong will vanish, and no sooner.—*Selected.*

FOR "THE FRIEND."

Extract from the Life of William Allen.

At a meeting on First-day, it opened to my mind, that as the Supreme Being is a Spirit, so all communication with Him must be spiritual; and as we cannot command the times at which He may be pleased to open, it is our duty to wait for them, and to cherish them when so favored; but if we turn away our attention to outward and visible objects, these openings will close, and we shall be left to ourselves, barren and poor: happy for us if we feel our loss, and patiently look out for the next opening, and strive to make a better use of it.

It also appeared to me, that those who are carnally-minded have no idea of the inward life; they are wholly absorbed in outward objects, and when these please them they feel a momentary joy, but no true peace. Riches, life and health are uncertain, but a little assurance that we are on that foundation which cannot be removed, and that none of the storms and vicissitudes of life can separate us from the love of God, which is in Christ Jesus our Lord,—this adds a luster to all that is beautiful in creation, and sweetens every bitter cup, and it even enlightens the darkest scenes with a gleam of peace and hope.

FOR "FRIENDS' QUARTERLY EXAMINER."

"VENI, SANCTE SPIRITUS."

(A PARAPHRASE FROM THE LATIN.)

Come, Holy Spirit, to Thine own;
With heavenly light and fire come down,
Assume possession of Thy throne.

Come, Father of the outcast poor;
Come, Giver of a homeless store;
Come, Light of hearts for evermore.

Of all consolers, Thou the best,
Sweet Dweller in the yielded breast,
Dear Calmer of all minds distressed.

We need Thee as our Rest in care,
Our Shelter from the noontide glare,
Our Song and Solace in despair.

Thrice blessed Light, do Thou reveal
The sin we from ourselves conceal;
Search Thou our hearts that Thou may'st heal.

Without Thy smile, Thy quickening breath,
Despair our labor answereth:
And every pathway leads to death.

Each thought that seeks not Thee purge out,
Let streams of grace dispel our drought,
And Love heal all the wounds of doubt.

For self-will give us humbleness;
Warm the cold heart with Thy cares;
Make halting footsteps Godward press.

Reign Thou in us: Thy Throne is bright;
We need no sun, we fear no night,
For where Thy Throne is, there is light.

Grant us through life to feed on Thee;
Grant us in death Thy love to see;
Grant us Thyself eternally.

—Richard H. Thomas.

MOTHERS.

One mother, once by her encircling arm
Grew powerless to shield her child from harm,
Wove a frail basket of the trembling reed,
And, strengthening it with loving art, she laid
Him helpless, thus, beside the river's brim,
Trusting that God would keep and care for him.

Since then all mothers, taught by her, have known
God's care is larger, better than their own.
They weave their trembling faith into an ark,
And strengthen with their prayers the tiny bark,
And trust their growing children thus to Him
Who saved the lad beside the river's brim.

—Sunday School Times.

BESSIE BELL.

Dear mother, why do all the girls
Love little Bessie Bell?
I've often thought it o'er and o'er,
And yet I cannot tell.
My favorite cousin always was
Dear gentle Cousin Bess;
But why the others love her so,
Indeed I cannot guess.

They hear her gentle voice, my child,
And see her mild, soft eye,
Beaming around on every one
With love and sympathy;
They see her striving every hour
For others' happiness;
These are some reasons why the girls
So love dear little Bess.

Her widowed mother's heart she cheers
With love and tenderness,
And by her daily walk with God
And growth in holiness;
Sweet Bessie is a Christian child,
She loves the Saviour dear;
One of the lambs of his own flock,
She has no want or fear.

Money which other children spend
In candy, toys, or cake,
She carries to the poor and sick—
She loves them for Christ's sake.
Poor old blind Dinah down the lane
She reads to every day,
And ne'er forgets it, though dear Bess
Is very fond of play.

And now, my little daughter dear,
Would you be loved like Bess,
Go, ask of God to change your heart
From pride to humbleness.
Better than beauty, rank or gold,
To be like little Bess,
Clothed in the spotless garment of
The Saviour's righteousness.

—Golden Songs.

A Cure for Moths.

WE were examining our wardrobe after the summer, and found, to our surprise and grief, many of our choicest articles of apparel sadly damaged by the moths. In the midst of our trouble, and the discussion as to the modes of protection against moths, which had been handed down by tradition in our family, Aunt Julia came in.

"Aunt Julia, how do you keep your winter clothing from the moths?" we both asked eagerly, as that good lady proceeded to lay aside her handsome shawl, which looked as fresh as ever after seven years' wear.

"I used to suffer from moths as much as any one," replied Aunt Julia, taking her knitting from her little basket and sitting down, "but I found a recipe in an old-fashioned book which has relieved me of much solicitude on the subject. It was many years before I could be persuaded to try it. In my young days money was not quite so plentiful as now, but provisions were cheap, and a farmer's daughter began her married life better supplied with linen, blankets and bed quilts, than many a jewel-decked city belle. As I was an only daughter, and was not married too young, a noble pile of blankets, feather beds, bed quilts, &c., became my portion. For many years after we removed to the city I used to dread my summer work of airing beds, and packing very fine, home-made blankets, and quilts stuffed with the softest down. I tried snuff, tobacco, camphor, pepper and cedar chips, and yet, as we changed our place of residence several times, some colony of moths—old squatters among the beams of the garret, or in some unobserved scrap of woolen cloth—would encamp on my choicest possessions."

"Why, Aunt Julia, I thought you had a cedar closet."

"Yes, when we moved into our new house; but by that time my closet was too small for my increased wealth, and till I used this recipe I seldom passed a year without some moth holes; but now I have not seen one in nine years."

"What was it, Aunt? Have you the book? or can you repeat it from memory? It is too late to save these things, but I will write it down, and try it next spring." So saying, Anna took out her little recipe book and pencil, while Aunt Julia prepared to recall the moth preventive.

"The book was an old one, with the title obliterated, and the title-page torn out by some careless child; but the directions were these:

"Lay not up for yourselves treasures upon earth, where moths and rust doth corrupt, and where thieves break through and steal. But lay up for yourselves treasures in heaven, where neither moth nor rust doth corrupt, and where thieves do not break through nor steal."

"Oh! Aunt Julia, is that all? How does that help the matter?"

"Wait, Anna, and hear my story out. One day as I was mourning over my choicest blankets, eaten by the moths, and airing my down bed-quilts and feather beds, which had been rendered obsolete by the introduction of spring mattresses—as I stood ready to cry with vexation to see my choicest articles eaten in the most conspicuous places, as you have experienced to-day—my eye rested on an old Bible, which lay on the top of a barrel of pamphlets in the garret. I opened it, and almost unconsciously read the recipe for avoiding moths which I have given you to-day. I then recollect that they seldom troubled the clothing in frequent use, and that the articles which caused me such care were not needed twice a year. I then thought of Sophy Baker, with her large family and sick husband. They had been burned out the spring before, and were just entering upon a cold, long winter of poverty. I sat down, and writing her a note, sent two feather beds and four blankets, and an old-fashioned 'cover-lid,' that very day; and two more blankets I despatched to a poor old rheumatic neighbor, whose destitution had never occurred to me before. I then began to breathe freely; and before another week two more blankets were gone to comfort tired limbs and aching hearts. The cast-off coats, cloaks, and all pieces of carpeting which had long lain in my garret, were given to the deserving poor. A bag of woolen stockings and socks, which had been kept for cleaning brass, were sent to a charity institution, never again to become a temptation to the moths. I inquired particularly the next year, and found the beds and blankets were in such excellent preservation that I cheerfully laid out more of my surplus property 'in heaven,' and out of the way of moth and mould. My cedar closet and trunks hold all I wish to preserve, and, when they begin to run over, I commit more articles to the keeping of my widowed and fatherless acquaintances."

"But, Aunt Julia, yours is a peculiar case. You had a home-made outfit of a rich farmer's daughter, and could not expect to make use of it; besides, the Bible don't encourage wasting our goods extravagantly."

"I do think the Bible leans to what is called the extravagant side. The rest of the chapter following the verse I have quoted gives little encouragement to much forthrighting, either in food or raiment, and in another place says, 'He that hath two coats, let him impart to him that hath none.' This rule leaves very little to pack

away in a cedar closet. In my opinion, God's providence is far from encouraging extensive accumulation either of money or possessions, especially among Christians. Fire and flood, drought, mildew and moth stand ready to rebuke that spirit of covetousness which the Lord abhorreth."

"Surely, Aunt Julia, you wouldn't have me give away the new furs you gave me yourself last winter."

"No, my child; but let us examine for a moment this moth-eaten pile. Here are three coats of your husband's which he never could wear again."

"Those are for fishing, Aunt."

"How often does he fish?"

"Once in four- or five years, perhaps," said Anna.

"Well, here is a bag of outgrown, shrunken socks and stockings, and these old dresses of Ada's, and those overcoats of the boys, that I heard you say were unfit for wear, even in the playground; and besides, I think you remarked that the whole difficulty originated in an old carpet, which has been harboring moths many years, when it might have been out of harm's way upon some poor widow's floor."

"Well, aunt, I believe you are half right."

"Try my rule, Anna; not after your property is ruined, but when you find you can spare it, even at the risk of sending some of your treasure to heaven before you have obtained all you could from its use. Many an old garret have I known to be infested with moths, ruining many dollars' worth of valuable articles, when the whole evil might be traced to an old coat or carpet, selfishly or carelessly withheld from the poor. We are God's stewards, and our luxuries are not given us to feed a 'covetousness which is idolatry,' but are talents which may be increased ten times before the great day of final account. When people ask me how to prevent moths, I always long to say, 'Lay up your treasures in heaven,' because I have found from experience it is a sure and convenient way."

"Well, aunt, I own I never thought much about it before as a matter of Christian duty. I will try, before another year, to confine my care to the articles I need, and shall hope for better success.—*The Episcopal Recorder.*

An amusing incident occurred lately in a Baltimore street car. Several quite well known ladies, meeting on their way to or from the shopping quarter of the city, were talking in rather a loud manner about preachers and their wives. They finally came to speak of the wife of a prominent pastor of one of the Methodist churches. All kinds of things were said—some truthful, others the boldest imaginations. All said they had never seen the lady; but they had heard she was a blonde, and all said they would like to see her. All in the car enjoyed the talk; none more so than the lady talked about, who happened to be sitting opposite them. When she arrived at her destination, she pulled the bell to stop the car, and, having a sense of the ludicrous, went to the gossippers and said: "Ladies, you have expressed a desire to see me. Here I am. Let me give you a piece of advice. When next you gossip in a street car don't do it in such a loud manner; it may be heard by some one who will not enjoy it as I have. Good day." The gossippers showed great astonishment and chagrin, while the other passengers laughed immoderately at the proceedings.

The Boy in the Hardware Store.

"We have had a good many boys with us from time to time," said Mr. Alden, the senior member of a large hardware establishment on Market street, Philadelphia, "as apprentices, to learn the business. What may surprise you is that we never take country boys, unless they live in the city with some relative who takes care of them and keeps them home at night, for when a country boy comes to the city to live everything is new to him, and he is attracted by every show window and unusual sight. The city boy, who is accustomed to these things, cares little for them, and if he has a good mother he is at home and in bed in due season. And we are very particular about our boys—and before accepting one as an apprentice we must know that he comes of honest and industrious parents."

"But the best boy we ever had is now with us, and a member of the firm. He is the one man in this establishment we couldn't do without. He was thirteen years old when he was apprenticed to us, and he was with us for eleven years, acting for several years as sub-man. When he first came we told him that for a long time his wages would be very small, but that if he proved to be a good boy his salary would be increased at a certain rate every year, and as it turned out, when according to agreement we should have been paying him five hundred dollars a year, we paid him nine hundred, and he never said a word himself about an increase of salary. From the very outset, he showed that he had an interest in the business. He was prompt in the morning and if kept a little over-time at night, it never seemed to make any difference with him. He gradually came to know where everything was to be found, and if information was wanted, it was to this boy, Frank Jones, that every one applied. The entire establishment seemed to be mapped out in his head and everything in it catalogued and numbered. His memory of faces was equally remarkable. He knew the name of every man who came to the store to buy goods, what he bought, and where he came from. I often used to say to him 'Jones, your memory is worth more than a gold mine!' How do you manage to remember?"

"I make it my business to remember," he would say. "I know that if I can remember a man and call him by name when he comes into the store, and can ask him how things are going on where he lives, I will be very likely to keep him as a customer."

"And that was the exact case. He made friends of buyers. He took the same interest in their purchases as he took in the store, and would go to no end of trouble to suit them, and to fulfill to the letter everything he promised."

"Well, affairs went on in this way until he had been with us eleven years, when we concluded to take him into the firm as a partner. We knew that he had no extravagant habits, that he neither used tobacco, nor beer, nor went to the theatre. He continued as at the beginning to board at home, and even when his salary was the very lowest he paid his mother two dollars a week for his board. He was always neatly dressed, and we thought it very probable that he had laid up one or two thousand dollars, as his salary for the last two years had been twelve hundred dollars. So when we made him the offer to become a partner in the business, and suggested that it would be more satisfactory if he could put some money into the firm, he replied:

"If ten thousand dollars will be of any object I can put in that much. I have saved out of my

salary nine thousand four hundred dollars, and my sister will let me have six hundred."

"I can tell you that I was never more astonished in my life, than when that fellow said he could put ten thousand dollars, and the most of it his own money. He had never spent a dollar, or twenty-five cents or five cents for an unnecessary thing, and had kept his money in bank where it gathered a small interest. I am a great believer in the Bible, you know, and I always kept two placards in big letters up in the store. On one was this text: '*He that is faithful in that which is least, is faithful also in that which is much*'; and on the other: '*He that is diligent in business, shall stand before kings and not before mean men*.' And Frank Jones' success was the literal fulfillment of those two texts. He had been faithful in the smallest things as in the greater ones, and diligent in business. That kind of a boy always succeeds," concluded Mr. Alden.—*Mary Wager Fisher, in Wide Awake.*

"Oh, That can be Done at any Time."

The house in which I live was new when I moved into it. On the day that the last workmen left, the man who had charge of the building came to me and said the house was ready to be occupied. I was simply a renter of the property, not the owner, but he asked me to go over the house with him to see that everything was in order. We found it complete, with one trifling exception. Through some oversight the carpenter had neglected to put on the inner door of the vestibule the little knob which turned the latch. When I called the agent's attention to this, he replied, "Oh, that can be done at any time, and you can use the outer door for a few days."

I have been in the house two years to-day, and that little knob is still missing.

I know a minister who has a friend; a lawyer. Almost every time they meet, the clergyman says, "I want you to come and take tea with me some day. I'll send for you soon." The next time they meet he says, "You have not been to tea with me yet; but you must come some time. I'll fix a day when I see you again."

This has continued for years, but the lawyer has never sat at his friend's table.

Both these men were sincere. The agent would have felt insulted if I had replied, "Two years from now that door will be without a knob." The minister would have thought it strange if the lawyer had responded, "You will never send for me."

Yet anyone as wise as the swallow in the fable could have foretold the failure. A swallow had built her nest under the eaves of an old tumble-down woodshed. One day her brood were thrown into great excitement by hearing the owner say to his son, "Upon my word, William, some day we must tear down this unsightly shed and build a new one." Telling this to their mother, they begged her to take them away at once. "What time did he set for the work?" she asked. They replied, "Some time." "Then be easy, my children," said the mother, "for some time means any time but the present. When, however, you hear him fix a definite day, then we must be flying."

How many good deeds which we purposed have we consigned to a tomb from which there is no resurrection, with the words, "Oh, I can do that at any time." The date on the headstone of that grave is "Some time."

Ye who intend to repent, fix a date. If you refuse to fix a day, your intention is deceptive.

You leave the time uncertain with a purpose—that purpose is to provide a way for avoiding rather than for performing the duty.

If you sincerely try to set a day for that duty, you will find no day so suitable as to-day. The present time is our own. To-morrow no man ever saw. We must not, dare not, put off this matter of repentance and turning to God, for a future that may never be ours. God's time is now—"to-day." "Now is the accepted time, now is the day of salvation."—*Friendly Visitor.*

FOR "THE FRIEND."

We wish to recommend everyone who is interested in the maintenance of the principles of the Society of Friends, to a careful perusal of an article in No. 6 of THE FRIEND, headed "The Outlook." It gives a clear and forcible showing of the consequences of a "pastoral" system, if introduced into our meetings for worship. One worthy Friend to whose notice it was brought, had read it, but not so as to leave any clear impression on his mind; re-reading it, he was highly pleased with its utterances.

It seems to us the time is at hand when Friends' eyes and ears and mouths should be opened to protest against the departures from the faith and following of Christ, as "once delivered to the saints," and revived by our worthy predecessors in the unchangeable Truth.

MARSHALTON, PA.

M. F.

Natural History, Science, &c.

Plants Protected by their Juices.—When a drop of the juice of sorrel, garlic, saxifrage, or nasturtium is put upon the tegument of a snail, the animal manifests pain and exudes abundance of its mucous secretion; yet it is not thus affected by a drop of water. When snails avoid plants marked by such juices, we have a right to regard the plants as defended by a chemical armor. The offensive substance may also be important to the nutrition of the plant, but that is not the question we are dealing with here. Many plants are evidently lacking in this means of defense; for, of some plants, all the animals experimented upon have been found to prefer fresh to dead parts. Others are never touched by them, whether living or dead. Hence we may conceive that an infinite variety may exist in the degrees of chemical armoring between total absence of protection and complete protection.

Plants containing perceptible tannin are disagreeable to nearly all animals. Only swine will eat acorns, as they regarded them as food. Other animals reject them, except when they cannot get anything else. Leguminous plants containing tannin in weak proportions are eaten by horses and cattle, but snails are not fond of them. But the garden snail, which lets fresh clover alone, will eat it freely after the tannin has been extracted with alcohol.—*Popular Science Monthly.*

Danger in Closed Houses.—An old and skilled plumber told a friend of ours a short time ago that oftentimes people who go away and leave their homes unoccupied for two or three months in the summer, upon returning are stricken with typhoid and other fevers, and attribute it to their summer resort, when the fault is in their own residences. During their absence the little water in the traps in the bath-room and elsewhere has evaporated, and the poisonous gases have free access to the house. He further remarked that every house that has thus stood vacant should be thoroughly ventilated and all the traps well

flushed with water before the place is occupied. As a single night of exposure is sufficient to plant the germs of these diseases, he who neglects so simple a precaution after it is brought to his notice does it at his peril.—*Christian Advocate.*

The Electrical Plant of India.—There has been discovered in the forests of India a strange plant which possesses to a very high degree astonishing magnetic power. The hand which breaks a leaf from it receives immediately a shock equal to that which is produced by the conductor of an induction coil. At a distance of six meters a magnetic needle is affected by it, and it will be quite deranged if brought near. The energy of this singular influence varies with the hour of the day. All powerful about two o'clock in the afternoon, it is annulled during the night.

At times of storm its intensity augments to striking proportions. During rain the plant seems to succumb, and bends its head during a thunder shower; it remains there without force or virtue, even if one should shelter it with an umbrella. No shock at that time is felt in breaking the leaves, and the needle is unaffected beside it.

One never by any chance sees a bird or insect alight on the electric plant; an instinct seems to warn them that they would find sudden death. It is also important to remark that where it grows none of the magnetic metals are found—neither iron, nor cobalt, nor nickel—an undeniable proof that the electric force belongs exclusively to the plant. Light and heat, phosphorescence, magnetism, electricity—how many mysteries and botanical problems does this wondrous Indian plant conceal within its leaf and flower?—*Nature.*

Excavating by Freezing.—The remarkable achievement of sinking a deep shaft through treacherous ground by means of first freezing the earth, has been successfully accomplished at the Chapin mine, in Northern Michigan, by the Poetsch process. The contract was to freeze, excavate and curb up a rectangular shaft, 15½ by 16½ feet, and about 100 feet deep. This was accomplished by first putting down the freezing pipes three feet apart, in a circle 29 feet in diameter, to the depth proposed to be reached by the shaft. The pipes were connected at the top and filled with a solution of brine containing about 25 per cent. of calcium chloride. The brine was frozen to a point below zero by means of an ice machine, and in 40 days a frozen wall of ice, earth and stone was formed, 10 feet thick. The excavation, in the meantime, had been going on, and 70 days from the commencement it was completed to the ledge 100 feet down, in spite of some difficulty from the percolation of water near the bottom, which was stopped by freezing. Except for this ingenious method, the sinking of the shaft would, it seems, have been practically impossible on account of the great inflow of water.—*Railway Age.*

Tame Screech-owls.—In the spring and summer of 1887, I was making a collection of nestlings of representative American birds, to be sent to Prof. Parker of London, to be utilized by him in his work on "Avian Osteology." Among the many birds brought to me by my boy collectors was a family of four young screech-owls. Wishing to use but one of them as an alcoholic specimen, I finally concluded to adopt the others.

From first to last, small fish was their main diet, and it was amusing indeed, when their food was brought, to see the downy little fellows rush and tumble over each other in their eagerness

to get at it. If a mouse was given to them it would first be put through a bone-breaking process and then swallowed. Small birds would be thoroughly picked, and then swallowed head first.

After they became able to fly about, they were taken from the box in which they had been kept, and put into the apple trees growing in my yard to shift for themselves. But they refused to shift; on the contrary seemed to consider themselves as a part of the family, and for weeks remained about the yard; and in the dusk of the evening would come at once on being called, sometimes from the mill a hundred yards away, or from the trees across the river.

A very interesting feature connected with these little owls was the manner in which they were treated by the other birds of the vicinity. About once a day the birds would assemble to harass and scold them, the usual time being a little before sundown. At a signal, generally from the Robin, they would come from all directions—the Jay and the Purple Grackle from their nests in the apple trees; the Rose-breasted Grosbeak from the top of the blackberry; the Cardinal and Wood Thrush from the box-elders across the river; the Orioles from their swinging nests in the elm and sugar maple;—all would come to devote a few minutes to scolding their common enemy.

The Jay, the Grackle, the Cat-bird and the Robin would do the aggressive business, while the other birds, from a respectful distance, would be the spectators. The Robin in particular would show the greatest excitement in these attacks. He would often fly down to the ground near where I sat, and in the most frantic manner try to call my attention to the fact that there was a terrible owl in the apple tree. One of these interesting birds was stoned to death by a man as it was perched upon a fence near his shop. Another was shot and killed by a kind-hearted lady that wished to display her manliness. A third is still about town, and his tremulous notes are often heard around my premises in the dusk of the evening.—*Dr. W. S. Strode, in the American Naturalist.*

The Mink.—While engaged in geological work on the Cedar River, Iowa, my attention was attracted by a mink, engaged in fishing for her young. On the ripples in the centre of the stream, where the water was not more than two feet in depth, was a flat boulder, rising a few inches above the surface. On this rock the mother mink took her position, and watched for small fish to approach, when she would dive into the water, be gone for a moment and reappear, usually with a fish in her mouth, which she would deposit in the centre of the stone, stopping its struggles by a quick, sharp bite back of the head. This process was repeated until seven fish were deposited on the rock. Then, taking one of them in her mouth, she swam to the shore, climbed the steep bank, and ran hastily to her young, in a burrow under an old stump.—*C. L. Webster.*

Items.

Expensive Families.—An officer in one of the Street Railroads of New York was recently convicted of having issued fraudulent certificates of stock. It is said the motive to commit the crime was to supply the demands of an extravagant and expensive family. On this case, the *Independent* makes the following reflections:

There is not much utility to anybody in mere social parade that calls for a large expenditure of money beyond reasonable necessities; and to those

who cannot afford it the result will always be disastrous. Every man should live within his means, and in this respect cut his garment according to his cloth. He who acts rich when he is poor, and knows that he is poor, is simply a fool, and the chances are that he either is, will become a knave. A bank officer, who is a clerk or cashier, who is living in a style not corresponding with his salary, ought, as an act of prudence, on the *prima-facie* presumption of something wrong about him, to be dismissed from the service. He is not a safe officer to keep in the employment of a bank.

Superstition.—Three fanatical Negroes went into an iron furnace, near Birmingham, Ala., as the representatives of Shadrach, Meshach, and Abednego. Old Tobias Jackson, who proclaimed himself Daniel the Prophet, said they would die with him, and were speedily cremated. Some of the papers are dwelling upon the superstition of the Negroes. Equally terrible tales can be told of the whites, and in some parts of the continent of Europe whole communities within fifty years have been given up to the wildest superstitions.

Louisiana Lottery Company.—The Louisiana Lottery Company is making an application to extend its charter for fifty years. In a moral aspect it has nothing to offer in favor of the grant, but rests its claim upon a money consideration. The franchise is conferred, the company agrees to pay off the State debt of \$12,000,000. This may be a tempting offer in some eyes, but if the State were to put itself at the mercy of such an organization in the way proposed, it would soon fall a prey to rascals, and have reason to rue the day for many a year. It is a high bid for a valuable privilege, but it would be a calamity to Louisiana to consider it. If, for the sake of the consequent exemption from taxation, and under the influence of a sordid principle, her legislators accepted the bait of this gambling corporation, Louisiana has suffered long enough from its corrupting operations, as have thousands in other States, without granting any further lease of life to its demoralizing influences. No legal sanction should be given any robbing business. Lotteries wrong the home as well as the individual. They enrich the few at the expense of the many. They are at war with moral right and honor.—*Presbyterian.*

Public Meeting at Concordville, Pa.—This meeting, appointed by the Committees in charge of Concord Quarter, was held on the 8th of Ninth Month. A correspondent says of it, "It was held in the authority and power of Truth. The house was completely filled. Great quiet prevailed, and the benefits of a full surrender of the heart to the teachings of the Divine Spirit, especially in the youth, and by those in the vigor of their days, were earnestly set forth." After this, there was a "clear but simple statement of the two paths, one leading to death here and hereafter, the other to peace and happiness in the way to come, as well as peace here." The vocal service was closed with supplication and thanksgiving. "Some tracts were distributed, and I think we all separated under a feeling of thankfulness for our unmerited favors."

Hindoo School.—Ramabai, who during last year lectured in various parts of the United States to collect funds wherewith to establish a school in India, writes under date of Sixth Mo, 11th, that she had 22 girls in her school, has completed the first quarter, and her prospects are encouraging.

War—Wholesale and Retail.—Jonathan Grubb, of Sudbury, writes:—"A few weeks ago I lodged in the house of a dear friend, who is a large miller in a town where soldiers are quartered, and where the military element is bristling in almost every street. My friend tells a story in a very quiet way, but with a vein of humor and a point in every sentence. 'Not long ago,' he said, 'a soldier came into my mill in a very excited state, not exactly drunk, but evidently under the influence of dried beef.' He began to assault the men to come in. 'I was eight, but who were afraid to lay hands on him. I entered the mill, and rather laughed at their want of courage. 'Try your own hand upon him,' they said. I laid my hand on his shoulder, saying, 'Now my friend, do be quiet and go away.' He at once struck me in

the face, inflicting a deep wound, whereupon the men seized him and held him fast, waiting my orders how to dispose of him. I said, 'Put him in a sack.' This was soon done, and there he stood, nothing but his head visible, waiting the arrival of the police who had been sent for. They came, and inquired how they should proceed him to the police station. 'Why, as he is, to be sure,' I said; but their pride would not let them carry a criminal in a sack, so they took him out, when he knocked them about, right and left, fearfully. However, they managed to conquer him, and I appeared against him when brought before the magistrate, and was called to make my charge. 'Well,' I said, 'all I have to say is that I hope you will deal leniently with the poor fellow.' 'And what he has cut your face open,' they said. 'Yes, can you mean?' 'Why,' I replied, 'he has been educated not only to knock people about, but even to kill them at the word of command; people who had never injured him any more than I had, so he was only doing a little in a private way on his own account, in accordance with his training on a larger scale, whereby to earn the character of a hero. The magistrates could not deny the force of what I said.'—*Herald of Peace.*

BISHOP BUTLER regretted the attempts at definitions more precise than any which Scripture has authorized of the mole in which redemption is brought about by the Saviour's life and death. "I do not find," he said, "that Scripture has explained it. And it is our wisdom thankfully to accept the benefit, by performing the conditions upon which it is offered on our part, without disputing how it was procured on his."

THE FRIEND.

NINTH MONTH 28, 1889.

A letter from a Friend in Ohio requests the republication of a paragraph from an Address to the Society of Friends, written by Thomas Shillitoe in 1820. The letter says: "I make this request hoping it may be of use at the present time to some who are too much inclined to run out and mix with the people in the excitements incident to partisan politics, and thereby lose their strength."

The paragraph referred to is as follows:—

"Friends, let us not dare to meddle with political matters, but renewedly seek for holy help to starve that disposition so prevalent in us to be meddling therewith. Endeavor to keep that enclosed, which will be itching to hear the news of the day, and what is going forward in the political circles. I have found, that if we suffer our minds to be agitated with political matters, our dependence becomes diverted by little and little from the true centre and place of safety, where perfect peace is experienced, though the world and all around us may speak trouble. Such as have this dependence will know it to be a truth fulfilled in their own individual experience, that 'They that trust in the Lord shall be as Mount Zion, which cannot be removed, but abideth for ever' and that, 'As the mountains are round about Jerusalem, so the Lord is round about his people from henceforth even forever'."

While the Christian ought to perform his share of civil duties necessary for the proper carrying on of the government, yet it is his duty to ever bear in mind his primary allegiance to his Creator; and to be thankful that all his actions and the spirit he manifests, should be such as to bring glory to his Father in Heaven. If

this concern is kept steadily in view, we think it will prevent joining in any movement of a doubtful character; and to preserve our members from becoming mere partisans, who would sacrifice the public good for the advantage of a party; and above all will keep them alive to their own spiritual interests and preserve them from being engrossed in the spirit of the world.

SUMMARY OF EVENTS.

UNITED STATES.—The Committee on Site and Buildings of the World's Fair, at New York, has decided that the location of the fair should be between Ninety-seventh and One-hundred-and-twenty-seventh streets, Fourth avenue and the North River, to include Riverside Park and Morningside Park, and the property contiguous thereto, and the use of the north end of Central Park in case of absolute necessity.

The long-lost "Maria Roman mine," according to a despatch from Monterey, California, has been found. It had often been told how the Indian woman, Maria Roman, used to go away, and in the course of a few days she would assay herself at the mine. Where the mine was located had always been a mystery. The mine, if accounts are correct, is located near the head of the Carmel River, about 15 miles from Monterey, and was found by a man named Foreman while deer hunting.

A despatch from Monterey, California, says that for several months the Government has made no effort to prevent the sale of liquor in Guthrie, and as time went on the liquor smugglers became emboldened, and over a dozen groceries have been running in full blast during the last few months. Applications for licenses was refused, yet to all appearances the Government winked at its sale. On the 20th instant, however, a Deputy United States Collector went into the city unexpectedly, and before eight 22 men were under arrest, and will be sent to Wichita for trial.

A national convention of Baptists concluded its annual session in Indianapolis last week. E. K. Lone, of Savannah, Georgia, said that of about 5,000,000 Baptists in the United States, 1,362,273 were negroes, although when the Emancipation Proclamation was issued, but 300 colored Baptists were in the South.

The Suffrage Committee of the Constitutional Convention of Wyoming has reported in favor of universal suffrage. An amendment was offered that the woman suffrage plank be submitted separately, but it was defeated.

An important case was decided last week, in the Common Pleas Court at Pittsburg. L. D. R. Reese was expelled from a train of the Pennsylvania Railroad, because he refused to pay the 10 cents extra for cash fare, the money to be refunded at any office of the company on presentation of receipt. The Judge held that the 10 cents extra was wrong, and so instructed the jury. Reese obtained a verdict for \$250.

The Executive Committee of the Association of Cities and Towns to Regulate the Liquor Traffic in Baltimore, has published an address in advance of the nominations to be made by both parties for the Legislature, so that candidates may be brought forward for whom they can vote without a sacrifice of what they consider to be the most important principle before the people. "It is their belief that the city can secure the defeat of either party, but cannot with safety postpone the mitigation of the growing liquor evil."

A large dam at Springton Forge, eight miles above Conowingo, Penna., burst on the night of the 17th instant, owing to the heavy rains, and the Brandywine creek was eighteen feet above its usual height. Hundreds of fields were a dreary waste of water. Many farmers and their families left their houses during the night, and remained on the neighboring hills. The night was a storm, and a violent wind, which originated between Reading and Wilmington. Many miles away fences have been carried away, and, on a number of farms, everything not in buildings was carried away. The damage amounts to many thousands of dollars.

A heavy rain fell on the 22d instant, and was accompanied by high winds and terrific electrical displays. About 5 o'clock in the afternoon a deluge of rain descended, while the wind almost reached the velocity of the wind. In 10 minutes a considerable section of the city was flooded, and the water was still rising—turn up, and the lower floors of many buildings were filled with water. The rainfall up to noon was only half an inch, but at 5.50 P. M. it had increased to 4 1/2 inches, the greatest recorded at Jacksonville for a like date.

The recent wet and windy weather has done great

damage to the late peach crop in New Jersey. In Hunterdon County alone the loss is estimated at \$100,000. The late tomato crop has been partly destroyed, and canners, it is stated, will sustain heavy losses.

Deaths in this city last week numbered 377, which is 10 more than during the previous week, and 15 more than in the corresponding week last year. Of the whole number 196 were males and 181 females; 46 died of consumption; 29 of marasmus; 24 of diseases of the heart; 20 of typhoid fever; 20 of pneumonia; 19 of inflammation; 18 of old age; 17 of convulsions; 13 of cholera infantum; 12 of debility; 10 of cancer; 12 of carbuncles, &c.—U. S. 4 1/2, 106 1/4's, reg. 127 1/2; coupon, 128 1/2; currency 6 1/2, 118 a 130.

CATTLE.—Extra, 4 1/2 cts. per pound and ruled quiet. Small sales of middling ulsters at 11 cts. per pound.

FEED.—Winter bran, choice and fancy, \$13.25 a \$13.50; do. fair to prime, \$12.50 a \$13.00.

FLOOR AND MEAL.—Western and Pennsylvania super, \$2.50 a \$2.75; do., do., extras, \$2.85 a \$3.25; No. 2 winter family, \$3.40 a \$3.75; Pennsylvania family, stone ground, \$3.75 a \$3.90; Pennsylvania roller process, \$4.00 a \$4.40; western winter, clear, \$4.00 a \$4.25; do., do., straight, \$4.25 a \$4.50; winter patent, \$4.50 a \$5.00; Minnesota, clear \$4.50 a \$4.00; do., straight, \$3.75 a \$4.10; do., patent, \$3.75 a \$4.00.

GRAIN.—No. 1 mixed wheat, 80 a 80 1/2 cts. No. 2 mixed corn, 40 a 40 1/2 cts. No. 2 white oats, 20 1/2 a 27 cts.

BEEF CATTLE.—Extra, 4 1/2 cts.; good, 4 1/4 cts.; medium, 4 a 4 1/2 cts.; common, 3 a 3 1/2 cts.; fat cows, 2 1/4 a 3 1/2 cts.; Texas, 3 a 3 1/2 cts.

SHEEP.—Extra, 5 1/2 a 5 1/2 cts.; good, 4 1/2 a 5 cts.; medium, 4 1/4 cts.; common, 3 1/4 a 4 cts.; culls, 3 a 3 1/2 cts.

LAMBS.—Extra, 6 1/4 a 7 cts.; good, 6 a 6 1/2 cts.; medium, 5 1/2 a 6 cts.; common, 5 a 5 1/2 cts.

PORK.—Light western, 63 1/2 cts.; heavy western, 61 a 61 1/2 cts.; extra heavy western roasts, 5 1/2 a 6 cts.; State, 5 1/2 a 6 cts.

FOREIGN.—The Marquis of Londonderry, the retiring Lord Lieutenant of Ireland, in a speech at Stockton on the 30th instant, said he believed that 20 years of coercion would pacify Ireland.

At the meeting of the Dublin Corporation, held Ninth Mo. 19th, Lord Mayor Sexton, referring to Balfour's offer to establish a Catholic University in Ireland, said that, no matter what remedial measures might be adopted as a part of the policy of coercion, the Government, the Irish people would not swerve from their main object, namely, to obtain an Irish Parliament, and to secure the management of Ireland's revenues and the administration of the laws by a judiciary responsible to the people.

The election for members of the French Chamber of Deputies, was held on First-day, the 22nd instant. Returns from 560 electoral divisions show that 244 Republicans have been elected and 152 members of the Opposition.

Among the Republicans elected there are 16 Moderates and 57 Radicals. The Opposition members elected includes 56 Royalists, 51 Bonapartists and 22 Boulangerites. Retallots will be necessary in 157 divisions. It is expected that 105 of these will return Republicans. The Republicans will probably also win the seats for the Colonies. The new Chamber will probably consist of 369 Republicans and 201 members of the Opposition.

The English and Italian Governments have signed a more stringent anti-slavery convention than has hitherto existed. The new convention declares the slave traffic to be an act of piracy, and enables cruisers to deal more promptly with captured slavers. The Mediterranean is excluded from the operations of the treaty.

Cholera has made its appearance in Bagdad, and the disease is spreading in Western Persia. A waterspout burst over Cerro Gordo, Mexico, on the 18th instant, causing several deaths. Live stock was swept away and houses destroyed. The exact number of deaths and the extent of the damage done are not known.

A despatch from Ottawa, Ontario, says the Joggins Raft Company has been incorporated to do business in Canadian and American lumber on the Pacific coast. The company's capital is \$300,000, with a reserve double that amount. The raft is to be located in British Columbia. The Joggins Raft Company from Nova Scotia to New York. They are to be cigar shaped, and will contain 12,000,000 feet of lumber. A saving in freight of \$2 per 100 feet will be effected. J. D. Sprackles and Colonel J. M. Bonduke, are the principal managing promoters. At Quebec, on the night of the 19th instant, several

thousand tons of rock slid from Cape Diamond, at the end of Dufferin Terrace, to Chaplain Street, 300 feet below, demolishing in its course seven dwellings, and burying a number of people. The latest accounts show that 25 dead bodies and 15 injured persons have been taken from the debris. The exact loss of life is not yet known.

RECEIPTS.

Received from Jacob Griffith, Phoebe Jane Griffen, and Maria S. Griffith, N. Y., \$2 each; do. 63; from John S. Fowler, o. per Edmund S. Fowler, Agent, \$2, vol. 63; from Luna Otis Stanley, Agent, Ind., \$4, being \$2 each for William T. Hadley, and Joel W. Hodoan, vol. 63; from James E. Meloney, Pa., \$2, vol. 63, and for Alice E. Reid, \$2, vol. 63; from James E. Armstrong, N. Y., \$2, vol. 63; from M. S. and E. P. Allen, N. J., \$2, vol. 63; from Jabez Thompson, Pa., per J. R. Cooper, \$2, vol. 63; from Mary Ann Wright, Philada., \$2, vol. 63; from Samuel Williams, N. J., \$2, vol. 63, and for George Williams, \$2, vol. 63; from Walker Moore, Pa., \$6.25, being \$2 each for himself, and Asahel W. Moore, Pa., and Caleb Moore, Kan., vol. 63, and 25 cents for Paschal Moore, to No. 8, vol. 63; for Anne Hutton and Mary H. Fritchman, O., \$2 each, vol. 63; from John B. Foster, Agent, N. Y., \$4, being \$2 for himself, vol. 63, and \$2 for Stephen L. Smith, to No. 27, vol. 63; from John B. Foster, \$2, vol. 63; from Charles Ballinger, N. J., \$4, being \$2 each for himself and Mark Ballinger, vol. 63; from Lydia H. Moorman, Io., \$2, vol. 63; from Charles Jones, Gtn., \$4, being \$2 each for himself and Mary Ann Hutton, vol. 63; from Joel Adair, Philada., \$2, vol. 63; from Homer B. Smith, \$2, vol. 63; from Anne O'Hara, N. J., \$1, to No. 27, vol. 63; from Christy Davis, Cal., \$2, vol. 63, and for Mary Alice Brown, Mass., \$2, vol. 63; from George Thomas, Pa., \$2, vol. 63; from George C. Webster, Pa., \$8, being \$2 each for himself and 13 children, vol. 63; from W. B. Webster, Pa., and Thomas M. Webster, Philada., vol. 63; from George W. Thorp, Fkfd., \$2, vol. 63; from Samuel L. Moore, Pa., \$2, vol. 63; from Susanna Brinton, Pa., \$2, vol. 63.

Remittances received after Third-day will not appear in the Receipts until the following week.

NOTICES.

TOUGHKEMAN BOARDING AND DAY SCHOOL will re-open Tenth Month 1st, 1859.

Address HANNA M. COPE, Principal.

THE CORPORATION OF HAVERFORD COLLEGE.—A Stated Annual Meeting of "The Corporation of Haverford College" will be held in the Committee-room of Arch Street Meeting-house, Philadelphia, on Third-day, Tenth Mo. 8th, 1859, at 3 o'clock P. M.

ELLIOTT P. MORRIS, Secretary.

WANTED.—An experienced teacher, (a member of the Society of Friends) possessing good administrative and business abilities, to be Superintendent of Friends' Select School, 140 N. 16th St., Philadelphia. Apply to

Ephraim Smith, 1110 Pine St.

John W. Biddle, 119 South Fourth St.,

or George Vaux, Bryn Mawr, Penna.

If any of our Quarterly or Monthly Meetings should have on hand a surplus of the "Extracts from the Minutes of the Yearly Meeting for 1859," will they please present them to Friends' Book Store, 304 Arch Street, in care of Jacob Smalley?

FRIENDS' EVENING SCHOOLS FOR COLORED ADULTS.

—Teachers wanted for these schools, to open Second-day, Tenth Mo. 7th, 1859.

Edward S. Lowry, No. 2220 Pine St.

Howard E. Yarnall, No. 1027 Fifth St.

Ellwood Cooper, No. 322 N. Fortieth St.

Thomas Woolman, No. 558 Marshall St.

DIED, at his home, Eighth Mo. 15th, 1859, MAHLON U. TOMLINSON, in the 70th year of his age, a member of Salem Monthly Meeting, Iowa. He was firmly attached to the doctrines and principles of our Society. He several times said that all was peace, and that the future looked bright.

At his home, near Flashing, Belmont Co., Ohio, on the 5th of Ninth Month, 1859, SARAH W. PURVANCE, in the 83rd year of her age, a member of Flashing Monthly and Particular Meeting. Her consistent life and peaceful close, give her friends the comforting belief that her loss is her eternal gain.

THE FRIEND.

Entered as second-class matter at Philadelphia, P. O.

FOR "THE FRIEND."

Incidents and Reflections.—No. 191.

PARENTAL INFLUENCE.

The restraining influence of parental love and concern is exhibited in an anecdote related to me a few years since, of a Friend whom I well knew. When young he was fond of company, and often indulged in visiting and attending parties, which his godly parents did not approve. His mother made it a rule to wait for him, no matter how late the hour at which he returned home. She always received him at such times kindly and without reproach; although he knew that she was grieved at his conduct.

One night as she was thus waiting for him, the weather was severely cold, and anxiety for his health mingled with her solicitude for his spiritual welfare. So she kept up a warm fire, and prepared a hot drink to ward off any ill effects from his exposure. He was late in reaching his home. After she had kindly inquired for his welfare, and cared for his physical comfort, they sat awhile in silence by the fire, until her anxious heart found relief in vocal prayer to her Father in Heaven.

This was the last time in which her son transgressed her wishes in that way.

A writer in *The Presbyterian* of Philadelphia, relates an incident in his own experience, which shows the power of parental influence. He says:

"The writer, when a boy of about sixteen, one day carelessly opened the door of his mother's room, not knowing she was engaged in her devotions. There he saw her bowed in prayer, pleading so earnestly with God that she had not been disturbed by his entrance. Instantly he withdrew, awed by the solemnity that filled the place; but as he softly closed the door, he heard his own name and the fragment of a sentence of prayer, which revealed to him the fact that the mother was making intercession for her boy. That was more than thirty years since, but through all the events of those crowded years that momentary glimpse of his mother on her knees in intercession for him, has been a power both of restraint and inspiration in the writer's life. In times of temptation, far from home, that holy picture has shone out in the darkness, and it has been impossible to do the wrong thing. In scenes of danger that door has seemed again

to open, revealing the mother still upon her knees in prayer, and courage and strength have come to the trembling heart.

"It is utterly impossible to measure the influence on the writer's life of that one moment's glimpse of his mother on her knees. It was a perpetual power all the years while the mother lived. And when she went home to God, one of the elements of the sorrow was that her intercession would no more rise from earth to heaven for him."

A curious case of the power of conscience, associated with the remembrance of a good mother, is related in the *Episcopal Recorder* of Philadelphia, of Eighth Month 23rd, 1888. Among the prisoners brought before the justice in the Tombs Police Court at New York, a few days before, was a youth about eighteen years old, against whom there were no witnesses. He told the justice that his mother was dead, and that she had been a good mother to him, bringing him up honestly and warning him against evil doing. They lived in Philadelphia, but after her death he came to New York, where he fell into bad ways. On the 4th of the month, he was in West Street, and noticed a lady waiting an opportunity to cross the street, which was crowded by vehicles. Her attention being concentrated on the passing drays and cars, he went behind her and succeeded in stealing her watch. She did not notice her loss, and he got away unobserved. He pawned the watch and meant to have a good time with the money, but on going out that night he saw a shadowy form follow him in a menacing manner. He looked at it over his shoulder, and recognized his dead mother. He tried to shake off her pursuit by running, by going into crowded thoroughfares, and by drinking; but, wherever he went, the shadowy form followed, and when he went home it stood by his bed, terrifying him. He suffered the torture for two days and then, being unable to bear it longer, he went to the police, made a confession and gave up the pawn ticket and what money was left. Then he said the spectre left him, and the night in his cell was the first night he had slept since his crime. The spectre was, of course, the product of his conscience and his imagination, but to him doubtless it was very real.

The influence of a mother over her child commences in the very early stages of life, when the character is forming. Maclaren beautifully illustrates its effect, when he speaks of the stone slabs in our museums, "with the marks of rain that fell hundreds of years before Adam lived, and the footprint of some wild bird that passed across the beach in those olden times. The passing shower and the light foot left their prints on the soft sediment; then ages went on, and it has hardened into stone; and there they remain and will remain for evermore. That is like a man's spirit, in the childish days so soft, so susceptible to all impressions, so joyous to receive new ideas, treasuring them all up, gathering them all into itself, retaining them all forever."

William M. Taylor, a Methodist bishop, relates an anecdote of a mother who had a dear little boy, whom she called Jimmie. One day when Jimmie's mother was away from home, having seen her put a plum-cake in the cupboard before she left, his curiosity led him to open the cupboard door, and peep in at the plum-cake. Seeing a plum protruding, his mouth watered for it. His conscience said: "Jimmie, don't touch the plum; that would be stealing." He said: "Oh! it's nothing but a plum;" so he picked it out and ate it. That sharpened his appetite, and he dug out another, and then another. Then he broke off a piece of the cake, and ate it. So his appetite got very strong, and his will to resist temptation got very weak. Then he said to himself, as he confessed afterward: "Well, mother will find it out, and I expect she will whip me anyhow, so I may just as well eat all I want," and he took feed off the cake.

Up to that day he loved his mother dearly; but now he did not like her at all. When he saw her coming, instead of running to meet her to receive her smile and kiss and blessing, he ran out behind the kitchen and hid. His mother did not discover his theft that afternoon, but Jimmie found out a sad fact: "He that covereth his sins shall not prosper." He covers a smouldering fire that will burn him out, if he don't get rid of it.

That night Jimmie came to his mother and said: "Mother, does God know everything?" "Yes." "Can He see in the dark?" "Yes." "Can He see in the cupboard?" "Oh, yes!" "Then He saw me." "Jimmie, what have you been doing?" Then he confessed his theft. She said: "Ah, my dear child, you have lost something."

Jimmie felt in his pocket, and said: "Oh, no! mother, I haven't lost anything."

"Yes, my child, you think now, and see what you have lost." After a little reflection, Jimmie wept aloud, and mother said: "What have you lost, my dear child?"

"O mother! I have lost the happy out of my heart."

The mother then explained to her child, that by yielding to the temptation he had come under condemnation; and that to recover his peace of mind it was necessary that he should repent of his sin, and ask God for forgiveness and restoration to his favor. The occurrence was one that very probably would never be forgotten, and may have risen up with warning and instruction, when temptation presented in future years. J. W.

A SPECTATOR, in hastening across the street to witness a passing pageant, had some dust blown into his eyes by the wind, which effectually prevented him from accomplishing his object. "There were but a few specks in my eye," said he, when relating the circumstance afterwards, but they blinded me as much as if you had held up a barn-door before me."—*George Morridge.*

William Grover.

(Continued from page 68.)

Twelfth Month 29th, 1815.—If, by a mighty hand, and by a stretched-out arm, our predecessors were brought forth from amidst the different denominations of professors, and enabled to bear faithful and undeviating testimony to the spirituality of the gospel—to the necessity of following the Captain of salvation, withersoever He is pleased to lead by his light and truth manifested in the secret of the soul; in other words, in the path of self-denial and the daily cross—to the necessity of avoiding all conformity with formality, all unrighteous conformity to the maxims, policy, fashions, and friendships of the world—to hold up a standard against wars and against oaths, and a testimony to the freedom of gospel-ministry, and to that worship which, laying aside all rites and ceremonies, as constituted and proper appendages to the gospel dispensation, is performed in spirit and in truth:—If they have been brought to the blessed and glorious avowal, "That in pure, silent worship, we dwell under the holy Anointing, and feel Christ to be our Shepherd; that here the best of Teachers ministers to the several conditions of his flock, and the soul receives, immediately from the Divine Fountain, that with which it is nourished."—If this people have been brought thus far, surely it becomes the living among them, to the depth of humility, reverence, and fear, to say, as a collective body, "He that is mighty hath done for us great things, and holy is his name;—has placed us in the midst of many mercies, in a state of awful responsibility. Are we not brought to the acknowledgment, that "the opening of an inward, silent worship in this nation, is a precious opening;" and that it is our duty to walk anxiously to the nature of an inward communion with God, that so no stumbling block, through us, may be laid in the way of others? The awfulness of the responsibility does not annul the truth of it; and I believe it is unsafe to flinch from or deny it.

Sixth Month, 1817.—Whether we be ministers, elders, overseers, or of whatever class, I believe we should mind where we are; and rather bear a burden, perhaps rightly brought upon us, from sympathy, or the operation and influence of the Spirit, than venture to relieve ourselves, when circumstances and the want of opportunity forbid. I believe, in a large meeting, a diversity of exercise may be excited in lively-spirited Friends, which it would be very inexpedient to bring forth in words. But I suppose that the weighty, deeply-attentive, patient mind, is permitted to discover the right time for moving; and then, the baptizing influence being dwelt under in the exercise of the gift, the meeting feels the precious effect. But I rather think, that some who have a gift in the ministry miss it at times, in the exercise of it, for want of understanding, at the time, the state of the meeting; perhaps, partly, from being involved in their own exercise. When a meeting is baptized under a living ministry, and the minister sits down, it is a nice thing indeed to make an addition; at least, before a suitable space has been allowed. As the end of all true ministry is to bring the hearers to an abiding under the influence of the Spirit of Christ, we should rejoice when this is in any considerable degree produced by the ministry of any Friend; and be very careful not to step in, in a way to dissipate the solemnity, or remove the sense which has thus profitably been begotten. At the same time, it is very desirable that no rightly appointed offer-

ing should be prevented; and the diversity of states and conditions is to be remembered. So that it is indeed a mystery; and a very weighty thing is living, baptizing, ministry.

I remember, whilst on this subject, a remark of dear Henry Tuke, in our Quarterly Meeting, a pretty many years ago, that to meet hardly a greater evil could befall us, as a religious society, than an unbaptized ministry.

Fifth Month 19th, 1821.—I am not sure, whether it is possible, by words, to convince the gaitersayers, if many such there be, that our meetings for discipline are divinely owned and crowned; but if those who know the Truth, and love it, would keep their ranks faithfully, with meekness and lowliness, yet in stability and gospel beauty, it would, perhaps, go further than anything else; and I believe these, rightly engaged, would be blessed in meetings, and meetings blessed in them.

I believe it is good for young men to make a point of devoting a small portion of time—a few moments—every day, to read a little in the Holy Scriptures, and to endeavour to yield their minds, in sincerity, into a short calm and quiet. For, in Divine loving-kindness, something may be vouchsafed and communicated, in these short seasons of mental recollection, which will, in degree, nourish and cherish the Divine Life in the soul, so that the Love of God will be felt to prevail a little; and as this love is entertained, and found to increase, the love of the world and the anxious desire after its enjoyments will lessen, and the mind be prepared to take its chief delight in something spiritual and heavenly. This experience will prove a permanent treasure.

Here, dear young friend, whosoever thou art, is the point of wisdom. Mind, day by day, and through all, an inward sense respecting things, and thou mayest be favoured to perceive what thy duty calls for at thy hands, as to thy outward, temporal, domestic, or social occupations; and then what time thou canst properly spare for company and books, and how much of either thou canst enjoy, with religious benefit to thy own mind. Much company and many books, or much reading, have often a direct tendency to draw the attention of the mind outward, instead of inward. And here there is need of wise discrimination. If thy company or thy reading tends to give thee a humbling view of thyself, and of thy many frailties and infirmities, and to increase the ardour of thy mind, in the pursuit of Divine help, of inward quietude, and sweet, enriching peace, thou mayst conclude so much of it is good for thee; but if either of them be such, or indulged in to such a degree, as unprofitably to occupy thy mind, and rather indispose than encourage thee in the love of inward recollection and meditation, thou mayst safely conclude there is a snare in it, and that there is danger lest the durable and precious substance may be lost in the pursuit of the shadow.

(To be continued.)

Justs gave himself for the world. Paul counted not this life dear unto himself if he might testify "the Gospel of the grace of God" to others. There is no philanthropy equal to that which the Gospel plants in the human heart. It turns the severest sacrifices for Christ and for humanity into pleasures, and enriches the soul with impulses and aspirations that grow only in the soil of love. God be praised for every such example of what the Gospel can do for human character.

FOR "THE FRIEND."

A Visit to Colorado.

BY CHARLES RHOADS.

On the 6th of the Eighth Month, 1889, a party of six took the Chicago, Rock Island and Pacific Railroad through train to Denver, Colorado, intending to visit some of the most interesting accessible places in the Rocky Mountains, and to sojourn a few weeks at Colorado Springs, for health and recreation.

Modern Pullman car trains accomplish for the traveller what could only be obtained twenty years ago by nightly tarriance at hotels by the way; thus saving both time and money in reaching a distant point. They are so arranged as to carry with them a dining car and kitchen upon which meals are served and eaten with as much comfort and leisure as may be enjoyed in a hotel. Forty hours of travel on such a train, passing through parts of Illinois, Iowa, Missouri, Kansas and Colorado, landed us at Denver about 10½ A. M., on the 8th of the month. The journey took us through Kansas City, now grown to be a place of 125,000 inhabitants, where many lines of railroad concentrate, and great activity in business is manifest: thence via Topeka, the northern counties of the State of Kansas, and the eastern part of Colorado, and gave an opportunity to view the prairie lands of eastern Kansas, now clothed with luxuriant crops of corn and oats, and the arid plains of Western Kansas and Eastern Colorado, once known as the great American Desert. This region is described by John C. Fremont, in his report to the United States Government of the expedition of discovery performed by him in the years 1842-3, over the Rocky Mountains,—as a treeless, undulating, sandy plain, devoid of vegetation to support the animals who transported his supplies, except a fine species of grass two or three inches long and thinly scattered over the soil, called Buffalo-grass, and the Sage-bush. The same natural features still characterize these plains for a space of 400 miles east of the base of the mountains, and north and south nearly as great a distance.

The Chicago and Rock Island Railroad upon which we travelled, had scattered along it in this region a few settlements of farmers, who were striving to gain a subsistence from the land. Where streams flowed they were used for irrigation; but the few fields of growing corn we saw, proved how discouraging the results are. The stalks of corn did not seem more than three feet high, yet were in tassel and partly dry and dead at top. Some horses and cattle were grazing in places, but the number was small compared to the immense area traversed. Our impressions of this vast country were, that it is still of little value to mankind, and monotonous and uninteresting to travellers.

The transition from this barren country to the City of Denver is almost startling in its effects. Here we find a busy thriving place of over 100,000 residents, costly public and private buildings, street cable railways, electric lights, and all the appurtenances of an Eastern metropolis. Denver is located at the foot of, and about 15 miles east of the mountain range, on the table land which is here 5,000 feet above the sea level. The temperature ran up to 90° at mid-day, but the evenings and nights were cool off rapidly. From Denver we journeyed northward to Estes Park, 45 miles distant by rail, and 25 more by stage. This railroad took us through the high plains, called *Mesas* in Spanish phraseology, at the base of the range, parts of which

were irrigated and farmed. Fine crops of alfalfa, a species of clover, were growing on these watered fields, and some acres of good oats were cut and stacked up on others. We also passed several coal mines which were being worked. Arriving at the little town of Lyons, where the railway ends, we were transferred to stage coaches to complete the remainder of the trip over the mountains. Soon we began to climb their steep sides along the pretty creek called St. Vrain; a thunder-storm overtook us on the way, which added grandeur to the scene. Rising some hundreds of feet we finally reached the rim of the basin or park into which we aimed to descend. A "Park" in Rocky Mountain phraseology is a wide meadow or plain surrounded by mountains and watered by streams. Such an one was spread out at our feet, and our horses sped down the hard smooth roadway that led to it. On the right stood Mt. Olympus, a precipitous cone bare of trees, overlooking a peaceful vale below. A lucid creek rushed over its rocky bed, and refreshed the green meadow through which it ran. A wall of granite nearly vertical, and stretching upwards probably a thousand feet, enclosed one side of the park. On another the great Mummy peak, on the flanks of which is found a real Alpine glacier, and its companion summits reared their crazy heads; flowers of every hue were strewn thickly by the wayside, and herds of Durham cattle were being driven by the ranchmen homeward, or milked in the corral near which we stopped. This valley, which is from a half-mile to a mile wide, ramifies by its various arms many miles in extent, has been settled by a half dozen adventurous men either in search of health or wealth or the charms of solitude. Our host informed me that he had migrated there in 1874, from Missouri, on account of his wife's health, and had brought with him a herd of 35 cattle. These had subsisted entirely on the pasturage derived from the valley, winter and summer. He had given them no hay or stable shelter at any time, and truly their progeny were as thrifty a herd as one often sees. In winter when there is snow, he said it was not often more than 6 or 8 inches deep and blew off the pastures so soon that the buffalo-grass was accessible to the animals in a few hours after it fell. This grass is turned into good hay in the autumn as it stands on the ground, so that the farmer is under no necessity to cut, cure and house it, as with other grasses. Thousands of cattle and sheep live on the pastures of the parks and valleys on the eastern slopes of the Rocky Mountains, without much care from their owners during the winter season. This is not the case on the western side of the great mountain ranges, however, where I was informed by an old farmer the snows often fell to the depth of four and six feet on a level, and the cold is intense.

(To be continued.)

Science has its place in this world, but it is a very small place. Feeling is more potent than knowledge. The literature that abides as a permanent influence among men is the literature of sentiment, rather than of fact. Men of scientific research are of service to their fellows, but theirs is, at the best, an inferior service. The better service, the greater service, the more permanent service, is always in the realm of the affections, not of the intellect. Knowledge shall vanish away, but love abideth. Not all of us can have knowledge, but all of us can have love. The lower plane of effort is not open to all, the higher plane is.—Selected.

An Address Prepared by the Meeting for Sufferings of Western Yearly Meeting, Ninth Month, 10th, 1889. On the Extravagance at Funerals.

As representatives of the Society of Friends, who have always had embodied in their conduct the necessity of moderation and temperance in all things, we come before the intelligent and thinking portion of our fellow citizens, with an honest and earnest appeal to the consciences, especially of religious professors, whether the signs of the times do not demand a solemn protest, a united voice, against the customary display and extravagance on funeral occasions.

In view of the solemnity of such occasions, we feel that unnecessary parade of any kind detracts from the important lesson intended to be brought to bear on every heart, that this world is not our home.

Considering the example of those of ample means (who feel that no demonstration of affection is too great to bestow on dear ones who have left their embrace), as it reflects on the sensitive nature of those of limited means, to say nothing of the many *poor* whose departed friends are just as dear.

What is the duty of those claiming to be followers of a meek and lowly Saviour?

Is there no way by which this burden can be relieved?

When we remember that naked we came into the world, and so we must appear before the Judge of all the earth, that no robes of self-righteousness, nor adorning of the lifeless remains, can screen us from the scrutinizing eye of the Omniscient, how the glitter and show of this world sink into insignificance. We have not been placed here on God's footstool as exclusive beings, but as stewards, accountable for our words and deeds, for our example as well as our precepts, for the proper use of our temporal blessings, as well as the right occupancy of the entrusted talents, and if we fail to carry out the injunction: "Bear ye one another's burdens, and so fulfill the law of Christ," we fail in one of the grand objects of our creation.

Let us then pause and consider the tendencies of the extravagance, the ostentation of a modern funeral, of course somewhat regulated by the monied worth of the parties, more than their Christian character and intrinsic worth.

Often the time and means are taxed to the uttermost to obtain, as is considered, an appropriate outfit for the clay tenement of our departed ones, and too a corresponding outfit for mourning friends, milliners and mantua-makers are brought into requisition. Florists are set to work to weave garlands of flowers with which to decorate the dead and the grave, so that by the time the last sad rite is being performed, the hurry and anxiety have so overcome the mental and physical powers, that we are incapable of much calm reflection.

The obsequies or church services seem only as the same old story, and we pass from the scene with little impression except the grandeur of the occasion.

The immediate family feels the sadness of bereavement, and gradually the fact opens up before them that a heavy expense has been incurred, in addition to the bereavement, which comparatively few are able to bear without sacrificing the comforts, often the necessities of life.

Fellow Christians, church members, what ought to be done? And then, according to custom, there must be an ample monument, or tomb stone provided to mark the last resting

place of the dead, and the accompanying mourning apparel for the living, which as has sometimes been said, are often more of an advertisement for sympathy and companionship, than of real mourning, and which not unfrequently almost takes the bread out of the mouths of poor fatherless or motherless children.

In this age of fast living, with the threatening judgment of an offended God hanging over our nation, it does seem to us that the time for retrenchment has come, and to begin with the most solemn obligations in which we are required to act our part wisely, the last tribute to the dead, is a most fitting place of reform.

If those in the higher ranks would begin by setting the example of becoming simplicity, others would gladly fall in line, and the consigning of our loved ones to mother earth would be attended with more serious thoughtfulness and benefit to all concerned.

Why not arise as a people who shall have to give account, and in one united effort bear an earnest protest by example and precept, in our last tribute of respect, against all extravagance that would detract from the solemnity of the occasion by occupying the mind with military display, the adorning of the lifeless body, the grand decoration of flowers, the appropriateness of the music, or the fitness of the sermon to the life and character of the dead. The character given in the sermon not unfrequently being the reverse of the real one, has a tendency to settle the living into a false rest, for if a man of doubtful Christian character could find acceptance, why not the rest of us, who live as we list, and do as we please?

Pride and folly are the outgrowth of a libertine spirit, and in whatever we indulge that fosters these, we fall in keeping under our body (as the example of the great apostle), and give latitude to an easily besetting sin.

Righteousness exalteth a nation, but sin is a reproach to any people.

On behalf of the meeting aforesaid,
MILTON STANLEY, Clerk.

Phosphate Mines at Redonda.

The island of Redonda, where the phosphate mines in question are found, is situated about midway between the islands of Montserrat and Nevis, and about 25 miles to the southwest of Antigua, in latitude 26° 6' and longitude 61° 35'. It is a dependency of Antigua, and one of the numerous islands belonging to the Leeward Island group, and under the jurisdiction of the British Government. Its discovery dates from the second voyage of Columbus, in 1493.

A full survey of the island has never been attempted. It is estimated to be one mile in length, a third of a mile in width, and about 1000 feet in height. It stretches north and south, and presents a very barren, bold, rocky, rugged appearance. The eastern side is somewhat rounded, and more deliberate in reaching the sea, but the western side, with the exception of a steep ravine, is a sheer precipice of nearly 1000 feet in the highest part. Its shores are rock bound, and offer but one desirable place for landing, at the southwest part, near the foot of the ravine alluded to. The rock is encompassed by bold water, and a stone can be easily cast from the shore into 20 fathoms of water. The mines are situated on both the northerly and southerly ends of the island.

Phosphate alumine was discovered at Redonda about 1865, by Dr. Field and Henry A. Arrindell, both Americans; the latter a naturalized

citizen, and later a consular officer at Antigua. The shipments of phosphate by the present company began in the latter part of 1855, and have amounted in all to about 21,000 tons, valued at \$117,810, free on board.

On account of the mines being situated on the top of this precipitous island, a system of wire cables and iron buckets has been instituted in order to lessen the difficulty of placing the phosphate rock aboard ship.

The system at the south of the island connects the wharf and landing with the mines and buildings above. It extends up to the ravine before referred to, and is 700 feet in length, with a gradient of 60 degrees. The system consists of two 1½ inch steel wire cables, stayed above and below. Suspended from these are two large iron buckets, connecting with blocks, which run on the cables. The buckets are connected by another wire cable, which runs in a large wheel at the top. Water is used for the ballasting, and is kept in a cistern at the top, holding 800 gallons, and which is pumped from the sea below by a steam engine stationed at the water's edge. The phosphate is sent down with a bucket and dumped into a box, which is swung by a crane and dumped into a lighter and put aboard ship. The operation is simple and most expeditious, and a vessel is rarely delayed in taking in her freight. The system at the north of the island, where most of the mining is done, is 1140 feet in length, and has, it seemed to me, a steeper gradient than at the south. The foot of this system is stayed into the rock in the bottom of the sea, in two fathoms of water, and some little distance from shore. The phosphate is dumped from the bucket into the lighter direct.

The number of mines varies from time to time. When I visited the place in November all operations had been stopped and the miners sent home for a holiday. In the busy season, when shipping is active, about ninety hands are employed, of which fifty are miners proper. The labor is obtained from the islands of Montserrat and St. Martins, and is negro labor entirely. From \$6 to \$7 per month is paid them, and they are found both food and lodging. The staff consists of a superintendent, manager, and hook-keeper.

On the southern end of the island, and at a height of about 600 feet above the sea, the company has erected a number of buildings, consisting of a large house for the staff, shops, store-houses, boarding houses, and others. These buildings are mostly of iron, and every precaution has been taken to save the rain-fall by a system of pipes, tanks and cisterns in connection with them.

The company is now in possession of a stock of rain-water amounting to about 60,000 gallons. The mining is confined to the surface, and the good rock is found in veins. The drilling is done entirely by hand-drills, and the rackarock explosive is preferred to all others. An apparatus is kept on hand to test the amount of phosphoric acid contained in the rock, as the rock sold is guaranteed to contain not less than 30 per cent. of acid. Some of the rock contains 35 per cent. phosphoric acid. No data could be supplied to determine the chemical constituents of the rock in question. It is known to contain a large percentage of iron, however. The supply of phosphate is reckoned by experts to be inexhaustible.

CHESTER E. JACKSON, *Consul.*

ANTIGUA, December 22nd, 1888.

THE earth and its fullness are the Lord's.

THE WILD WHITE ROSE.

It was peeping through the brambles,
The little, wild, white rose,
Where the Hawthorn hedge was planted
My garden to enclose.

All beyond was fern or heather
On the breezy open moor;
All within was sun and shelter,
And the wealth of beauty's store;
But I did not heed the fragrance
Of flower or of tree,
For my eyes were on that rose-bud,
And it grew too high for me.

In vain I strove to reach it,
Through the tangled mass of green
It only smiled and nodded
Behind its thorny screen.

Yet through that summer morning
I lingered near the spot:
Oh! why do things look sweeter
If we possess them not?

My garden buds were blooming;
But all that I could see,
Was that mocking, little, wild rose
Hanging—just too high for me.

So, in life's wider garden,
There are buds of promise too—
Beyond our reach to gather
But not beyond our view—

And like the little charmer
That tempted me astray,
They steal out half the brightness
Of many a summer day.

O hearts that fail for longing
For some forbidden tree,
Look up and learn a lesson
From my white rose and me!

'Tis wiser far to number
The blossoms at my feet,
Than ever to be sighing
For just one bud more sweet.
My sunbeams and my shadows
Fall from a pierced Hand:
I can never trust his wisdom,
Since his Heart I understand,
And maybe in the morning,
When his blessed face I see,
He will tell me why my white rose
Grew just too high for me!

—*Elna Fletcher.*

A ROYAL SERVICE.

Among the Master's callings of high honor,

One often hears we wise,
Because our hearts, in their impatient yearning,
Fail to perceive its bliss;

Fail to perceive the grandeur of its service,
The deep, sweet joy it brings,
And deem some other easier or nobler,
With richer harvestings.

And so we may not choose, but Christ appoints us,
The work of His will,
And saith, "My child, in quietness and patience
This service now fulfil.

Since all these hours of weariness and waiting
Are precious unto me,
Each one mine hour, be freighted with some blessing;
Let it be perfect choice for thee.

"Then think not thou art kept within the shadow
Of long inactive years,
Without some purpose infinitely glorious,
Some harvest, sown in tears."

And so there comes a glory and a gladness
Into the weary days,
And in our hearts there shines a solemn radiance,
Inwrought with quiet praise.

We learn that we are given this sweet service,
Because the Master sees
That thus his delegates must oft be fitted
For higher embassies.

We praise Him for these lonely hours of waiting,
And trusting look above,
Till all the hush and silence of their service
Grows luminous with love.

We muse upon that ministry at Nazareth,
Until it seems to be
A fellowship most sweet, a royal honor,
To wait, O Christ! with Thee.

We learn that we are given this sweet service,
Because the Master sees
That thus his delegates must oft be fitted
For higher embassies.

We praise Him for these lonely hours of waiting,
And trusting look above,
Till all the hush and silence of their service
Grows luminous with love.

We muse upon that ministry at Nazareth,
Until it seems to be
A fellowship most sweet, a royal honor,
To wait, O Christ! with Thee.

We learn that we are given this sweet service,
Because the Master sees
That thus his delegates must oft be fitted
For higher embassies.

We praise Him for these lonely hours of waiting,
And trusting look above,
Till all the hush and silence of their service
Grows luminous with love.

We muse upon that ministry at Nazareth,
Until it seems to be
A fellowship most sweet, a royal honor,
To wait, O Christ! with Thee.

SELECTED.

And even as we stand within the shadow

Of these long years of Thine,
Our waiting days grow letter, holier, grander,
Their service more sublime;

Until at last we hear Thy dear voice saying,
"Child, I have need of thee
To fill this vacant place of trust and honor,
To do this work for Me."

And then, as fellow-workers with the Master,
We shall arise and go
Forth to the harvest-fields of earth, it may be,
The reaper's joy to know;

Or to some perfect, wondrous service yonder.
Within that Holy Place,
Where, veilless, in its full, transfigured glory,
His servants see his face.

—*The Presbyterian.*

The Dying Boy and the Lost Sheep.

Many years ago I was engaged in work for the Lord in a remote district in Ireland, a wild mountainous region, and was asked to visit a boy who was dying.

Entering a little hovel, I saw him lying on a heap of straw.

"My poor boy, you are very ill; I fear you suffer a great deal."

He replied with difficulty:

"Yes, I have a bad cold; the cough takes away my breath, and hurts me a great deal."

"Have you had this cough long?" I asked.

"Oh, yes, a long time! near a year now."

"And how did you catch it?"

"Ah!" he answered; "it was that terrible night—about this time last year—when one of the sheep went astray; my father keeps a few sheep upon the mountain, and that's the way we live. When he reckoned that that night there was one wanting, and he sent me to look for it."

"No doubt," I replied, "you felt the change from the warmth of the peat fire in this close hut to the cold mountain blast."

"Oh, that I did! There was snow upon the ground, and the wind pierced me through and through; but I didn't mind it much, I was so anxious to find father's sheep."

"And did you find it?" I asked, with increasing interest.

"Oh, yes; I had a long weary way to go, but I never stopped till I found it; and I just laid it on my shoulder, and carried it home that way."

"And were they not all at home rejoicing to see you when you returned with the sheep?"

"Sure enough and they were! Father and mother and the people around that had heard of our loss, all came in next morning to ask us about the sheep; for your reverence knows that the neighbors in these matters are mighty kind to each other. Sorry they were, too, to hear that I was kept out the whole dark night; it was morning before I got home, and the end of it was that I caught this cold."

Wonderful! I thought. Here is the whole Gospel history: the sheep is lost; the father sends his son to seek for and recover it; the son goes willingly, suffers all without complaining, and in the end sacrifices his life to find the sheep.

Reader, Jesus has died to save the lost. Has the Good Shepherd found you? He is seeking you, and if you seek Him you shall find Him,

Tenderly the Shepherd o'er the mountains cold
Goes to bring the lost one back to the fold;
Seeking to save!

Lost one, 'tis Jesus seeking to save.

FOR "THE FRIEND."

Some Notes on Insects.

Two or three years ago, a vine came across the fence from a neighbor's garden into our own. It was a quick growing plant, with numerous small greenish white flowers, and rather large 5-lobed leaves. The fruit was about the size of a small hen's egg, but not so pointed, and was covered with weak fleshy prickles. From this is derived its botanical name, *Echinocystis*, compounded of two Greek words meaning a hedgehog and a bladder—from the prickly covering of the, at length bladderly fruit. Like many other climbing plants, it supports itself by tendrils, which clasp any object they come in contact with. To give it a more secure grasp, each of the stalks of the tendrils divides into two or three branches, which are coiled in spirals of many circles, so that when the extremity has wound itself around the twig of a supporting bush, the tendrils can be lengthened by drawing out the spiral coil into a straight line, if there should be need.

The plant we found to be the Wild Balsam Apple (*Echinocystis lobata*). Although the vine dies at the end of the season, yet as each fruit bears 4 seeds, it provides for a succession of plants.

Observing one day that something seemed to be destroying the leaves, I examined the vine more closely, and found they were being eaten by a small round-topped, yellow beetle, prettily marked on the back with twelve dark dots. It was apparently a species of bug similar to those I had often seen on Morning Glory vines, and which is commonly called Lady-bug. Some of the Lady-bugs are useful as destroyers of the plant-lice which suck the juice from the tender shoots of plants, and hinder their growth and strength. But this species is, at least sometimes, a vegetable feeder.

On the afternoon of the 29th of Eighth Month, in walking along one of the lanes near our village, I was surprised to see the numbers of grasshoppers which were disturbed by my approach, and which clustered on the lower rails of the fence. I had noticed but very few of them before, during this summer. Though of considerable size, the wings were short, so that they moved principally by the aid of their long and strong legs, which enabled them to take long leaps. When the grasshoppers are first hatched from the eggs, their wings are mere rudiments, but as they grow these are gradually developed, so, it is probable that later in the season the insects which I saw would have the power of flight.

In the leaps which they made several of them became entangled in the webs of a very large, yellow-bodied spider, which were placed like nets among the bushes. Some of these nets contained the bodies of grasshoppers which had lost their lives in this way, and had been closely enveloped in a silken shroud, and fastened to a portion of the web.

Another insect which was quite abundant in the low ground, was the common black cricket, which in structure and habits is similar to the grasshopper. Indeed, they belong to the same family of insects. Both feed on grass and other vegetable matters. The cricket is more nocturnal in its habits. The males are quite pugnacious, and in some eastern countries it is a favorite amusement to capture them and induce them to fight each other—as other people in whom the same semi-civilized habits prevail, will fight game-cocks, dogs, &c.

Near the path I trod where a number of plants

of the Boneseet (*Eupatorium perfoliatum*) in full bloom; and these seemed to furnish an attractive repast to a variety of insects, which rested on the flowers and explored their recesses for honey or pollen. Among these were some beautiful small white butterflies, probably the same which earlier in the summer lays its eggs on cabbage, radish, mustard and other plants of the *Crucifera*; from which develop small green worms which are sometimes quite destructive. When these have attained their full size, they quit the plants, and retire into crevices or beneath palings or the edges of stones, where they spin a little tuft of silk in which they entangle the hooks of their hind feet. Then the insect casts off the caterpillar skin and changes into a chrysalis. There are two broods of these butterflies in the year, and the chrysalids from the later brood pass the winter in that state and do not come forth as butterflies until the following spring. The name of this Cabbage butterfly is *Pontia oleracea*.

Another Butterfly, of about the same size, but yellow, instead of white, was more abundant. Some of them visited the flowers, but others congregated in spots of bare sandy ground. I have often seen them near the margin of streams of water, where the sand was moist, collected in large numbers. Their yellow wings are bordered with black bands. It was the *Colias Philodice*. Its caterpillars feed on clover, lucern and other leguminous plants. The habits of this insect are similar to those of the Cabbage butterfly.

Perhaps the most numerous visitors to the Boneseet pasture grounds were the common honey bees, which were industriously at work among the flowers. Occasionally a large Humble-bee would be seen, or a banded Yellow-jacket, or a fly similarly marked with yellow bands, and so nearly imitating the stinging insect it resembled, as to prevent most persons from carelessly interfering with its movements.

A clump of Silk Weeds (*Asclepias Cornuti*) by the side of the path, had its leaves apparently covered on the upper side with a sticky substance which had exuded from them. This was an attraction to some wasps, who had seated themselves on the leaves.

On the lower margin of a piece of woodland, where it sloped down into a meadow, were a number of Pin-oak trees (*Quercus Palustris*), whose beautiful leaves were dotted over with small round swellings varying in size from a large grain of shot to a pea. There were thousands upon thousands of these. In some cases more than 20 were growing on a single leaf. I supposed them to be galls formed by the Gall-fly having stung the young leaf, and deposited one or more of its eggs in every spot where these galls afterwards developed. The puncture of the leaf is followed by a swelling of the wounded part, which increases rapidly in size and becomes spongy. The eggs grow for a time by absorbing the sap around them; and after they are hatched, the little grubs proceeding from them find food around them. When they have gone through their changes, and are ready to appear as perfect winged insects, they gnaw their way through the shell of the galls and come out into the air.

The Aleppo galls, or nut-galls of commerce, used in making ink, and in medicine, are caused by the punctures of a species of Gall-fly on a kind of oak that grows in the western parts of Asia. Several other forms of galls grow on the oak trees—and they are also produced on other plants. We not infrequently meet with them on the wild Blackberry, forming a rough en-

largement of the stem sometimes 2 or 3 inches in length, the effect of numerous stings and the deposit of many eggs of a Gall-fly.

As I wandered along the edge of the woodland, I came to a tree where the green expansion of the leaves on some of the branches had all been eaten away, and the principal veins only were left, stung irregularly with the galls we have been describing. The cause of this destruction was soon apparent in clusters of dark colored caterpillars, with light yellow lines along their sides. It is the larva state of a moth of an ochre-yellow color, the wings of which are faintly tinged with purplish-red, (*Dryocampa scenaria*). Harris in his *Treatise on Insects Injurious to Vegetation*, says, "They live together in swarms, but do not make webs; their bodies are cylindrical, remarkably hard and stiff, naked or not hairy, and have on each ring about 6 short thorns or sharp points, besides two on the top of the second ring; which are long, slender and threadlike, but not flexible, and project in the manner of horns. They are black, with four narrow ochre yellow stripes along the back, and two on each side. It is found in swarms of several hundreds together on the limbs of oaks. At first they eat only the youngest leaves at the end of the branches and twigs, and as they grow larger and stronger, proceed downward, devouring every leaf to the midrib and foot stalk, from one end of the branch to the other. They have their regular times for eating and for rest, and when they have finished their meals, they cluster closely together along the twigs and branches. When fully grown they measure about 2 inches in length. Commonly in the early part of September, they crawl down the trees and go into the ground, where they are changed to chrysalids. These remain in the ground throughout the winter, and work their way to the surface in the following summer. About the beginning of July the moths burst them open and make their escape."

J. W.

From the cradle to the grave men's lives exhibit little else than a continued course of dependence. They are dependent on the earth, on the water, on the air, on each other, on irrational animals, on vegetables, on unorganized substances. Let but the sun withhold his beams, and the clouds their showers, for a single year, and the whole race of these mighty, independent beings expires. Let but a pestilential blast sweep over them, and they are gone. Let but some imperceptible derangement take place in their frail but complicated frame, and all their boasted intellectual powers sink to the level of an infant's or an idiot's mind. Let a small portion of that food on which they daily depend for nourishment pass but the breath of a line from its proper course, and they expire in agony. An insect, a needle, a thorn, has often proved sufficient to subject them to the same objects for the continuance of their lives, they are dependent on a still greater number for happiness, and for the success of their enterprises.—*Dr. Payson*.

ONCE asked an aged man, in regard to his pastor, who was a very brilliant man, "Why is it that your pastor, so very brilliant, seems to have so little heart and tenderness in his sermons. "Well," he replied, "the reason is, our pastor has never had any trouble. When misfortune comes upon him his style will be different."—*Talmage*.

SELECTED.

I have had to believe that the Lord will take care of his own cause and truth; and though many unfaithful ones may wholly run out and make shipwreck, and the Society become much reduced in number, yet the Lord will preserve a remnant true to himself and to his truth, through all the reproaches and trials they may have to endure, and cause them to stand in greater purity and integrity; and they will be as an ensign lifted up for others to rally to, so that in days to come there will be a gathering to the standard of ancient Quakerism. For I am firm in the persuasion, that the precious principles of Truth will not be permitted to fall, nor standard bearers be wanting to uphold them before the nations.

Happy will it be for such members, who, in an honest and good heart, maintain them in all their integrity, not in word only, but in their whole lives and conduct.—*Thomas Evans.*

Means of Grace in a Closet Door.

Quite a good many years ago I had an invitation to visit a dear old aunt of mine. I was very fond of her, not only because she was sweet and good, but because she was so bright and original, and had such clever entertaining ways of looking at things. So, of course, I accepted with pleasure, and before many days I was safely ensconced in her cozy home. She was something of an invalid, so we used to sit up in her room a good deal, in front of a cheerful wood fire, while we talked about many things that happened long ago before I was born, when she and my father were children together, or of my own mother, who had died when I was quite a child. In all of these things I was immensely interested, but I doubt if any thing she ever told me did me more good than this funny little incident about her closet door. One morning, after we had been busy together, as she rose to put away her work, she said: "My dear, come hold my closet door open for me, please." I complied at once, somewhat wondering, and then said, "Why?"—for I must confess, that habit of my childhood still clings to me.

Many times have I been thankful for the bit of helpful wisdom that came to me in an answer to that "why." She answered: "My dear, years ago, when I took up my abode in this room, I found to my great annoyance that the closet door had a way of shutting by itself, without in the least consulting anybody else's convenience. I might be only half-way in, or half-way out, or poking about in its darkest corner with my dim old eyes—slowly but surely, and most exasperatingly, would that closet door shut upon me. I'm afraid I lost my temper a good many times over it. In despair I finally sent for a carpenter, who came with his box of tools and fussed a whole morning. As he went away he said: 'Can't say surely, ma'am, as I've helped you any. This here is an old house, and it's settled, ma'am, and I'm afraid that door'll swing to the end of time.' So I sat and thought about it. 'Swing to the end of time!' I said. 'And am I going to keep losing my temper three and four times a day to the end of time? Wretched prospect! I won't do it. I'll make use of that door. It shall be a means of grace to me. I'll take pleasure in its very infirmity; for I'll make it teach me patience.' And it has, my dear. It sounds strange, perhaps, to say it; but I really believe that closet door has helped my Christian life."

I thought over her story a long time, and a

new idea of life came to me. The little things that seem so insignificant—can we use them? Are they among the "all things"? Surely it was true! I could think of several things that had been daily small trials to me at home. I made a resolve that they should be "means of grace" instead, and I think they have been.—*Sunday-School Times.*

Drunkenness, as a rule, is the result of drinking liquors which contain alcohol; and therefore, the more of pure alcoholic liquors there are drunk, the more there is of drunkenness. This has been the state of things from the days of Noah until the present time. It is true that the opposers of total abstinence have been accustomed to claim the opposite, but that claim does not militate against the obvious facts in the case. Drunkenness does prevail in wine-making districts all the world over. That a man who gets drunk on pure apple cider is the most ill-natured and outrageous man to deal with, is a patent fact to all who have known cider-drunkards in comparison with other drunkards. That a drunkard whose only drink is pure beer is the most heastly and repulsive sot among sots, is a fact well known to all who have a wide range of observation among different sorts of drunkenness. That there are adulterated liquors which kill a man sooner than pure liquors is a fact; but that any adulterated liquor can make more drunkenness to the square inch in any man who drinks it, is not a fact. If it is drunkenness you are after, use pure liquors. If it is drunkenness you want to be free from, the best thing in the world for you to let alone is—pure liquor.

Natural History, Science, &c.

The Fieldlark and Some of its Relatives.—It is rather disappointing to the reader of English literature to find that many of the birds whose praises the poets have sung, are not found in America. It is true that the common names of several of our birds correspond to those of English songsters thus celebrated, but upon investigation they turn out to be very different birds.

For instance, our robin, the rather greedy bird which, as Lowell says, "has a bad reputation among people who do not value themselves less for being fond of cherries," is a thrush (family *Turdidae*) while the English robin of which we hear so much is a smaller bird and belongs to the warblers, the only similarity being the red breast.

The blackbird, too, appears in various forms. The blackbirds we know so well are by no means noted for the beauty of their song; but turn to an English work on birds and you find that the blackbird is a thrush and one of the sweetest singers in England.

Then, when we read Shelley's Ode to the Skylark, we cannot help regretting that we do not know the bird of which he says:

"On the vernal showers
On the tinkling grass,
Rain-awakened flowers,
All that ever was
Joyous and clear and fresh, thy
music doth surpass."

But though we do not have the bird which "sings as he soars," we have a fieldlark, a very delightful vocalist, though he does not belong to the true larks at all, but to the *Leteridae* or American starlings. He is an interesting bird, notwithstanding the fact that he has missed being immortalized by Shelley, and he and some of his near relatives are making the fields

and sloughs about here melodious these early summer days.

The family *Leteridae* is divided into three groups—the orioles, the crow blackbirds, and the marsh blackbirds. The beautiful Baltimore oriole, or golden robin, is a type of the first group. Its plumage, flaming orange, and jetty black, its curious pensile nest and its sweet song make it one of our most attractive birds. It is rather rare here, though we generally see one or two each summer. But it is a woodland bird and will probably become more common as the artificial groves of this prairie country grow older. It is scarcely more than a decade since the first robin gladdened the hearts of those who had emigrated to Iowa from wooded regions, and now each year brings us more birds than the last.

The crow blackbirds, as may be supposed, ally the *Leteridae* to the crow family. They have large, strong feet, adapted to walking, and spend much of their time on the ground. Their voices are harsh and unmusical.

The third division, the marsh blackbird group, is the one to which the fieldlark belongs. In low, swammy ground, where the sedges and cattails grow, we may find a familiar example of this group, the red-winged blackbird. The cowbird, too, which, like the European cuckoo, lays its eggs in the nests of other birds, belongs to this group and is found in the same locality. The fieldlark, however, though similar in many respects to these birds, inhabits higher ground. Down among the grass in the open field it builds its nest, laying from four to six spotted eggs. It is a migratory bird, disappearing from this region in the fall and coming back with the early spring.

In color the fieldlark differs widely from its relatives, the blackbirds, the prevailing color of its back, head and wings being a grayish brown, mixed slightly with black. Its breast is yellow, set off by a black crescent on the throat. Its bill is long and of a peculiar shape, the lower mandible having the appearance of being bent downward just where the feathers end. It is one of our most common field-birds, and its sweet song makes it a welcome visitor, while its coming is hailed as one of the many harbingers of spring.—*Anna J. Nichols, in Friend's Intelligence.*

Bark Dust Explosion.—On the 19th of Seventh Month an explosion took place at the Eagle Valley tannery, Ridgeway, Pa., by which five workmen lost their lives. The building in which it occurred had mills at one end for grinding the bark. The explosion took place just after the machinery had started in the morning, but before the bark mills were put in operation. The accident shows that bark dust, like flour dust, and other combustibles in a finely divided state, may be diffused through the air, so as to make a mixture which will explode on the approach of flame. The *Scientific American* recommends as a preventive of such accidents that the atmosphere in the mill be kept saturated with steam.

The Plague of Crickets in Algeria.—A species of winged cricket or grasshopper that breeds on the dry highlands of Algeria, has been descending to the cultivated plains during the last few years, and committing great devastation on the crops. The female lays her eggs about the end of the Sixth Month, choosing dry and sterile ground, in which she bores a hole an inch deep, and deposits a cylindrical ovary, or hardened shell of muclage containing about 40 eggs.

These remain in the ground about 9 months, and are hatched out early the following spring. They collect in immense armies and begin their march towards the corn growing regions.

The French government last year commenced an extensive system of preventive measures. The Arab tribes were summoned to encamp in the districts where the eggs had been laid and offered a reward for all of the eggs collected. About 200,000 bushels of eggs were thus destroyed in the latter part of the year. To stop the progress of those insects which escaped capture, long bands of cotton were stretched over the country, at the base of which a series of trenches were dug. These trenches soon became full of struggling insects, which were destroyed by laborers employed for the purpose, and then removed, so as to leave the trenches clear to receive succeeding swarms. Nearly 100,000 persons were employed in these operations, and the quantity of insects destroyed is estimated at more than half a million cubic yards.

Items.

At the Meeting for Sufferings, held in Philadelphia Ninth Month 20th, a concern arose for the spiritual welfare of the younger members of the Society of Friends, with desires that they might more generally become acquainted with the principles embodied in the Book of Discipline, and with the lives and experiences of many of our predecessors in the Truth, who were living examples of the power of Divine Grace to change and purify and to lead in the way of holiness and practical righteousness.

The belief was expressed that a more fervent concern for the growth in grace of this class, on the part of the older members, would be helpful—leading as it would not only to secret prayer for their good, but to the extension of kindly advice and encouragement.

The subject was referred to a committee to feel after it and see whether any definite steps ought to be taken. At this time to promote the object of the concern.

The Turkish Empire.—A writer in the *Independent* suggests that one reason why the Ruler of Nations permits the continued existence of the Turkish Empire is "the providential purpose of a previous preparation for a nearer era in the life of the East. Under Turkish despotism, in its weakness compelled by Christendom to use its strength, sufficient for this end, for suppression of outbreaks of Moslem fanaticism, and for prevention of destructive persecution by Christian and Jewish ecclesiastics, the strange spectacle is presented of the widespread introduction into those lands of an evangelistic movement impossible in Russia and Austria, and which would probably, almost certainly, be suppressed—at least greatly hindered—if Turkey were to fall now under the political rule of the Greek Cross of the one, or the Latin Cross of the other of those Powers. Whether by conquest by either, or by division between them, the Turkish Empire shall become Christian, and will be the day for the hope of liberty and moral progress, unless it can be postponed until the Scriptures of Divine truth can be first so far put into the homes and hearts of the people that no earthly power can dispossess them. Amid opposition and great difficulties, but really, this is being done."

Protestants in Spain.—The *Revista Christiana*, a Protestant periodical published in Madrid, says:—"The Protestant churches in Spain have no less than one hundred places of worship, from chapels down to a room to hold a general assembly. They have fifty-six pastors and thirty-five evangelists. The congregations muster 9,194 persons of both sexes, 3,442 of whom are regular communicants. Attached to the chapels are eighty Sunday-schools, attended by 3,231 pupils, and managed by one hundred and eighty-three teachers. The most prosperous schools, and the most numerous congregations, are to be found in Madrid, Barcelona and Seville. The rest are scattered all over the country. The Wes-

leyan, the Scotch and English Presbyterians, the German Lutherans, the Swiss Calvinists, and some independent churches, have the largest congregations, and the most numerously attended schools for children and classes for adults. This is especially visible in Madrid and Barcelona."—*The Christian at Work.*

Sale of Indian Lands.—It may be wise and considerate of their best interests, but there is something sad in the fact that after long negotiation and much effort to secure the result, the Sioux Indians have consented to sell eleven million acres of their reservation to the United States for the sum of fourteen million dollars. It is only another step in the slow retreat of the Red Man before the irresistible march of the white man—the retreat of the wild son of the forest before civilization and the movement of population Westward, and it has, therefore, a melancholy side. It behooves the Christian people of this country to use all the influence they may retain upon the government to secure the best expenditure of the money which is the purchase price of their possessions, and to push forward the work of educating and Christianizing them in the homes which they still retain, so that they may be fitted to melt into the population of the region, and become citizens, with rights and privileges not to be bartered away or tamely surrendered.—*The Presbyterian.*

Westminster Confession of Faith.—There is at the present time considerable stir among the Presbyterians, looking towards the revision of the Westminster Confession of Faith, which has long been received among them as an authoritative statement of doctrine. It appears that a considerable number of their members do not believe the extreme view of election and reprobation advanced in that Confession. To meet the difficulties of these members, the American Presbyterian Church does not require its officers to accept every proposition in it, but only those which are essential and necessary. An elder in one of the New York Presbyterian churches, writing in the *Independent* says: "At the time of the meeting of the last General Assembly I asked one of the commissioners, an aged minister, over seventy years of age and now a pastor, what he thought of a Revision of the Confession. He answered: 'I do not believe the doctrine in the Confession on reprobation, and never did.' I thought I would ask the views of a director of the Princeton Theological Seminary, whom I supposed would be a non-reviser. His answer was: 'It always gives me a cold chill when I read the chapter on the decrees. It ought to be changed.'"

THE FRIEND.

TENTH MONTH 5, 1859.

Among the advices which are annually read in our Monthly Meetings, is one calling the attention of the members to the truth, that the business which comes before them is the Lord's work, and should be done as in his sight. This recognition of the religious nature of these meetings, and of the necessity of experiencing Divine help and wisdom, in order to carry them on to the honor of the Head of the Church, is very important. It would be a mark of serious declension from the true principles of Friends, if its members should come to feel that they might transact the business of our meetings for discipline relying on their natural wisdom and reasoning powers, as they would in a political gathering, or in the ordinary course of outward affairs.

In a document signed by Edward Burroughs, in 1662, respecting the establishment of a meeting for discipline in London, he says, it was set up "in the counsel and authority of God." It was to "consist of just and righteous men, all believing in the Truth and walking in the same—men of sound principles and judgment in the

truth of Christ—of good and blameless conversation amongst men."

The subjects coming before it, he says are to be determined, "not in the way of the world, as a worldly assembly of men, by hot contests, by seeking to outstep and overreach one another in discourse, as if it were controversy between two sides violently striving for dominion; not deciding officers by the greater vote, or the number of men. But in unity and concord, submitting one to another in lowliness of heart, as one only party, all for the Truth of Christ, to determine of things by a general mutual concord."

Stephen Crisp weightily says: "It is no man's learning or artificial acquirements; it is no man's riches or greatness in this world; it is no man's eloquence or natural wisdom, that makes him fit for government in the Church of Christ: all his endowments must be seasoned with the heavenly salt, and his gifts pass through the fire of God's altar, a sacrifice to his praise and honor."

When Friends have been concerned to dwell under the influence of the Spirit of Christ, meetings for discipline have often been precious seasons of Divine favor. An epistle from Philadelphia Yearly Meeting, in 1713, to that of London, makes this acknowledgment: "Through the great mercy and favor of God we have had a very precious, large and heavenly meeting, overshadowed with his tendering love, power and presence; so that the rain and dew of Heaven descended in a plentiful manner, and Friends in a general way were tendered and overcome by it, and brought to the valley of humility, where we hope it will lie long upon our branches, and cause us to bring forth savory and acceptable fruits to our God, who was pleased to cast the cords of his love, and the unity of his Spirit about us."

The early records of our Society contain many similar testimonies to the presence and help of the Lord in their meetings for discipline; and we suppose there are few persons amongst us of religious experience, who have not at times felt something of the same quickening power in similar circumstances.

May we then be encouraged to go to our meetings for discipline, with our minds turned inward to the Spirit of Christ, and trusting to its guidance and power in the management of the business; and not to our own abilities. A Friend who attended London Yearly Meeting many years ago, said, "It was deeply affecting to my mind, as I sat in those meetings, to observe men rising up and taking an active part in the concerns of Society, who appeared to act and speak exclusively from the mere powers of their own natural capacities. Hence, when a subject was under consideration, their method of coming to a conclusion seemed to be principally by argument. I inquired of the meeting, whether, in the judgment of Friends, it was most in agreement with our religious profession to decide upon cases that came before them by argument,—or by simply attending to the sense of truth in the minds of Friends, and accepting the generally prevailing sense for the conclusion. The Meeting took up the subject; and after considerable discussion came to the conclusion, that it would be better in all cases to be guided by the general sense of the meeting."

In another part of our columns will be found an Address on needless display and expense at the time of funerals. It was prepared by the Meeting for Sufferings of Western Yearly Meeting (Conservative), and received the approval of the Yearly Meeting itself.

AGENT APPOINTED.

Isaiah Pemberton, Laura, Miami County, Ohio, has been appointed Agent for "THE FRIEND."

SUMMARY OF EVENTS.

UNITED STATES.—Secretary WHEAT has informed the Collector of the City of San Diego, Cal., that, under existing Chinese exclusion acts, Chinese merchants doing business in the United States are not prevented from visiting Lower California and returning to the United States, as the exclusion acts relate solely to Chinese laborers.

The Federal Commission appointed to treat with the *Cœur d'Alene* Indians for the purchase of mineral and timber lands and navigable waters within their reservation, has succeeded in the mission. The Indians have good schools, fine farms, buildings, and fences, and are a civilized section of country as any one could wish. The Indians offered about as much land as the Commissioners wanted for \$2,000,000. They asserted that the mineral land is very valuable, and one of them had some fine specimens of gold-bearing quartz from a ledge which he had traced for three miles. The Indians at last consented to sell 250,000 acres of the north end of their reservation for \$500,000.

It is reported from the City of Mexico that Chinamen are building a canal at Tampico, and thence making their way into Texas.

A bill in equity has been filed in Fort Dodge, Iowa, asking a decree vesting in the Government the title of the Des Moines River lands. The territory mentioned is that from which numerous evidences were recently attempted by land companies and wealthy individuals who purchased from the companies. The complaint is in the name of the United States, and sets forth that the grant was never earned and that all predated settlements and adjudications of title to the lands are illegal.

The *Chattanooga Times* publishes reports from 75 out of the 96 counties comprising the State of Tennessee, showing an increase of the value of real and personal property of \$26,000,000 over the assessment of 1888, and an increase of \$100,000,000 over the assessment of 1886.

Large fires are raging in the redwood forests in San Mateo County, California, south of San Francisco. A large forest fire is also reported near Santa Rosa, north of that city. Men are fighting the flames, but the destroyed and some valuable timber is being consumed and many suburban villages are burned.

William Watkins, Chief of Police of Parsons, Pennsylvania, was killed at the Central Railroad depot, in Wilkesbarre, a few weeks ago, by a freight train. He was wife and child, and some valuable timber is being destroyed and many suburban villages are burned.

William Watkins, Chief of Police of Parsons, Pennsylvania, was killed at the Central Railroad depot, in Wilkesbarre, a few weeks ago, by a freight train. He was wife and child, and some valuable timber is being destroyed and many suburban villages are burned.

The new directory of Johnstown, Pa., places the number of drowned at 3590. This is considered a close estimate, and is about 10 per cent. above the exact figure. The body of a young girl was brought to view last week.

Deaths in this city last week numbered 312, which is 65 less than during the previous week, and 12 less than the corresponding week last year. Of the whole number 161 were males and 151 females; 10 of consumption; 25 of diseases of the heart; 23 of marasmus; 16 of inanition; 15 of pneumonia; 15 of typhoid fever; 12 of old age; 12 of convulsions; 11 of infantile convulsions; 10 of cholera; 10 of debility and 8 of cancer.

Markets, &c.—U. S. 4½, 106; 4, 98; 127½; coupon, 124; currency 65, 118 a 130.

COTTON was quiet, but steady at 114 cts. per pound for the following grades:
Ferd.—Winter, bran, choice and fancy, \$13.25 a \$13.50; do, fair to prime, \$12.75 a \$13.00.

FLOUR AND MEAL.—Western and Pennsylvania super, \$2.50 a \$2.75; do, do., extras, \$2.85 a \$3.25; No. 2 winter, family, \$3.40 a \$3.75; Pennsylvania family, stone ground, \$3.75 a \$4.30; Pennsylvania roller process, \$1.00 a \$1.20; extra, western, \$4.00 a \$4.25; do, straight, \$4.30 a \$4.55; winter patent, \$4.60 a \$5.00; Minnesota, clear \$3.50 a \$4.12; do, straight, \$4.25 a \$4.85; do., patent, \$4.50 a \$5.50. Eye flour was steady at \$3.10 per barrel for choice.

GRAIN.—No. 2 red wheat, \$2½ a \$2½; do, white, \$2½ a \$2½ mixed corn, 10 a 12 cts.
No. 2 white oats, 26½ a 27 cts.

LARGE CATTLE.—Extra, 4½ cts.; good, 4¼ a 4½ cts.; medium, 4¼ a 4½ cts.; common, 3 a 3½ cts.; fat cows, 2½ a 3½ cts.; Texans, 3 a 3½ cts.

SHEEP.—Extra, 3½ a 5½ cts.; good, 4½ a 5 cts.; medium, 4¼ a 4½ cts.; do., common, 3½ a 4 cts.; culls, 3 a 3½ cts.

LAMBS.—Extra, 6¼ a 7½ cts.; good, 6 a 6½ cts.; medium, 5½ a 5½ cts.; do., common, 4½ a 5 cts.

HOGS.—Good light western, 6½ a 6½ cts.; heavy western, 6½ a 6½ cts.; extra, 6½ a 6½ cts.

FOREIGN.—Captain Adams, a well-known Scotch whaling captain, who has returned to Dundee from the Davis Straits, after a fairly successful voyage, reports that the season was the bleakest he ever experienced, there having been no sunshine during the summer months.

Eliza Cook, the poetess, died on the 25th of last month, at Wimbledon, where she had lived in seclusion for many years. She was born in 1818.

The French Municipal Commission has decided that the vote for George C. Davis for Mayor of Montmartre in the recent elections are null and void, and has declared Joffrin, the labor candidate, who received the next highest number of votes, elected. The Commission has also nullified the votes cast for Henri Rochefort in Belleville.

A large party of men in London from St. Petersburg, on what appears to be credible authority, states that just previously to the Czar's departure for Copenhagen a chest of dynamite exploded at the Peterhoff Station. The station was badly wrecked, and a railway signalman was killed. It is fully believed that it was intended to blow up the explosion take place when the Czar stepped through the station on his way to the train; but that, through some miscalculation, it occurred before the time of his departure.

A terrific storm raged at Naples on the 25th ultimo—the harbor of Naples is submerged. Premier Crispi's villa is flooded.

The Diritto of Rome, in an article on the coming International American Congress at Washington, says: "The Congress indicates the possibility of two dangers—the hegemony of the Anglo-Saxon race over the Latin race, and a coalition of the American States against the products of Europe. We cannot accept the projected union if the intention be to convert it into a great engine of war against European manufacturers." While admitting that there are many difficulties to be overcome, the *Diritto* expresses a wish that each race may preserve its liberty and maintain security for the development of its resources.

The Chinese Emperor and the members of his Council are understood to be debating a memorial demanding the expulsion of Americans from China. There is a strong agitation for a cessation of the restrictions on American merchants and missionaries at treaty ports.

The Pacific mail brings details of the greatest disaster known in the history of Japan. The province of Kyū in the southern part of Japan, has been literally overwhelmed with tragedy. The catastrophe was occasioned by floods in the western part of the province and by the crumbling of a mountain which buried six villages under a huge mass of rock and earth. Probably more than 15,000 people have been killed. The Kingdom of Korea has been visited by the Eighth Month 19th, and vast quantities of water swept over the country for miles around. The disaster in the Conemaugh valley was not nearly as great as widespread. Besides the thousands of persons that have been killed, there is a large number of sufferers must die of starvation and exposure before succor can reach them.

The bodies recovered from the ruins caused by the landslide in Quebec number 44. The fourteen wounded victims are in a fair way for recovery.

RECEIPTS.

Received from Daniel Packer, N. J., \$2, vol. 63; from Anne J. Stokes, N. J., \$2, vol. 63, and for Elizabeth Stokes Morris, Gta., \$2, vol. 63; from Samuel L. Fox, Pa., \$5, vol. 63; from Thomas E. Smith, Agent,

Io, for Benjamin Coppock, \$2, vol. 63, and for Ruth Edmondson, \$1, to No. 27, vol. 63; from William G. Hays, 10, \$2, vol. 63; from Oliver W. Cope, Pa., \$2, vol. 63; from John O. Neill, D. C., \$2, vol. 63; from H. H. Hill, Md., \$2, vol. 63; from Hannah Evans, W. Philad., \$2, vol. 63; from George Jones, \$1.00, to No. 52, vol. 63; from Josiah Jones, Philad., \$2, vol. 63; from William B. Haines, N. J., \$2, vol. 63; from Richard H. Reeve, N. J., \$2, vol. 63; from Hannah W. Hedley, Philad., \$2, vol. 63; from Dr. Susan W. Good, B. W. Va., \$1, to No. 27, vol. 63; from Albert L. Hilles, Philad., \$2, vol. 63; from Oliver Miller, O., \$2, vol. 63; for Abram Stratton, Pa., \$2, vol. 63; from Mary M. Brinton, Pa., \$2, vol. 63; from Joseph Beesley, Io, for George McNichols, Agent, \$2, vol. 63; for Richardson S. Reeve, N. J., \$2, vol. 63; from Mary W. Bacon, N. J., \$2, vol. 63; from P. Ellis De Cou, N. J., \$2, vol. 63; for Sarah J. Dutton, Philad., \$2, vol. 63; from Mary M. Edmondson, Io, for Jesse Negus, Agent, \$2, vol. 63; from William Baderston, Pa., \$2, vol. 63; from John O. Neill, D. C., \$2, vol. 63; from Elijah Kester, Md., \$2, vol. 63; from Sarah Nicholson, N. J., \$2, vol. 63; from George Rhoads, W. Town, \$2, vol. 63; from George S. Garrett, Pa., \$2, vol. 63; from James Davis, Pa., \$2, vol. 63; from Sarah Satterthwaite, Pa., \$2, vol. 63; from Milton Stanley, Agent, Ind., \$6.35, being \$4.00 for J. C. Moore, \$2.35 for Mrs. W. C. Moore, \$2 for Joel Newlin, vol. 63, and 35 cents for Ruth Woodard, to No. 9, vol. 63.

NOTICES.

HULDAH H. DONWILL requests Friends whose hearts are touched with sympathy for some Friends in remote places, and also for Indians who are insufficiently provided with clothing and bedding, during the winter, to send such articles as they can spare to the store of Henry Laing, No. 30 North Third Street, Philadelphia, marked "care of H. H. Bonwill." It is desirable that such goods should be forwarded at as early a date as convenient.

THE CORPORATION OF HAVERFORD COLLEGE.—A Special Annual Meeting of "The Corporation of Haverford College" will be held in the Committee-room of Arch Street Meeting-house, Philadelphia, on Thursday, Tenth Mo. 8th, 1889, at 3 o'clock P. M.

ELLIOTT P. MORRIS, Secretary.

WANTED.—An experienced teacher, (a member of the Friends' Society,) to teach in the Philadelphia Friends' Select School, 140 N. 16th St., Philadelphia. Apply to Ephraim Smith, 1110 Pine St. John W. Biddle, 119 South Fourth St., or George Vaux, Bryn Mawr, Penna.

If any of our Quarterly or Monthly Meetings should have on hand a surplus of the "Extracts from the Minutes of the Yearly Meeting for 1889," will they please return them to Friend's Book Store, 304 Arch Street, in care of Jacob Smedley?

MARRIED, on the 26th of Ninth month, 1889, a Friends Meeting-house, near Westfield, N. J. CHARLES W. WILSON, M. D., son of Jonathan and Elizabeth WILSON, ANNA H., daughter of J. Gardner Taylor, of Riverton, New Jersey.

DIED, on the 18th of Eighth month, 1889, ELIZA J., widow of the late Jonathan Fawcett, in the 78th year of her age, a member of Short Creek Monthly Meeting of Friends, Ohio. This dear Friend had many trials and privations allotted her through life, which she accepted with calmness and resignation, being of a meek and quiet spirit; and although she did not express much relative to her feelings, during her last illness, a severe one, she was sustained by Christian patience, yet her friends feel the comforting assurance that, through mercy, she has entered into rest.

On the 12th of Ninth Mo. 1889, near Winona, Ohio, THOMAS SAVERY, an esteemed member and elder of the Short Creek Monthly Meeting, Penna. — on the 19th ultimo, at his residence, near Plainfield, Hendricks Co., Ind., LYDIA B. NEWLIN, widow of the late Eli Newlin, deceased, in the 60th year of age. She was an esteemed member of Plainfield Monthly Meeting, and firmly attached to the Friends' cause. Her husband, who was a true and noble her extreme sufferings with Christian patience and resignation. Her relatives and friends have the consoling hope that, through Infinite love and mercy, she has been permitted to enter a mansion of peace and rest.

Incidents and Reflections.—No. 192.

REPROOF—PROFANE SWEARING.

The zealous and eccentric Rowland Hill relates, that once when he was returning to England from Ireland, he was much annoyed by the conduct of the captain and mate, who were both sadly given to the habit of swearing. First the captain swore at the mate—then the mate swore at the captain—then they both swore at the wind. Rowland says, "I called to them with a strong voice for fair play. 'Stop! stop! said I, if you please, gentlemen, let us have fair play; it's my turn now.' 'At what is it your turn, pray?' said the captain. 'At swearing,' I replied. Well, they waited and waited until their patience was exhausted, and then wanted me to make haste and take my turn. I told them, however, that I had a right to take my own time, and swear at my own convenience. To this the captain replied, with a laugh, 'Perhaps you don't mean to take your turn?' 'Pardon me, captain,' I answered, 'but I do, as soon as I can find the good of doing so.' I did not hear another oath on the voyage."

Somewhat similar was the device of the captain of a ship, who, when about to take command of his vessel, assembled the crew on the quarter-deck and gave them his orders for the voyage. He told them there was one law he was determined to enforce, which was, that they must allow him to swear the first oath in that ship. "No man on board must swear an oath before I do." To this the men agreed, with the result of abolishing swearing on the vessel.

When Christopher Wren, the eminent architect, was building St. Paul's Cathedral in London, he caused to be fastened up in several parts of the building, the following notice: "Whereas among laborers and others, that ungodly custom of swearing is so frequently heard, to the dishonor of God and contempt of his authority; and to the end that such impiety may be utterly banished from these works, which are intended for the service of God, and the honor of religion; it is ordered that profane swearing shall be a sufficient crime to dismiss any laborer that comes to the call; and the clerk of the works, upon a sufficient proof, shall dismiss him accordingly; and if any master, working by task, shall

not, upon admonition, reform the profanation among his apprentices, servants and laborers, it shall be construed his fault, and he shall be liable to be censured by the commissioners."

To those who are addicted to the wicked custom of profane swearing, and desire to be free from the habit, the ancient father, Chrysostom proposes a method, "which," he says, "if thou'lt take, will certainly prove successful. Every time, whenever thou shalt find thyself to have let slip an oath, punish thyself for it by missing the next meal. Such a course as this, though troublesome to the flesh, will be profitable to the spirit, and cause a quick amendment; for the tongue will need no other monitor to make it need of swearing another time, if it has been thus punished with hunger and thirst for its former transgression, and knows it shall be so punished again if ever it commits the like crime hereafter."

In the year 1883, being in company with an aged friend, of retentive memory, I listened with interest to his recital of a reproof given many years before to Nathan Sharpless of Chester County, (long since deceased) and which he had heard related by Nathan himself.

When a young man Nathan was not disposed to adhere strictly to the practices of Friends, and shrank from using the plain language, and refraining from the use of compliments, when conversing with persons of note in the world. Having some business to transact with one of this class, he used the expressions, "Mister" and "Sir," and tried to be very polite. When they were about to part, this person said that he supposed he had been brought up among Friends, and was a member of their Society. Nathan replied, that this was the case. "Let me then," said the man, "give you a few words of advice. You have been brought up to use the plain language, and no sensible man of any denomination, high or low, will think any the better of you, for mistering him."

Nathan said, if there had been a hole in the floor, he would gladly have dropped into the cellar at this unexpected rebuke. He thought it had more effect in making him a Quaker than anything else that ever happened to him.

On the same occasion an anecdote was told of George the 3rd of England, who was riding out with the Queen, when they saw three men on the foot-walk in front of them. The Queen remarked that one of them was a Quaker, but the King thought it was not so. When they overtook the men, the King stopped the carriage, and called to the men to ask whether either of them was a Quaker. One of them replied, that he was a member of the Society, and received the reproving query—"If you are a Quaker, why don't you dress as a Quaker, so that the King and Queen need not dispute over you."

A very effective reproof was that given by the wife of a drunkard, who once found her husband in a filthy condition, with torn clothes, matted hair, bruised face, asleep in the kitchen, having come home from a drunken revel. She sent for a photographer, and had a portrait of him taken

in all his wretched appearance, and placed it on the mantel beside another portrait taken at the time of his marriage, which showed him handsome and well dressed, as he had been in other days. When he became sober he saw the two pictures, and was so awakened to a consciousness of his condition, that he afterward led a better life.

An anecdote is told of an officer who was much addicted to profane swearing, who was once visiting a deep mine in Cornwall. He was attended by a pious miner who was employed in the works. During his visit to the pit the officer uttered many profane and abominable expressions; and as he ascended in company with the miner, finding it a long way, he said to him, with an oath, "If it be so far down to your work, how far is it to the bottomless pit?" The honest miner promptly and seriously replied, "I do not know how far it is, sir; but I believe that if the rope by which we are drawn up should break, you would be there in a minute." The swearer was rebuked, and uttered no more oaths whilst in the company of the miner.

There was really wit manifested in the reproof given by — Haynes, a colored minister, to two reckless young men who had agreed to test his quickness of intellect. One of them said,— "Father Haynes, have you heard the good news?" "No," said he; "What is it?" "It is great news indeed," said the other; "and, if true, your business is done." "What is it?" again inquired the preacher. "Why," said the first, "the devil is dead." In a moment the old gentleman replied, lifting up both hands, and placing them on the heads of the young men, and in a tone of solemn concern, "Oh, poor fatherless children! what will become of you?"

It was said of B. Jacobs, a clergyman of Cambridgeport, that he could administer reproof in a manner that was both forcible and gentle. Some young ladies at his house were one day talking about one of their female friends. As he entered the room he heard the epithets "odd" and "singular" applied. He asked, and was told the name of the young lady in question; and then said, very gravely, "Yes, she is an odd young lady; she is a very odd young lady; I consider her extremely singular." He then added very impressively, "She was never heard to speak ill of an absent friend."

Martin Luther relates that at one time, when he was sorely vexed and tried by his own sinfulness, the wickedness of the world, and by the dangers that beset the Church; he saw his wife dressed in mourning; Surprised, at this, he asked her who had died; and she queried whether he did not know that God in heaven was dead? "How can you talk such nonsense, Katie?" he said. "How can God die? Why, He is immortal and will live through all eternity." "Is that really true?" she asked. "Of course," he said, still not perceiving what she was aiming at: "How can you doubt it? As surely as there is a God in heaven, so sure is it that He can never die." "And yet," she said, "though you do not doubt that, yet you are so hopeless and

discouraged." "Then I observed what a wise woman my wife was, and mastered my sadness."

The *Messenger of Peace* mentions that in a western city two young men were sitting in their room in a private house; and playing on the floor were two little girls, aged three and five years, who belonged to the mistress of the house. With the mother's permission they were in the habit of carrying their dolls and other playthings into the rooms of the young men and there, sitting in the middle of the floor, the little prattlers would spend many an hour. At this particular time there were present in the room the two young men talking politics, and the two children on the floor playing with dolls. Now, one young man was a Democrat, the other a Republican. The result was an exciting controversy and finally an oath from one, by way of emphasis. Quick as a flash little five-year-old jumped to her feet, gathered her dress skirt full of toys, and said to her innocent baby sister, "Come Clara, let us go quick! I don't think mamma would like to have us hear such language." Before the young men could recover from their surprise the children and toys had disappeared through the door. It was a rebuke that cut deep. There was no more discussion of politics that evening, and the young Chicago lawyer who uttered that oath, states that he has not used a profane expression since the little girl's sermon. J. W.

William Grover.

(Continued from page 74.)

I believe that the way to be truly happy, is to endeavor to do the will of God. The way to enjoy the blessings intended for his dear children, is to serve Him, and obey Him in child-like simplicity; to dwell under a sense that He is our Father; and to look at Him, as He can provide for us, take care of us, lead us, feed us, and keep us. To have this sense upon the mind is very precious, and is what I crave for me and mine, and those under my care. Here self is gradually reduced and kept under; and we are made sensible that there is no safety for us, whatever may be our attainments, but as we are doing his will; and as we are measurably clothed with a tender, filial fear, lest we should be found doing anything that would deprive us of a sense of his love upon our spirits.

When temptations, of whatever description, assail, forget not the fear of the Lord; that thou mayst be favored to witness preservation, and escape. Be in earnest to be good—the only way to be happy. If, through unwatchfulness at any time, thou art in any degree overcome, be sure thou be willing to come under condemnation, and bear the chastening hand for disobedience; be willing to endure affliction for transgression, and do not flinch from it. Let it have its appointed season, and the dispensation of condemnation will have a refining tendency, and thou wilt be likely to come up from the washing-pool, from time to time, with increased strength to resist succeeding temptations. We must not expect to be exempt from these. Bearing this reproof and chastisement will give thy mind weight and solidity; and thou wilt, I trust, come to be less and less susceptible of the allurements of the trifling things of the world, and thou wilt be more and more enabled to set a right value upon things. Unlawful things, and trifling things will come to have their proper character stamped upon them, in thy view; and thou wilt be likely to increase in thy love for quietness, watchfulness, and meditation.

God is the source and centre of happiness.

In proportion as we yield ourselves to things which the Light He has afforded us testifies against, in the secret of the soul, we go from Him, and go into confusion; and so mix of the mercies, the favors, the consolations which He is permitting those to partake of, who read nothing so much as losing his Divine approbation, and the sweetness resulting from it. Do not be halting and double-minded, I entreat thee; but yield thyself up to be a consistent Friend, so to speak, and appear as such, and I believe thou wilt be blest.

(To be continued.)

FOR "THE FRIEND."

Sardis and its Works.

We find from the accounts of Sardis, that it was a working church. But that its works were not found perfect before God; yet it worked in such a way that it had the name to live while it was spiritually dead. Cannot we and other churches learn wrought in God, and prompted by Him, what are they worth? They may give us a name to live, when, like Sardis, we are dead. So it would be well for us to be watchful, and strengthen the things which remain in us, and in our churches that are ready to die, that our works may be found more perfect before God; so that we might be ready for every good word and work that He calls us to, that God and not man might be glorified. But I thankfully believe that we have a few names, even in Sardis, that have not defiled their garments with the stains of dead works; but are walking with Him in white, for they are worthy. Yes worthy; because they have passed through the washing of regeneration, and witnessed the renewal of the Holy Spirit; and having come out of great tribulation, with their robes washed in the blood, or life-giving virtue of the Lamb; therefore are they employed by Him. And while He is in them and they in Him, their works are greater than all the works of the enemy, though these are carried actively along under the cloak of religion. The white robes are the righteousness of the saints, and not spotted by the works of the un sanctified children of flesh.

Now from all the various examples and precepts in the Scriptures, and from my own observations, I find that the different denominations, including our own, do not lack for workers; but the trouble is to distinguish between the workers of righteousness and the workers of iniquity. For the workers of iniquity are often on the side of the majority, which makes the difficulty the greater. Like it was in Sardis, there are only a few names who have not defiled their garments in the works of darkness, nor gone with the many in the broad way of the world. So they do not receive the hallelujahs and the flattering "amens" in our emotional meetings for worship. O the deceivableness of unrighteousness in them that perish! What does our Saviour say about the many in that great day, that thought they were casting out devils in his name, and in his name doing many wonderful works? He says, "I never knew you, depart from me, ye workers of iniquity." They had been workers, and like the workers of Sardis, had a name to live, while they were dead. And how was it with the foolish virgins? After their lights had gone out, and the door was shut, they went boldly forward, saying, "Lord, Lord, open unto us." But the answer was, "I know you not." Watch, therefore," &c. D. H.

DUBLIN, IND., Seventh Month 15th, 1859.

FOR "THE FRIEND."

A Visit to Colorado.

(Continued from page 75.)

"What is a Ranch?" is a question naturally put by any one not familiar with the local terms used in this country. It is derived from the Spanish "Rancho" signifying a farmhouse and its appurtenant buildings with a tract of arable or pasture land surrounding it, owned by the occupant and devoted to raising cattle. The ranch we tarried at in Estes Park lay on the slope between two foot hills of the great range. The log dwelling that had been originally erected by our host on his settlement here had been somewhat expanded and improved since, and occasional tourists having discovered the attractions of the place had induced him to accept them as boarders, and thus add somewhat to his otherwise scanty revenues from agriculture. Four or five separate cabins for lodgers in time became necessary and grew up by the side of the mansion. Two of these were assigned to our party and meals were taken in the main house.

With the early morning came a pure azure sky and bracing air peculiar to this region, and tempting to a climb up the hill of granite boulders which overlooked our dormitory a few hundred feet. Reaching the apex disclosed a view of the rampart of cliffs on the north, crowned with various domes and pinnacles; one grotesquely like two owls standing upright and facing me, wing to wing. Others resembling chimneys and hay stacks. Near me a pair of eagles perched on a lonely pine, and at my feet a tiny chipmunk gathered his breakfast by climbing and bending down the stalk of a plant and nibbling the seeds from its top. Miles away to the south, Long's Peak peeped over the nearer crests, while the peaceful vale to the west was animated by grazing cattle and horses.

Breakfast over, a coach and pair drew up to the door, and two saddle horses were in attendance to carry some friends who were to pilot us on a ride through the park. One of these was a former acquaintance of one of our company who had found restored health in the mountain air, after losing it by study and confinement to business in New York city; and who had become familiar with the locality by daily trips on horseback. Our course lay by the winding creek, now among the shade of pines and aspen, and again over long reaches of natural meadow bedecked with the artemisia, dwarf sun-flower, rudbeckia, golden-rod, fire-weed, mentzelia, campanula, purple-astragal, blue gentian and English daisy. Occasionally a summer party of tourists was seen camping by the stream, or fishing for the speckled trout which abound here. Ten miles brought us to the foot of the range which is surmounted by Long's Peak. Its summit is 14,271 feet above sea level, and being divided into two serrated pinnacles is grandly picturesque in effect. The flanks and ravines of Long's and adjacent peaks were flecked with fields of snow; from their base issued the impetuous stream that flowed at our feet; up and deep into the heart of the range penetrated the wild gorge whose sides were clothed with silver firs and pines, surmounted by bare granite boulders and pinnacles splintered and corroded by the frosts of ages. We paused to gaze in reverent silence on a scene combining so much of the grand and beautiful, with some sense of the majesty of Him whose "righteousness is like the great mountains and whose judgments are a great deep."

Long's Peak is frequently ascended by horseback parties, but is said to be a severe test of strength and nerve. The bridle path ends three

miles from the summit, and this part of the ascent must be accomplished on foot over sharp rocks and steep acclivities. A tragic result attended a party of four who climbed to this peak lately. A young man who was one of them carried a loaded pistol in his belt which was discharged by his falling on a rock. The ball passed through his neck, causing a wound which soon made it impossible for him to descend. He was laid upon an improvised bed, and whilst the guide went down the mountain to obtain aid, was attended by his father and uncle. Night came on before help could reach them. The air grew cold and snow began to fall. The shock from the wound and the chilling air soon exhausted the sufferer and death ensued. The party had started in the heat of the day, and were even destitute of coats. There was no alternative but to await daybreak before descending. In this suffering condition they passed the remainder of the night, and when assistance came the dead body of the son and nephew had to be carried three miles in a blanket before horses could be used to complete the sad journey.

"AROUND THE CIRCLE."

By examination of the map of Colorado it will be observed that the Denver and Rio Grande Railroad runs west from Pueblo through the central part of the State, penetrating the rocky mountain region and Utah to Salt Lake. Another branch of the railroad starts at Denver and runs directly south along the base of the mountain range through Colorado Springs to Pueblo, and further south to El Moro, near the line of New Mexico. At Cuchara Junction, north of El Moro, another branch of the Denver and Rio Grande Railroad proceeds southwestwardly, crossing first the Sierra Blanca range at Veta Pass, then descending into the valley of the Rio Grande Del Norte, known as the San Luis Park, and crossing that over the line of the State into New Mexico again, ascends the San Juan range through Toltec Gorge and Cumbres Pass, and thence down to the Valley of the San Juan River to Durango, in the south-western part of the State of Colorado. From hence the railroad takes a northward course along the Animas River to Silverton, Ouray and Montrose; the latter being on the first mentioned main line of the Denver and Rio Grande Railroad, near the western boundary of Colorado. The Railroad Company has devised daily excursion trips over the above mentioned lines, so that the traveller can start at Denver, go southward via Colorado Springs, Pueblo, Cuchara, Veta Pass, Alamosa, Antonito, Toltec Pass, Durango, Silverton, Ouray, Montrose, Gunnison, Marshall Pass, Salida, the Royal Gorge, Cañon City, and Pueblo via Colorado Springs to Denver again; comprising 1000 miles of travel, for the moderate sum of \$28. It can be all accomplished by *day-light* in five days: the time of the trains being so adjusted that one can stop over night and resume the journey next morning; and good hotels are to be found at the principal towns, where rest and opportunities to survey the scenery and relieve the fatigue of continuous travel.

These excursions "around the circle" as the company designates them, may truthfully be said in the language of their pamphlet describing them, to "comprise more noted and magnificent scenery than any other railroad trip of similar length in the known world. Piercing the heart of the Rocky Mountains, crossing and re-crossing the great 'Divide' between the Atlantic and Pacific slopes; penetrating four cañons, each of which is a world's wonder, and no two

having the same characteristics; climbing three mountain passes by rail, and one by stage; achieving grades of 211 feet to the mile; reaching heights 11,000 feet above the level of the sea; penetrating gorges whose walls soar half a mile in perpendicular cliffs above the track; traversing fertile and picturesque valleys watered by historic rivers; passing through Indian reservations and pausing in the midst of mining camps—where gold, silver, copper and coal are being taken from subterranean recesses."

Our party left Denver on the 12th of Eighth Month, to travel around this circle, and without entering into unimportant details I will sketch some of the most prominent features of the excursion:—Leaving Cuchara Junction about 8 A. M., our course lay westward over the foot hills until the ascent of the Veta Pass began. To the south the Spanish peaks now opened on our view. They are distinguished by rising pretty directly from the plains on the eastern slope of the range, thus affording the observer a clearer view of their height and form than those peaks which are more involved within the interior of the range. They are also more pyramidal in shape than many of the summits, and being respectively 13,620 and 12,720 feet in height, and not far apart, were a pleasing introduction to this variety of scenery.

(To be continued.)

SELECTED.

In the year 1776, Dr. John Fothergill was nominated one of a committee appointed by London Yearly Meeting, to make a general visit to the meetings throughout the nation. On this occasion he wrote the following letter:—"To the Friends nominated at the late Yearly Meeting to visit the Quarterly and Monthly Meetings, &c., and to the members of our Society in general."

Dear Friends: Having been nominated on service, I accepted of it with reluctance, from an apprehension of my unfitness, as well as from the confining nature of my employment. But being desirous to acquit myself to the best of my ability, I could not avoid considering, with much and deliberate attention, the proposal made to the meeting, both in respect to the manner of it, the nature of the service, and its object; all of which claim my hearty concurrence.

That it arose from the simple movings of Truth, I am fully persuaded; the prevalence of a holy influence over the minds of many, when it was delivered, was generally felt and acknowledged. The nature of the service is, to render us helpful to one another, in promoting the growth and prosperity of every individual in the truth, and by this means to advance the great end of true religion, the glory of Him who created us, and the comfort and happiness of all.

The complaining language of many countries having deeply affected the minds of Friends, fervent desires were raised that the life of religion might be renewed in the churches, to their help in the maintenance of pure, unmixed piety. And it pleased Divine Providence to open the way to a fresh labor of love amongst his people, and to make many willing to engage in this service; and, oh! may it be blessed, so as to make it a memorable season of Divine refreshment, from the great Master of our assemblies. A desire to contribute my mite to this great and useful labor, prompts me to throw before my brethren the following reflections, hoping they will be received as the fruits of a mind cordially disposed, in the first place, to build up its own breaches, and, in the next, to join in repairing

those which the enemy has made in the walls of our Zion.

I would wish to apply myself to my brethren engaged in this service, and to recapitulate some parts of the wise, important heavenly counsel communicated to you during your deliberations on this subject, by many concerned brethren; that as you have given up your names, and that with a willingness that bespeaks your zeal for the cause of truth, and its prosperity among the people, you will let the weight of the work take possession of your minds; let it be your fervent prayer, that you may be made deeply sensible of its importance, as well as of the time and manner in which you are to proceed. These considerations were earnestly pressed upon you, and, as you keep them in humility and fear before you, will be opened for your accomplishing the work, to the churches' benefit, and your own growth and experience in righteousness and truth.

Let it be your care, in the service, to look to that Arm of power which gathered us to be a people, and has hitherto, in a good measure, preserved us one in faith and practice. Wait for a degree of that wisdom which led our ancestors to establish a most wholesome discipline amongst us, for our preservation; and be it your chief care, in much brotherly love, to strengthen the weak, and bring back the scattered, and, by an awful labor, to awake them to a sense of the holy principle of light, life, and grace, to an obedience to it, to a knowledge of its blessed effects; this is the one thing needful; and, oh! that they may wrestle and prevail, as Jacob did, and obtain the blessing for yourselves, and for the whole heritage of God.

And you, my dear friends, who are the objects of the churches' care, and amongst whom I rank myself, surrounded with many weaknesses, much imperfection, far short of that excellency that adorned our predecessors, yet struggling in hope after a better life, freedom from entanglements, more love to God, and his truth, yield to the word of exhortation; receive this visit as a fresh renewal of the love of God, and of help administered at the needful time. Let us embrace the hand held out to help us; kiss the rod we may have deserved, and give thanks to God for his mercy and loving-kindness in thus exciting a fresh concern in the Church for the restoration of individuals. Let us prepare ourselves, in sincerity, to receive the word of exhortation in meekness and humility; so shall we be made partakers of the benefits intended, feel our strength renewed to run with alacrity the race that is set before us, be made helpful to others in their progress, and, having finished our course with joy, leave a bright example to those who follow after us.

Under a sense of the great need we have to be afresh roused up to diligence, I found a willingness to throw these few hints before my brethren, as a testimony of my full unity with the proposition, and my desire that it may be rendered effectual to the help of many, and the general edification of the churches.

J. FOTHERGILL.

THE Lord God is rough with the transgressor, and all along the Scripture he weth and julgeth him: and if we come forth in the same Spirit, we shall find the same leadings where we meet with the same thing; for the Lord God will never be tender there; nor can that which comes from Him, lives in Him, is led by Him, be tender there, where He is not. Now the very root of this severity is good, and of God, and hath love and sweetness at the bottom of it.

The Youth in our Society.

An Address at the Close of a Little Book Published by Henry Tuke, and Written by him.

In the design and execution of this work, my mind has been much influenced by a desire for the welfare of the youth in our Society, and for their instruction in the principles of true religion. To them I feel disposed to address myself in this conclusion.

Let me remind you, my dear friends, of that wise and pious injunction, "Remember thy Creator in the days of thy youth." Consider his operations in nature and in grace; in Providence and in Redemption. Although in the consideration of all these, some difficulties, not easily comprehended, may present themselves, yet so much will be opened to the humble and attentive mind, as will excite the love and fear of Him "who made the heaven and the earth, the sea and all that therein is." In entering into these considerations, there are two assistants afforded us, by our gracious Creator—Reason and Revelation. The former, as well as the latter, is useful on this occasion. Reason, as a faculty given us by God; and, if rightly exercised, will tend to promote our knowledge of Him, particularly in the works of creation and nature. When not misled by the vanity of the human heart, reason sees and feels its own imperfections; and readily embraces and submits to those advantages, which revelation affords. By revelation, I mean to comprehend both that which is mediate and that which is immediate. The former is communicated in the Holy Scriptures, in which we have ample accounts of the being and nature of God—of his manifold works in Creation and in Providence—of his love to mankind, particularly in the work of redemption by Christ, and in affording the assistance of the Holy Spirit, to guide and direct into all necessary truth. It is by this Spirit, which is called the Spirit of God, and of Christ, as proceeding from the Father and the Son, that immediate revelation is received. This revelation produces that knowledge of God and of Christ, on which eternal life depends. In this sense, "no man knoweth who the Father is, but the Son, and he to whom the Son will reveal Him." And when it pleases God to reveal his Son in any, and obedience is yielded to the heavenly vision, these then become acquainted with the mysteries of God's kingdom, and are made sensible that "flesh and blood hath not revealed these things unto them; but their Father which is in Heaven." As the Holy Scriptures are the blessed [outward] means of introducing us to an acquaintance with the way of life and salvation, and of affording us much instruction in our various duties to God and one to another, I earnestly press on you, my dear young friends, a frequent and serious perusal of them. You will here find much profitable instruction of various kinds; the history is, beyond any other, important and interesting; the mystery makes "wise unto salvation." Here you may see the various dealings of God with his created man; you may be made acquainted with the dispensation of the law, the predictions of the prophets, the ministration of John, and the most glorious dispensation of the Gospel. Beware of such publications as have a tendency to create a disrelish for these sacred writings. Consider what the state of our religious knowledge would have been without them; and look at those parts of the world which have not had the benefit of the Scriptures, or in which the reading of them has been greatly restrained. When this comparison is fairly made, I believe

we shall find abundant cause to be thankful to the God and Father of all our mercies, for the benefit we enjoy, in having free access to these testimonials of his ways and will respecting the children of men. Let them be fairly compared with the various systems of religion in the world; and then, although there should be some difficulties, which may not at once be fully comprehended (and in what science are there not such difficulties), then will the transcendent excellency of Christianity be felt and acknowledged; and gratitude will fill the heart, for the unmerited love of God, in Christ Jesus our Lord. Having fairly appreciated the general principles of Christianity, those which are peculiar to our religious society, and of which you make profession, will, I believe, rise in your view with esteem and attachment. Their consistency with the Christian religion has been already shown; and, presuming you to be sensible of this consistency, I affectionately entreat you to be faithful in your adherence to them. Attend to that Divine Light, that saving grace, that good Spirit, which is placed in our hearts. This, if attended to, will preserve from the temptations incident to early life, and be your guide and support through the various trials and probations which, now or hereafter, may be your allotment. O! my dear friends, receive this heavenly visitant in the way of his coming. Give not up your minds to the pleasures and enjoyments of this world, which will draw away your obedient attention from things which make for your peace, and things by which you may edify one another. Be willing to take up the daily cross; and to bear the yoke of Him who said: "Take my yoke upon you, and learn of me, for I am meek and lowly in heart, and ye shall find rest unto your souls; for my yoke is easy, and my burden is light!" Let those who have been habituated to sinful or dissipating pleasures, and have afterwards been brought to taste of the good word of life, and the powers of the world to come—let these say, whether more of the real comforts and enjoyments of life are not to be experienced in the humility and self-denial of a Christian than in all the gratifications which sin and folly afford. When we take into consideration the Divine peace, which we are told "passeth all understanding," and a degree of which is at times the experience of the faithful followers of a crucified Lord; when we also consider the comfortable prospects of another and eternal state of existence, there will be found sufficient inducements, in every reasonable point of view, to prefer a life of religion and virtue above that which is devoted to the indulgence and the pursuits of folly, dissipation and sin. The same principle of Divine Light which led our predecessors out of the vain and sinful pleasures of the world, also let them see the corruptions which had taken place in religious worship and ministry; the inconsistency of war with the Gospel Dispensation; and the impropriety of divers other matters, in the external department of professing Christians. For their testimony on these accounts, and the conduct consequent upon them, they suffered deeply in an age when religious liberty was claimed by all, but was given by few or none who came into the possession of power. Read the relations of the patient sufferings for the cause of truth, and the testimony of Jesus, of those who have gone before you, and faithfully bear your testimony even in those things that you may be ready to call little. Let not the singularity which a conduct consistent with your principles may produce, discourage you from a faithful

adherence to them; but submit to bear that cross, which will crucify you to the world, and the world to you, and redeem you from the various corruptions with which it abounds.* Prize your privileges; consider how differently our forefathers were circumstanced; and let this consideration excite in your minds increasing faithfulness and dedication to all parts of your religious duty. Follow the example of our blessed Redeemer; remember the reproaches which He endured; and be willing to take up the cross and despise the shame; then you may become partakers of that crown of righteousness which is the reward of all who have fought the good fight, and kept the faith, and who love his appearance. Before I conclude this address, I wish a little further to open the subject of Christian redemption, so far at least as to turn your attention to that work, which the depraved state of human nature renders universally necessary, and in which our Lord thus instructed a ruler among the Jews: "Except a man be born again, he cannot see the kingdom of God." Whatever our religious professions, whatever our outward appearance and demeanor may be—all will fail to procure us Divine favor and acceptance, if the heart is not renewed after the image of Him that created us. "Marvel not that I said unto thee, ye must be born again." This was the language in which our Saviour repeatedly inculcated this doctrine to Nicodemus; and O! my dear young friends! neither marvel at it nor withdraw from it. Examine the state of your own hearts, and the occasion for it entreat you, under those Divine convictions and influences by which "the washing of regeneration and renewing of the Holy Ghost" is experienced. The work is generally slow and gradual; therefore be not discouraged, if you cannot always perceive its progress; but, as you abide patiently under a right exercise of mind, you will find that the work will in time proceed, until the new creation in Christ Jesus unto good works is known. But when this is in measure attained, still watchfulness and prayer should be the companions of every mind. The command to watchfulness is of universal extent: "What I say unto you, I say unto all, watch." Again, "Watch and pray, that ye enter not into temptation." When this disposition or mind is rightly abode in, it preserves from formality in religion, keeps the soul alive to God, and makes living members and bright examples in his church and among his people. In this state of religious exercise the experience of the primitive believers is attained: By one Spirit are we all baptized into one body, and made to drink into one spirit. Here also right qualifications are received for religious service, and a capacity to fill up the measure of suffering or labor, which may be allotted in the church of Christ—a Church, the members of which are thus described by an inspired apostle: "Ye also as lively stones, are built up a spiritual house, a holy priesthood, to offer up spiritual sacrifices, acceptable to God by Jesus Christ."

We, as a people, need more of daily, fervent, silent introversion and waiting upon God; whereby our strength would be renewed, and our hearts more weaned from the world, and ability received to serve our God with reverence and godly fear.—*Thomas Eans.*

* The principles and practices of our Society are now, in general, so respectfully treated, that the temptation to desert them is much lessened.

FOR "THE FRIEND."

BACK UNTO BETHEL.

Back unto Bethel it is well to wander,
Where the fresh beauty of our morning lies,
Where the glad sunlight of the spirit's dawning
First woke to rance the soul's dark skies;
And drops more grateful than the dew of Hermon,
Or those that gathered upon Zion's mounds,
Poured, in their crystal and anointing clearness
From Lida's pure founts.

Back unto Bethel when our way is darkened,
And thro' the shadow we can find no light,
Our guidance lost and thickly round us closing
Foul's misty cirque, and despair's black night;
If hitherward our fearful steps are turning,
Perchance the cloud may glow with rainbow dyes,
And we behold the ladder of the angels
To Heaven rise.

Back unto Bethel when the waves of Jordan
Scem swelling deeper than the soul can dare,
And faith is weak that ever from its billows
We shall the rich stones of memorial bear;
Oh! strength and courage may afresh be given,
If fondly here we dwell a little space,
And breathe the air whose fragrance is surrounding
This trying place.

Back unto Bethel when our feet are straying
Far from the pathway leading unto peace,
When cumbering cares have been our steps delaying
And earthly pleasures yielded their increase,
Let us return, and renoun the promise broken,
Bind up the covenant, renew our vow,
And He who stands the same forgiving Saviour
May meet us now.

MY KINGDOM.

SELECTED.

A little kingdom I possess,
Where thoughts and feelings dwell,
And very hard the task I find
Of governing it well;
For passion tempts and troubles me,
A weak word will mislead my way,
And selfishness its shadow casts
On all my words and deeds.

How can I learn to rule myself,
To be the child I should,
Honest and brave, and never tire
Of trying to be good?
How can I keep a sunny soul,
To shine along life's way?
How can I tune my little heart
To sweetly sing all day?

Dear Father, help me with the love
That casteth out my fear;
Teach me to lean on Thee and feel
That Thou art very near;
That no temptation is unseen,
No childish grief too small,
Since Thou, with patience indinite,
Dost soothe and comfort all.
I do not ask for any crown,
But that which all may win;
Nor try to conquer any world,
Except the one within;
Be Thou my Guide until I find,
Led by a tender hand,
Thy happy kingdom in myself,
And dare to take command.

—*Louisa M. Alcott.*

SEPTEMBER DAYS.

Cianda plays his viol 'mid the grasses,
The last shrill sound at night, the first at morn;
Late poppies grow along the garden passes,
And light winds gossip in the ripening corn,

The sluggish creek in meadows lately greening
Is flanked with gold and purple, either brink;
From daisy beds the wind, the breeze is leaving
A deathly pallor on her lovely pink.

With Tylor fruit the lowly poke is laden;
Wych-bazel weaves "her thred of golden bloom;"
The wandering woodbine like a gypsy maiden
Warms with its color the deep forest's gloom.

The mourning sows with pearls Arachne's weaving;
The orchard peach looks out with cheeks a blush;
From shady nook the ring-dove's note of grieving
Floats far and faint upon the noontide hush.

By country roads the scarlet sumac's burning,
And over zigzag fences spread and shine
The lush dark elderberries, daily turning
Their loyal heart's blood into purple wine.

Down the lone path, where cows come in the gloaming
The thistles stand with faded armor on;
In buckwheat bloom the weary bees are roaming,
To gather sweets till the last day is done.

With all thy gift and grace, O fair September,
Some anniversaries it is thine to bring,
That loath unwilling eyes but to remember
And choke with sighs the heart that fain would sing.

And yet, when God has filled the earth with beauty,
And given the soul a quickened consciousness,
One may go forth in pleasant ways of Duty,
And feel the chastening Hand in close caress.
—*Elia C. Trug, in The Independent.*

Eli Perkins in Kansas.

I was lecturing out in Kansas last Spring,
where they have prohibition. An intemperate
man came to me one day and said:

"Yes, Mr. Perkins, this prohibition will bring
ruin to the State."

"It will, will it?"

"Yes, it will impoverish us and destroy our
business houses."

"Now, let's see about this, my friend," I said.
"Let's examine this a little."

"If a Kansas farmer brings a thousand
bushels of corn into Topeka, he gets how much
for it?"

"Three hundred dollars," answered my friend.

"Now, if they take this thousand bushels of
corn over to Peoria, how much whisky will it
make?"

"Four thousand gallons."

"And if this whisky should come back to
Kansas, you would have to pay wholesale about
\$8,000 for it?"

"Yes."

"Would it be worth anything to your citizens?"

"No; I suppose it would cause a good deal
of idleness and crime. It would hurt us. I
never did think whisky a positive benefit. I

"Well, how much would it hurt you?" I
asked.

"Oh, I can't tell. I —"

"Well, I'll tell you," I said. "It will hurt
you directly about eight thousand dollars'
worth. You would sell the corn from which
this whisky is made for \$300, and then buy
back the whisky for \$8,000. You would be
directly out of pocket just \$7,700. And, in-
directly, it would cost Kansas, in idleness and
crime—caused by the four thousand gallons of
whisky—about \$20,000. It would take 16,000
men a day a-piece to drink it, if they drank a
quart a day each. The loss of 16,000 days'
labor to Kansas would be \$20,000—wouldn't
it?"

"Well!" exclaimed my friend, "I never
heard it put in that way. I see it all plainly
now. I'll never say anything about prohibi-
tion-damaging Kansas again."

"Yes," I said, "if Kansas can save \$25,000 of
every thousand bushel of corn by getting the whisky
made from it stay in Kentucky, the more she
is damaged that way, the richer she will become
till finally, Kentucky, utterly impoverished, will
have to call on Kansas to lend her money to
build poorhouses. But there is one thing in
Kansas," I said, "that will be ruined by prohibi-
tion."

"What is that?" asked my friend.
"Why, your poorhouses. Your poorhouses

and jails will become empty. Think of a poor-
house with not a soul in it but the poor-master!
Think of a jail without a convict—poor, bankrupt
jail and poorhouse!"

Kansas used to send out \$19,000,000 a year
to Peoria and Kentucky and St. Louis, for
drink. She sends now about \$1,000,000 a year.
She is saving \$18,000,000. That is what is
keeping up the boom in Kansas. Her crops
have been bad, but her policy has been wise,
and she will soon have a surplus large enough
to buy the poor run States.—*Kansas City
Journal.*

FOR "THE FRIEND."

Ohio Yearly Meeting convened at Stillwater,
near Barnesville, on Second-day, Nnth Mo.,
30th. The meetings for worship held the day
previous, were, as usual, attended by many per-
sons not members of our religious society; and
many young people, who evidently had no
thought of attending the meeting at all, assem-
bled on the grounds, and passed most of the day
there, wandering up and down the walks, quite
out of accord with the spirit of the place, and
occasioning much annoyance to Friends. This
practice has been increasing, and will have to
be met by some effort to prevent it, while at the
same time welcoming all serious persons who
desire to profit by the meeting. The intrusion
is severely commented upon by the Barnesville
press, but, excepting from many leaving the
meeting before its conclusion, Friends were not
much disturbed after having assembled. During
both sittings there was much vocal expression,
in exhortation and prayer.

On the opening of the business meeting, on
Second-day, after reading the names of the Rep-
resentatives, minutes were read, liberating David
Heston and Thomas Whitson, from Philadelphia
Yearly Meeting; also one for Eliza H. Varney,
from Ontario, Canada, for religious service
within the limits of Ohio Yearly Meeting, the
concern of the last-named being the most ex-
tensive.

Epistles were read from Friends of Iowa,
Kansas, Western, New England and Canada,
and committees were set apart to essay replies.
A committee was appointed to nominate three
Friends to fill vacancies in the representation of
the Yearly Meeting in the Meeting for Suffer-
ings, occasioned by death, and another to audit
the treasurer's account.

On the opening of Third-day's session, the
Representatives reported their nomination of
Barclay Stratton and William L. Ashton as
Clerks, a continuance of the appointments of
last year.

The Queries were then taken up, and were all
disposed of at this sitting, the answers eliciting
much comment from many concerned Friends;
among other subjects, the habitual reading of
the Scriptures in families, and participation in
the decoration of soldiers' graves, drew forth
extensive remarks. Among the Elders deceased
during the year, the name of Dr. Isaac Huestis
drew forth the testimony that, in his professional
engagements, he was always careful to arrange
his affairs so as to be able to attend his religious
meetings, and he died while on his way home
from attending the last Yearly Meeting.

During the evening of Third-day, an educa-
tional association, composed mainly of the
younger members of the Yearly Meeting, met
at the school-house, whose object is to obtain
funds by contribution, towards an endowment
of the Boarding-School, and assisting students
in obtaining an education there.

The Reports on Education from the Quarterly Meetings showed a census of 613 children, of proper age to attend school, of whom a larger proportion are attending public schools than within the limits of Philadelphia Yearly Meeting, where many are placed under Friendly influences through the help of the Educational Committee, and by aid of other funds provided for the purpose.

A meeting for Divine worship was held on Fourth-day, the business meeting having been adjourned to Fifth-day morning.

The Boarding-School report showed a small attendance, and some pecuniary loss to the school, for the summer term of 1888; but the result of the winter session was such as to leave a small balance in favor of the institution for the year.

The Committee on Indian Affairs reported that a visit had been paid to the Sacs and Fox Indians.

During the session of Sixth-day, a minute on the state of Society, which had been prepared by a committee, and which was directed to be forwarded to the subordinate meetings, was read and approved; also, replies to the five epistles from other Yearly Meetings.

A committee to nominate correspondents, and another to suggest representatives in the Meeting for Sufferings, made report; after which, the meeting adjourned for another year, having transacted its affairs with true Christian condensation.

FOR "THE FRIEND."

A Visit to Sea Side City.

Sea Side City is one of the many places of summer resort for bathing on the shores of the Atlantic, in New Jersey. It is intermediate between Atlantic City and Cape May, and is of recent origin. I visited it at the end of the Eighth Month, not for bathing purposes, but in hope of finding some varieties of plant which would be new to me.

The railroad to the seashore branches off from the Cape May Road, shortly after crossing a piece of low marshy ground, which appears to form the head waters of Dennis Creek, which flows westerly and enters into the lower part of Delaware Bay. Dennis Creek has a border of Cedar swamp land; and is noted besides, as a place where the novel business of *mining* for Cedar has been extensively carried on.

The White Cedar (*Cupressus thyoides*), grows most luxuriantly on beds of peat, where its roots are always bathed in water. These beds are principally found along the head waters of the different streams of Southern New Jersey, forming the well-known Cedar swamps, in which the trees grow closely together. For hundreds of years there has been a very slow subsidence of the land, amounting to about two feet in a century, along the New Jersey shore, and indeed, in other parts of the Atlantic coast. In many places the inflow of salt water caused by this has killed the timber. A very large amount of white Cedar timber has been found buried in the salt marshes. The timber thus buried undergoes scarcely any change, and trees which must have lain there for hundreds of years are as sound as ever they were.

In mining for cedar logs, the shingler trims the swamp with an iron rod, until he finds what he regards as a good log. With a sharp spade he cuts away the roots and earth from over it, and then saws it off at the ends. This is easily done, as the mud is very soft and without grit. By means of levers he then loosens it, when it

at once rises and floats on the water. The under side of the log is always the lightest, and when it floats it always turns over, the side which had been at the bottom coming uppermost.

The low-lying salt meadows near the beach at Sea Side City were abundantly covered with vegetation. Some of the most characteristic forms were thick-leaved plants, such as the Sea Rocket (*Cakile Americana*), two species of Orache (*Atriplex*), and the Glass Wort (*Salicornia*), which has no leaves, their place being taken by the succulent jointed stem, which turns red late in the season, giving in many places a decided tinge of color to the marshes where it abounds. A species of Orache, a native of Tartary, is cultivated, especially in France, where the leaves are used as a spinach. The ashes of the *Salicornia* contain a large amount of soda, and were formerly much employed in making both soap and glass—from whence was derived its common name of Glass Wort. It grows abundantly on the coast of the south of Europe and the north of Africa.

Another interesting plant is the Sea Lavender or Marsh Rosemary, (*Statice Limonium*). The leaves are fleshy, like those of many other seaside plants, but are not very conspicuous because they are close to the ground, springing directly from the roots. The flowering stems are much branched, and bear many small lavender-colored flowers. Although this is the only species native to the United States, yet there are many kinds in other countries, some of which are very interesting occupants of greenhouses and gardens.

Our walk was rendered more interesting by the companionship of a well-informed naturalist who imparted much information. Among other things he spoke of mussels having been found in one of the pools left by persons who had been digging out marl. How this shell-fish could have been transported thither was a problem, which appeared to find a solution in a discovery of Dr. Leidy, that the embryo mussels are furnished with hooks, which might easily attach them to the feet or feathers of water-birds, and thus be conveyed to pools which they had not before inhabited.

After examining the meadows we went to a mill-pond on a small stream, a few miles distant. Among the bushes which grew on its edges, were numerous specimens of the Spiked Loosetrife (*Lythrum Salicaria*), with large purple flowers. A most curious habit of this plant is the manner in which it encroaches on the area of the pond by letting its branches droop until they touch the water, and then growing to a considerable length along its surface, sending up branches and sending down numerous roots which grow till they reach the mud below and fasten themselves there. While this process is going on, the original branch is kept in its position by the development on its surface of a thick coating of soft, spongy material, full of cells, which buoy it up and float it on the surface.

A similar development of air cells for the purpose of a float is made by another plant which we found on the quiet waters of this pond. It was one of the Bladder-worts (*Utricularia inflata*), which floats in the water, without any attachment by roots to the ground below. The long stem is divided into numerous fine thread-like fibres or leaves, which have small air-bladders. When the time for flowering comes, by this singular plant sends up a stalk which bears several pretty large yellow flowers, it provides a float by the growth of several large bladders

radiating from the base of the flower stem. These are buoyant enough to keep the flowers elevated in the air, so that they can perform their appropriate functions and mature their seed. Lindley states that when the fructification is accomplished, the bladders become filled with water in place of the air, and the plant then sinks. J. W.

FROM "THE BRITISH FRIEND."

What Barclay calls the "universality of Divine grace" is being grasped with increasing firmness by the leaders of religious thought. The following extract from a recent sermon by the Bishop of Manchester speaks for itself:

"There was no race on earth that did not have the feeling of dependence upon a higher power. He knew that travellers had testified to finding races without the religious instinct, but he said fearlessly that those reports had never borne the scrutiny of strict investigation. It was said that the Zulus had no such instinct, until Bishop Harrington proved that they believed in a great ancestral god. It had been stated more recently that the aborigines of Australia, who shared with the Hottentots the reputation of being the lowest of the human race, had no religious instinct. That was totally false. But even the man who knew them best thought so for fourteen years, but when he became as it were a member of their tribes, he discovered, to his amazement, that they had a religion which no woman of the tribes might know under penalty of death. It was not true that there was a tribe anywhere on the earth's surface that did not know and believe that there was something diviner and higher than itself on which it must depend. From the days that men carved their hatchets out of flint, they had felt that there was a Being higher and diviner than themselves, which would open their eyes and support their weak wills in determining to do what was according to their primitive notions of right; and so it had been down the long ages."

Natural History, Science, &c.

Contest Between a Blackbird and House Snake.

—One bright morning last summer I was walking out in the country near town, when I was surprised to hear a great noise of birds chattering and crying as if under excitement, blended with cries of fear and distress. On coming nearer to the noise, I saw a large number of birds: there must have been at least one hundred of all kinds on and about a certain tree. There were sparrows, bluebirds, Baltimore orioles, robins, nut hatches, &c., and one very large blackbird. He seemed to be fighting something, as he would throw forward his feathers, and raise his wings, then strike at something very seriously, while the other birds would utter cries of encouragement and rage.

I watched them for some time, wondering what it could all mean, when a house snake about eighteen inches long dropped at my feet. It started up the tree, and I killed it with a stone. As soon as the snake fell, all the birds began flying about as if congratulating each other on their victory, and it really seemed that their cries were changed to joy.

Curious to know more, I climbed the tree. In a fork of it, where the fight had taken place, I found a sparrows' nest with five young ones, which the snake was after. The parents not feeling able to cope with the enemy, had undoubtedly gone for help. The blackbird was

the champion and did all the fighting, while the other birds did the talking.—*E. L. Day, in Forest and Stream.*

Some Devices of Indian Criminals.—A writer of a series of articles in the *Times* of India on "By-paths of Crime in India," mentions some devices of criminals in that country. One curiosity which he was shown on a visit to the Presidency gaol in Calcutta was a heavy lead bullet about three-quarters of an inch in diameter. This was found on an habitual thief, and was being used to form a pouch or bag in the throat for secreting money, jewels, &c., in the event of his being searched. The ball is put into the mouth, and is allowed to slide down gently until it reaches some part near the epiglottis, where it is held in position and is kept there for about half an hour at a time. This operation is repeated many times daily, and gradually a sort of pocket is formed, the time being longer or shorter, according to the size of the pocket required. In some cases six months have been sufficient, in others a year, while in some cases two years are necessary. Such a pouch as this last is capable of holding ten rupees—about the size of ten florins. The thief therefore can undergo search, and nothing being found, he goes away with the spoil in his throat, the power of breathing and speech being in no way interfered with. About a score of prisoners in the Calcutta gaol have such pouch formations. In the hospital of the prison the visitor learned some of the malingering practices of Indian criminals. In one case he saw a youth who was a perfect skeleton, with lustrous eyes looking out in a ghastly manner from a worn, haggard face. It was discovered that he had for two years been taking an irritant poison, with a view to produce dysentery, in order to shirk work and get pleasant quarters in the hospital. But he had overdone the part, for he had reduced himself to such a condition that recovery was all but impossible. This taking of internal irritants is a common practice amongst the habitual criminals of Calcutta. Castor oil seed, croton seed, and two other seeds, which have no English name, are the agents most commonly employed. One man was pointed out, who, in order to get off his fetters, had produced an ulcer by rubbing the chafed skin with caustic lime, and then irritating the sore by scratching it with a piece of broken bottle.

Vitality of Seeds.—At a meeting of the Academy of Natural Sciences, Philadelphia, one of the members referred to the persistence of life in seeds, as illustrated by the presence of upwards of twenty species of plants on the newly made embankment at Fairmount Park, distinct from those growing in the neighborhood. The ground had been formed by dredging, and the seeds must have preserved their vitality in the river mud.

Poisoned by Paris Green.—William H. Seifert, his wife and family of four small children, were taken seriously ill after eating boiled cabbage for dinner. The cabbage, after examination, was found to contain Paris green, which was applied too freely—probably to the cabbage plants in early growth.

Silk without Worms.—M. de Carbonnet, a French savant, has discovered how to make silk without worms. He began his experiments some time ago, with the guiding idea that the peculiar appearance of silk was the result of the spinning of a liquid. After many months of repeated and unsuccessful trials he produced several yards of silk in this wise: he poured a colloid solution

into a copper receiver, which emptied into a system of small glass tubes. These tubes terminated in capillaries, which carried off the solution in fine thread-like streams. In a second system of glass tubes filled with water, the fine streams became fine threads, which, before leaving the water, were caught mechanically and wound around tiny rollers. After being heated and cooled in an acid of special gravity and temperature, the threads were made less combustible than cotton by being saturated in a simple chemical preparation. The quality of the silk goods manufactured from these threads is fine. The threads are cylindrical and are from one to 40 micro-millimeters in diameter. They sustain a weight of 25-35 kilograms per square millimeter. Ordinary silk bears a weight of 30-45 kilograms per square millimeter; cooked silk, 15-20. De Carbonnet's silk is much more brilliant than ordinary silk, and absorbs and holds coloring matter more satisfactorily. As yet only a few pieces have been produced by the new process. Several of them are shown in the Paris Exposition. De Carbonnet is confident, however, that further experiments will enable him to manufacture silk cheaply and in large quantities. In fact, he thinks that a few years hence the silk worms may as well go and die, as machinery will then be doing their work much better than they can do it themselves.—*New York Sun.*

Items.

Iowa Yearly Meeting (Progressive).—This body met at Oskaloosa, Iowa, on Third-day, Ninth Mo. 3rd. A request from two Monthly Meetings in southwestern Nebraska for the establishment of a Quarterly Meeting was made a favorable report. This was united with by the meeting, and a committee appointed to set up the meetings.

Barclay Hinchman was appointed Clerk, and Stephen M. Hadley and William Jasper Hadley, assistants.

The proposition to establish a Quarterly Meeting at Des Moines, was postponed till another year. The members had to form a Missionary Board to the instruction of delegates from the American Yearly Meetings, whenever six of them should unite in the plan, was sanctioned.

The committee appointed the previous year on "birthright membership," proposed discontinuing the custom—but the meeting decided that it should remain as it had been.

It was concluded that persons applying for membership should answer the following questions:

First.—Have you accepted the Lord Jesus Christ as your Saviour, and is it your purpose of heart to live a faithful Christian life?

Second.—Will you, with the assisting grace of God, conform to our discipline and the requirements of the Church?

Third.—Will you give of your means according to your ability, for the support of the work of the Church?

The superintendent of evangelistic work reported that 51 pastors were in the field regularly; 15 of whom were wholly supported, and 4 supported themselves; 150 others were doing pastoral work. The cost of the evangelistic and pastoral work had been somewhat less than \$10,000.

Western Yearly Meeting (Progressive).—The first sitting of the meeting for business was on Fifth-day morning, Ninth Mo. 12th.

The singing of hymns was of frequent occurrence, and appear to have called forth a caution from one of the members.

A proposition was introduced, that a children's day be taken in all the meetings, and that a collection be observed to be used in creating a fund to be used as a loan for the education of young persons for Christian work as missionaries, ministers, &c. It was left for consideration next year.

The statistical reports gave the whole number of members 13,420, and number of meetings 91.

Five day schools had been maintained among the Eastern Cherokees.

A proposition to reprint the Book of Discipline produced considerable discussion, and was referred to a committee to report next year.

Western Yearly Meeting (Conservative). convened on the 6th ultimo at Sugar Grove. The meeting of Ministers and Elders on the day preceding at 3 o'clock p. m.

Mary R. Test, a minister of Ohio Yearly Meeting, was present with a minute from her friends at home, and several other dear Friends from a distance, without credentials, were present, whose company and solid deportment was satisfactory and encouraging to us.

Satisfactory tokens of brotherly love were received from all the Yearly Meetings with which we correspond, except New England. The reading of these epistles was strengthening and encouraging to us at this time.

On First-day two large public meetings were held, at 10 A. M. and 2 p. m., in which much good advice was held out.

On Second-day the state of Society was brought to view by the reading of the Queries and Answers from the Quarterly Meetings, during the consideration of which many minds were deeply exercised on account of the many deficiencies amongst us; and much cheering was afforded to the dear youth. In the afternoon the request from Plainfield Quarterly Meeting came up, for the new Quarterly Meeting, to be composed of White River and Wilmington Monthly Meetings. The new Quarter to be known by the name of Laura Quarterly Meeting of Friends, to be held at Laura, Miami County, Ohio. After a time of deliberation on the subject the meeting in that respect was united with, and a committee appointed to attend the opening thereof on the 3rd Seventh-day in Second Month next.

On Third-day, the meeting in joint session had the minutes of the Meeting for Sufferings read, and the action of that body was approved for the past year; and a report added on the Minutes, prepared by that body, was read and approved, and referred back to the Meeting for Sufferings, for publication and circulation.

Our Committee on Education made a satisfactory report: showing there had been five schools the past year, under the care of Monthly Meeting committees within our Association.

Also our Committees on Books and Tracts, and on Peace and Temperance, made satisfactory reports.

On Fourth-day morning, meeting resumed business at 9 o'clock. Epistles, one to each of the Yearly Meetings with which we correspond, were read and approved.

Minutes read, and solid deportment of the dear youth was commendable; there was a goodly number of them present.

After the meeting finished the business that came before it, and the minute of adjournment was read, there was a large public meeting held, to the satisfaction of Friends, and they then separated. Many could say, that it had been good for us to be here. Also Maxwell was re-appointed Clerk of the Meeting this year, and Nathan Pinson for an assistant.

FEELINGLESS and indisposition often interfere with my regular attendance of meetings, though I think it right to make great exertion to go, and sometimes the effort is trying and wearisome to the flesh; yet the reward overbalances this. When we are providentially hindered from going to our religious meetings, it does not necessarily follow that we will be deprived of communion with our Father in heaven through his dear Son, nor of worshipping Him in spirit and in truth. He graciously regards the fervent exercise and travail of the soul to draw near to and feel after Him, and owns it as well in the solitary chamber as in the public assemblies for worship.—*Thomas Evans.*

THE FRIEND.

TENTH MONTH 12, 1889.

The *Christian Messenger*, a local church paper, published at Dickson, Tenn., enumerates among some articles which it regards as "indispensable in a Methodist home," the Bible, the Methodist Discipline and a Methodist paper.

We suppose there are few, if any, families of Friends in Philadelphia Yearly Meeting that are not provided with one or more copies of the Holy Scriptures; and probably most of them have also a copy of the Discipline and its companion volume, the Book of Advices. We wish to commend those books to our younger members especially, as well adapted to give them a knowledge of the disciplinary rules under which they live; and also as containing much sound doctrinal matter, and expression of religious concern for the spiritual welfare of its members, which has been felt from time to time by the body. A serious and thoughtful perusal of both of these volumes might prove of great advantage to many.

SUMMARY OF EVENTS.

UNITED STATES.—The debt statement shows that the decrease of the public debt during the Ninth Month amounted to \$13,653,094. Total cash in the Treasury, \$637,540,530.

A statement prepared at the Treasury Department shows that there was a net increase of \$14,711,990 in circulation during the Ninth Month. The decrease of \$10,597,273 in money and bullion in the Treasury during the same period. The principal increase in circulation was in United States notes, silver certificates and standard silver dollars. The decrease was in gold certificates and gold notes. The circulation on Tenn. Mo. Ist was \$1,405,018,000, and the money and bullion in the Treasury on the same date \$619,060,971.

On the 21st instant, the delegates to the International American Congress assembled at the State Department at noon, and were received by Secretary Blaine, who delivered a short address of welcome. Secretary Blaine was then chosen President of the Congress. On the morning of the 2nd the delegates started in a special train to the Pennsylvania Railroad, on an excursion to visit the chief cities in the Northern, Eastern and Western States. On the 7th, the party visited some of the factories in Lawrence and Lowell, Mass.

The steamer Corowa, which left New Orleans for the Ouachita River on the evening of the 2nd instant, exploded her boilers at False River, nearly opposite Fort Hudson, causing a loss of the steamer and forty lives. A number of persons were saved by a steamer that was near by. The Corowa recently came out of the dry dock, where she received extensive repairs.

War had been declared in Brainerd, Minnesota, by Indian Commissioners at the Mille Lacs reservation that these Indians have at last given in and signed the treaty, which will open some of the richest lands in the country to settlement. The result of the Commission's labors adds about 4,000,000 acres to the domain in addition to that secured by the Sioux Commission.

It is reported from Guthrie, Indian Territory, that the Iowas have consented to sell their reservation, and will probably agree to it formally when the Congressional Commission returns there two weeks hence. If the Iowas should sell their reservation the Government will be thrown open to settlement 200,000 acres of rich farming land. The Iowa tribe numbers but 83 souls, all told.

The total value of railroad property in Tennessee for 1889 amounts to \$39,253,600.

The returns of the elections in the four new States, held on the 1st instant, indicate that the Republicans have carried both the Dakotas and Washington, and the Prohibition and Congressmen and Legislatures. In Washington. The vote on Prohibition in North Dakota is close, but in South Dakota it is carried by a decided majority. Pierre has been chosen the capital of North Dakota.

The latest returns from Montana give a Democratic majority of seven on joint ballot in the Legislature,

with one in doubt, which may increase the majority to nine. In several counties the vote is very close, but it is not thought the official canvassing will make any material change. Toole, Democrat, is elected Governor by a majority of about 500; Carter, Republican, for Congress, by a majority of about 1000. South Dakota, says that the selection of that place as the capital of South Dakota, bids fair to create a boom which shall outrival Oklahoma last spring. Strangers are flocking into the city by thousands, every train being loaded down with prospectors and speculators. Over \$300,000 worth of property changed hands on the 5th instant. Lots which could have been bought a week ago for \$100 sold for \$1000.

Connecticut, on the 7th instant, voted on a prohibitory amendment to her State Constitution and defeated the measure by a majority of three to one. The new secret ballot law had its first trial, and it is said worked well.

The constitutionality of the Iowa Prohibitory Liquor law has been reaffirmed by the Supreme Court of the State, in an action in replevin involving the right to the possession of a large quantity of beer, all in sealed vessels, bearing United States Internal Revenue stamps over the plugs. The goods were shipped to a resident of Keokuk, an agent of the plaintiff, and were offered for sale in unbroken packages. The lower Court found as a fact that the beer was kept for sale for the purpose of evading the prohibition law of Iowa, but that the laws are unconstitutional and void as applied to the facts of this case. The Supreme Court holds that the law is constitutional.

Eighty-seven cases of small-pox are reported in Socorro, New Mexico, during the period of last year. In Texas, 200 miles from Socorro, has ordered a quarantine against the latter place. Vaccination will also be made compulsory in the public schools.

Deaths in this city last week numbered 330, which is 18 more than during the previous week, and 14 less than in the corresponding period last year. Of the whole number, 176 were males and 154 females: 48 died of consumption; 26 of diseases of the heart; 22 of pneumonia; 17 of old age; 17 of marasmus; 14 of typhoid fever; 13 of inflammation; 13 of inflammation of the brain; 12 of convulsions; 9 of cancer; 9 of delirium; 8 of inflammation of the stomach and bowels.

Markets, &c.—U. S. 4½, 106; 4's, 127½; currency 6's, 118 a 130.

COTTON was quiet, at 11 cts. per pound for middling uplands.

RYE—Winter bar, choice, \$13.25 a \$13.50; do, fair to prime, \$12.50 a \$13.00.

FLOUR AND MEAL.—Western and Pennsylvania super, \$2.50 a \$2.75; do, extras, \$2.85 a \$3.25; No. 2 winter family, \$3.40 a \$3.75; Pennsylvania family, some ground, \$3.75 a \$3.90; Pennsylvania roller process, \$4.00 a \$4.40; western winter, clear, \$4.00 a \$4.25; do, do, straight, \$4.30 a \$4.55; winter patent, \$4.60 a \$5.00; Minnesota, clear \$3.50 a \$4.00; do, straight, \$4.25 a \$4.75; do, patent, \$5.00 a \$5.35. Rye flour was quiet but fair at \$3.10 per barrel for choice. Buckwheat flour at a minimumly quoted at \$2.40 a \$2.75 per 100 pounds for new.

GRAIN.—No. 2 red wheat, 82½ a 83 cts.

No. 2 mixed corn, 39½ a 40 cts.

No. 2 white oats, 26½ a 27 cts.

BEEF CATTLE.—Extra, 4½ a 4½ cts.; good, 4½ a 4½ cts.; medium, 3½ a 4 cts.; common, 2½ a 3 cts.; fat cows, 2½ a 3 cts.

SHEEP.—Extra, 4½ a 5½ cts.; good, 4½ a 5 cts.; medium, 4½ a 7 cts.; common, 3½ a 4 cts.; culls, 3 a 3½ cts.

LAMBS.—Extra, 6½ a 7 cts.; good, 6 a 6½ cts.; medium, 5½ a 6 cts.; common, 4½ a 5 cts.

HOGS.—Good light western, 63½ a 63 cts.; heavy western, 6½ a 6½ cts.; extra heavy western, 6 a 6½ cts.

FOREIGN.—On the 7th instant, a terrific gale was prevailing throughout Great Britain and Ireland. Much damage was done at Blackpool and Liverpool, and in Ireland. The British ship Prince Louis, from Quebec, has been driven ashore in the Mersey.

One of the notable surprises of the week was the endorsement by Lord Hartington of Balfour's Irish University bill and his agreement to the amendment made by Chamberlain, that the real work of the meeting session of Parliament will begin with the introduction and consideration of an Irish Land bill and an Irish Local Government measure. As the report of the bill was publicly read and submitted, Irish matters will, as they have done during the past sessions, be the most prominent, and, as a correspondent on the ground says, "the indications clearly point to very stormy weather at Westminster."

The elections held in France on the 6th instant, re-

sulted in the success of a large majority of Republicans. The result, it is thought, will completely crush the hopes of the Bonapartists. Rochefort has been beaten by 1500 votes, and is deprived of any possible pretext for accusing the Government of undue measures against the press. In the districts which he failed to select members of the Chamber of Deputies on Ninth Month 22d. According to the latest estimate the new Chamber of Deputies will have 365 Republican and 211 Opposition members. This estimate indicates a change of 100 members.

The *Troops* commenting upon the fact that the Moderates, headed by Say and Ribot, have a dominating influence in the Republican party, says it considers the time propitious for a policy of reconciliation toward all classes, with a view to a consolidation of the Republic and the permanent establishment of peace and order.

A company has been formed in Germany to run a line of steamships between Hamburg and Mozambique. The vessels will stop at Zanzibar en route.

Official telegrams from Freiburg received at Potsdam and the Foreign Office on the night of the 5th instant say that the Czar will start for Berlin on the 10th instant.

Nothing is expected to result from the Czar's meeting with Prince Bismarck.

A movement is on foot in the United States which will accept any conciliatory overtures unless they are well backed by solid concessions.

The Russian Government is enforcing quarantine regulations on the Persian frontier owing to the prevalence of cholera at Reshd.

A movement is on foot in St. Petersburg for observing the first day of the week as it is understood in the United States and Great Britain. It is said that twelve hundred St. Petersburg merchants have already declared themselves willing to keep their places of business closed on First-day.

A movement is on foot in the elections for members of the Servian Skuptchina, that 102 Radicals and 15 Liberals have been elected. The total number of votes cast for the Radical candidates throughout the country was 158,635, and for the Liberal candidates, 21,774.

The province of Cagliari, Italy, has been ravaged by a terrific storm, in which 240 houses were destroyed. Sixteen persons were killed and hundreds were injured. The town of Cagliari suffered severely.

A terrible hurricane has visited the Island of Sardinia, and has done a fearful havoc in the destruction of buildings battered by the storm, and thirty persons were killed.

Details of the recent hurricane in Laguna del Carmen, Mexico, show that one hundred and five houses were destroyed and twenty-seven vessels wrecked.

The steamer *Geographie*, from Montreal, for Southampton, with cattle and merchandise, collided with the Nova Scotia sailing vessel *Minnie Swift*, forty miles off St. Pierre Miquelon, at 2 o'clock on the morning of the 1st instant, and was buried in within ten minutes, drowning about fifteen persons, including two women and three children. The others, with part of a Norwegian crew previously picked up, got on board the steamer. That also sank nine hours after the collision. Her captain and fifteen men were picked up by a boat, but a passing schooner took them to St. Pierre. Two other boats, containing about thirty-five missing persons.

NOTICES.

The next meeting of the TEACHERS' ASSOCIATION OF FRIENDS will be held at 14 N. Sixteenth Street, on Seventh-day, Tenth Month 12th, at 2 o'clock. Principal subjects under discussion (1) *The use of the Voice*. (2) *How can our schools, especially the smaller, be improved?* All are invited.

SOCIETY FOR HOME CULTURE.—The Term of 1889-90, opened Tenth Month 1st. SARAH ELY PAXSON will act as Secretary this year, and those wishing to become members or become members, will please address her at New Hope, Pa., or at the Pension in St. Pierre.

A new department of books for children may be useful to parents and teachers.

WANTED—An experienced teacher, (a member of the Society of Friends) possessing good administrative and business abilities, to act as Superintendent of Friends' Board School, 140 N. 11th St., Philadelphia.

Apply to
Ephraim Smith, 1106 Pine St.
John W. Biddle, 1199 South Fourth St., or
George Vaux, Bryn Mawr, Penna.

FOR "THE FRIEND."

Incidents and Reflections.—No. 193.

THE WORK OF GRACE.

Robert Barclay in speaking of the Light of Christ, which visits the hearts of all mankind in order for their redemption from sin, says, that man cannot move and stir it up when he pleaseth, but it moves and strives with man as the Lord pleaseth. "For, though there be a possibility of salvation to every man during the day of his visitation, yet cannot a man, at any time when he pleaseth, or hath some sense of his misery, stir up that Light and Grace so as to procure to himself tenderness of heart; but he must wait for it; which comes upon all at certain times and seasons, wherein it works powerfully upon the soul, mightily tenders it, and breaks it; at which time if man resist it not, but close with it, he comes to know salvation by it."

The truth of these remarks is instructively illustrated in the account which Thomas Ellwood gives of his own conversion—of the turning of his feet from the path of vanity and spiritual carelessness in which he had before walked, into the narrow path of self-denial and communion with his Maker, which leads to ever-enduring happiness and peace. When on a visit with his father and sister at the house of Isaac Penington, they met with Edward Burroughs, who, on parting with them, addressed a few words to each, according to the sense he had of their several conditions. T. Ellwood says: "That which he said to me, or rather that spirit in which he spoke it, took such fast hold on me, that I felt sadneke and trouble come over me, though I did not distinctly understand what I was troubled for. I knew not what I ailed,—but I knew it was something more than ordinary, and my heart was very heavy."

Soon after this he attended another meeting of the Society of Friends, which "was like the clinching of a nail; confirming and fastening in my mind those good principles which had sunk into me at the former." My understanding began to open, and I felt some stirrings in my breast, tending to the work of a new creation in me. The general trouble and confusion of mind, which had for some days lay heavy upon me, and pressed me down, without a distinct discovery of the particular cause for which it came, began now to wear off, and some glimmerings of

light began to break forth in me, which let me see my inward state and condition towards God. The light, which had before shone in my darkness, and the darkness could not comprehend it, began now to shine out of darkness, and in some measure discovered to me, what it was that had before clouded me, and brought that sadness and trouble upon me. I saw, that although I had in great measure been preserved from the common immoralities and gross pollutions of the world, yet the spirit of the world had hitherto ruled in me, and led me into pride, flattery, vanity and superfluity; all which were naught. I found there were many plants growing in me, which were not of the heavenly Father's planting; and that all these, of whatever sort or kind they were, or how specious soever they might appear, must be plucked up.

"Now was all my former life ripped up, and my sins, by degrees, were set in order before me. And though they looked not with so black a hue and so deep a dye, as those of the lowliest sort of people did, yet I found that all sin, even that which had the fairest and finest show, as well as that which is more coarse and foul, brought guilt, and with and for guilt, condemnation on the soul that sinned. This I felt, and was greatly bowed down under the sense thereof.

"Now, also did I receive a new law, an inward law superadded to the outward, 'the law of the Spirit of life in Christ Jesus,' which wrought in me against all evil, not only in deed and word, but even in thought also; so that every thing was brought to judgment, and judgment passed upon all. So that I could not any longer go on in my former ways and course of life, for when I did, judgment took hold upon me for it.

"Thus the Lord was graciously pleased to deal with me, in a manner somewhat like He had dealt with his people Israel of old, when they had transgressed his righteous law, whom by his prophet He called back, and required 'to put away the evil of their doings'; bidding them, first cease to do evil; then, learn to do well. And what, in particulars, the evil was which I was required to put away, and to cease from, that measure of the Divine light, which was now manifested in me, discovered to me; and what the light made manifest to be evil, judgment passed upon.

"So that here began a way to be cast up before me, for me to walk in—a direct and plain way; so plain, that a way-faring man, how weak and simple soever, though a fool to the wisdom, and in the judgment of the world, could not err, while he continued to walk in it; the error coming in by his going out of it. And this with respect to me, I saw that measure of Divine light which was manifested in me, by which the evil of my doings, which I was to put away and cease from, was discovered to me.

"I found it was not enough for me to cease to do evil; though that was a good and a great step. I had another lesson before me, which was to learn to do well; which I could by no means do, till I had given up, with full purpose of mind, to cease from doing evil."

As Thomas Ellwood endeavored to walk in obedience to the gradual unfoldings of the Spirit of Christ in himself, he was brought into many trials and much suffering. One of these times of trial was on the occasion of the holding of a Court of Quarter Sessions at Oxford, to which he was sent by his father, who was a justice of the peace, to attend to some business for him. Thomas had many acquaintances in that city, with whom, he says, he had been "wont to be jolly; whereas now I could not put off my hat, nor bow to any of them, nor give them their honorary titles, as they are called, nor use the corrupt language of you to any one of them, but must keep to the plain and true language of thou and thee." As he rode towards Oxford, a frequent cry ran through him to the Lord, that he might be preserved faithful, and not be drawn into evil, how much scorn and contempt soever be cast upon him. He soon met with a knot of his old acquaintances, who saluted him after the usual manner, putting off their hats and bowing, and saying, "Your humble servant, sir;" expecting the like from him. But when they saw that he did not move his cap or bow his knee as in former times, they scarcely knew how to understand his bearing; and the one who stood nearest to him, as T. Ellwood relates, "clapping his hand in a familiar way upon my shoulder, and smiling on me, said, 'What! Tom, a Quaker?'" To which I readily and cheerfully answered, "Yes, a Quaker." And as the words passed out of my mouth, I felt joy spring in my heart; for I rejoiced that I had not been drawn out by them, into a compliance with them, and that I had strength and boldness given me to confess myself to be one of that despised people." He adds the statement, that on his return home in the evening, "My heart was full of thankful acknowledgments, and praises unto the Lord for his great goodness and favor to me, in having thus far preserved, and kept me from falling into anything that might have brought dishonor to his holy name."

Though his experience at Oxford was no doubt attended with much mental exercise to a young man like T. Ellwood, accustomed to move in a social circle where compliments were largely practised, yet he had many conflicts to pass through which would be regarded as more severe, such as personal violence from his own father, and imprisonments for his religious profession. Under all these, his chief resource for help and guidance was the same as in the inciting prayer related—"My heart was full of brave life to the Lord, that He would vouchsafe to be with me, and uphold and carry me through." On one of these occasions, when he had been stopped by the watch for riding through the town of Maidenhead on a First-day of the week, he says, "I retired in spirit to the Lord, in whom alone my strength and safety was, and begged support of Him;" and when, after some detention, he was allowed to proceed on his journey, the feeling on his mind was one of joy that he had been preserved from doing or saying anything which might give an advantage to the adversaries of

Truth; and praises were raised in his heart to the Lord, his preserver.

As he thus lived in submission to the Divine will, the Lord was graciously pleased to visit him by his quickening spirit and life, so that he came to feel more and more the operation of his power working out that which was contrary to his will, and giving him dominion over it. Thus he grew in grace, until he became established as one of the pillars in the Lord's house that go no more out; and, as one of his friends testified, "eminently serviceable in the Church of Christ."

Cotemporary with Thomas Ellwood, although some years older, was Sir Matthew Hale, Lord Chief Justice of England. He also was favored when a young man with a visitation of Divine Grace, working powerfully upon him; and, being in with it, he too (it is believed) came to know salvation through it. In early life he was fond of company, and fell into many levities and extravagancies.

Being one day in company with other young men, one of the party, through excess of wine, fell down, apparently dead, at their feet. Hale was so affected that he immediately retired to another room; and shutting the door, fell on his knees, and prayed earnestly to God, that his friend might be restored to life, and that he himself might be pardoned for having given countenance to so much excess. At the same time he made a solemn vow, that he would never again keep company in that manner, nor "drink a health" while he lived. His friend recovered, and Hale religiously observed his vow. After this event, he forsook all dissipated company, and became remarkable for a grave and exemplary deportment, and a religious tenderness of spirit.

No doubt this good man drew from his own experience, when he wrote,—"They who truly fear God, have a secret guidance from a higher wisdom than what is barely human, namely the Spirit of truth and goodness." "The observance of the secret admonition of this Spirit of God in the heart, is an effectual means to cleanse and sanctify us." J. W.

William Grover.

(Continued from page 82.)

1803.—*Sixth Month, 3d.*—It is very gratifying to the natural mind, to have a very full and comprehensive view of the subject of religion, at the beginning of the work; but the religion of our Lord and Saviour Jesus Christ appears to be very differently intended to be opened to the mind; beginning, frequently, with a little light or manifestation of the Divine will, as to some point or part of duty. And as obedience is yielded to this small manifestation, let it be respecting whatsoever it may, greater and greater degrees of light and of strength are afforded, to follow on to know more and more of the Divine will, and of Divine things. This is very humbling to the natural mind, which would willingly be getting on faster; but the real, Divine manifestations of Light and of Life must be humbly waited for, and the mind clothed with reverence and fear, lest it get on in its own wisdom, and mix something of its own with the communications of Divine Light and Life; for, it is well to remember, that "in Christ (the Word) was Light, and that Light was the Life of men." Now, as the mind is really favored to believe that all good comes from God; and that its own conceivings and searchings, in its own wisdom and strength, will end in disappointment, and short of that clearness and evidence which truly satisfies, it is brought into a humble, waiting state; and in this reduced, de-

pendent, humble state, as anything is made known from the source of all true good, I believe a sweet, substantial, satisfying something will attend it, which all the exertions of the mind, in its own wisdom and activity, cannot afford. And as this comes to be really known and believed, a fear possesses the mind of entering into abstract speculation concerning Divine things; preferring God; not doubting but He will be pleased, if we yield obedience, day by day, to the manifestations of his light in our minds, to make to us such discoveries as He judges best and most suitable for us.

Now, as the Holy Scriptures are read in this disposition of mind, depending on God, through the spirit of Christ in the soul, for the opening of them to our understandings, we may, I believe, often be sweetly refreshed, comforted and edified, even in reading a very few verses. And if we meet with anything which is not quite clear to us, we may rather feel disposed to leave it, than to reason, search, and contrive concerning it. Thus thou wilt perceive that I believe the religion of Christ to be a religion of faith in Him; and that, as in Him are hid all the treasures of wisdom and knowledge, so, as we are brought into a state of true waiting and dependence upon Him, and upon the manifestations of his spirit on the soul, we are in the way to be rightly introduced, from time to time, into such degrees of knowledge in Divine things, as is truly best for us, and best adapted to the state of our minds; and that it is not consistent with Divine wisdom to communicate the treasures of heavenly mysteries, but as the mind becomes, through true obedience, refined and prepared for the reception of them.

1810.—*First Month, 21st.*—I think I never saw, more than lately, the usefulness and necessity of diligence to acquaint ourselves with that Divine good, which alone can console and sustain the soul in the hour of trial and extremity; and I feel, whilst I write, desires that thou mayst, for one, prize the present day. Love retirement, and frequent, solemn introspection of mind; that so thou mayst increasingly see thy duty and service in religious society, and be careful to do it with Christian magnanimity and faithfulness, showing, on all occasions, on whose side thou art, that thou mayst be an example and encouragement to others to do likewise.

1810.—*Seventh Month, 25th.*—Those manifestations intended for real, solid, and permanent good, are oftentimes in the cross to our own nature; but, as yielded to and obeyed, they tend to change our nature, even to introduce that nature which does the will of our Heavenly Father with delight. And I believe such are always blessed, and partake of substantial good, though it may be often mixed with trial—such being the terms of this life: "In the world ye shall have tribulation." But remember the foregoing words: "These words I have spoken unto you, that in Me ye might have peace."

1811.—*Eighth Month, 7th.*—It would be very pleasant to know — well settled; not that I consider that he may be losing time, unless it be in delaying to take up the cross, and follow, in humility and resignation of heart, the Saviour of men. I am ready to think that the likeliest way for many young men to get forward, as to an establishment in the world, is to seek earnestly and carefully after the pearl of great price, trusting in the Divine promise: "Seek first the kingdom of God and his righteousness, and all these things shall be added to you." I rather think that many who may be

steady, respectable characters, yet not submitting to all the terms needful for those who desire, above all things, to secure to themselves the Divine blessing, prevent that substantial advancement, even in temporal things, which they would more easily be favored with, if they were more weighty in spirit, and more fit to be placed in respectable stations at the head of families, having more or fewer young men under them. Could — come enough to put his trust rightly in Him, to whom belongs the earth and the fulness thereof, and whose are the catt upon a thousand hills, I think something would open; and it would be a comfort to see him, thus trusting and thus depending, settled for himself.

(To be continued.)

FOR "THE FRIEND."

A Visit to Colorado.

(Continued from page 83.)

To understand the peculiar alignment and mode of ascending the high passes on this railroad, it may be remarked, that they do not attempt to rise to the summit of any one mountain by climbing its *sides alone*. Such an ascent would only be possible by a spiral course *around* its sides, or a zigzag progress directly up *one side*. If we regard the whole system of a mountain chain, we shall find that it does not consist of an aggregation of truncated cones springing out of a common plain; but first, of the upheaval of a wide plain, whose axis or ridge runs for varying distances in a continuous line, but which apex has been broken through by the force below into protruding peaks and points. That this principal axis, or ridge, has transverse axes crossing it at different angles, which denote the uplifting of the sides of the main incline, and these in turn broken by internal force into further ridges at right angles to the original one; thus leaving valleys between them, which, in a more or less tortuous course, lead from the base of the range up to a depression or pass in the main axis, or "divide."

These valleys, or cañons (as they are termed in the Spanish phraseology, so prevalent in this country once owned and partially occupied by the Mexican race), afford access to the heart of the elevated land not otherwise attainable, and are mostly the channel of a mountain stream. The general course or trend of the apex of the eastern or front range of the Rocky Mountains is north and south, and of the cañons is east and west. This is not meant to give the idea of an invariable or direct course, in either, as both the crest and the cañons which approach it are sinuous in their directions. Keeping these ideas in view, the engineer must first seek for the lowest place in the crest of the mountain range to carry his road through, which is contiguous to the region he wishes to open to travel. Then he must find a valley, or cañon (usually indicated by a stream issuing from the hills), leading by the most direct course to the mountain pass.

For some reason the builders of the Denver and Rio Grande Railroad have seldom resorted to tunnels in its construction. They seem to have considered it their best policy to work on the surface, and consequently often double and redouble on their own track in the devious path pursued. Thus, by the bold excavating of rock and gravel, the iron way ever rises at the greatest practical angle, at times as much as 400 feet to the mile; now winding around the almost vertical side of one mountain, then reaching the head of a gorge which curves into the side of an adjoining one, and following

its outline, although it may lead far back again; yet some forward progress is made, even at the cost of ten miles of track for one of direct motion towards the point to be reached. With a diagram of that part of the road before me which leads over the San Juan pass from Antonita to Chama, a distance in a direct line of only twenty-five miles, I find the sinuosities of the track cover 115 miles of travel—about five to one!—In one of the loops made by running the railroad far up on one side of a ravine to round its terminal point and return by a parallel course on the opposite side, the distance traversed was just about ten times the breadth of the ravine between the points of departure and approach, and which might have been crossed by the train in a few minutes, if it could have been spanned by a bridge. Yet, just here was the practical difficulty to solve by the engineer.—His ascending grade had carried the line hundreds of feet above the bottom of that ravine before he approached it. To throw a bridge with trestle-work to support it over the chasm would have been impossible, or unsafe; further, he has still many hundreds, perhaps thousands of feet of elevation to gain before he reaches the culminating pass which must be surmounted, and as he lengthens out his track on this apparently fruitless double, he gains materially in the ascent to be overcome, so that an observer stationed at the mouth of the cañon would see the locomotive and train coming back from this long detour far up on the mountain side, above the altitude of the point at which they entered it on the opposite side.

As our engine, with heavy and measured throbs, carried us from height to height, the ever-varied views which opened to the vision, affected the mind with alternate sensations of tranquil enjoyment, wonder and awe. The great treeless plains, stretching indefinitely to the eastward, and wrapped in a dreamy haze of saffron and blue, the lofty Spanish peaks lifting their bold crests into the deep azure sky to the south of our gateway. Veta Mountain, closer to our path on the north, her creamy surface flecked with the shadows cast by the cloudlets now dotting the heavens, all spoke of beauty and serenity. As our train rounded the granite promontories which jutted from the cliffs we were climbing, revealing to the sight dizzy depths below, an involuntary shudder would steal over the nerves at thought of the result, if the track should sink under the weight passing over it. It is indeed a marvel that no such accidents have yet befallen travellers on these mountain highways. The fact speaks well for the care in construction as well as the prudent management of the officials. Conversing with a brakeman on this subject, as we ascended Marshall Pass, he told me he had been on the line for four years and felt safer than when running on the level prairies, as he knew that greater caution was observed on the mountain road.

The descent on the western side of the slope led us down to the San Luis Park—the largest of all the four great parks that distinguish Colorado, viz: North, Middle, South, and San Luis. This tract of nearly level table-land is 7500 feet above sea-level, surrounded on all sides but the south by ranges of high mountains, and is larger than the State of Connecticut. On reaching it, we had a fine view to the north of the Sierra Blanca range and the three contiguous peaks which form its crest. These are the highest in the United States, excepting, perhaps, Mount St. Elias, being 14,464 feet in altitude; and are usually covered with snow, even in mid-

summer. At present there are only occasional snow-fields in the ravines, on their sides, as the warmth of last winter diminished the usual deposition of snow here, as well as elsewhere, in the United States.

(To be continued.)

Parents and Children.

SELECTED.

Would that the following selections might have due place, and tend to stir up the pure mind of parents in the earnest Christian effort to train their children in the nurture and admonition of the Lord, as becometh those who must give an account to Him whose heritage children are:—

“We tenderly and earnestly advise and exhort all parents and heads of families, that they endeavor to instruct their children and families in the doctrines and precepts of the Christian religion as contained in the Holy Scriptures; and that they excite them to the diligent reading of those excellent writings, which plainly set forth the miraculous conception, birth, holy life, wonderful works, blessed example, meritorious death, and glorious resurrection, ascension and mediation of our Lord and Saviour Jesus Christ; and to educate their children in the belief of those important truths, as well as the belief of the inward manifestation and operation of the Holy Spirit on their own minds; that they may reap the benefit and advantage thereof for their own peace and everlasting happiness; which is infinitely preferable to all other considerations.”—*Discipline of Philadelphia Yearly Meeting, 1732.*

“Is not this pious care much needed at the present time within our borders? Well would it be for all who are delegated to watch over and guide the young, never to forget, that they are required not only to inscribe upon their hearts the precepts of Truth, and impress them by the force of example, but to prevent these heirs of eternity from learning lessons or acquiring habits which may blast or blur the whole page of existence. For want of due regard to this, there is most lamentable evidence of the lack of proper maintenance of true Christian parental dignity and authority; and a declension among our members, from the simplicity and self-denial which were conspicuous in our predecessors. How sad and great are the consequences, resulting from parents not exercising the authority with which Providence has clothed them, to correct youthful propensities to indulge in things not right in themselves, or calculated to betray them into that which will be hurtful, forgetting that indifference to, or disregard of the proper exercise of the authority to restrain, carries with it partnership in the wrong committed, and in the punishment which is sure to follow sooner or later.”

Well would it be for those in the parental relation, diligently to enquire in the light of the Lord Jesus, which deceiveth not, and is never withheld from those who humbly and sincerely seek it, whether they are by a godly example, a wise and wholesome precept, and a judicious supervisory restraint, doing *all they can* in a faithful discharge of the responsibility and influence committed and involved in training up impressible and susceptible beings who, like themselves have become probationers of earth, and have also never dying souls to be saved or lost. Perhaps there never was a time when the sad fruits of neglect of this religious care and training was

more painfully manifest; or when parents should so seriously lay to heart the awful accountability which cannot be turned from or transferred, and which if undischarged, will gravely rest as a cloud of sorrow and of darkness if not of bitter remorse, upon the retrospect of the dying hour.

It is a matter for serious inquiry, whether the lack of true Christian, prayerful concern on the part of parents, is not a fruitful cause of the low state of religion and religious growth in the Church as it is in Jesus, not only in our own Society, but in that of others also. That it is the ostensible reason why so few of those in the early walks of life, are seen coming up in an unreserved surrender and covenant of filial obedience to the law of the Lord inwardly revealed, which would make them not only useful members of the church militant by enabling to serve their generation according to the will of God, but prepare also, through the washing of regeneration and renewing of the Holy Ghost, for an inheritance in the Church triumphant in heaven.

Children love their parents; and what these do and say becomes, in the early susceptible period of childhood, the deeply rooted impressions and lessons so calculated to give a bias to, and have an important influence upon the whole course of their lives. Let parents, then, deeply weigh in the just balance of the sanctuary, the responsibility of the position in which Providence has placed them, and no less reverently seek by prayer and supplication to the God of all grace, for that wisdom which is profitable to direct in this as in every other good work.”

“We have been ready to query sometimes when dwelling upon the state of our Society, and especially in view of some of our younger members, whether parents have been and are sufficiently watchful and faithful in the great duty of teaching their children, as early as the understanding is duly matured, to distinguish between right and wrong, by directing their attention, in a familiar way, to the operation of the Spirit of their Heavenly Father in the secret of the heart; as causing them to feel comfortable when they do right, and uncomfortable when they do wrong. Whether the merchandise, the farm, or the many other relative and social, and very lawful duties when kept in their due relation and proper place, have not too often so abstracted or too exclusively engaged the mind, that this very imperative and fearfully accountable one has been much overlooked?”

There can be no doubt, that the influence of parents, and especially mothers, over the precious olive plants committed to their care is very great. And in proportion to this influence, whether for good or for evil, will be their reward or solemn accountability in that day for which all other days were made. If engaged conscientiously to train them up in the Lord's fear and admonition, no less by consistent exemplary walking in this fear themselves, than by pious precept coupled with holy restraint, and all being backed by the heart's earnest pleading petition to a God of knowledge and Father of mercies for their preservation, then may they confidently hope that He will bless their efforts; will hear and accept their prayers even as incense, and the lifting up of their hands as the evening sacrifice.

Parents, herein, may have to labor long; to toil on and on and on without the encouragement of much fruit; yea, even sometimes to sow in tears. But the Omniscient, whose eye is on the heart, seeth all. It is written, “Behold we count them happy which endure.” And, “The

husbandman waiteth for the precious fruit of the earth, and hath long patience for it, until he receive the early and the latter rain." As the faith of these religiously concerned parents fall not, and the fervent breathing of their souls is, through the help of the Holy Spirit, unto Him who hath all power in heaven and in earth. He will in his own time, either give them the desire of their hearts in seeing their children growing up in good liking before them, or else He will strengthen with strength in their souls, and proclaim a blessing in that they have done what they could. How desirable to see from generation to generation, the hearts of the parents with much Christian solicitude turned to the children, and the hearts of the children to the parents, to the praise and glory of the Redeemer's all-sufficient and saving grace!

FOR "THE FRIEND,"

The Birds.

SIC VOS NON VOBI8 NUDIFICATIS—V. Tryll.

When closed this scene of toil and strife
And time to rest is ended,
No picture on the page of life,
To now be made or mended;
Against me shall one line appear
In all high-heaven's dominion;
Or shattered frame, or fractured limb,
Or fluttering gory pinion?

The birds come amongst us in the spring to build their nests, and rear their broods, they please our eyes by their graceful symmetry of proportion, their glossy rich and iridescent plumage; and should excite our respect by their untiring vigilance in searching out and destroying noxious seeds and insects, which but for them would in many instances become sources of serious inconvenience to the community.

They labor for us diligently, and cheer our homes by their lively presence through the summer, and bequeath to us a most solemnly beautiful farewell when they take their flight in the fall. What do we render them in return for the pleasure and profit we derive from their company? In the first place our government has gone so far towards recognizing their departure as to legislate for our sportsmen in the privilege of celebrating it by firing for them a salute; not of blank cartridge, but one well charged with the death-dealing missiles of lead. And in their thoughtless wanton pastime, there is but little distinction made—all have to suffer alike, from the wren and the sparrow that sport at our doorway, to the eagle and vulture that soar in mid-heaven. For it appears as if any thing great or small, clothed in feathers, had a more than magnetic attraction for the muzzles of their guns.

Another great means of their destruction is by robbing their nests of the eggs. For a long time past, fifteen or twenty pairs of turtle-doves had been building their nests and rearing their young in our orchard. These marauders found them out, and for two or three years pursued their eggs till now not a solitary bird is left.

We had a ring-dove that would perch on our hand, and come into the house several times in the day for its meals. It was perfectly tame, having its liberty at all times, still we could pick it up anywhere whenever we wished, either indoors or out. A person came along with a gun, we heard our pet cooing in a tree near the road; we soon heard the report of his gun, and our ring-dove never returned.

From such treatment the presence of man has become a just cause of terror to them, and they are taught by sad experience to shun his society; if they were but treated as they should be, as

they deserve to be, they would soon become as domestic as the poultry of our farm-yard, and what a gratification they might then prove, at least to those who appreciate their company. I know of but few things in nature more solemnly pleasing than the departure and return of the birds; and there are but few things that bring an angry scowl across my brow more quickly than their wanton destruction.

I do detest that cruel sport
That justifies the cautious fear
That drives the songsters from my path,
Or ever I approach too near;
But how my soul delights to hear,
Beneath the broad cerulean dome,
Their heaven-born murmurs bold and clear,
In soft pulsations round me thrown.

I never aimed a deadly tube
In sport, in pastime, or in wrath;
That tore a parent from her brood,
Or quenched parental hopes in death—
I'd rather see them seek my path,
Reclined in some lofty tree,
There pour their mellow, melting breath
In music's measured harmony.

Could I with murderous heart and hand,
And death-deliberate dealing eye,
Slaughter a little covey band,
That in my pasture chance to fly?
I had much rather pass them by
And hear their whistling notes declare
They recognize me as a friend,
And justly banish every fear.

The plover in the open field,
The flicker on his hollow tree,
The thrush, the holly-hush conceals,
May live and love secure for me.
It always gives me pain to see—
Impelled by fierce expanding fire,
The leaden shower, where ere it be,
Fulfill the sportsman's wild desire.

When withering leaves the ground bestrew,
And wintry storms approaching nigh;
I love to hear their last adieu
Accord with nature's mournful sigh.
Or watch them with a tearful eye
As on their austral course they steer,
And wonder whether they and I
Again will meet another year;

Again enjoy the blooming glade,
Again behold the glorious spring
With it the ever-varying shade
Of leaf and flower in verdure bring;
And they, once more on joyous wing
Attune aloft their earliest lays;
Or whether I, with them shall sing
Again in autumn's golden days.

C. S. COPE.

"I see the better course, and, I approve it, but I follow the worse," said a heathen poet. The saying has become famous as a confession of the power of sin. But it is also a proof of the power of conscience and of the persistence of all good influence. To approve the good is proof that the soul has not gone down to the deepest moral depth. Powerful appetites, and passions may have their seat in the carnal nature, which, from frequent triumph over too weak a will, have gained a mastery over the life; but if a voice still persistently cries out for the good, and the heart asserts its approval of it, it is certain that the life is not wholly won to evil. So long as there is struggle in the soul, that is proof that the powers of goodness still have life and power.—Selected.

BECAUSE a man is worthy of being held up as a model in some things, it does not make him worthy of being held up as a model in all things. His right-doing cannot make any wrong-doing of his right.—Selected.

LATE OCTOBER.

SELECTED.

The cruel frost has left no bloom alive,
But playful Nature seems to try how fair
Her skill can make the woods
Without the help of snow.

And so she pranks the leaves with hues as bright
As any that the summer blossoms wore:
The smac's robes are dyed
With brilliant red and gold;

The maples glow with every varying tint
Of scarlet, luminous yellow, unclunged green,
And tender shadings born
Of all these mingled hues.

The regal oak puts on its bravest dress,
Purple and crimson—while the humbler beech,
In palid russet, dreads
The next disheveling breeze.

Timid and terrified, the poplar stands
Shivering in thin pale yellow, though the leaves
Of other trees are still,
And all the winds at rest.

The sunshine, melting through the gorgeous roof,
Fills all the wood with strange, unvoiced light,
And makes the atmosphere
A bath of liquid gold.

Wherein all dissonant thoughts, discordant sounds
And clamorous voices seem dissolved away
Into a perfect peace—
A trace from all the world.

How silent! There is not a sound to break
The utter quiet of the autumn noon,
Save when an acorn drops
Upon the dry, dead leaves;

Or suddenly a prickly chestnut burr,
Scorning to wait for the compelling wind,
Falls and rebounds again,
Scattering its treasures wide.

A squirrel, frisking in the thinning boughs,
Flings down a half-shelled nut before my feet,
And chattering noisily
Disputes the intruder's right.

Or, in the shadow of its plummy tail,
Stands motionless, and silent as a leaf,
Peering with wild, bright eyes,
Curious, yet half afraid.

Then, swift and nimble, scampers up aloft,
Sure-footed sailor of the sea of leaves—
Fearless of dizzy heights,
And heaving depths below.

Yonder a leaf-brown rabbit from the brake
Leaps, and is lost amid his kindred hues—
The sudden rustle dies
And all is still again.

Hark! from afar a faint, unwarmed call—
The homesick cry of some belated bird,
Left by his emigrant tribe
To meet the frost alone.

And like a dirge for all the insect lives
Which made the world of late so rolulue,
The last faint katydid
Rasps feebly in the fern.

THE INWARD CHRIST.

SELECTED.

The outward word is good and true,
But inward power alone makes new.
Not even Christ can cleanse from sin,
Unless He comes and works within.

Christ in the heart! If absent there
Thou canst not find Him anywhere;
Christ in the heart! O friends, begin
And build the throne of Christ within.

And know from this that He is thine,
And that thy life is made Divine,
When holy love shall have control,
And rule supremely in thy soul.

"UNTO THE DESIRED HAVEN."

Psalm cvii.

What matter how the winds may blow,
Or blow they east, or blow they west;
What reck I how the tides may flow,
Since ebb or flood alike is best.

No summer calm, no winter gale,
Impedes or drives me from my way;
I steadfast toward the Haven sail
That lies, perhaps, not far away.

I mind the weary days of old,
When motionless I seemed to lie;
The nights when fierce the billows rolled,
And changed my course, I knew not why:

I feared the calm, I feared the gale,
Foreboding danger and delay,
Forgetting I was thus to sail
To reach what seemed so far away.

I measure not the loss and fret
Which through these years of doubt I bore;
I keep the memory fresh, and yet
Would hold God's patient mercy more.

What wrecks have passed me in the gale,
What ships sunk in the summer day;
While I, with furled or spreading sail,
Stood for the Haven far away.

What matter how the winds may blow,
Since fair or foul alike is best;
God holds them in his hand I know,
And I may leave to Him the rest:

Assured that neither calm nor gale
Can bring me danger or delay,
As I still toward the Haven sail
That lies, I know, not far away.

Frank's Victory.

SELECTED.

A TRUE STORY, BY ROBERT EMORY.

"No," said Henry, who was fourteen years old and very thoughtful for his age, "those words of the Saviour about turning the other cheek when you are struck in the face are not to be taken literally; they are like that other saying about the mountain being removed and cast into the midst of the sea. Our teacher told us, you remember, to get at the spirit of the words. You know yourself that no boy in our school could let himself be slapped in the face, and not strike back, without being thought a coward and a milk-sop. Could we follow that rule in our every-day life, pa?"

"You are certainly right, my son, in always trying to get at the spirit of the Saviour's words. But if you and your brother can spare a few minutes from your lesson, I will tell you an incident that happened in our school when I was a boy, which may help us on this subject."

"One day we were practicing for a match-game. I was in the left field; the game had been called, for some reason, and I was talking to the centre-fielder, when we heard Joe Harding's angry voice:

"You did."

"No, I did not," quietly replied Frank Talbott. "I say you did, and if you say you didn't, that's the same as calling me a liar, and nobody shall call me a liar."

"Joe was a splendid looking fellow, the envy of all the boys; for he was the best base-ball player in the school. But he had a quick temper, and it was very easy for him to get into a fight when he was angry. Some of the boys hinted that he didn't try to control his temper, because he knew he was the best fighter in school."

"He always manages to keep cool when Frank is around," said Big Tom. "Frank is his match; so, we'll never see that fight," he added, sneeringly.

"But it looked as if we should see it now.

Frank stood in the catcher's position, his black curly hair thrown back from his forehead, his fair face looking almost white as he tried to control himself. Joe, slinging his bat away, came toward him, walking on tiptoe and slightly sideways, with his fists doubled up. We knew what was coming next. Everybody had run in as soon as we saw that there was going to be a fight. "But what! Frank a coward! Not going to fight! There he stood with his hands by his side, saying, as Joe rushed at him, 'I never called a boy a liar—' But Joe had struck him a blow in the face that sent him reeling just some of the little boys that had gotten there. Frank recovered himself in time to take another blow; then another and another, saying merely, 'I did not call you a liar.'

"Shame to hit a fellow that won't hit back," cried some of the big boys, and they caught Joe's arm and held him struggling.

"And there stood Frank, his face all bruised and bleeding, a sight I shall never forget.

"'Why on earth didn't you fight him? You are his match, any day.'

"'No, I am going to be a Christian,' replied Frank; 'and I don't think it's right to fight.'

"'You are a fool, that's what you are,' said Big Tom. 'Are you going to let your face be battered up in that way by every bully that comes along?'

"'I can't help that; but I have made up my mind never to strike back so long as I live.'

"That evening, in Frank's room, you might have seen a sight that none of us would have thought possible. Joe kneeling to Frank, begging pardon for what he had done.

"'Why, Joe! Get up this instant! Of course, it's all right with us.'

"And Frank lifted Joe up. As they shook hands, Joe said:

"'But can I ever forgive myself for striking you as I did?'

"'Joe is conquered for once,' said one of the boys, at supper.

"I always said Frank was his match," replied Big Tom; 'but I didn't think he was going to take that way to conquer him.'

"'Boys, do you think Frank was a coward and a milk-sop? Why, we thought him the bravest fellow in the school!'

"Joe never struck a boy after that. And what's more, it came to be considered a disgrace to get into a fight. And all because Frank believed in taking the words of the Saviour literally: 'Whoever shall smite thee on thy right cheek, turn to him the other also.'

BADGES of patriotism and religion are often made to perform service for which they were not originally intended. A gentleman addressing the scholars of a large school observed among the decorations about the room an American flag, and said: "Children, can any of you tell me why that flag was hung there?" "To hide the dirt," quickly responded one sharp boy, who had assisted in making the preparations for the occasion. "If we could read the secret history of some outward displays of symbols and signs, our respect and admiration would give place to contempt and disgust. To put on mourning merely because it is the custom, to make an outward profession of religion because others do, or to hide the deformity of a corrupt spirit, to contribute to charitable and benevolent objects merely to win the admiration of those who witness what is done, are acts of selfishness, offensive to God, and degrading to humanity.—

Christian Advocate.

Wet Weather and Miry Race Tracks.

THE "THE FRIEND."

To many of those who have been domiciled in the rural districts of the Atlantic seaboard this exceptionally wet summer and first month of autumn, the almost daily recurrence of rain-storms during continuous periods of several weeks' duration, has undoubtedly come with depressing effect. Where those so situated have been farmers dependent on the harvesting of fair crops for their living, the failure to secure, in many cases, anything like an ample return for a great deal of time and labor bestowed, has called for much sympathy. While some may be almost disposed to murmur at Providence because of these things, it cannot be doubted, nevertheless, that they are permitted to occur for a wise, just, and, eventually, a merciful purpose.

This interference with man's plans may be recognized as salutary, in connection with the great and growing evil of horse-racing, customarily indulged in during the warmer half of the year. Thus, the *Public Ledger*, of Philadelphia, says: "The announcement that the races of the Philadelphia Driving Park have been declared off, will prove a great disappointment to the local lovers of trotting and pacing, who have been longing for a grand circuit meeting in this city these many years, and now, after the horses had all been shipped here, and arrangements made to give the meeting, the elements interfere and the affair has to be abandoned. The Philadelphia Driving Park Association sustains a heavy loss, as they are not only out thousands of dollars spent for advertising and for making preparations to give this meeting, but they had also counted on getting some return for the \$100,000 they paid for the property, and money expended in fitting up the grounds."

A like interference has been known in scores of cases throughout the extensive section of country east of the Alleghenies, where the late very remarkable succession of rains has been so prevalent. At the grounds of the Chester County Agricultural Association, at Westchester, where the races were a failure, and the managers of the Fair were subjected to loss, notwithstanding the attraction of a "Wild West" show within the enclosure, it has been gratifying to learn that the women of the Christian Temperance Union relinquished the space which had been accorded them, when it came to their knowledge that pooling upon the horse-races was to be permitted. It would seem safer not to accept any privilege of allowed space at a Fair where horse-racing was a feature, inasmuch as a race-track in operation means gambling, profanity, rum-drinking, and ruin, as does the liquor saloon itself.

The writer of this was in the office of the late Thomas H. Powers, of Philadelphia, not long before his decease, when the subject of publishing the accounts of horse-races in the daily papers was mentioned. T. H. P. spoke most earnestly in deprecation of the custom itself and of the publicity given to the races by the papers; then, calling to his side the clerk who assisted him in the distribution of his many benefactions, he dictated a letter to the publisher of one of our most influential city journals, asking him if he would not be willing, in the interest of good morals, to therefore eliminate that sort of intelligence from his, in many respects, excellent paper.

Precisely what effect this urgent appeal had at the time, I cannot say; but I believe it may safely be affirmed that the journal referred to

gives at the present day far more space to "sporting matters," horse-racing included, than it did twenty years ago. The journal in question is also authority for the statement made early in this year, that "Last year's racing was the most notable in this country, and, both in number of races run and in the amount of money won, exceeded by large figures the record of the preceding year." He then gives the totals, showing the increase in the single year to be as much as *twenty-five per cent.*

Had the compiler of that article appended to his sally suggestive exhibit the startling number of defalcations and suicides precipitated through indulgence in the mania of betting on races, he might have been almost ready to concede that the newspapers which publish so and popularize the "sport," are, in so-doing, assuming a very serious responsibility.

One hapless case reported this spring was that of a "prosperous boss mason, contractor and prominent trades-union man," who, after losing heavily on the Brooklyn "handicap," and then nearly ruining himself totally in the endeavor to recover the loss by betting upon the favorites at another race-course, went to his home where were his wife and only child, and, taking up a revolver, shot himself with fatal effect through the head. Incidentally, it may throw some additional light on the demoralizing character of the races, and the evil spirit of recklessness which they engender, if we quote the following telegram which was published the day following the "handicap" above mentioned, and which, as we have seen, caused at least one of the participants to take his own life:

"After the third race, there was a rush to the betting-shed, which soon so filled it that the book-makers could hardly do business. Men clamored like mad and fought like wild animals for a chance to stake their money on their favorites. The odds offered by the book-makers were scandalously inadequate, but they thought little of that. The wild mania to get a bet at any odds seemed to pervade the multitude. Had there been four times the number of book-makers, all would have been rushed to accommodate the tremendous numbers of betters. While the gamblers were playing their money, other throngs visited the paddock, to see the great horses groomed and saddled for the fray."

Truly, it was with good reason that the Meeting for Sufferings of Philadelphia Yearly Meeting, took cognizance, last spring, of the bill before the Pennsylvania Legislature, which proposed to legalize pool-selling upon the grounds of agricultural fairs and driving-park associations. We may be thankful that that iniquity was not consummated, and that the kindred measure by which it was sought to establish a fast-driving track at Fairmount Park was likewise defeated by the veto of the Governor. And if the continued rains and miry race-tracks which this season proved a determinate hindrance or estoppel to horse-racing in scores of instances, we may still rejoice, notwithstanding what the wet weather has wrought of discouragement in other directions.

The great tempest and high tides of the Ninth Month upon the Atlantic Coast, which were felt with especial severity at Atlantic City, causing consternation to the dwellers in the hotels, and bringing many thousands of dollars' loss upon the property-owners, seemed to speak in most solemn tones to the caterers to pleasure at that popular summer resort, that "God is not mocked." With a power that human contrivance could not withstand, the awful billows broke

upon the pavilion by the sea, where that sensational and sensuous spectacle, "The Fall of Pompeii," had been given; and treated as a very little thing that puny erection of the man who (as the current account related), had so boastfully said, in building it, that he defied the power of the Almighty to break it down.

In the contemplation of these evidences of Omnipotence, we may well exclaim, with the Psalmist, "How terrible art thou in thy works! Through the greatness of thy power shall thine enemies submit themselves unto thee."

— JOSHUA W. LEEDS.

NEAR BIRMINGHAM MEETING-HOUSE,
Tenth Month 4th, 1859.

ROBERT BARCLAY on the ministry says, "By the light or gift all true knowledge in things spiritual is received and revealed;" and "by its strength, power, leading, moving and drawing" * * *

"every true minister" is ordained, prepared, supplied," and "led and ordered in all the labor and work of the gospel. No man who is a concerned Friend, and abides in this gift will ever undertake a theological course as a preparation for the ministry. Only apostates from this basic principle of Quakerism ever can engage as a "regular minister" for a stipulation. The growth of the paid pastorate system and the proposal to educate for the ministry is, when measured by the standard of early Friends, certain and undeniable proof of total apostasy from the true principles of Quakerism. Day by day this system that involves the total subversion of ancient Quakerism, proceeds in England and America, with its work of revolution, under the guise of revival; and many who ought to be watchmen on the walls close their eyes and refuse to see the desolation. Content with a show of numbers gathered by apostate Quakers, to apostate principles, they are satisfied to see the ancient truth of Quakerism thus overthrown. Oh, what blindness hath happened unto Israel?"—*Western Friend.*

Natural History, Science, &c.

Haw Pond is about 17 miles east of Cordele in Georgia, situated in a low spot towards which the hills slope from every side. Every year at about the middle of the Sixth Month, the water gradually goes down a few feet. Then there is a rush of water, a tremendous roar, and within a few minutes every drop of water disappears. For miles around the ground is said to be very unstable, and liable at any moment to sink. Every year crowds of people from the surrounding country gather to witness the disappearance. In the fall, when rain is abundant and the streams are full of water, *Haw Pond* fills up.

Maternal Instinct in Spiders.—M. L. Pike, in an article in the *Scientific American*, says that "mother-love in spiders is very fierce and strong for the time it lasts. He mentions a species that spins no web, but spins a flat cocoon of silk around her eggs. He says, "I saw one fasten her cocoon on a door, and wanted to have a good look at it; but on my approach, she darted to her cocoon, cut the threads with her mandibles, clasped the precious burden to her, and was soon out of sight."

Such spiders are common on the African islands of the Indian Ocean, and their voracious appetites render them valuable in killing off the cockroaches, which abound. Pike says he once saw a roach eating a piece of bread, when a spider approached. The roach seemed paralyzed, and the spider rushed at it, clasped it tightly, and finally left only the skin and legs.

Iron.—It is said that a pound of steel made into hair springs for watches will sell for \$140,000.

Coffee.—The U. S. Consular Reports state that for the year ending Sixth Month 30th, 1887, the United States imported 526,109,170 pounds of coffee. Brazil is now the largest producer of coffee of any country, its product being about one-half of that of all other parts of the world combined. The consumption of coffee has greatly increased in the United States. In 1866 it was rather less than 5 pounds to a person, and in 1888 it amounted to 9.45 pounds.

In preparing it for market, the ripe fruit, which is a red berry like a cherry, is first washed in tanks to free it from dirt. After this it is run through a crusher which breaks the skin and outer pulp. The inner part of the fruit, which consists of the two seeds enveloped in a parchment-like skin, is dried in large open yards, smooth and cemented. The seeds are afterwards separated from the husk that envelops them by passing through a husking machine.

The trees which produce coffee are planted in rows from 10 to 15 feet apart, and are frequently shaded from the excessive heat of the sun by a growth of bananas or other leaf-producing plant. They begin to bear at 3 years old, and when in full bloom are covered with a profusion of small snow-white blossoms. The crop varies from 500 pounds or less per acre to over 1000 pounds, and in San Domingo to 2700 pounds.

The quality of the coffee grown on high land, from 2500 to 4000 feet above the sea, is superior to that produced at lesser elevations. In Trinidad the Bois Immortel is planted as a shade tree in the coffee plantations. Its leaves fall off about the Tenth Month, at the proper time of year to allow the sun's rays to fall on the ripening coffee beneath.

American Plants in Europe.—Victor Hehn, in his work on "The Wanderings of Plants and Animals," remarks respecting American plants which are cultivated in Europe:—"Every walk we take through European parks and gardens, every drive on the roads and railways leads us past some American plant; the Virginia Creeper from North America covers columns and walls with its crimsoned autumn leaves; beside it climbs the bright yellow blossom of the *Nasturtium*; the pyramidal poplar (*Populus dilatata*), stretches like a green colonnade in single or double file along our highways (a native of the Mississippi, but brought to us by the way of Italy, and therefore miscalled Lombardy Poplar); the American Plane-tree, or Buttonwood (*Platanus occidentalis*), throws a thick, broad shade; hedges of North American *Acacias* (Locust), the *Kobinia pseudoacacia*, surround the public gardens, in which the spectator finds the White Pine, the Catalpa, the Tulip Poplar, the magnificent *Magnolia grandiflora*, now universally propagated south of the Alps, and many others.

In return for wheat, cattle and horses—Eastern gifts of incalculable worth—we have received the Turkey-cock, maize, potato, and the Opuntia Cactus (prickly pear) or Indian Fig. The Indian fig is almost as important to the waste lands and rocks of the Mediterranean as the Potato is to the heaths of the North. On all the coasts of the South, from the Atlas Mountains to the Sierra Morena, past Etna to the Taurus and Sinai, this bluish green, prickly plant of South America, producing in its strange vegetation one fleshy leaf at the end of another, has covered the driest and barrenest cliffs and shelves of rock, and restored them to cultivation by humus soil. This cactus is planted in the lava

fields of Etna, and the neighborhood of Naples to make them more quickly susceptible of cultivation; hedges of the spine-covered plants protect the fields and orchards; the leaves nourish cattle and goats, and the juicy fruit forms the nourishment and refreshment of the population during the late autumn and winter months.

Items.

Stirring up a Race War.—In speaking of the outbreaks of murderous violence against the Negroes in so many places, within the past few months, *The Independent* says: "It has simply been the result of the natural and necessary progress of the Negroes, and their growing assertion of their rights." "The time will come when Negroes will demand protection, or will try to protect themselves. Then the time will come when white men, accustomed to Negro servility, will call this insolence and will 'punish' it. If the Negroes band together to protect themselves, if they purchase arms, if they agree to demand certain wages, if they answer taunt for taunt and insult for insult, then they are 'dangerous,' and will require 'protection,' and the sheriff is called on to arrest them, and the military comes to finish the job. This is the story of every one of the outbreaks, so far as we can learn. It is with the Negroes as with the Indians—the whites are always to blame.

"The reports sent to the Associated Press indicate clearly enough that we have in these outbreaks the attack of barbarism on an emerging industry. Here is a story from Mississippi, not told by the correspondent of some bloody-sighted organ but sent to the colorless *Herald* of this city.

"*Greenwood, Miss., Sept. 9th, 1889.*—The George Allen arrested at Indianola yesterday is not the leader of the riots at Minter City, but an incendiary who fired B. T. James's store in Shiloh Grove. He was seen to charge on the evening before, if he reaches that place it is believed he will be lynched.

"Louis Mortimer and another bad Negro, who had actively participated in the riot, were captured at Charleston, Miss., and brought here this evening. He is now in jail, but will be carried to Shellmound to-morrow. He was seen on the evening before, if he reaches that place it is believed he will be lynched.

"Two Negroes, whose names cannot be learned, were killed near Indianola, Saturday. Mr. Richard Townes, a planter living near Minter City, arrived here yesterday and reported that three Negroes were killed near Red Cross on that day. Aside from the little excitement occasioned by the *Killing of each*, they were all caught and brought in for trial, everything remains peaceable. They receive a fair and impartial hearing, and many who have been accused and brought before the committee have been released for want of evidence.

"The whereabouts of Oliver Cromwell are yet unknown, but his capture is only a matter of time. *He will be killed* when caught, and his death is enough to make a man's blood boil to read such a story.

"The occasion of this wholesale massacre, in which over twenty Negroes have been killed, is the attempt of a 'bad Negro' to establish labor organizations called 'alliance lodges.' He was ordered to leave, and his friends proposed to 'protect him.' Then the Regulators, under the leadership of Major General Lyddell, who led in killing thirteen blacks at Carrollton, in 1886, took up the work of suppression with the result stated.

"Now, for relief, we turn to a very mild case—no murder at all, only there would have been if the men attacked had exercised their right of self-defense. The National Baptist Colored Convention was held in Indianapolis last week, and the condition of things in the South, and the treatment of delegates on their way up absorbed all the thought of the meeting. Five of the delegates were attacked en route. They came over the East Tennessee and Georgia Railroad because they expected courteous treatment from the agents of that road. In other lines colored travelers are compelled to ride in second-class cars. The party took seats in one of the best

cars, and soon began to hear murmurs from the white passengers. They were warned by the porter that there would probably be trouble, as a passenger had sent a telegram ahead that the party was coming. Hear what one of the party says:

"At Boxley, Ga., a dozen rough-looking men boarded the train and ordered us out of the car. We didn't go, and we were then assaulted. We were all badly beaten. Revolvers were drawn, and we were driven out of the car. I think some of us would have been killed if it had not been for the interference of the conductor."

"The delegates told the story to the Convention. Here is part of the resolutions passed by the Convention:

"Whereas, The colored Baptists of all this country are represented in this meeting in this home of our worthy President;

"Whereas, News comes to us from some of the Southern States that our people are being shot down like dogs or wild beasts at their homes, in their fields and other places without there being any redress for outrages and wrongs perpetrated; therefore be it

"Resolved, That this body lay our grievances before the President and all the Governors of the States where these outrages are perpetrated, to ask them for the protection that belongs to citizens of the United States."

"The Convention was appointed to lay the matter of these outrages personally before the President and Attorney-General."

Prohibition in New Zealand.—The *Dunedin* (New Zealand) *Temperance Herald* reports that the Prohibition cause is making very satisfactory progress in the colony of New Zealand. The question has been agitating Parliament, and *The Herald*, in a review of the proceedings in that body, says that the House passed the following expression of opinion, by a vote of 39 to 20:

"Whereas, The enormous direct expenditure on intoxicating liquors in this colony, amounting annually to more than two million sterling, contributes largely to the existing depression, adds material to crime and poverty, and reduces the capital available for productive industries; and

"Whereas, The people under the existing law are powerless to remove the principal cause of these evils;

It is, in the opinion of the House, imperative that the Government should, without delay, introduce a bill giving power to the people, by direct vote at the ballot-box, periodically taken, to prohibit the sale of such liquors within the district in which they reside."

Friends' School in England.—The *London Friend* remarks in reference to a school which Friends in England have taken steps to establish:

"If we rightly understand the leading purpose of those who have taken a prominent part in furthering the establishment of this school, it is to provide for the children of our more wealthy members an education equal, intellectually, to what they could obtain at Eton, Harrow, or Rugby, and at the same time to place them under religious influences favorable to the development of a robust Christian character, in accord with the principles of our Society. However unsectarian in design, and by the influences brought to bear on Nonconformist boys at these and similar Public Schools, the bias received will, as a matter of course, be strongly in favor of the Established Church. Whilst in a school where the head master, thoroughly qualified in other respects, is a true-hearted Friend, loyal to a Christ, nobly faithful to his convictions, and assisted by a staff of teachers of like spirit with himself, though there be no systematic teaching of the distinctive views of Friends, there cannot fail to exist a quiet but powerful influence in favor of their most cherished principles."

The real test of the genuineness of an inward affection as it appears in our consciousness, is the course of action to which it leads. If it does not lead one to act rightly, it is not of much value. What men practically do is a very sure index to the character of their feelings.

THE FRIEND.

TENTH MONTH 19, 1889.

The Editor of the *Western Friend*, in the issue of that paper for the Eighth Month, gives some of the practical results of the so-called "Pastoral system" in the meetings of Friends. He says:

Since the issue of the *Western Friend* for the Seventh Month, the editor being in Wichita, Kansas, attended the meeting held in that place, which professes to be a Friends' meeting. But there was absolutely nothing to indicate that anyone in the whole meeting had any knowledge or faith in the order of worship, which the views of Friends on the immediate influence of the Spirit render necessary. Indeed, judging by the conduct of ministers and people, there was no one that believed any Divine guidance necessary—other than the mere performance of the agreed routine of "religious service."

The First-day school—"Sunday-school," as the Superintendent repeatedly called it when addressing it—had ended. The organ which stood in the meeting-room, which had accompanied the music during the school, was closed, though it is, I learned, at times used in meeting. The "appointed pastor," Caleb Johnson, announced that it was time for meeting. Instantly a number of young persons, with Sankey hymn books, who had seated themselves together just in front of Johnson, began singing a hymn in concert from the books. The instant the singing ceased, Johnson, seated at a table, began a prayer. As soon as this closed, the singing again prevented any silence. Next, with not a moment of silence, a woman arose and read a part of a chapter, and proceeded to comment on it for perhaps thirty-five minutes; followed at once by more singing. When it ceased, a man who seemed prominently arose, and crowned this utterly un-Quakerly performance, for worship there seemed to be none—only words, words, words; and it seemed with no desire or expectation for anything else—by saying, we will now take up "our regular collection," when two individuals, in what ought to have been the most solemn part of a First-day meeting for worship, arose and proceeded to all parts of the house, holding out their hats to everybody for a contribution. This over, the "tip" was given a Presbyterian minister who was present; and he showed he understood it by previous arrangement, by arising and giving a benediction. And so ended the "Friends' meeting" in Wichita. The whole thing was heart-sickening. It was impossible to keep down a mingled feeling of disgust and sorrow to see young people like Caleb Johnson, who, in his younger years, was a consistent Friends' minister, so utterly lost to the nature of the precious principles of Friends on ministry and worship, as to openly arrange, seemingly without any sense of shame, for such an inexpressible violation and outrage of the principles which he continually represents himself as upholding, by professing to be a Friend.

The Wichita meeting is nothing more than the ripened fruit of the "pastoral system," now established in most of the bodies with which London Yearly Meeting corresponds on this continent. The rich and well-to-do meetings in both city and country have generally adopted this system, and now have their "pastor" paid and stationed as other hiring ministers; and Wichita shows the result. The governing element of all these bodies—the educated and

wealthy—live in these meetings and approve this system. And little regard is paid to the feeble protests of the meetings not able to pay for a "pastor." The prominent ministers, the \$500 to \$1000 preachers, are now employed, so that there is now very little chance for the poor meetings to hear a \$1000 preacher, and this no doubt gives such a color of selfishness to the protests of these poor meetings that the leaders care little for it.

At Marion, Indiana, is one of the most influential meetings in Indiana Yearly Meeting. In it three prominent ministers are located. For a time one of them was duly installed as a "pastor." The other two and their friends did not like this arrangement, and protested with such force, that the unity of the meeting was much disturbed. At last, as a correspondent from there writes, the matter has been adjusted by an "arrangement" that provides that these three rival ministers shall preach, one on First-day, the other the next, and so on by "turns." It is claimed that the "Pastoral system" does not interfere with the exercise of the spiritual gifts of others, but this case is a good illustration of the results when these other gifts declined to be "bossed" by the "pastor." And it shows to what a ridiculous pass, in delusion, a meeting claiming to be Friends can be brought while pretending to be guided by the Holy Spirit. There is nothing of the true Friend in this system, and never can be; and we think that a few more incidents like this Marion case will open the eyes of every one who still has any of the principles of Friends left, to the inconsistency of claiming this "Pastoral system" as in any way in harmony with Quakerism.

SUMMARY OF EVENTS.

UNITED STATES.—Secretary Blaine announces that the principal cities of the South may be assured of a visit from all the delegates to the International American Conference in proper season.

The Minnesota Chippewa Indian Commission has returned to St. Paul. The Indians of Red Lake, Minnesota, have ceded all their lands, except a small reservation, which is to be theirs by allotment. The ceded lands comprise 3,000,000 acres, and include \$60,000,000 worth of pine forests.

The official returns of the recent election in North Dakota show a total vote of 59,500. Hansbrough (Rep.), candidate for Congress, received a majority of 15,000, while Miller (Rep.), candidate for Governor, had 12,600. The majority in favor of Prohibition is 1100. Eighty per cent. of the total vote was in favor of the Constitution, and 70 per cent. was the average Republican vote.

Returns from all the Legislative districts in South Dakota show that the Republicans have elected 125 members, the Democrats 27, and the Independents 7, "with Republican proclivities."

The Chairman of the Republican Central Committee of Missouri claims that the election is certainly a Republican, "either by one or three majorities," basing his claim on the results of the counting of the votes as far as ascertained. The canvassers in Silver Bow County have thrown out the vote of what is known as the "black and purple" wards for the amendment of article 174. This action, if sustained by the courts, will sent the whole Republican delegation from that county, eleven in number, and give the Republicans control of the Legislature. The Democrats will ask a writ of mandamus to compel the counting of the rejected precincts.

Election returns from all except one of the 168 towns in Connecticut show that the Prohibitory Amendment received 25,945 affirmative votes and 50,271 negative votes, a majority against the amendment of 27,226. Twenty-three towns were carried for the amendment under the local option law. Eighty-three towns, a gain of three, allow liquor selling within their limits, and eighty-five exclude saloons.

The body of a child was found in Stony Creek, Johnston, on the 13th instant, by men who were

viewing work done by the State. It is estimated that there are 300 cases of typhoid fever in Johnston.

The corner-stone of a new building of the N. York World, at the corner of Park Row and Livingston Street, was laid on the 10th instant by Joseph Pulitzer, Jr., the four-year old son of the proprietor of the World. The building will be of granite and red sandstone, with a front of 115 feet on Park Row and 136 feet on Frankfort Street. It will be 15 stories in height, and from the roof will spring a dome 250 feet high and a cupola 20 feet high, a 30-foot flag staff surmounting all. The top of the cupola will be 300 feet above the sidewalk.

Two huiemen having been killed last week by electric light wires, in the streets of New York City, Mayor Grant has ordered all the overhead wires that are not insulated to be cut. The officers of the electric light companies have obtained temporary injunctions restraining the Mayor and the Board of Electrical Control, from interfering with the currents or cutting the wires.

Deaths in this city last week numbered 331, an increase of 2 over the preceding week, and a decrease of 1 as compared with the corresponding period of last year. Of the foregoing 177 were males and 154 females; 38 died of consumption; 30 of heart diseases; 24 of pneumonia; 17 of old age; 16 of cancer; 12 of influenza; 12 of cholera; 11 of inanition; 11 of inflammation of the brain; 11 of convulsions; 11 of cancer and 10 of inflammation of the stomach and bowels.

Markets, &c.—U. S. 4½, 106; 4, 127; currency 6½, 118 3/4.

Cocoa sold in a small way to spinners on a basis of 11 cts. per pound for middling uplands.

FEED.—Winter bran, choice, \$13.25 a \$13.50; do, fair to prime, \$12.50 a \$13.00.

FLOUR AND MEAL.—Western and Pennsylvania 2 No. 2 white oats, \$2.75; do, extra, \$2.85 a \$3.25; No. 2 white wheat, \$3.75 a \$3.85; Pennsylvania roller stone, \$4.00 a \$2.75; \$3.90; Pennsylvania roller process, \$4.00 a \$4.20; western winter, clear, \$4.00 a \$4.25; do, do, straight, \$4.20 a \$4.55; winter patent, \$4.60 a \$5.05; Minnesota, clear \$3.75 a \$4.12½; do, straight, \$4.25 a \$4.75; do, patent, \$4.55 a \$5.35.

GRAIN.—No. 2 white oats, 40 a 40½ cts. No. 2 white oats, 27½ a 28 cts.

BEEF.—Extra choice, 6½ a 7 cts.; good, 6¼ a 6½ cts.; medium, 6¼ a 6½ cts.; fair, 6 a 6½ cts.; common, 5½ a 5¾.

LAMB.—Best, 9¼ a 9½ cts.; good, 9¼ a 9½ cts.; medium, 9¼ a 9½ cts.; fair, 9 a 9½ cts.; common, 8½ a 9 cts. Lams, 12 a 14 cts.

FOREIGN.—The election in the Parliamentary district of Elgin and Nairn to fill the vacancy in the House of Commons, caused by the resignation of Mr. Anderson, Home Ruler, resulted in the return of J. Seymour Keay, Gladstonian, who received 2571 votes. C. B. Logan, the Unionist candidate, received 2639 votes.

At the previous election Anderson received 1991 votes. The Unionist is nominated Sir G. M. Grant, Liberal Unionist.

The subscriptions to the fund to meet the expenses of Parrell in his defense before the Parrell Commission, have been closed. The total amount subscribed is \$1000, and a small sum has been added for the purpose for which it was originally sent. Sir Charles Russell received £1,000 for preparing his briefs, and a salary of £50 daily. The mackerel fishery on the coast of Ireland is improving steadily, it is reported.

The London Daily News prints a letter from Crete, which confirms the report that Chalik Pasha, the Governor, allowed the Turkish troops to pillage and persecute the Christians after gaining their confidence by promises of protection. The letter gives a list of the killed, banished and imprisoned, and describes the atrocities committed.

General Boulanger has gone to the Island of Jersey. A despatch from Paris, dated Tenth Month 11th, says:—Disastrous floods prevail in the Department of the Jura. A number of bridges have been carried away by the high water. Lons-le-Saulnier, the capital of the Department, is inundated, and a number of villages are surrounded by water. The military are actively engaged in saving life and property.

The German Government has placed to the credit of the Navy Department the sum of 32,000,000 marks (about \$100,000,000) to be expended on the war-men-of-war.

Prince Bismarck has just returned from the foreign situation, to the President of the World Reviewing Congress in the following words:—"The foreign situation is so peaceful that you may set to work without the slightest fear. It was not always so. Not long ago

England still hesitated whether to act as a mediation or as a fat ox chewing cud. 70-day her isolation is taken, and I can assure you that the maintenance of peace is certain."

Berlin, Tenth Month 14th.—Political circles here are highly satisfied with the exchange of views between Emperor William and the Czar. It is believed that peace is assured on the basis that Bulgaria belongs to Russian and Serbia to the other spheres of interest.

The Journal de St. Peterburg expresses pleasure at the Czar's reception in Berlin, especially the attention of Prince Bismarck, and hopes that the meeting will have a lasting and peaceful influence.

A despatch from Managua, Nicaragua, received in San Francisco, U. S. States Minister Minner has settled the canal difficulties, and work is now progressing. This shows that Costa Rica's hostility to the canal has been removed, and the trouble between that country and Nicaragua settled by arbitration.

The greatest known depth of the sea is in the South Atlantic Ocean, midway between the island of Tristan d'Acunha and the mouth of the Rio de la Plata. The bottom was there reached at a depth of 40,236 feet. In the North Atlantic Ocean, south of Newfoundland, soundings have been made to a depth of 27,480 feet. The deepest soundings in the world are reported south of the Bermuda Islands. The average depth of the Pacific Ocean between Japan and California is a little over 2000 fathoms; between Chili and the Sandwich Islands, 2500 fathoms, and between Chili and New Zealand, 1500 fathoms. The average depth of all the oceans is from 2400 to 2500 fathoms.

NOTICES.

WESTWON BOARDING SCHOOL.—The Committee who have charge of this institution, meet in Philadelphia on Sixth-day, Tenth Mo, 25th, at 11 A. M.

The Committee on Instruction meet the same day at 9 A. M., and the Committee on Admissions at 9.30.

The Visiting Committee meet at the school on Seventh-day evening, Tenth Mo, 19th. Conveyances will be in waiting at the depot on the arrival of trains leaving Philadelphia at 2.53 and 4.55 P. M.

WM. EVANS, Clerk.

SOCIETY FOR HOME CULTURE.—The Term of 1889-90 opened Tenth Month 1st. SARAH E. E. BAXSON will act as Secretary this year, and those wishing to obtain circulars or become members, will please address her at New Hope, Bucks County, Penna.

A new department of books for children may be useful to parents and teachers.

MARRIED, at Birmingham Meeting-house, Chester County, Pa., Ninth Mo, 18th, 1889, JOSEPH TRIMBLE and EMMA P. FORBSTE.

DIED, at her father's residence, near New Market, N. C., on the 24th of Fifth Month, 1889, DELLA A. EDWARDS, wife of D. M. Edwards, and daughter of N. A. and M. J. Edwards, aged 31 years, 11 months and 26 days. She was a consistent member of Marlboro Monthly Meeting of Friends, and had served the Monthly and Quarterly Meetings in the capacity of Clerk, acceptably to Friends. Her sufferings during her last illness were very severe, but she believed her recovery was made with her Saviour before her end came, and all earthly things faded away. As exhibiting the quality of her moral and Christian life, there are on record many of her serious thoughts while passing through life's tribulated journey. The following lines, written and signed by her, is found on a fly-leaf of her Bible:

"In God I have found a retreat,
Where I can securely abide;
No refuge nor rest so complete,
And here I intend to reside."

—, suddenly, on the 20th of Eighth Month, 1889, at his father's residence, near Greensville, Belmont Co., Ohio, FRANCIS DAVIS, in the 75th year of his age, a member of Stillwater Monthly and Particular Meetings. He was firmly attached to the doctrines and principles of our Society, and a regular attendant of all of our religious meetings, and was much interested in "the day's" work which kept pace the day and increasing more so of latter times. The happy expression of confidence after death impressed our hearts with this language, "Weep not for me, I am safely landed in a brighter world, where all is joy and peace." We humbly trust that our loss is his eternal gain.

Incidents and Reflections.—No. 194.

MENTAL EXERCISE BEFORE SERVICE.

When Stephen Grellet was paying a religious visit to Hayti in 1816, he found considerable openness to receive his services among the blacks in whose possession the island was at that time. Having appointed a meeting to be held the following day, his Journal says: "The whole night my exercise was such that my soul cried deeply unto the Lord for his saving help and strength. It was as if he felt of the mountains was I upon me, and I felt so poor and empty, that I thought I could never more advocate the cause of Truth." Early next morning, first-day, I was greatly dismayed at beholding the number of people who had already come into the town to attend the meeting, whilst others were seen at a distance descending the mountains round about. To accommodate such a crowd, it was considered proper to hold the meeting in their large marketplace. About meeting time a regiment of soldiers, on their march to Port au Prince, also arrived in the town, and their officers brought them all to the meeting. Several thousand persons, it was supposed, were collected. They stood very close round me, and I was placed on the market cross, or rather Liberty Tree, which is planted in almost every town. The Lord very graciously condescended to be near to support me on the occasion. I had been brought very low, but He is riches in poverty, as well as strength in weakness. It was a quiet, solemn meeting."

When at Lausanne in Switzerland, in 1820, he makes this record: "Second Mo. 4th. I had but a poor night. A great weight of exercise was upon me. Prayer is a blessed refuge in time of trouble. The Lord was pleased to hear the voice of my supplication. The day has been spent under very close engagements in visiting the families of many here. Some of them, poor in this world, are rich in faith. They know the quickening influences of the Divine Spirit. Some of these seasons were very remarkable and interesting; attended also with great brokenness of heart. At two places there were twenty or more together. Solemn silence was over us. The Lord himself ministered to us. Whilst I was at Langalleries, upwards of twenty persons came in to see me, mostly one by one. Some

came from a distance, having by some means heard that I was there. One came from Vevey. They came evidently under religious concern, their chief language of inquiry being, 'what shall I do to be saved?' The Lord was pleased to give me a word for each of them, according to their various needs. I then saw that the deep travail of my soul during the night preceeding had been a useful preparation for the work of the day. Well known unto the Lord is the end of all his dispensations to us. It was late before I retired to rest, with my spirit very reverently prostrated before Him, for his Divine help and strength."

"The exercise of mind through which this service of the Lord passed on these occasions is no unusual experience of those who are called upon to labor for the promotion of his cause in the earth; and it was often the lot of S. Grellet. In a letter written from Petersburg, he says:—"From the accounts some may have of our often meeting with great and public characters, and of the open door that the dear Master has been pleased to set before us in many of them, they may conclude that we ride about on the king's horse; but, from the exalted state in which Mordecai appeared placed, he saw and felt full well the humble station he must speedily resume. Though there is an outside washing and anointing, yet the sackcloth may remain underneath; and, as to myself, I see very little prospect of its being loosened from my loins, so long as I continue in this mutable state. But do not conclude from this that I repine in any degree, as complaining of my allotted portion; for, contrariwise, I may even now, as frequently through the mournful days of my pilgrimage, 'with the voice of thanksgivings and praises publish the Lord's wondrous works.'"

"On another occasion he makes this entry: "I spend many hours in retirement, pouring forth my heart and tears before the Lord. My poverty is very great. I am humbled to the dust. No past favor, nor experience of the Lord's power and mercy can, even by a lively remembrance of them, minister to the soul's present wants; its supplies must flow fresh from the Divine fountain."

"The need of such fresh supplies is the experience of many of the Lord's servants. George Whitehead, who was called into the work of the ministry before he was 18 years of age, in speaking of the operations of Grace for accomplishment of a thorough work of regeneration, says: "And whatever Divine openings, prophecies, sights, or discoveries, the Lord was pleased at any time to give me by his Holy Spirit, for my encouragement and the increase of faith and hope, I saw I must still be mindful of his inward work of grace, sanctification and holiness, that it might go on and prosper."

"For want of continuing "mindful of the inward work of grace," how many have suffered the loss of spiritual life! and some have even become openly dissolute and degraded. The *New York Times*, some time since published a notice of the miserable end of Augustus Littlejohn, who

at one time was esteemed as a successful revivalist preacher in the interior of New York. "For a number of years he made his home in Chenango County, where he married an estimable lady. In the progress of his labors through the neighboring towns he built up new churches and revived decaying ones, and brought thousands of converts to the altar. But finally there came a cloud upon his fame. Rumors became rife of immoralities, which took such form that his wife left him and sued for a divorce, and he found it advisable to seek new fields of labor in the West. He engaged in revival work in Indiana, and there, after a time, he was again accused of gross immoralities and drunkenness, and was ultimately, after a sensational trial, found guilty and degraded from the pulpit. The next heard of him was in the role of a reformed drunkard, lecturing on temperance through Michigan. When old age and an impairment of his once brilliant faculties overtook him, he was constrained to seek a refuge in an almshouse. One morning last week he was found dead and cold on the frozen ground under the window of the room he had occupied. Whether he threw himself out of the window with suicidal intent or fell out accidentally is an unsolved mystery. His remains were buried in a pauper's grave."

"In commenting on this case, the Editor of the *Christian Advocate*, of New York, refers to that of Peter Sinclair, a Scottish Temperance lecturer, who came to this country, perhaps 30 years ago, and travelled to and fro, founding Bands of Hope. He then made a very favorable impression, and seemed simple, earnest and pure. On a visit to England in 1863, the editor bore with him a letter of introduction to Peter Sinclair, from whom he received many attentions, and who was then regarded as a true man and a genuine reformer.

"Three years later," continues the editor, "the writer, accompanied by his brother, stepped into the Lindell House in St. Louis, and among a large number of persons sitting in the immense hall of that famous building—then the largest hotel in the world, but since destroyed by fire—we saw a man poorly clad, with a swollen face, who had the appearance of a person recovering from a debauch, and was sound asleep. It being suggested that that was Peter Sinclair, we made him a study for fifteen or twenty minutes, and then awoke him. The odor of beer was unmistakable. The old light came into his eye, he recognized his interlocutor, and said that he was acting as an agent for an English emigration firm. The question was put to him whether he still practised the principles of temperance, and, with a somewhat crestfallen look, he said, 'Yes, O, yes; stick to them always.' We left with the impression that he was a degraded man.

"One year afterward inquiries came to the office with which the writer's brother has been long connected concerning Peter Sinclair, of Scotland, stating that he had left his wife in circumstances of destitution, and it was feared that he had become a moral wreck. The person in-

quiring was notified of the circumstances above described, and pending the investigation Peter Sinclair—but five years before honored, loved, and trusted—fell dead in one of the streets of Chicago. On an examination of his person, he was found to be penniless. There was every evidence of his having lived a depraved life, and of his having been destitute of food for some time.—He was almost in rags. Whether he was honest up to the time that we met him in England, or had been carrying on iniquity in various forms under cover of his profession, we have no information. All iniquities can grow in a very short time under and from the use of alcohol. "At the last it biteth like a serpent, and stingeth like an adder."

"The moral of such cases is: 'Let him that thinketh he standeth, take heed lest he fall.'" J. W.

FOR "THE FRIEND."

A Visit to Colorado.

(Continued from page 91.)

San Luis Park was once the home and hunting ground of the Ute, Apache, Comanche and Navajo Indians; and parts of it were long ago inhabited by Mexicans, who raised sheep and cattle. The Indians have been gradually pushed farther Westward. Some Mexican ranchmen are still to be found in it, and a few white settlers have of latter time taken up white claims, and succeeded in agricultural pursuits by irrigation. But the proportion of inhabited or cultivated area out of the whole expanse is still insignificant, and the eye wanders over the vast level territory as the railroad train pursues its course across it, without much to relieve or arrest the vision. Where the streams issue from the mountains they are available for irrigation, but it is said that before many of them reach the interior of the park, they sink into the loose sandy soil and are lost to view.

Passing the old military post of Fort Garland we soon reached the western boundary of the park and began the ascent of the San Juan Mountains. This was not very dissimilar to the one we had previously passed over, but was distinguished by the grandeur of Toltec Gorge, which lay at our left, as we rose 1500 feet above the rocky bed of the stream that hastened down its channel.

At Cumbres, in New Mexico, the summit of the pass is reached, and our train stood 10,000 feet above tide, on the backbone of the continent. West of this point the water-shed casts its rainfall into the sources of the San Juan River, which flows into the Pacific Ocean. The slope we had just ascended sheds its waters eastwardly into the Rio Grande del Norte, and its outlet is in the Gulf of Mexico.

The trip from this point westward to Durango was mostly through a rough district of country with but few settlements and little cultivation. The Navajo Indians inhabit part of it, and still retain their native characteristics. Their bark wigwams and adobe huts stood by the road-side in several places. They cultivate some crops, and we noticed that in harvesting their grain they pull it up by the roots instead of cutting it off with a reaper.

Leaving Durango, next morning, our course lay northward up the valley of the Animas River, (to which the Spaniards gave the euphonious but rather melancholy title of "Rio de las Animas Perdidas," or river of lost souls. This beautiful vale has been compared by travellers to those in Switzerland. Unlike most of the route hitherto passed over, the hand of man and mod-

ern civilization had converted its surface into rich pastures and green fields and gardens. The verdant Alfalfa grew luxuriantly; farmers were harvesting oats and barley, and neat residences gave evidence of thrift and enjoyment. The river sparkled in the glinting rays of an unclouded sun, and forests clothed the mountains on either side. A few miles up, the valley gradually contracts in width, the mountains tower up higher above it until there is only breadth enough for the rushing torrent to find vent in cascades and rapids. The rail track retreats up the steep sides of the gorge and finds a foothold by blasting away the solid rock; from thence the traveller gazes down a thousand feet into the swirling waters below with exquisite delight. Further on the cañon widens out again, and lofty pinnacles grace the mountain tops on either side.

I quote from "The Crest of the Continent" a description of the process of constructing the railway through this cañon. "The building of the railway for the first mile north of Rockwood exceeded in its daring any work even in the famous Grand Cañon of the Arkansas. The engineer who had charge of the construction showed us a picture one of his surveyors drew of the manner in which the location was made. Evidently the draughtsman took his observations from the waters edge, where his vista was between two walls of natural masonry, and was limited by the side of the gorge which bent sharply there. This wall was vertical and smooth for almost a thousand feet from its base. From that height were seen hanging spider-web-like ropes, down which men, seeming not much larger than ants, were slowly descending, while others perched upon narrow shelves in the face of the cliffs, or in trifling niches from which their only egress was by the dangling ropes) sighted through their theodolites from one ledge to the other, and directed where to place the dabs of paint indicating the intended road bed. Similarly suspended, the workmen followed the engineers, drilling holes for blasting and tumbling down loose fragments until they had won a foothold for working in a less extraordinary manner. Ten months of steady labor were spent in this cañon-cutting; months of work on the brink of yawning abysses, and in the midst of falling rocks; yet not one serious accident occurred. 'Often it seemed as if another hair's distance or straw's weight would have sent me headlong over the edge,' said the chief engineer, and no doubt his subordinates could say the same. The expense attending such construction was of necessity great, the outlay for this single mile aggregating about \$140,000."

By noon Silverton was reached, a mining town as its cognomen indicates, located in a cordon of the San Juan range. A half mile would nearly span the level circle of land on which this village is built; and although its lowest part is 9,224 feet above marine altitude, the great crests of Sultan, Solomon and others look down upon it from immense heights. A half hour's halt here for dinner gave our botanical friends an opportunity to pluck the harebells, gentian, rubbeckia, and many other flowers which grew thickly on the vacant lots and wide avenues we crossed from the railroad station to the hotel.

Returning to our train, we now for the first time saw a pack of those useful, but ludicrous looking little donkeys, called in the vernacular of these mountain regions, "Burros." They are the indispensable common-carriers of all necessary things between the mines and the railroad

deposits. Most of the silver and gold mines are located far up the mountain sides, and are inaccessible to wheeled vehicles of any kind. The "burro" must carry on his back over the steep and rocky paths both the mining tools, the lumber to build cabins, and the provisions to feed the men required to be taken up to the mines, and also the ore which is dug out of them, and must be transported down to the railroad cars. And a wonderful little creature he is for such service. A horse would be soon exhausted by the labor, and withal probably sacrificed by falls on the road. A mule is too large for the narrow paths. It requires the imperturbable spirit, the tough endurance and the sure foot of the little burro to accomplish what animals of more refined and excitable natures are unequal to. All around us on the face of the steeps, we could discern what at first seemed fox-holes, so much did the great height diminish their real size. Then just below a bank of *trabris*; and, by straining the vision, a path or trail could be discerned among the low bushes leading up and down from the openings by devious courses. These were the entrances to the mines and the dumpage or refuse cast out from them, with the foot-paths up and down which the patient burros travelled on with their packs or loads securely strapped on their backs, sometimes almost covering the little animal from view, and apparently heavy enough to crush him to the earth. But the burro is not only tough, he is also endowed with great strength in proportion to his size, and rarely is overloaded. It is said that they seldom stumble on these precipitous and jagged paths, but when they do so depending with the heavy bags of silver-ore in the middle of their backs, they will alight on their feet on the rocks below, but with ruptured spines from the concussion of the load.

(To be continued.)

THERE are different ways of being busy, and the busiest way of all is that which often looks least like business. It is sometimes derisively said that one is "busy doing nothing." But "doing nothing" may mean one thing to one kind of worker, and another thing to another kind. "Your work is only head-work," said the college whitewasher to the college professor, quite contemptuously. The locomotive engineer on the lookout of the fast express, with his hand on the throttle, may seem to the purely physical laborer, or to the purely intellectual toiler, to be "busy doing nothing." He calls no muscle into action, he evolves no abstract thought, no philosophy, no science. He appears to be enjoying the view from his cab-window just about as idly and complacently as does the recreating tourist behind him, whose very life is committed to the inactive hands of that engineer. The engineer to all appearance is "busy doing nothing." But the difference is that the tourist-passenger is inert, while the engineer is alert. And this unbroken alertness, this sense of a tremendous responsibility unlifted for one moment, is the busiest of all ways of being busy. Every muscle is ready, every nerve is tense. The whole man, physical, mental, moral, is exhaustingly engaged—albeit the whole man may outwardly seem to be "doing nothing." The hardest part of any one's business is that part of it which lives and dies within himself. The unceasing, unbroken alertness, the ever-conscious responsibility for right action at the right time, is the busiest of all businesses, the first business of every business—of every life.—S. S. Times.

Centre Square and the Bank Meeting Houses, Philadelphia.

[The following account of the Centre Square and Bank Meeting-houses was prepared, (as well as other articles on kindred matters which may follow this) from materials which I had been collecting for many years, and before I was aware that it was in contemplation to publish the extracts from the minutes of Philadelphia Monthly Meeting bearing on the same subject, which have recently appeared in the columns of THE FRIEND.

At the request of the editor I have revised and re-written a considerable part of these articles with the object of avoiding repetition as much as possible, and have endeavored to omit everything which may be viewed in that light, so far as it can be done without destroying the continuity of the subjects treated of. It is hoped that the new points presented may compensate for occasional repetitions.

GEORGE VAUX.

BRYSN MAWR, Ninth Month, 1859.]

It seems to have been the original design of William Penn in his plan for laying out Philadelphia, to locate Broad Street so that it should intersect with Market Street midway between the Delaware and Schuylkill rivers, and to have an equal number of parallel streets both to east and west of it. This would have placed Broad Street about where Twelfth Street now is. It has been claimed by some, that under these circumstances the Centre Square Meeting-house was probably located very close to the site now occupied by our present Twelfth Street Meeting-house. There is no doubt that this is an erroneous supposition. The original plan of Penn never had any existence except on paper. The records of the Survey Department show that in the Sixth Month, 1683, a lot was surveyed bounded on the east by Broad Street, and on the west by the Eighth Street from the Schuylkill now Fifteenth Street, which clearly proves that as early as that time, Broad Street had been located on the ground just where it now is. Whilst the reason for changing the position of the centre and placing it further west than William Penn originally designed is not fully apparent, it was probably due to the fact that the present position of Broad and Market Street was the highest ground or summit between the Delaware and Schuylkill rivers. This may also account for the long distance between Thirteenth Street and Broad Street, which necessitated the introduction of the narrow intermediate street now called Juniper Street.

Inasmuch as will hereafter be shown, the decision to locate the meeting-house at Centre Square was not arrived at until one year after the survey above referred to was made, viz., in the Sixth Month, 1684, it is impossible that it could have been erected at Twelfth Street. There is every reason to believe that it was built near the intersection of Broad Street and Market Street as now located, and probably not far from the southwest angle of the Public Buildings.

The history of the Centre Square Meeting-house is very fully given in the minutes of Philadelphia Monthly Meeting, though some of the early ones are so vague that it is doubtful whether they refer to this building or not.

Commencing with Sixth Month, 1684, however, they are clear and explicit, and we proceed to quote from them.

1684. Sixth Month.—“A place to build a

meeting-house upon being taken into the consideration of the meeting, after some consultation it was unanimously agreed that the said meeting-house should be builded in the centre of the city, being the middle way betwixt D-ls-ware River and Schuylkill, according as it is already designed a-nd pitched upon; and the building to be of brick, its dimension; and its length 60 foot, and its breadth 40 foot, and the height referred to further consideration.”

[I have considered the bearing this minute has upon the question of location, but see no ground to modify the opinion heretofore expressed. It is probable the expression “according as it is already designed and pitched upon,” refers to the location of the centre shortly before made, just east of the present Fifteenth Street.]

1685. Fourth Month 1st.—“It is unanimously agreed, that there shall be built with all expedition a meeting-house in the centre of brick, to be fifty foot long and thirty-six foot wide.”

Fifth Month 6th.—“Thomas Duckett [and others] were appointed to carry on the brick work of the meeting-house in the centre, and S. Carpenter [and others] to go to the centre with the workmen aforesaid, and get the place where the meeting-house shall stand set out and to get bricks, stones, &c., to place, to begin the work. This meeting agrees that the meeting-house in the centre be fifty foot long, thirty-five foot wide, fourteen foot high.”

* Eighth Month, 5th.—“Andrew Grison * * * promised to begin [the carpenter work] in ten days at furthest, and in the meantime to make what [progress] he can in regard to it.”

In the Eleventh Month, 1685, a committee was appointed in relation to raising funds to defray the cost of building, and subsequently a loan was effected to pay for putting on the roof and securing the walls, which it appears had stood some time exposed to the weather, thus endangering their stability.

An effort also seems to have been made to procure aid from the country meetings, as will appear from the following extracts from the Merion minutes:

“At our Monthly Meeting held at Hugh Roberts’ house in Merion, on y^e 11th day of y^e First Month 1686 it was ordered, “that Friends of each particular meeting do bring into y^e next meeting their voluntary subscriptions towards y^e building of y^e meeting-house in y^e centre at Philadelphia,” and “Hugh Roberts for Merion, William Howell for Harford [Haverford] John Humphrey for Scookill, David Meredith for Radnor, are ordered to bring an account of y^e s^t collections into y^e next meeting.”

At the next Monthly Meeting held at John Bevan’s house in Haverford, further action was taken. “The Friends of each meeting are ordered to bring their collections for y^e buildings of y^e meeting-house in Philadelphia to Thomas Duckett’s house in Scookill ag^t y^e first day of y^e Sixth Month next.

Radnor Meeting . . .	£ 7 6
Harford Meeting . . .	6 0 0
Merion Meeting . . .	6 0 0

A hiatus occurs here in the minutes of Merion meeting, and it does not appear from them whether report was made at the time indicated or not.

It may be incidentally stated that Merion meeting seems to have been held alternately at the places above named, that is at the residences

of different Friends in those districts (6 or 7 meeting-houses had then been built), and also at “Thomas Duckett’s house in Scookill.” This house is supposed to have been in the district now embraced in the yards of the Pennsylvania Railroad immediately west of Market Street bridge.

In the Second Month, 1686, it was reported to the Philadelphia Monthly Meeting, that Andrew Grison had disappointed Friends, and had done nothing toward performing the work upon the Centre Meeting-house. Upon his promising to proceed promptly, however, he was afforded another opportunity, and in

1686. Sixth Month 2nd.—“Some Friends acquaint the meeting, that Andrew Grison saith, that the meeting-house will be ready to raise the Third or Fourth-day next, which shall be appointed for the purpose; the meeting desires John Jones and others to speak to Friends belonging to the meeting, to send help at that time, as Andrew Grison and they shall appoint, and that the said Friends with Andrew, consider of materials for the duly raising of the roof.”

On the 27th of the Sixth Month, different Friends undertook to attend to several departments of the work, so as to push the building forward more rapidly and “B. Wilcox was desired to speak to Ph. Duckett, that he will all speed go on with the brick work, * * * and to advise how bricks shall be had.”

At the close of the Eighth Month, the boarding and shingling of the roof had not been completed, and it was decided by the Monthly Meeting to send an assistant to a certain P. Maul, who it appears had charge of the work, and at the same time a committee was appointed “to get A. Grison that he forthwith come to finish the hiping of the roof, that the workmen may go on with shingling the same.”

Ninth Month 26th.—“The hiping of the roof of the Centre Meeting House being in discourse how to proceed to get it done, and accordingly several persons have subscribed to pay those workmen that undertake the same.”

1687. Fourth Month 24th.—A committee was appointed “to agree with workmen about making forms and doors and a seat for public Friends, at the Meeting-House at the Centre.” It would thus appear that by midsummer of 1687 the Centre Square Meeting-House was approaching completion. A few months later, the question of title to the ground upon which it stood was considered and a committee appointed to endeavor to obtain a patent for it. This, however, was not accomplished, and Friends never had a title to the lot. Subsequent events obviated the necessity for it, and the ground was ultimately allotted by William Penn as part of the property devoted to public purposes.

The building must have remained in an unfinished condition for a long time, for in the First Month, 1689, arrangements were made for flooring it, which was paid for out of the proceeds of a legacy left by “John Jones’ brother,” and the following autumn the meeting gave instructions “that the windows be substantially hang’d” and other necessary work done to complete it.

The meeting-house appears to have been occupied in the Tenth Month, 1689, but the windows gave trouble, and the following summer directions were given to put them in order; and about the same time arrangements were made for digging a well.

It is by no means certain that meetings were held with any great degree of regularity in the

Centre Square Meeting-House. It was remote from the densest population and inconvenient to reach for almost every one. After all the effort required to erect and pay for it, it soon became manifest that its erection on that site was an error. Meetings seem to have been discontinued there in the autumn of 1895, but were resumed in the spring of 1897, when it was agreed to have one during the summer following and also on First and Fifth-days, whilst the Market Street house was being plastered. This appears to be the last reference to the subject on the minutes.

In the year 1700 the Centre Meeting-House had so decayed in some of its parts as to be in danger of falling down. The Monthly Meeting appointed a committee to consult with William Penn, who was then in this country, as to the best course to be pursued in regard to it, with authority to sell the building if it was thought best to do it. This committee reported, that it was best to sell, and that they had sold it to William Penn for one hundred pounds, it not being worth more than that sum. This action the meeting "doth unanimously consent unto and confirm."

Thus the career of the Centre Meeting-House would appear to be closed; but it nevertheless had an important future. Several years had elapsed since the removal of the first Bank Meeting-House, and its site still remained vacant. The need of another building on that lot was apparent, and only about a year after the old building at the Centre had been sold to William Penn, at what was manifestly a large price, it was decided to apply to him to "resign" it to Friends, supposing the same may be of great service to them toward building another meeting-house.

In the Seventh Month, 1701, William Penn attended the Monthly Meeting for the last time before his departure for England, after his second and final visit to the colony.

On this occasion the question was put to him in open meeting, whether he would not "resign the Centre Meeting-House to Friends again." It is to be feared that there was more worldly wisdom in this proceeding than was justified, especially on the occasion of its being the last Monthly Meeting the founder was likely ever to attend. With that generosity and nobleness of heart which ever characterised that great man, he readily condescended thereto, judging it might be much to Friends' advantage to have the materials to make use of toward building another meeting-house." Thus the building became again the property of Friends, apparently for nothing, after the Governor had paid them one hundred pounds for it, a sum in all probability more than it was worth.

(To be Concluded.)

It is a matter of great importance, for our own future comfort and consolation, that we learn to appreciate our obligations to the loved and useful ones around us, whilst they are still with us, and that we, before it is too late, and in a proper manner, manifest our appreciation of what they are to us. Soon they may descend into the grave, and we, in the bitterness of impotent sorrow, shall hasten "to garland the tombstone when we have not crowned the brow, and to pay the honor to the ashes which we have denied to the spirit." Let us, by manifested tokens of appreciation, bring gladness to all the living hearts we know to be beating in sympathy with our own, and we shall be gladdening their hearts, and sparing ourselves the bitterness of self-reproach in the years to come.

FOR "THE FRIEND."

Remembrance.

It is interesting in the perusal and study of Holy Scripture to note the wonderful remembrance, love, pity and long-suffering of our Heavenly Father concerning the human race; his great forbearance and kindness notwithstanding the fact of their continual forgetfulness of Him.

One of the first instances on record on the sacred page is God's remembrance of Noah. Humanity had become so corrupt, so degraded, so degenerated from their former estate, that it was the Divine purpose to cut them off from the face of the earth. "But NOAH found grace in his sight." Therefore God remembered Noah and his family for good, and in this remembrance prepared a way for their deliverance.

Noah obeyed the Divine command, and prepared him an ark as directed. May we not gather from this a lesson? Let us obey the voice of the Lord in all things.

Again, God remembered Abraham and called him out from the heathen nations and from his father's people. The promise to him was, "I will make of thee a great nation; "so many as the sands by the sea shore and the stars of heaven for multitude." In this and other things Abraham believed God and obeyed.

Are not all the faithful followers of our Lord and Saviour at the present day called upon to come out and be separate from the world and its sinful pleasures? "Come ye out and be ye separate, and touch not the unclean thing," for "ye are a chosen generation, a royal priesthood, a peculiar people." Let us show then to the world that we have better things to enjoy, and things that accompany salvation. Let us, though in the world, yet be not of it. Above all, do not let us allow the world to get into us. "I pray not that thou shouldst take them out of the world, but that thou shouldst keep them from the evil," was the prayer of our blessed Lord. If the cares of this life, the deceitfulness of riches and the little misleading sinful pleasures—theatre going, card playing, and dancing, etc.—if the love of these is allowed to get into the heart the result will be a danger of choking the good seed. By more and more giving way to indulgence in them, there will be a corresponding "drifting away" from the truth as it is in Jesus.

We are again reminded of God's remembrance of the patriarch, Jacob, the heavenly vision, and the heavenly visitant. Do not many of the Lord's children now find places in their lives like unto a Bethel? also places where they are to wrestle for the blessing ere they receive it?

God also remembered Joseph. Though his brethren sold him into Egypt, yet the Lord was with him, and the Divine purpose was being accomplished through this *apparent adversity*. Through him came future deliverance to the chosen race in the time of famine. Thus many times when the Lord's children are passing through seasons of distress and seeming darkness it is but the hand of our Father laid on us in loving regard.

He may be in this very thing working for us future good. In the darkest hour if we turn inward we shall many times hear the sweet voice of our Divine Leader, saying, "It is I, be not afraid." Then we can sing amidst the tempest, "Praise the Lord."

God remembered his chosen people again in the call of Moses; selecting him to lead them out of bondage. Then if we follow these all

through their journey to the promised land and after they had reached their inheritance, we see one continued renewal of mercy extended to them from a long-suffering God. Israel again and again departed from the right path and still the Lord looked on them in love and his arm was "stretched out still" to save and to help. A remarkable summary of this is found in the 78th Psalm.

Thus our Heavenly Father remembered his people continually. And He hath remembered us all in our fallen estate, and provided for us a way of escape. He hath given unto the world a Saviour, a Redeemer, Christ Jesus the Son. In Him we have redemption, even the forgiveness of our sins.

How blessed and encouraging are the promises to those who will forsake sin, and all who are willing to yield themselves unto the guidance of the Holy Spirit. "I will remember their sins no more."¹ "I, even I, will blot out their transgressions;" "blot them out of the book of my remembrance;" "cast them behind my back;" "will bury them in the depths of the sea." And his promises are "yea and amen forever." Much more could be said of God's loving remembrance toward us, but let us see what part we have to do in order to fulfil the Divine command. One of the positive injunctions given us is to "Remember now thy Creator in the days of thy youth." The best time in all life's journey to give God the control of our heart is in the spring time of life. "While the evil days come not nor the years draw nigh when thou shalt say, I have no pleasure in them." The Lord loves an early surrender of the heart (the will) to Him. Then how beautiful the thought of a long life (if length of days be granted) in his service, and growing day by day in the grace of our Lord and Saviour Jesus Christ. Then, after we have realized forgiveness, let us remember to "Look unto the Rock from which we are hewn and the hole of the pit from whence we have been digged." My feeling concerning this passage of Holy Writ is, that we are to look unto the Rock, Christ Jesus, like unto which we are being formed and fashioned by his Divine hand. That we are to keep our eye fixed upon Him, our holy example and our Guide. At the same time we are to remember the hole of the pit from whence we have been taken, our wonderful rescue from the "miry clay" by Him who hath now set our feet upon the rock and hath put a new song into our mouths, even praise to our God. "Yea," saith the apostle, "You hath He quickened who were dead in trespasses and sins."² Again, we should remember his commandments to do them, and we should remember his words that "they are spirit and they are life." We should show forth his life in us by works of righteousness, that our light may be "hid under a bushel, but that it may shine that others seeing our good works may glorify our Father which is in Heaven."³ "Faith without works is dead," and he that is born of God and "hath passed from death unto life," should manifest it in his life.

Let us remember again that we have here no continuing city, but that we "seek one to come," "even an heavenly;" "a building not made with hands eternal in the heavens." We are truly assured that our faithfulness is held in continual remembrance, for the Divine record tells us that, "They that feared the Lord spake often one to another and the Lord hearkened and heard them: and a book of remembrance was written before Him for them that feared the Lord and that thought upon his name." Again we have

the gracious promise to the faithful ones, "And they shall be mine saith the Lord of hosts in that day when I make up my jewels, and I will spare them as a man spareth his own son that serveth him." "Wherefore, brethren be ye steadfast, immovable, always abounding in the work of the Lord, forsaking as ye know that your labor is not in vain in the Lord."

J. H. Y.

NEW YORK CITY.

OUR CHILDREN.

I looked at the happy children,
Who gathered around the hearth;
So blithe they were, no children
Could happier be on earth;
With their airy play, and their whimsome ways,
And the sound of their silvery mirth.

Then I thought of those other children,
So wizened and hard and bold,
Who huddle in slum and cellar,
And shiver with want and cold;
Not fresh as the dew or the morning's hue,
But haggard and lean and old.

But yet may they still, those children,
Be taught to forget their pain;
And, gathered in arms that love them,
Their laughter may come again;
And the stare of woe and the craft may go,
And the spirit be washed of stain.

But it is not in cold book-learning
Those children's hearts to move;
And the stony eye of the serpent
Is death to the stricken dove;
'Tis an angel alone can touch them,
And that angel's name is Love.

For what the world may fancy,
And whatever the wise men say
Of our nineteenth century progress,
Of a new and a better way;
Still it makes a soul to a soul
Now, as in the olden day.

—A. G. B., in the "Spectator."

STRENGTH FOR THE DAY.

BEFORE.

The morning breaks in clouds, the rain is falling,
Upon the pillow still I sigh for rest;
But yet I hear so many voices calling
To work by which my burdened soul is pressed,
That I can no longer pray,
"Strength for the day."

'Tis not a prayer of faith, but weak repining,
For with the world there comes no hope, no light;
In other lives a morning sun is shining,
While mine is but a change from night to night;
So while I weep I pray,
"Strength for the day."

For it is hard to work in constant shadow,
Climbing with tired feet an up-hill road;
And so, while my weak heart dreads each to-morrow,
And once more I lift my heavy lead,
Desponding still I pray,
"Strength for the day."

AFTER.

Now, looking back to the long hours ended,
I wonder why I feared them as they came;
Each brought the strength on which its task depended,
And so the prayer was answered just the same.
Now with new faith I pray
"Strength for each day."

For in the one just closed I've learned how truly
God's help is needed as we need;
Sufficient for each hour it cometh newly,
If we but follow where its teachings lead,
Believing when we pray,
"Strength for the day."

He who has felt the load which we are bearing,
Who walked each step along the path we tread,
Is ever for his weary children caring,
And keeps the promise made us when He said
He'd give us all the way
"Strength for the day."

IN THE FOG.

BY SUSAN COOLIDGE.

Veils of pallid mist and grey
Wrap the world of yesterday;
Fir-fringed island, rocky cape,
Yellow sands, and mountain shape,
Sun and sky, and waters blue,
All are blotted from the view.
Out to sea we blindly stare;
Did we dream that such things were?

No; untouched, and safe and sure,
All these lovely things endure;
Underneath that hovering mist,
All the blue and amethyst,
All thy rocky cliffs, and sca,
All the surflines rippling free,
Mountain forms and islands green,—
All are there, although unseen.

If we bravely bide and wait
Through this brief eclipse of Fate,
Smile through the unsmiling noon,
Keeping heart and hope in tune,—
Shadow shall give place to sun,
And, out-stealing, one by one,
All the fair things mourned in vain
Shall be made our own again.

Dear heart, faint heart, who in shade
Sitst, pale, perplexed, afraid,
At the brief enshrouding
Of yesterday's content,—
Courage take; for hope endures,
Though a little mist obscures,
And behind the fog-wreaths dun
Brightens the eternal sun.

—S. S. Times.

William Grover.

(Continued from page 99.)

Thy case and situation seem to require the neglect of meetings for worship respects thy mind to be not in a tender, religious frame; but unguarded, and too indifferent about thy own everlasting good. There was a time, I believe, when thy mind was much more sensible of the benefit of attending meetings; and when thou wouldst have been afraid to be absent, except something particular prevented thy attendance. Now it seems a light matter; seldom more than once on a First-day, sometimes not once; and seldom on a week-day. It is not the way to gain strength in the best things, to neglect opportunities of waiting on the Lord. Remember the Scripture saying; "That they that wait upon the Lord shall renew their strength." But they who neglect to wait upon Him, are in danger of having their minds dissipated, and turned from good, and of coming to have a pleasure and delight in those things which once they esteemed not worth pursuing—things which bring no solid peace to the mind. These are accompanied with a sting, and with bitter remorse, unless the pure witness in the mind be so stilled and buried that it be not heard nor understood, but blindness, darkness and insensibility prevail. This is a dreadful state; but I trust this is not thy situation. Yet, I think, if thou dost not speedily turn about, thou art in danger of losing the sense thou once mayst have had of the sweetness of a religious life and conversation. Light, unguarded company, is liable to be a sad snare to thee. Evil communications corrupt good manners; and we may be insensibly leavened, if not upon our guard, into the nature and spirit of those who do not walk in innocence. Thus, one thing after another, of which thy judgment may have been convinced, may be called in question; plainness and sincerity of speech, plainness of apparel, simplicity and innocency of manners, may all be

SELECTED.

departed from; and thy poor mind be exposed to many, many dangers and temptations, from which thou mightest have been preserved, from which thou mightest have maintained the watch;—if thou hadst carefully maintained the watch;—if thou hadst fled from every appearance of evil, and been afraid of loving the tenderness and sensibility of thy mind hurt, by touching and partaking of things of which thou once sawest the evil and inconsistency.

Do not be deceived, or believe any one to be thy true friend who would rejoice to see thee dishonor thy profession, or set light by any tender, religious scruple. It is a great favor and blessing to have a tender mind, fearful of doing anything to offend our Maker; and those who know not the value of this tenderness of mind, and would willingly rob us of it, are to be guarded against as dangerous companions.

I do not mention this because I believe thou has not once known it to be true; but I believe thou hast opened an ear to that which, if followed, will lead thee into confusion, if not to ruin; confusion as to the state of thy mind, and as to thy profession as a Friend; and, perhaps, confusion as to thy outward concerns.

I see nothing but that the situation at—night affords thee a competent livelihood, if properly minded; but it will require care. It will, I believe, require thee to be frugal and careful in thy expenses, careful of thy time, regular and punctual in doing thy business, and steady in attention to it. If thou art too often from home, thou mayst lose more in two or three hours than will be got again in a week. By all means, be consistent. Do not seem one thing and be another. Be an industrious tradesman and mind thy business. Let hardly anything call thee from it, except thy religious duty; and take care to give a suitable preference to this duty, above everything. This will make thee careful how thou conductest thyself in thy business, with punctuality, honesty, integrity, and humility. Thou wilt fear to dishonor thy profession in thy words or in thy ways, and this is the way for thy neighbors to have a confidence in thee; for though some may scoff at and deride the way of Truth and of simplicity, yet all like to have to do with those whom they can depend upon, and who they really believe are preserved by a principle of integrity, from doing them an injury, even if they had it in their power.

Do not despise little things, as some may call them; remembering, "he that despiseth the day of small things, shall fall by little and little." And by little and little thou mayst get so far from the right way, as never more to return to it; thou mayst depart from the way of innocence, the way of plainness, the way of humility, the way of safety, so far as to have, in the end, to lie down in sorrow, and to wish that thou hadst never known better things, rather than, having known them, to depart from them, and trample upon them.

I believe thy situation very dangerous, and requiring particular watchfulness and resolution; because thou hast, I believe, opened thy heart to some things of an evil tendency; and that will, if not speedily and firmly stood against tend to the blinding and darkening of thy understanding.

I think I need not make any apology for this friendly freedom; as I did not see that I could be clear in my duty to thee, without submitting a few hints to thy very serious perusal.

With desires for thy real good,
Thy respected Friend, W. G.

(To be continued.)

of all his imitations, however, was the crying of a baby. It was enough to touch the heart of any tenderparent passing the house when Polly had this theme in hand. Such sobbing, such holding of breath and then bursting out afresh in a perfect scream as of pain, made everybody within hearing and not knowing the source feel like suggesting soothing syrup or paregoric, and that without delay. One other extraordinary effort of Polly was the squealing of a dying pig. Mr. Crick killed many hogs for the market, and this gave the bird an excellent opportunity to acquire this ear-piercing refrain. Its imitation of the whining of a puppy and the barking of a dog were perfect in the full sense of the term. In short there was nothing that he undertook to imitate which was not done to perfection, except the braying of the mule.

Polly was happy in his home, but he finally became too sociable for Mr. Crick's use. His obtrusive sociability consisted in eating from the baby's hand. One day the baby was eating candy. Polly wanted some of that candy, so he just walked up to where the baby was sitting at the door and took the candy and part of the thumb. When baby cried he broke out in a fit of laughing, which novel concert brought the family to the scene, and from that moment it was resolved, finally and irrevocably, that "Polly must go." He was at once deprived of his liberty by being put into his cage and transported to Lancaster, five miles distant to be sold. He was kept in a basement restaurant, where I for the first time saw, loved, and bought him.

In 1876 I left for Europe, and expecting to stay several years, bethought me what to do with my pet. It occurred to me that the safest place would be the Zoological Gardens at Philadelphia, and there, accordingly, I left him. After three years and three months absence, I called at the Zoo and requested the superintendent, Mr. Brown, to accompany me to the bird house, telling him that I proposed to put Polly to a test as to the retentiveness of his memory. Mr. Brown cheerfully complied, and we were witnesses of one of the most remarkable instances of animal sagacity on record. I will quote from an article in a Philadelphia paper, which appeared a few days later, and was written by one of the reporters after an interview with the superintendent. He says: "On entering the bird house Mr. Sprenger took his station on the opposite side of the building from that occupied by Polly, where the bird could not see him, and then exclaimed: 'Where's my Polly?' Immediately the bird recognized the voice of his former master, became excited, walking back and forth on his perch, showed as best he could, by voice and gesture, that he wished to answer the question by saying, 'Here am I.' It was a clear case of instant recognition. Then Mr. Sprenger went to his pet, and the scene is described by Mr. Brown as the reunion of a parent and a child. The affectionate creature ran his bill through his old master's moustache in the attempt to kiss him, rubbed his head against his cheek, then kissed him again and nestled close to his old friend, as though he feared he might lose him again. Then Mr. Sprenger tested him in some of his old tricks to prove his memory, and they were performed with as much readiness as in former days. 'Polly, I have lost my pocket-book,' said his old friend, after having dropped it. Then Polly went in search of it, and soon brought it in his bill, and having deposited it in his friend's hand expressed his joy in a hearty laugh. On Mr. Sprenger's taking his leave of him, he was

almost frantic with grief, and it was only with difficulty that his keeper prevented him from following the master he so affectionately loved."

In 1881 Polly was brought from Lancaster, Pa., (Atlanta, Ga.), where I had located a year before, and soon attracted unusual attention, as he had at the North, exciting the wonder and admiration of all who saw him. It was evident, however, by noticeable failing of eyesight and stiffness in his joints, that age was telling on Polly, and this caused me to watch him with as much solicitude as a tender father watches his child.

Polly was entertaining a number of callers with his laughing, talking, whistling and barking programme, until a late hour in the evening, and seemed to be in his usual good spirits. After the company had left, members of the family were startled by plaintive cries from the bird as if in great distress. Rushing into the room, they found him lying on the floor, to where he had fallen from the back of a chair upon which he had been sitting, uttering the most pitiable cries, evidently trying to say "Papa" (meaning me). I heard the commotion from a room in the lower story, and immediately ran up-stairs. Imagine my feelings if you can, gentle reader, when I picked up my dear old friend! A few gasps, a convulsive tremor, a closing of his jet black eyes, and Polly was no more! He died in my hands, doubtless from an apoplectic stroke.—From *The Audubon Magazine*.

J. J. SPRENGER.

ATLANTA, GA., Dec. 24th, 1886.

The Roman Church on the Down Grade.—Under the above heading, the *Christian Advocate*, of New York, comments on a recent "encyclical" in which the Pope recommends "that the Christian people should acquire the habit of invoking with great faith and confidence, at the same time as the Virgin Mother of God, the most chaste spouse, blessed Joseph." He says, "It is natural and most worthy of the blessed Joseph, that as in the past he provided for the needs of the family of Nazareth, and surrounded them piously with his protection, he should defend and cover with his patronage from heaven the Church of Jesus Christ."

The whole system of praying to saints, is a departure from the principles of the religion of Christ. It is God alone who can change the heart of man, and to Him and His Son, our Lord Jesus Christ, we must look for salvation. His love is ever to his creature man; and the principle expressed by the prophet is as true now as when it was declared by Ezekiel, that though Noah, Job and Daniel were in the land, they could deliver neither son nor daughter.

Numbers of Different Sects.—Canon Farrar, in an article in the *North American Review*, in speaking of the Episcopalians, says: "As regards the Church in America, I am told that alone, and also, alone, of the religious communities on the Western continent, it is steadily, if but slowly adding to its numbers, lengthening its cords, and strengthening its stakes."

This statement stirs up the *Christian Advocate* to republish some statistics, by which it appears that the Protestant Episcopal Church, as to the number of its members is the tenth in order among the sects in this country, "some of which are increasing at the rate of more than the whole membership of that body annually. It makes rapid gains in a few of the larger cities, but in the greater part of the country it is feeble, and in large sections unknown."

Anti-Jewish Feeling in Germany.—The recent Convention of German Anti-Semites, held in Bochum, in Westphalia, was of more than ordinary interest in illustrating the character and aims of the whole agitation. The number of delegates pre-

sent was 182, among them also a few representatives from France and Austria. This assembly was controlled entirely by the radical wing of the party, Pastor Stocker and his friends, who believe that the solution of the Jewish problem lies in the Christianization of Israel, but have refused to co-operate with the latter in the program of the latter. The Convention of Bochum, however, reads, that the rights and privileges granted the Jews in the emancipation from the political and social disabilities, especially in 1818 and 1849, are to be taken away again. The words: "The Jews are and ever will be an alien people!" expresses the fundamental proposition of the Anti-Semites. It is therefore proposed that they be deprived of their political rights as citizens, and be granted special alien laws. In detail the demand was made that no Jew should be appointed a judge or occupy any official position in the State; that no Jew should act as attorney, except in cases of Jew against Jew; that Jews should not be allowed to practice medicine, except in Jewish families, nor be teachers of any kind, except among their own brethren. They are not even to be allowed to enter the temple, nor to pay a tax for this exemption. In their religious observances they are not to be molested, as long as they do not act contrary to the public good. They are to be allowed to engage in all kinds of business, except that of the small peddler. Then proscriptions are to be applied also in the case of baptized Jews, as the struggle is against the people as such and not against their religion. A number of speakers were bitter in their denunciation of the converted Jew, pronouncing him even more dangerous than the Talmud and the Reformed Jew.—*The Independent*.

Slandering the Papist.—"A Roman Catholic priest, G. Ely Brochu, priest of the Notre Dame Church, Worcester, Mass., was convicted of denouncing Dr. Louis Morose, a practicing physician of Southbridge, in a slanderous way from the pulpit. The jury gave damages for a plaintiff for \$1,300 with interest, a total of \$1,729. Dr. Morose had been divorced from his first wife, and was married a second time by a Justice of the Peace. This should teach all who need it that ministers have no right to denounce persons by name from the pulpit. In the case of the incidents told of Lorenzo Dow is that he denounced a rich man in a funeral sermon in such a way that the friends sued him for it. Dow was fined, but went to jail rather than pay the fine. On the Sunday after his release he read the parable of the rich man, and when he got to the passage, "And the rich man died and was buried," he said he would omit the reference to his future state for fear some of his friends would sue him for slander. A suit for slander could be maintained against any minister who should denounce men by name in his sermons, whether members of the church or not, under any circumstances in which a similar suit could be maintained against a private individual for saying the same things."

THE FRIEND.

TENTH MONTH 26, 1889.

We find in *The Christian Advocate* (Methodist) of New York, the following remarks on the importance of maintaining a respect for law, which are so good, that we transfer them to our own columns.

"It is respect for law that preserves the American Republic and insures the safety of every citizen. In some countries nothing is safe. Even the sovereign cannot lie down to sleep at night nor ride out in the day with a feeling of security, and no citizen knows what moment he may be sent into exile, or hurried away to prison, or spoiled of his possessions by the arbitrary decree of despotic rulers. But in America the President fears no violence from the hands of the people, and the citizens apprehend no danger from the caprice of those in power or the in-

justice and cruelty of their neighbors. This glorious freedom and delightful security are the result, not of the absence of law, but of the universal obligation to and the profound respect for law which the people feel. The President as much as the humblest citizen is under law, while the humblest citizen as much as the President is protected by law. This happy distinction between the people of this nation and others can continue only so long as the universal acknowledgment of this obligation and the voluntary submission to it shall continue. When American citizens begin to assert their independence of law, and to trample under foot any of the laws of the land because they do not respect them, to that extent the foundations on which our freedom rests begin to disintegrate. Whenever legislators begin to enact laws, not to bind all alike for the common weal, but to hinder one party and help another, to that extent the genius of our institutions will be perverted. Whenever the executive department loses its respect for law in its zeal for partisan ends, and allows transgressors to escape or the innocent to suffer, to that extent the security and freedom which our Government guarantees are lost. It is time for men who have been sneering at certain wholesome liquor laws and Sunday laws and election laws, to consider whether the course they pursue would land us if it were generally adopted by the nation."

On what is this respect for law, and obedience thereto, founded? Is it not on the diffusion among our people of a regard for religion?—which, though less powerful and prevalent than we would gladly see, is yet sufficiently prevalent to induce that self-restraint which, Burus states, is "virtue's root." The fear of the Lord, is not only "the beginning of wisdom;" but by it "are riches and honor."

SUMMARY OF EVENTS.

UNITED STATES.—There is great excitement in the Chickasaw nation over a decision by the Supreme Court of the nation, which disfranchises every white man who holds his citizenship through marriage with an Indian woman. The Supreme Court is composed of two full blood Indians and one half-breed, the latter dissenting from the opinion. For twenty-five years it has been an unwritten law that a white man's marriage to an Indian woman made him a citizen.

The *Boston Herald* states that: "There were three cases of champagne, besides sherry and Chateau Margaux, drank at President Harrison's lunch to the Pan-Americans."

It is reported that in Western Montana the grass is literally withering away from the want of rain. In some thousands of head of cattle have died of starvation. As high as \$20 and \$25 per ton is being paid for hay, and in some cases water is being hauled a distance of 20 miles.

Extensive prairie fires have been raging in the country west of Fort Wayne, Indiana, for several days, resulting in great damage. "The prairie lands that have been reclaimed by drainage have been burned down to a depth of four feet."

Prairie fires are burning within a few miles of Bismarck, north Dakota. A large number of farms have been destroyed. The village of Menoken, 14 miles distant, has been swept away and the inhabitants are reported to be destitute.

Extensive forest fires have been raging for some time past between Princeton and Bridgeman, Minnesota. Thousands of tons of hay, great quantities of cord wood and timber have been destroyed, and in some localities the health of natural meadows are burned. The Mission Creek county, north of Hinckley, is reported to be "all ablaze" with prairie fires. Fine hay and lumbermen's supplies have been destroyed for miles around." Fires are also raging north of the Snake River and at Pine City. The smoke is so dense as to obscure a headlight 50 feet away. The destruction of the pine forests, near Grand House, is reported still in progress.

The air about Marshfield, Wisconsin, is filled with smoke from forest fires in the vicinity.

California's second heavy rainfall of the season ended on the night of the 18th inst. The rain extended as far south as San Diego. The rainfall in San Francisco for the season is 3 11-100 inches against 1 8-100 inches for the same period last year. The rainfall in the chief wheat districts is from twice to three times as great as for the corresponding period last year. Of the crops, the wheat will do well, the corn, but everything else "the rain ruined the grapes, but everything else an hour for eight hours was reported early last week from the vicinity of San Diego.

An oil well, flowing 1000 barrels daily, was struck at Chertier, just outside the limits of Pittsburgh, last week.

Deaths in this city last week numbered 37, which is four less than during the previous week, and ten less than during the corresponding period last year. Of the causes of death were: males and females; 45 died of pneumonia; 17 of diseases of the lungs; 15 of consumption; 16 of convulsions; 12 of diphtheria; 13 of old age; 12 of crop; 12 of cancer; 12 of inflammation of the stomach and bowels; 11 of paralysis; 10 of marasmus; 9 of typhoid fever; 9 of bronchitis; 9 of inflammation of the brain and 9 of Bright's disease.

MARKETS.—U. S. 4½, 100; 4's, 127; currency 6's, 111.

COTTON was quiet, but steady, at 10 13-16c per pound for middling uplands.

FEED.—Winter bran, choice, \$13.25; do., fair to prime, \$12.25 a \$13.00.
FLOUR.—No. 2 red wheat, 65c.—Western and Pennsylvania superfine, \$2.50 a \$2.75; do., extras, \$2.55 a \$2.75; No. 2 winter family, \$3.70 a \$3.75; Pennsylvania family, stone ground, \$3.75 a \$3.90; Pennsylvania roller process, \$4.00 a \$4.40; western winter, clear, \$4.00 a \$4.30; do., do., straight, \$4.45 a \$4.55; winter patent, \$4.50 do.; No. 1 Minnesota, clear, \$4.12½; do., straight, \$4.25 a \$4.75; do., patent, \$4.85 a \$5.35. Rye flour was scarce and firm, at \$3.10 per barrel for choice.

BUCKWHEAT FLOUR was quiet at \$1.75 a \$2.25 per 100 pounds, as to quality.

GRAIN.—No. 2 red wheat, 61 a 61½ cts.; No. 2 red corn, 39½ a 40 cts.

No. 2 white oats, 28 a 28½ cts.
BEEF CATTLE.—Prime, 43 a 44 cts.; medium, 33 a 41 cts.; fair, 33 a 33½ cts.; common, 34 a 35 cts.; fat cows, 23 a 33 cts.

PORK.—Best, 5 a 5½ cts.; good, 4½ a 4½ cts.; medium, 4½ a 4½ cts.; fair, 3½ a 3½ cts.; common, 3 a 3½ cts.
Lamb, best, 6½ a 6½ cts.; good, 6 a 6½ cts.; medium, 5½ a 5½ cts.; fair, 5½ a 5½ cts.; common, 5 a 5½ cts.

HOGS.—Choice light western, 6½ a 6½ cts.; heavy western, 6½ a 6½ cts.; country hogs, 5½ a 6½ cts.

FOREIGN.—Sir Frederick Young, who is over 70 years old, has returned to London after one of the most remarkable journeys ever made by a man of his age—a South African tour that covered 16,000 miles. He was not sick a day during his absence from home. Arrived at Manchester on the 16th inst. at an early hour on the morning of the 16th instant. Seventy miners were in the pit at the time of the accident, only 11 of whom are alive. The pit was completely wrecked, and the rescue of the men will be one of great difficulty. The bodies recovered show that the victims died of gas poisoning. A relief fund has been started. It is supposed that the explosion was caused by leakage from an old fire in a disused shaft.

A company has been formed to buy a cable from Maracaibo to Buenos Ayres. It has a capital of £2,000,000, with interest guaranteed by the Argentine Government.

A committee is being formed for the purpose of considering plans for the construction of a canal and a connection with the Baltic Sea. The plan to be considered by the committee proposes to construct a ship canal from Berlin to the River Oder, and thus secure a connection between the German capital and the Baltic Sea.

Philip Kneiser, William of Wurttemberg, was driving to his place of worship at Ludwigsburg on the 20th instant, he was fired at by a man named Klaiher, who, upon being arrested, exclaimed: "It is high time Wurttemberg had a Catholic king." The Prince was not hurt. Klaiher is a member of the Anabaptist sect, the motto of which is "I am sworn to kill all Princes." The society recently drew lots to decide which of the members should kill Prince William, and the choice fell upon Klaiher.

Dr. Kikenthal, who with Dr. Walter made explorations the past summer in the Arctic regions round

Spitzbergen, has just returned to Bremen, and has reported to the Geographical Society of that place, at whose expense the expedition he commanded was fitted out, that he discovered a new and important ocean current flowing through the whole length of the Olga Strait, from north to south. It was observed to the west, and at all points from Northeast Land to the Byle Sea, and along Chuk Land. Only on the shallow coasts was it overcome by the ebb and flow of the tide.

A despatch from Lisbon, of the 19th instant, says that the King of Portugal, who has been ill for some time, died to-day. The Duke of Braganza, eldest son of the king, who succeeds to the throne, will assume the title of Carlos I.

On the 20th instant violent storms were reported in the region of Naples. The city is partially inundated. An immense amount of damage has been done.

At a banquet given to Prime Minister Cesi, at Palermo, on the night of the 19th instant, in his speech the Prime Minister declared that it was necessary to combat all persons, high or low, who were seeking to undermine the political edifice of Italy. The temporal power of the Pope, although it had existed for centuries, had been only a tradition, and the Pope's exhortations were only restricted, and less harshly than in other Catholic States, from encroaching upon the sphere of National right, which is the right of reason. The *Novae Venetia* says if Germany desires a firmly established peace, it is indispensable that she should tolerate Austrian intrigues in Bulgaria. Peace cease will never be secured, the paper declares, until the cause of the present international trouble is removed.

A telegram from Havana says that the cocoon disease has appeared in the district of Baracoa. The inhabitants are greatly alarmed, as cocooners are the principal source of income. This disease has nearly destroyed the cocoons in the western and central parts of the island.

A messenger from Bishop Bosse, of Labrador, has arrived in Quebec with news of the total failure of the fisheries at Esquimaux Point, and elsewhere on the Baffin families are starving. The local government will send relief for their immediate wants.

NOTICES.

WESTWON BOARDING SCHOOL.—The Committee who have charge of this institution, meet in Philadelphia on six days of the month, at 11 A. M.

The Committee on Instruction meet the same day at 9 A. M., and the Committee on Admissions at 9:30.

The Visiting Committee meet at the school on Seventh-day evening, Tenth Mo 19th. Conveyances will be in waiting at Westwonton Station at the arrival of trains leaving Philadelphia 2:55 and 4:55 P. M.

WM. EVANS, Clerk.

WANTED.—An experienced teacher, (a member of the Society of Friends) possessing good administrative and business abilities, to act as Superintendent of Friends' Select School, 140 N. 16th St., Philadelphia. Apply

Ephraim Smith, 1110 Pine St.
John W. Biddle, 119 South Fourth St.,
or George Vaux, Bryn Mawr, Penna.

DIED, at his residence at Frankford, Philadelphia, Mo. 27th, 1852, ABIGAIL C. WOOLMAN, in the 55th year of her age, a member of Frankford Monthly and Particular Meeting. This dear Friend was in Philadelphia on six days of the month, at 11 A. M. She was fully engaged for a number of years in assisting at Friends' Boarding School for Indian Children at Tunesassa, and afterwards for a similar period at Westwonton School as a nurse, and had the affliction of those who came under her influence and care. To the burial she attended, and her last words were, "I never regretted what I have done for Tunesassa or Westwonton." Her health had been giving way for two or three years, but she was able to get to meetings until within a few weeks of her death. A few days before she was mentioned to a Friend that the saviour had given her the assurance, He would take her to himself. "Blessed are the pure in heart for they shall see God."

Incidents and Reflections.—No. 195.

A GROUP OF ILLUSTRATIONS.

Among the anecdotes collected by Baxendale in his *Cyclopaedia of Anecdotes*, are several which enforce particular truths by apt illustrations. One of these says that a young man once picked up a sovereign lying on the road. Ever afterward, as he walked along, he kept his eyes fixed on the ground, in the hope of finding another; and in the course of a long life he did pick up, at different times, a good amount of gold and silver. But all these days, as he was looking for them, he saw not, that heaven was bright above him, and nature was beautiful around, but watched the mud and filth in which he sought for treasure.

The finding of that sovereign was to this young man a most unhappy circumstance, if it had the effect of turning his interest in the direction of accumulating wealth; and led him to neglect the enjoyments of life which a bountiful Father offers to his children; and still more so, if it tended to lessen the importance in his view of the laying up of treasures in Heaven, beyond the reach of the accidents of time.

Worldly possessions have their real value in the power which they give of purchasing those things which are needed for comfort and subsistence; and of enabling us to assist those in need, and in other ways to promote the general good. But in accordance with a very common trait of the human mind, they often come to be regarded as an *end*, instead of a *means*; and are sought for without much reference to any proper use of them. The folly of this is pointed out in a Russian fable—according to which a poor man, who was scoffing at the wealthy for not enjoying themselves was met by a stranger, who gave him a purse in which he was always to find a ducat, no matter how many he took out; but with this condition, that he was not to spend one of the coins until he had obtained all that he wanted, and had thrown away the purse. The man took out ducat after ducat, but continually put off the hour of enjoyment, until he had gotten "a little more;" and finally died counting his millions which had remained altogether unused.

A young college student, who was under religious impressions, was confused by the sugges-

tion, that he could not tell whether he should continue faithful to the end. While in this state of mind he called on one of the Professors, and spent some hours with him in conversation. When he was about to go home the Professor accompanied him to the door, and observing how dark the night was, prepared a lantern, and handing it to his friend, said, "George, this little light will not show you the whole way home, but only one step at a time; but take that step, and you will reach home in safety." It proved the word in season. As George walked securely along, brightened by the little lantern, the thought flashed through his mind, "Why can I not trust my Heavenly Father, even if I can't see my way clear to the end, if He gives me light to take one step?"

Charles Spurgeon relates, that when at Cologne one very rainy day, the window of the room in which he was sitting overlooked a public square in which stood a pump. To this pump a man came with a yoke and two buckets for water. In the course of the morning, he came a dozen times, and Spurgeon concluded that he was a water-carrier, who fetched water for other families than his own. This man seemed to him an illustration of a gospel minister. He needs to go to the Source of living water, not only for his own wants, but that he may receive for the refreshment of others.

A young man once expressed to Dr. Franklin his surprise that a wealthy man of their acquaintance should be more assiduous in the prosecution of business than any of his clerks. To illustrate to his friend the fact that care and anxiety about wealth generally increase as it goes, the Doctor took an apple from the fruit basket and presented it to a little child who could just toddle about the room. The child could scarcely grasp it in his hand; he then gave it another, which occupied the other hand. Then, choosing a third, remarkable for its size and beauty, he presented that also. The child, after many ineffectual attempts to hold the three, dropped the last on the carpet, and burst into tears. "See there," said Franklin, "there is a little man with more riches than he can enjoy."

A story is told of an old gentleman, who lived in a large house, and had everything he wanted, and yet he was not happy. When things failed to please him he would get cross and speak sharply. His servants all left him, and he was in great trouble. Discouraged, he went to a neighbor's to tell him of his difficulties. After listening to his story the neighbor said, "It seems to me, my friend, it would be well for you to *oil yourself a little*." "To oil myself! What do you mean?" "Let me explain. Some time ago one of the doors of our house had a creaking hinge. It made such a disagreeable noise whenever it was opened or shut that nobody cared to touch it. One day I oiled its hinges, and since then we have had no trouble with it."

There is a Hindoo fable of a dervish who once went into a confectioner's shop. The confectioner, to honor him, poured some honey into a dish before him. Immediately a swarm of

flies settled, as was their wont, upon the honey; some upon the edge of the dish, but the greater number in the middle. The confectioner then took up a whisk to drive them off, when those upon the side flew away with ease, but the others were prevented from rising, the honey clinging to their wings, and were involved in ruin. The dervish noticed this, and remarked, "That honey-dish is like the world, and the honey like its pleasures. Those who enjoy them with moderation and contentment, when the whisk of death approaches, not having their hearts filled with the love of them, can with ease escape the snare, while all who, like the foolish flies, have given themselves wholly to their sweetness, will meet with destruction."

Dr. James Hamilton draws an instructive lesson from the snows and icicles of winter. He says: "On a winter's day I have noticed a row of cottages with a deep load of snow on their several roofs; but as the day wore on large fragments began to tumble from the eaves of this one and that other, till, by-and-by, there was a simultaneous avalanche, and the whole heap slid over in powdery ruin on the pavement, and before the sun went down you saw each roof as clear and dry as on a summer's eve. But here and there you would observe one with its snow-mantle unbroken and a ruff of stiff icicles around it. What made the difference? The difference was to be found within. Some of these huts were empty, or the lonely inhabitant covered over a scanty fire, whilst the peopled hearth and the high-blazing faggots of the rest created such an inward warmth that grim winter melted and relaxed his grip, and the loosened mass tumbled over on the trampled street. It is possible by some outside process to push the main volume of snow from the frosty roof, or chip off the icicles one by one. But they will form again, and it needs an inward heat to create a total thaw. And so, by sundry process, you may clear off from a man's conduct the dead weight of conspicuous sins; but it needs a hidden heat, a vital warmth within, to produce such a separation between the soul and its besetting iniquities, that the whole wintry incubus, the entire body of sin, will come away. That vital warmth is the love of God abundantly shed abroad—the kindly glow which the Comforter diffuses in the soul which He makes his home. His genial inhabitation thaws that soul and its favorite sins asunder."

An anecdote is told of Charles Wesley, who was one day sitting by an open window looking out over the bright and beautiful fields in summer-time. Presently a little bird, flitting about in the sunshine, attracted his attention. Just then a hawk came swooping down towards the little bird. The poor thing, very much frightened, was darting here and there, trying to find some place of refuge. In the bright sunny air, in the leafy trees or the green fields, there was no hiding-place from the fierce grasp of the hawk. But, seeing the open window, and a man sitting by it, the bird flew, in its extreme terror towards

it, and with a beating heart and quivering wing, found refuge in Wesley's bosom. He sheltered it from the threatening danger, and saved it from a cruel death. He was at that time suffering from severe trials, and was feeling the need of a refuge in his own time of trouble as much as the trembling little bird did, that nestled so safely in his bosom. So he took up his pen and wrote the hymn—

"Jesus, lover of my soul,
Let me to thy bosom fly."

When Latimer was on trial for heresy he heard the *scratch of a pen behind the tapestry*. In a moment he bethought himself that every word he spoke was *taken down*, and he says, that he was very careful what words he uttered. How obvious is the suggestion, that Latimer's caution on this occasion should remind us of our Saviour's warning, that every idle word which men speak, must be accounted for in the day of judgment!

A somewhat similar lesson was taught by the removal of a bookcase which had stood long in one place. There was the exact image left on the wall of the whole and of many of its portions. But in the midst of this picture was another—the precise outline of a map which had hung on the wall before the bookcase was placed there. The family had forgotten everything about the map until they saw its photograph on the wall. "Thus" moralizes the one who tells the story, "some day or another we may remember a sin which has been covered up, when this lower universe is pulled away from before the wall of infinity, where the wrong-doing stands self-recorded." J. W.

FOR "THE FRIEND."

PAULLINA, O'REFIN CO., IOWA,
Tenth Month 15th, 1889.

TO THE EDITOR OF "THE FRIEND."

Dear Friend: Having just returned from attendance at Iowa Yearly Meeting (Conservative) and thinking that some reference thereto in THE FRIEND, might be interesting to some of its readers, I send the following.

Thine truly,

ARCHIBALD CROSBIE.

Iowa Yearly Meeting, held at West Branch, Cedar County, Iowa, has just been concluded, Ninth Month 30th, after what certainly proved the most interesting occasion in the history of that body.

Held in a new house, large, comfortable and well adapted for such a meeting, and with weather somewhat propitious, the membership in the immediate vicinity were present in considerable numbers, while those in the other Quarterly Meetings were well represented. Hickory Grove Quarterly Meeting, part of Ohio Yearly Meeting, but located in Iowa, formed quite an imposing portion of the assembly.

And as a further evidence of interest in, and sympathy with this Yearly Meeting, it may be mentioned that, no fewer than sixty-four applications were made to the caretakers, by those not in acknowledged membership, for privilege to sit the business sessions.

All the usual meetings for worship, with additional ones appointed as the result of individual concern, were largely attended, testing, not only the capacity of the Yearly Meeting premises, but other meeting-houses where such meetings were held.

Friends from other Yearly Meetings—Philadelphia, New England, Ohio, Indiana and Kansas, were in attendance, some with credentials from their particular meetings, and not a few with

such credentials as the great Head of the Church alone gives, and makes way for edifying service.

Among those to whose lot considerable labor fell, may be mentioned, Cyrus W. Harvey from Kansas, and Joel Bean from California.

The testimonies borne to our distinctive place and service in the Church of Christ, were clearly and forcibly set forth, and with a precision new to many, yet sensibly under the control and manifestation of Him, who is the Truth itself, and in using instruments which Himself has qualified, still reveals the great *I Am* of Old Testament history, and the Christ of Nazareth, as the Alpha and Omega of human salvation.

The Word preached had free course and with conscious baptism to many, and in what appeared the absence of creaturely effort; the periods of silence frequent, and sometimes prolonged, were evidently scenes comparable to that when the temple at Jerusalem was so filled with the presence of the Lord there was no room for the priests to minister. The devout demeanor, the serious countenance, the moistened eye, the falling tear, gave involuntary proof of the operation of Divine love, contriting the heart, and drawing into the experimental realities of its own nature.

The business sessions were marked by solid department and weighty concern—the subjects under consideration being treated in manner akin to the importance of which they gave evidence.

The state of Society as shown by the answers to the Queries, while affording cause for deep humiliation, nevertheless made apparent occasion for thankfulness to Him who does not break the bruised reed, nor despise the day of small things.

Epistles were read from each of the five Yearly Meetings with which this Yearly Meeting corresponds, with the result of largely strengthening the things that remain, and begetting a strong sense of the value of this branch of intercourse among the churches, not merely as a token of outward communion, but, as a means of grace, stimulation and drawing to that fellowship which is with the Father, and with his Son Jesus Christ. The information given to the meeting that now, Ohio, Kansas, New England, Western, Canada and Iowa Yearly Meetings were each in full correspondence with all, was accepted as an omen of individual blessing, and as it is, a widening of the harvestfield of the great Husbandman.

With no desire, as indeed there is no room for boasting in regard to numbers, evidence was not wanting of the sense of responsibility as well as privilege of being included among the thousands who constitute this united family, contending for simple, primitive Christianity, in sympathy with the early Quakers.

The condition of the dear youth now considerable a part of the body, claimed so much earnest thought; and that opportunity might be afforded them of obtaining a religiously guarded education, steps were taken with a view to establish a boarding school under care of the Yearly Meeting. A committee was appointed to have charge of the undertaking.

Lamenting the strife of tongues, the worldly innovations, and the lowering of the standard of Truth, but too plainly evinced by many claiming the name of Friends, fervent prayer was expressed to the Father of all our sure mercies, that in his time, and in his way, these things might cease and that unity of profession and purpose might be restored to the whole body, as in former days.

Meantime a deep feeling of gratitude prevailed for the satisfaction experienced in being aloof from the destroying conflict and for ability to welcome others to partake in such priceless favor.

Clarkson T. Penrose and Milton Mills, were continued as Clerk and assistant Clerk.

The meeting is to be held next year at North Branch, Madison Co., Iowa.

William Grover.

(Continued from page 101.)

Religion is one thing, profession is another. A man may, at his own option, and against conviction, change his profession; but his religion he cannot so easily change. If a man is religious, he fears God his Creator; fears to offend Him in thought, word or deed, and considers himself bound to walk conformably to this fear. Now, according to the degree of true light upon the understanding, is a man's religion. He cannot, at his option, change the convictions of this light; though he may act in opposition to them, and thereby incur condemnation. If a man does not fear God, I conclude he has no religion; if he does fear God, and walks answerably thereto, he endeavors to act according to the best evidence afforded to his understanding, as to what is, and what is not, agreeable to the will of his Creator concerning him. Thus, if I am not mistaken, a man can not, at his own option, change his religion; although, as he can act in opposition to what is really the religion of his judgment, he can, if he be not conscientious, change his profession. We believe, as a religious Society, that the duty of a religious man is to endeavor to know his duty as a Christian, both as to matter and mode, and then carefully and conscientiously to do it. Forms of profession may be various; but the truly pious, of all denominations, are, I believe, near akin. They unite in one grand and fundamental respect;—a sincere desire that their whole lives may be conformable to the will of their Creator. This desire embraces not only spiritual, but temporal things; and, with regard to their religion, not only the life and substance, but also the form and profession of it.

From whatever causes our distresses arise, whether ever so simple, or ever so complicated, it is good, it is safe, it is most wise to trust in Him, to cast our care upon Him, who knows our frame, and remembers that we are but dust; and by whom, in the emphatic language of our blessed Lord, "the very hairs of our head are all numbered."

That "we are not our own"; that we are not to gird ourselves, and walk whithersoever we list, is a truth so clear and evident to the enlightened mind, that it should be, I think, almost a first principle in education, in doctrine, in the habitual frame of the mind. But who are sufficient for these things?

I sincerely question, whether there be any way in which we more acceptably serve Him, than when, in the transaction of our outward affairs, we are preserved in meekness, quietness, and self-denial, with our eye and desire to Him for guidance, limitation and protection.

Eleventh Month 29th, 1812. The principle of light, life, and power, as submitted to, more and more leads the awakened and dedicated mind out of a conformity to the maxims and manners of the world, by a path of humble self-denial, to the enjoyment of a peace which is substantial, sweet, and precious. Press after it, my dear friend: press into the enjoyment of it; whatsoever sacrifices are required, I entreat thee

to make them through the renewings of best help. Do not embitter thy future days by persevering in opposition to the clear manifestations of the light of Truth. Get not into abstract reasonings on things; but eye the light, and follow it step by step, as the way is opened for thy complete deliverance.

How precious it is, my dear friend, in important moments, to feel a humble, reverent, filial trust in the Divine blessing on our undertakings; and though, at times, we may not be favored with very clear and strong light upon our path, yet being preserved in a fear of offending, and in a sense that, without the Divine blessing upon it, all our acquisitions and enjoyments will have a void, a painful void, here we are in the way of safety. There is, may I not say, an indescribable distinction between those who have really believed in the reality of Divine inward, immediate communication to the soul, and those who have not. Faith in this Divine gift is a most precious thing—a most valuable treasure; not to be trifled with; not to be bartered away; but to be reverently, humbly, and perseveringly treasured up, improved, and lived upon. Remember this, my dear friend; and may heavenly goodness be near to help, direct, and sustain thee. Amen.

Third Month 2nd, 1813. In the flowings of love, and in the enlargement or expansion of the mind, we may, I believe, sometimes be ready to recommend writings which are really very estimable; and yet in which, from the first word to the last, perhaps there is not a single pointing to the Word nigh in the heart, the Divine gift, or Light of Christ. Does it not require great care how such are recommended? I write with caution, not wishing to prevent any good; but it wants to be more understood in the world, and what if this be one of the great ends of our being raised up, that it is not comprehending sublime truths, even the truths of the Gospel, so much as seeing and knowing our own individual part of the great whole, that is the grand desideratum for us all; and, which, we do not allow, cannot any way be so well known, as by diligent attention to this Divine gift? Attending to this Divine gift in ourselves, and so being drawn and kept under its influence, it becomes our element, and we move healthfully and safely along in it. And in this element, not out of it, we may look at many things, and touch many things, perhaps without spiritual loss, and possibly with spiritual advantage; but the danger and the loss seem to be from meddling with religious and spiritual things, out of this element. Keeping in this element, we are in the way of feeling the liberty of Truth, and its blessed restraints, as to touching, tasting, or handling this, that or the other thing, that is thrown in our way.

Ninth Month 19th, 1816. I hope, with moderate industry and prudent care, you will be permitted, if your days are prolonged, to continue making some additions to your property; thereby enlarging your sphere of usefulness, as well as increasing your comfort. Much riches I do not covet for you; they are not necessary for our sweetest enjoyments. Supineness and inattention are productive of very little good; but moderate application, in a reliance on the blessing of Providence upon our humble and upright endeavors, adds much to our comfort, keeping our faculties bright, and even, I believe, the more susceptible of good. I wish you comfort, and that you may rightly appreciate the time and opportunity put into your hands, wisely applying your attention

between spiritual and temporal things. I had written *dividing*, but I drew the pen over it, thinking the expression exceptionable; because I believe we may be favored to have our minds so preserved as to maintain an undivided preference for that which is best of all (though necessarily engaged, and rightly so, in the concerns of this life), and to feel that we have indeed a connection with ever and ever, whilst we are conversant with the vicissitudes of an earthly pilgrimage.

(To be Concluded.)

FOR "THE FRIEND."

A Visit to Colorado.

(Continued from page 98.)

Resuming our seats in the train, we left Silverton about 1 p. m., and again began climbing the mountain sides along the ravines which opened northward and westward towards Ironton.

It would be a repetition of former descriptions to speak of the awe-inspiring and beautiful scenes which the traveller passes in this part of his journey. Suffice it to say, that in about two hours we had ascended to a height of 11,000 feet above tide level, near the summit of Red Mountain. This is the greatest altitude which any line of railroad in the world has yet attained. Here is situated a rich silver mine, called the "Yankee Girl" by its owners, and it is only the profit derived from opening its products to market, and that of other mines in the vicinity, that would justify the cost of constructing and working a railway to this elevation. Red Mountain is named from the deep salmon hue which its peak and sides exhibit owing to the mineral substances contained in the fine clays on it. There is another peak adjoining it which is nearly the color of yellow ochre. They were not composed of rock, as most of the mountain summits are, but apparently of earth.

Prof. Lakes, in his work on the Geology of Colorado Ore Deposits, speaks of these mines as containing *decomposed ores*, rich in silver; the reason for that richness being that the decomposed surface products have been leached out for ages by nature, combining and concentrating the essence, so to speak, of the metallic vein; so that a rich mine in the San Juan ships nothing but yellow mud, and another, the National Bell at Red Mountain, yields similar material, but gives steady and profitable returns in silver from the concealed presence of chlorides or sulphurets of silver in it.

Speaking of the San Juan mountain chain and its ore deposits, Prof. Lakes further remarks, that it is "composed almost entirely of prodigious flows of lava emanating in all probability from a series of dykes concealed underneath the flows. These horizontal flows have buried under their mass the primitive granite which is occasionally to be found peeping out from underneath it at the bottom of the profound cañons, from whose depths you can look up at a vertical section of from 2000 to 3000 feet of a lava lying layer upon layer of different colors." * * * "While some are Tertiary eruptions, others are of older date, and it is in these latter, particularly in the breccias that the mineral veins more especially occur." * * * "Probably few regions in the world are traversed by so many and such large veins. Immense vertical veins of a hard bluish quartz traverse the eruptive rocks. Their outcrops project like walls from the surface, or run down either side of the profound cañons for several thousands of feet; and although they penetrate both older and younger eruptive sheets, the ore bodies are

most productive in the older eruptions, especially the brecciated rocks."

It was over and through this strange volcanic region that we were now passing. As our train, consisting only of one passenger car and the engine, glided over the summit, we saw from our lofty perch far down through the vista to the North a valley hemmed in by the lava cliffs to right and left; almost under us a thousand feet below, the little city of Ironton lay en-*en-*closed in the bottom of the gorge; a large ore smelter at the mouth of the "Yankee Girl" mine stood near the track at our side; the snow fields of Mt. Sneffels on the West and the warm colors of Red Mountain glowed in the bright sunlight. We must go down these fearful steeples to the town at our feet! The nerves recoiled at the thought, accustomed as we had now become to mountain climbing. By a system of Ys, as the railroad engineers of this country term them, the descent was safely effected, and we breathed freer when the terminus of our iron track was reached at the station in Ironton.

Here stage coaches were waiting to convey the passengers nine miles further to Ouray. The route lay down the long defile of the Uncompahgre River, seen from the heights above, over a wagon road requiring almost as much engineering skill to construct it as the railroads we had traversed. The stage ride was a welcome interlude to the car-travel, and our party enjoyed it highly. As we advanced to our destination the walls of rock drew closer together, and the stream in the cleft leaped down its bed with growing velocity. A pair of equestrians met us where the narrow road built in the mountain-side hundreds of feet over the stream, seemed scarce to afford passing space; but the riders with courage doubtless acquired by familiarity with the path stood their steeds on the outer verge of the precipice whilst our vehicle went by on the other side. Presently a toll-gate and dwelling was reached, built under a shelving rock; here we halted, and the travellers alighted to view Bearcub Cascade: a pretty stream which shoots out of the rock just under the road, and falls 233 feet into the Uncompahgre. Now we observe on the way before us a long avalanche, slowly descending from a by-path in the mountain side. They are a train of "burros," perhaps 25 in number, laden with bags of carbonate of silver from a mine overhead. Some carrying mining apparatus down to Ouray for repairs. * * * Our company were much amused to notice one donkey bearing a wheelbarrow and a grindstone on his back, and another a blacksmith bellows which nearly hid the little creatures from view. They had no bridles on their heads, but all followed the lead of some experienced chief whom their masters placed in the van, while they gave the word of command from the rear.

Ouray is one of the most beautifully situated towns in Colorado. Its scenery is unique. It is cradled in a lovely valley enclosed by rugged mountains. It is thus vividly described by Ernest Ingersoll in the "Crest of the Continent": "The valley in which the town is built is at an elevation of about 7500 feet above the sea, and is pear-shaped; its greatest width being not more than half a mile, while its length is about twice that down to the mouth of the cañon. Southward, that is toward the heart of the main range, stand the two great peaks Hardin and Hayden. Between is the gorge down which the Uncompahgre finds its way; but this is hidden from view by a ridge which walls in the town and cuts off all farther view from it in that direction,

save where the triangular top of Mt. Abraham peers over. Westward are grouped a series of broken ledges surmounted by greater and more rugged heights. Down between these and the western foot of Mt. Hayden struggles Cañon Creek to join the Uncompahgre; while Oak Creek leaps down a line of cataraacts from a notch in the terraced heights through which the quadrangular head of White House Mountain is discernible as the eastern buttress of the wintry Sierra San Miguel. At the lower side of the basin, where the path of the river is beset with close cañon-walls, the cliffs rise vertically from the level of the village and bear their forest growth many hundreds of feet above. These mighty walls, two thousand feet high in some places, are of metamorphic rock, and their even stratification simulates courses of well-ordered masonry—stained by iron and probably also by manganese, they are a deep red maroon. This color does not lie uniformly, however, but is stronger in some layers than in others, so that the whole face of the cliff is banded horizontally in pale rust color, or dull crimson, or deep and opaque maroon."

(To be continued.)

The Unfinished Picture.

SELECTED.

"And He shall sit as a refiner and purifier of silver." (Malachi iii: 3.)

I had laid myself to rest and as I closed my eyes, my mind wandered back to the words I had been reading in the Bible a few moments before, about the great Refiner. I remembered also the old process of refining silver: how the metal was considered unfinished until it reflected the refiner's image. Thus thinking, I fell asleep and was led into dream-land, where I thought myself in a studio. I looked around wondering, for it did not resemble anything I had ever seen before. There were many easels standing about, holding unfinished pictures, and pieces of canvas with simple outlines, were resting on the wall on all sides of the room, just leaving a corner where an old man with silvery hair and softened features, sat slowly painting. In a few moments I noticed that he stopped and put aside his brush and palette, where only the very last touch seemed wanting to complete his labor. I was puzzled with the scene before me, and eager to have it explained. I said, "Sir, will you tell me why there are so many pictures unfinished, and what all those outlines are for?" He replied, "I am an artist of the King of kings, and He bid me paint the pictures of his children." I can only paint them as they grow like Him in their character, and alas! it is very slow work. Sometimes there are years I cannot touch a picture already begun, for the characters do not grow, they are ever asleep. Others grow quite rapidly and suddenly stop, as if they were wearied, and so the pictures must remain as I left them. The outlines you see are those who hear our Lord's name, but have not shown any likeness to Him, and I am watching each day hoping to fill them in."

I thought to myself, is there a picture here for me, or am I one of those simple outlines? But I will ask, for I ought to know where I stand; so I tremblingly said, "Is there anything here for me?" The artist moved to a corner I had not noticed, and drew from it a picture just commenced. There was something more than an outline, and there were touches that looked quite fresh, as if they had been put on lately. I looked at it with eyes scarce able to distinguish, they were so full of tears, as I saw how little

was painted, and yet hardly expecting anything. I was glad and felt grateful. The old man seemed touched by my emotion and said to me, "you have been growing more this last year, you have been working for others as our Lord commanded. Many times you have not pleased yourself, and we are told in Holy Scriptures that was part of the Saviour's life, for He pleased not himself. Take courage and let me paint diligently, for when you become like unto Him the picture will be done." Then I understood why there were so many unfinished portraits in this quaint old studio, and the dear gray-headed artist stopped just as his work seemed completed. It was because our Lord's disciples stopped in the way of their duty,—and with these thoughts awoke from my strange dream. But I felt as if I had looked beyond the veil. The studio, with its uncompleted pictures and dear outlines, were plain before me; the gentle face and touching tones of the artist were with me, too,—all were stamped upon my memory. The partial picture of myself I felt I never could forget, and yet I was humbly thankful that it was not a simple outline. *It had begun to be something.* Let us not be content until we are full pictures of Him who paints our everyday lives. Let us not be weary and pause in our duty, but with his grace go steadily, lovingly on, until the last touch is added to the canvas, when it will leave the studio of earth for the walls of Heaven.

FOR "THE FRIEND."

LINES

DEDICATED TO THE MEMORY OF E. B., AN AGED AND A PRACTICAL CHRISTIAN.

We want no photograph likeness of thee,
To remember thy worth, or thy visage to see:
We ask not a tombstone to show us thy grave,
Or help us remember the counsel thou gave:
The impression thy Christian example has made,
Casts all of those idols far into the shade;
And points to the source of immortal Truth,
For a guide and a staff to the aged and youth.
ANN BRANSON.

SELECTED.

"LITTLE BROWN HANDS."

They drive home the cows from the pasture,
Up through the long shady lane,
Where the quail whistles loud in the wheat field,
All yellow with ripening grain.

They find, in the thick waving grasses,
Where the scarlet lipped strawberry grows,
They gather the earliest snowdrops,
And the first crimson buds of the rose.

They toss the hay in the meadow,
They gather the elder blooms white,
They find where the dusky grapes purple
In the soft tinted October light.

They know where the apples hang ripest,
And are sweeter than Italy's wines;
They know where the fruit is the thickest
On the long, thorny blackberry vines.

They gather the delicate sea weeds,
And build tiny castles of sand;
They pick up the beautiful sea shells—
Fairy barks that have drifted to land.

They weave from the tall, rocking tree tops,
Where theoriole's hammock nest swings,
And at night time are folded in slumber
By a song that a fond mother sings.

Those who toil bravely are strongest;
The humble and poor become great;
And from those brown-handed children
Shall grow mighty rulers of State.

The pen of the author and statesman,
The noble and wise of our land;
The sword and chisel and palette
Shall be held in the little brown hand.

—New Haven News.

AUTUMN.

Glad thoughts to welcome thee
Sweet autumn morn,
With chill, yet sunny breeze
Of our dear climate.

The Spring that gave us joy,
With bloom and birds,
Gave many gentle thoughts,
And tender words.

The Summer, with rich charms,
That glowed and died,
Rests in thy princely arms
Like a fair bride.

Prince of the happy year
In royal dress,
Of crimson, green and gold,
Thy calm smiles bless.

But with the grand array
Of hill and sky,
I seem to hear the words:
"Thou too must die."

"And Winter with cold chains,
And northern gale,
Above thy silent tomb,
Will shriek and wail."

"But Spring shall come again,
And flowers bloom;
And resurrection-time,
Succeed the gloom."

To Him whose gracious love
Fills earth and sky,
With halos of His own
Divinity,

Let us in humble trust
Our souls commend;
Till death's autumnal lights
Earth's shadows blind.

And may the Lord whose hand
Blesses the year,
Give to our human souls,
Immortal cheer.

SELECTED.

A YOUNG MOTHER TO HER BABE.

And art thou mine, thou helpless, trembling thing,
How lovely Presence? Bird, where is thy wing?
Thou pure than art, fresh from the fields of light,
Where angels garner grain in robes of white.

Didst thou bring "sealed instructions" with thee, Dove,
How to unlock the fount of mother-love?
Full well dost thou fulfil thy winsome part;
With holy fire they're writ upon my heart.

My child, I fear thee; thou'rt a spirit, soul!
How shall I walk before thee? keep my garments whole?

O Lord, give strength, give wisdom for the task,
To train this child for thee. Yet more I ask:—

Life of my life, for these I crave best gifts, and glad,
More than, even in dreams, thy mother had.
O Father! fine this gold; joy, polish this, my Gem!
Till it is fair and fitting for thy diadem."

Most persons seem to feel relieved of a certain burden of responsibility when they have catalogued an evil desire, or habit, in themselves, as their besetting sin. If the discovery and stigmatization of one's besetting sin means a fixed determination to exterminate it, that would be one thing. But if it means, as too often it does, that it is to be accepted and loved with as one of the natural constituents of one's every human personality; that to the possessor of it has labeled it and put it by to keep as a part of his moral cabinet; that every other weakness and fault and sin is to be eradicated while this is to be let alone so as to fulfil the supposed necessity of a sinner having a besetting sin—that is quite another thing. Let us realize that there is no more virtue in besetting sin than in other sins.

Centre Square and the Bank Meeting Houses, Philadelphia.

(Continued from page 100.)

Toward the close of 1701, the question of moving the Centre Meeting-house to the Bank lot was actively considered, and it was concluded to consult the Quarterly Meeting.

At the Quarterly Meeting held First Month 2nd, 1702, "Philadelphia Friends laying before this meeting that it will be much for the service of truth and Friends to have the Centre Meeting-house, which is ready to fall, taken down and set up in the city on the lot belonging to Friends, where a meeting house formerly stood in the Front Street, this Meeting gave their concurrence."

At the Monthly Meeting held First Month 27th, "A subscription toward moving the Centre Meeting house and setting it up on the lot in town belonging to Friends, being begun at this meeting and many being absent, John Parsons and Anthony Morris are desired to get it perfected by going about to Friends' houses, in order to have them subscribe, and the same persons with Edward Shippen and John Kinsey, are desired to agree with the workmen to oversee the work."

In the Third Month, 1702, a committee was appointed to collect the subscriptions toward rebuilding the Meeting house, which is to be set up at the upper end of the town, but some delay having occurred in proceeding with the work, it was thought at the close of the Fifth Month too late to go on with it that summer, but directions were given to proceed the following spring. There does not seem to be any report on the minutes of the completion of the removal, but there is no doubt that it took place, for at the Monthly Meeting held Seventh Month 24th, 1703, "it was agreed that there be a meeting held at the new Meeting house in the Front Street, every First-day in the afternoon, to begin the next First-day, at or near the second hour, and George Gray is desired to give notice thereof the next First-day in the morning."

Thus the Centre Square Meeting house became the Second Bank Meeting. It may be added in support of the view that these two buildings were the same that the known dimensions of each were substantially alike, that both were of brick and both had hipped roofs. Also that in a reconstruction, but little alterations in the frame work and other timbers would be required, and thus much expense saved; and as four feet in width was added to the Bank lot in 1713, it would look as if the house had been built too large for the lot.

It seems proper to make some reference to a picture purporting to represent Centre Square Meeting house, which was found among the papers of the late John F. Watson. The building is shown in the form of the letter L (though possibly intended to represent a cross), with two gables at right angles with each other. Windows for one story only are shown on each side of the doorways, which are under the gables, and the doors have gabled pent houses. The general appearance of the building does not correspond with the description given in the minutes. How such a representation could have had attached to it the name of Centre Square Meeting house it is difficult to understand, and can only be accounted for on one of two suppositions: either that the name was inadvertently placed to the picture of some other building, or that an attempt was made to represent it from descriptions which were erroneous.

Whilst the subject of the Bank Meeting house might seem properly to belong to a separate article, yet in view of the fact that the Centre Square building was substantially reconstructed on the Bank lot, it seems appropriate to treat both subjects together. In tracing the history of this locality and circumstances connected with it, it will be again necessary to refer to the very early minutes of Philadelphia Monthly Meeting. The first structure on the Bank lot undoubtedly antedated the building at Centre Square. At the first Monthly Meeting of Friends in Philadelphia, held on the 9th day of the Eleventh Month (January), 1682, steps were taken for procuring a suitable site and erecting a meeting-house thereon; and a committee was appointed to attend to the subject. In the Fifth Month following, the committee was instructed to confer with William Penn in relation to the matter, and it was agreed to raise £60, in money toward the cost of the building, and that the residue should be "paid in goods." At the same time John Longhurst and several others were employed as carpenters to undertake the work. And a few months later several Friends were appointed to take an account of the timber cut for the proposed building, and to number and mark it. Although the minutes do not mention the Bank Meeting-house, there is very little doubt that they refer to it. It may be incidentally stated that when that Meeting-house is spoken of specifically in the early minutes, it is generally referred to as "on the Front of Delaware," or "on Delaware side," the appellation Bank Meeting house, not being found for some years, though it appears long before the time the street was cut down in front. It was the meeting-house on the Bank of Delaware. Before this meeting-house was completed, meetings appear to have been held in a rented building, but there is nothing to show where it was located. The accommodations, however, were so limited, that in the summer of 1684 it was agreed to hold the First-day morning meeting at the Governor's house, and in the Ninth Month following the Monthly Meeting was also held there. At this time William Penn had returned to England after his first visit to the colony. The site of the Bank Meeting-house was on the west side of Front street, fifty-eight feet north of Arch Street. The lot was originally forty-four feet front and eighty-nine feet deep, and was conveyed by Thomas Holme, Surveyor General to John Longhurst and others, in trust for Friends, on the 4th of the Third Month, 1687. The deed recites that it was the lot "whereon the Public Meeting-house now stands." From this it appears (and the minutes confirm it) that title to the property was not acquired by Friends until some years after it had been occupied. The size of the lot was increased in width to forty-eight feet, by the purchase in 1713 of an additional four feet of ground from Pentecost Teague. The first meeting-house on the Bank lot was of wood, and probably weather-boarded and evidently built in an indifferent manner, which was to have been expected at a time when the early settlers were struggling in the wilderness. It was probably the "boarded meeting-house" mentioned by Proud. In the Ninth Month, 1684, the Monthly Meeting appointed a committee to do something to make it more comfortable; and in the Third Month, 1686, it was necessary to strengthen it with supports and braces, and in the early part of 1689 it had to be underpinned.

There are some indications that a part of the Bank lot may have been used for burial pur-

poses in very early times, but the reference to it is vague and uncertain.

In 1692, during the Keithian controversy, the first Bank meeting-house was the scene of a remarkable occurrence. Robert Turner, who was formerly a merchant in Dublin, came early to Pennsylvania. He was a man of means and a good deal of influence, and took an active part both in Society and public affairs. Wm. Penn placed great confidence in him, and appointed him one of his commissioners to grant warrants and patents for land. According to Watson, he lived at the northeast corner of Arch and Front Street, close by the Bank meeting-house, of which he was also a trustee. Turner warmly espoused the cause of George Keith, and became one of his active partisans. On the occasion in question in company with William Preston, another of George Keith's adherents, he went to the meeting-house and pulled down the gallery—probably the ministers' gallery, as there could hardly have been a youths' gallery in this building. A committee was appointed by the Monthly Meeting to visit Robert and inform him (as mildly expressed) that "Friends were dissatisfied with his proceedings therein." The committee met with but poor success in their visit, for Turner told them "that he had always a testimony against galleries in meeting-houses, and that he was well satisfied with what he had done."

Further labor was extended to both William Preston and Robert Turner, and it was hoped that they might be brought to a sense of their error, but it was unavailing and they were disowned in the Twelfth Month, 1693. A new gallery was erected at the expense of the meeting in the Fifth Month of the same year. Wm. Preston subsequently repented, and at the Quarterly Meeting in the Tenth Month 1696, made a full and frank acknowledgment and condemnation of his cause, which seems to have been satisfactory to his friends.

In the summer of 1698 the first Bank meeting-house was so much decayed and in danger of falling down, that it was concluded to sell it at public sale, the materials to be removed by the purchaser: which was accordingly done, and in the winter of the same year the lot on which it had stood was rented to one John Austin for three years at thirty shillings per annum, "Friends promising that it shall not be a burden to him."

As has been heretofore shown, in 1703 the Centre Square meeting-house was removed and reconstructed substantially on the same general plan, on the Bank lot, thus becoming the 2nd Bank meeting-house.

It is this building which is described in Watson's Annals, though that account seems to be erroneous in several particulars. The pictures of it which have been preserved show it elevated somewhat above the street, from which it stood back, and with a wall enclosing it on the front, in which were two gates with flights of steps ascending to the level of the ground on the inside. The building is said to have been thirty-eight feet North and South and fifty feet East and West; and the engraving shows it with a hipped roof rising to a point in the centre, with windows for first and second stories, the building being low as if opening from a youths' gallery. Porticoes are shown over the doors on the South and East sides, that on the east being supported by columns. Afternoon meetings on First-day were commenced in this house the same year that it was completed

and were continued till 1721, when they were removed to the Market Street house.

In 1719 the galleries were ordered to be enlarged for the purpose of better accommodating the Yearly Meeting, and in 1721 a committee was appointed to get a gallery made for the women friends. For about twenty years the minutes make no further mention of this property, but in 1739 it was stated in the Monthly Meeting that the grade of Front Street had been changed, which made it necessary to alter the steps.

When the old meeting-house on Market and Second Streets was moved and a new one erected about 1755, a partition was put up in the Bank meeting-house, to adapt it for holding meetings previously held at Market Street.

A delay occurring in completing the last named building, the Monthly and Quarterly Meetings were continued in the Front Street house during the following winter, but as it appears to have been imperfectly heated and it would be too cold in the depth of winter to sit there the whole time, it was provided that the women should adjourn to the "School House," probably the southernmost building on the Forrest lot, on Fourth St. below Chestnut.

With the establishment of the Northern District Monthly Meeting in 1772, and the great increase of our membership in that section of the city, the second Bank meeting-house became entirely inadequate to accommodate the Friends of that meeting, and it was requisite to provide larger premises for the purpose. When the more commodious building on Keys Alley above Front Street was erected, the usefulness of the second Bank meeting-house departed, and as funds were required to pay for the new structure, it was decided to sell the entire premises, together with an additional lot adjoining on the North, also owned by Friends. This was accordingly done, and on the 21st of Fifth Month, 1791, Samuel Sansom and others, the Trustees who held the property conveyed it to James C. and Samuel W. Fisher, for the consideration of one thousand pounds specie. The stone steps with the forms and other movable property, were reserved.

It is probable that the last meeting which ever convened in the Bank meeting-house was held on Third-day, Ninth Month 14th, 1790, as Elizabeth Drinker states in her diary that she was present at that time, and "took leave of the old meeting-house—the new one is to be christened on First-day next." She also mentions that J. Pemberton, Edward Howell, Alice Needham and Samuel Emlen spoke. She was also present on the 19th, when the new meeting-house was "Christened," when "William Savery opened the meeting in prayer and S. Emlen and W. S. appeared in testimony."

For about eighty-five years the second Bank meeting-house had been used for Society purposes. Within its walls many of the most devoted Christian men and women of former generations worshipped, and although nearly a century has elapsed since it ceased to exist, its site must still be one which those who study the early history of our Society in Philadelphia will regard with deep interest.

Natural History, Science, &c.

Collecting in Ceylon.—A Berlin naturalist has been collecting in Ceylon for certain German museums. He employed several assistants, and his collection amounts to 25,000 beetles, 7000 butterflies, about 3000 *Orthoptera*, a like number of dragon-flies, and a thousand spiders and centi-

pedes. Among his most valuable specimens are the leaf-butterflies and locusts. He has also a good collection of snakes and shells.

Oysters on French Coasts.—A report of the Inspector General of Marine Fisheries in France represents the oyster-banks of Brittany to have been greatly injured by excessive dredging.

Fishing on the Lempa River in San Salvador.—Staying at a village over night, I learned that what is called "chilpate" fishing was to take place the next day, which the proprietors of the tavern assured me was worth seeing. Board, in most of the hotels, is only 70 cents per day for a man and mule, and, concluding nothing would be lost if the sport proved to be a fraud, I lay over. Immediately below a little falls in the river the natives had placed at an early hour a network of branches closely woven in and out like lattice-work, and bound with willow withes. Above the rapids, in deep pools, were the feeding and spawning grounds of many varieties of fish, and a variety called the "enymal," which, when full grown, weighs 12 and 18 pounds, was known to be a liking for the spot. When the network was completed about a dozen women entered the stream from above, carrying large earthen pots containing a strong solution of a vine called "chilpate," which resembles the Bernuda plant, made by merely mashing the leaves to a pulp in warm water. It has the quality when mixed with running water of stupefying the fish, causing them to float helplessly drunk on the surface of the water, as if shocked with the explosion of gun cotton, as done by the frontiersmen in our Western country. When carried down by the current they are picked up by hand by the men who station themselves at the network below.

At a given signal that all is ready at the dam, the women with their skirts well girded up, jump into the swift water, casting the solution right and left, while advancing down stream as a line of skirmishers. In anticipation of the feast to succeed the catch, "marimba" players place themselves on the bank, the women keeping step to the music and throwing the mixture in accurate time. The water was soon colored to a milky white, which smoothed the surface like oil. In a few moments the water was again troubled by the fish, as the drug affected them.

There were all kinds of drunks—some nervously so, others sleepily so, others dead drunk, and some only slightly intoxicated—but all so unwary as to be bagged at the net-work, where the quick work of catching the great numbers and throwing them on the bank kept three or four dozen swarthy natives busy.

The drug is not permanent in its effect, and the little ones thrown back into the stream soon recuperated and swam away no more affected than one who has tried laughing gas. Among the lot was a fine species of speckled trout, but salmon-colored, like those west of the Rocky Mountains; and any sad thoughts over the manner in which they were taken were dispelled while discussing the fry an hour or two later.

Yopicoa in Central America.—Near the village were some cassava fields, forming a pretty ornament in a small landscape, with its smooth, oblong leaves and bristling asparagus-like stalk, covered with bright red flowers. It grows to the height of four or five feet. There are several wild plants which resemble it, whose leaves are gathered for their medicinal properties, but the good part of cassava is the root, which might easily be mistaken for a sweet potato. It, with the "yuca," a variety of the same plant, produces

all the starch of the country. The "yuca" is a larger plant, growing ten feet high, blossoming and yielding fruit throughout the year, which, when dried, may be kept years without losing its value. In foreign markets the root finds a ready sale as the source of tapioca. The natives scrape the cassava into shreds, which are squeezed until the gluten oozes through. This is mixed with water and boiled to the proper consistency, producing a beautiful starch, equal in appearance to the best powdered sugar. When the washerwoman is in a hurry she sinks a root in boiling water, allowing the starch to wash to the bottom.

Kangaroo Skins in Commerce.—There are 6000 kangaroo skins received in Newark, N. J., every week. They are all tanned in one large establishment on Sussex avenue, and are then made into fine shoes. Australia and New Zealand furnish kangaroo hides for the world. The kangaroos are killed in Australia about 300 miles back from the coast, and are shipped from Melbourne, Sydney and Newcastle, in Australia, and from Masterton, in New Zealand. Up to 1869 the kangaroos were killed and eaten in Australia, and their hides were cut into shoe straps, but an Englishman named Brown in that year discovered the remarkable character of the leather, and brought several thousand skins to this country. He tried to sell the hides to tanners, but they were shy of the novelty, and he had to sell them at a sacrifice to a book-binder. The bookbinder made triangular corner pieces in ledgers and commercial books out of the skins, and so ascertained the good quality of the leather. It was in this way that the large leather factories were first attracted to kangaroo hide. The skin was found to be very tenacious and the compactness of the grain prevents its absorbing water, while the acids in blacking meet with an almost impervious substance. It was hard work for years to get the kangaroo skins. It was not until the Newarker, who now tans them, sent agents to Australia three years ago, that the demand could be supplied. The characteristic climate of Australia and the pugnacity of the kangaroo make hunting the hides dangerous. Winter starts in May and ends in December in that country. The rest of the year the heat is intense, the thermometer frequently reaching 140 degrees.

Eight men hunt together for kangaroos. They are called a "set." When brought to bay the kangaroo jumps like a flash for a hunter's chest and tries to crush it in with his fore feet. To prevent this each man wears across his breast a two or three inch thick matting. Armed with a spear, with a club attached at the other end, they ride upon swift horses into a herd. With the agility and equisite of circus riders, they stand erect upon their horses and use their spears and clubs. The kangaroo is able to jump clear over a horse. As the game is bagged it is skinned, and the skin is stretched on the ground and pegged down to prevent shrinkage. The flesh furnishes meat for the camp. Each man places his private mark upon his booty, and when they have one hundred skins apiece they return back to civilization.

There are twenty varieties of kangaroos, among them the blue, red Wallaby, black, gray and Forester, the latter furnishing the best leather, as it lives mainly in wooded sections. When the shipping ports are reached, the hunters dispose of the skins by auction to the highest bidders and realize about 70 cents a pound. Kangaroo hunters make large profits. One man has been able to have cleared \$4500 free of living

expenses in a single year. The tanning of kangaroo skins is confined to men employed by Americans, as other dealers cannot afford to pay the high prices for the raw material. The result is that Parisian and London shoe manufacturers buy their stock of kangaroo leather directly from Newark, and prominent dealers in Germany, Greece, Spain, and even Australia itself, obtain their supplies from the same.—*Providence Journal.*

Items.

Spread of Correct Principles.—A colored minister visited lecture on Religion among his hearers from the plain manner in which he proved their sinfulness that the time had come to dissolve the connection between him and them. He lately preached a farewell sermon, at which a young man was present, a relative of the Friend who gave the account. In this communication he told the people that some of them would come to "church," give a dollar per annum, kneel down and pray—and after they had gone away, continue to act out in the world just as if they made no profession of religion. He told them he had no use for that kind of Christians.

In the winding up of his discourse, he bade them farewell in the language of the Apostle: "And now brethren, commend you to God and to the word of his grace, which is able to build you up and to give you an inheritance among all them which are sanctified." But he bid them observe that this *Word of grace* was not the Scriptures, for they themselves were not able to produce such an effect as to build up and sanctify. It was the Divine Word and Power which was in the beginning and which was *Word*, which alone could effect such change in man, as to make out of a sinner a righteous, holy follower of the Lord.

Prepare for Peace.—The old Roman saying, "In time of peace prepare for war," should be a motto to one more in keeping with the Gospel, viz: In time of peace prepare to avoid war by making friends of those who might otherwise be our deadly enemies.

Nations living on friendly terms never fight each other unless they seek their friendly feelings.

"Do not our foes nor our party that keeps others from making friends with us, but acting justly toward them removes all occasion for war."
To avoid all wars in the future, we only need to deal more justly than we have in the past. God will honor the nation thus doing, more than He will forts and navies, and what God honors no nation can well afford to despise.

Science, philanthropy, and all good men and women who love their country, and fellow men, should labor for their nation's good, not by preparing implements for taking life and laying waste the industries of our civilization, but by creating a public opinion that would demand of legislators well organized courts of arbitration where all differences between nations might be amicably settled.

The elements of war might be changed to implements of industry, and the world know and rejoice in the reign of Peace, long since foretold by Hebrew prophets. And now may the Creator of the Universe cut short the day of wickedness that now rules here on the earth, and bring in peace and everlasting righteousness.—*B. F. Knowles.*

Influence of Union of Church and State.—Dr. Arnold says, "The Church of England clergy have been politically a party in the country from Elizabeth's time downwards, and a party opposed to the course of steady improvement." Again he says, "It will not do for the church party to identify themselves with the nation, which they are not; nor with civil and religious liberty, which they have done their best to hinder."

Lord Macaulay, who was a churchman, says, "The Church of England was for more than a hundred and fifty years the servile handmaid of monarchy, the steady enemy of public liberty. The divine right of kings and the duty of passively obeying all their commands, were her favorite tenets. She held those doctrines firmly through times of

oppression, persecution and licentiousness; while law was trampled down; while judgment was perverted; while the people were eaten as though they were bread. Once, and but once—for a moment, and but for a moment—when *her own dignity and property were touched*, she forgot to practise the submission she taught."

The membership of that Church included many men of high character; and that such statements as the above could justly be made shows in a forcible manner the evil effects of the subordination of religion to political demands.

Manual Labor Instruction.—The Committee in charge of Westown Boarding School have directed one of its sub-committees to establish at that institution a department of manual labor instruction—to teach the boys the use and care of tools, &c., and have selected a teacher for that department.

Public Meeting in Gloucester, N. J.—This town, lying near the city of Philadelphia, and being easily accessible by steamboats and railroad, has of late time been the resort on First-days of many of the looser class of citizens of Philadelphia. A concern for a public meeting at that place led to the appointment of one which was held on the 29th of Ninth Month, in a Methodist meeting-house. It was well attended, and was a satisfactory meeting, in which endeavors were used to strengthen the better part of the community in making a stand against the flood tide of corruption that seems to be flowing in that place.

Church Statistics.—A circular from the Superintendent of the United States Census, states that the department of Church Statistics has been intrusted to the care of H. K. Carroll, L. L. D., editor of *The Independent of New York*. The schedules which are to be furnished to those of whom the inquiries will be made are designed to embrace inquiries as to the church edifices, the seating capacity, the value of church property, and the number of communicants or members.

Samuel Morris and Thomas P. Cope.—The *British Friend* says these Friends were present at the Annual Meeting of Friends in Denmark, on which occasion their company was specially acceptable and helpful. After their service in that land, they visited the Friends at Minden in Westphalia, subsequently returning to England. Having paid a short visit to Britain, they have since attended Cumberland Quarterly Meeting at Cockermouth on the 26th of Ninth Month, intending after further service there to go forward into Scotland, hoping also to visit some of the northern counties of England before the setting in of wintry weather.

North Carolina Friends.—We are informed that some of the more conservative members of North Carolina Yearly Meeting are not free to pay their assessments for meeting purposes, because of their uneasiness with the manner in which the money is disposed for Evangelical work, as it is made.

THE FRIEND.

ELEVENTH MONTH 2, 1889.

Our valued correspondent and frequent contributor to the columns of THE FRIEND, David Huddleston, of Dublin, Indiana, celebrated the 88th anniversary of his birth-day on the 6th of Tenth Month.

A notice of the event in a local paper says, that 41 members of the Huddleston family met at the residence of Uncle David and Aunt Elizabeth Huddleston on that occasion.

After partaking of a dinner provided by the relatives, D. H. recited an anniversary poem which he had written. "Following this was a season of prayer and devotional exercises, then a season of social greetings. None seemed more happy than Uncle David, who yet possesses all the cheerful and happy quality of youth."

Following is the poem—

MY EIGHTY-EIGHTH BIRTHDAY.

The days of years allotted to me
The Scriptures inform us are three score and ten.
But now, I can say, the years of my date
Have amounted to-day to just eighty and eight.
My ardent wish with my cause I still tender, go,
Though I fear to advance in my infirm and slow.
My general health holds out pretty well,
I rest very well and relish my food,
Do errands around when not far away,
Use my hoe by short spells when pleasant the day.

But reading and writing and hoeing and rest
Are each interchanged as fancy deems best,
But I freely admit more rest is required,
As still I grow older and easily tired.
And I find, too, that sleep is more needed of late,
As I further advance in my infirm state.
The labor I use for variety's sake
Is partly for health, and to keep me awake.

And if I am old, I still feel inclined
To think exercise good both for body and mind.
But often I find tribulations attend
To see if my faith will hold out to the end.
So still I have need to watch and to pray,
Lest Satan's temptations should lead me astray.
For the worst advance in my infirmity round
To destroy the lamb—life—wherever it is found.
Though the power of Christ may oft bruise his head,
We never yet are safe until he is dead.

It may be of interest to hear how I live
As old age has come on, which infirmities give.
We keep house all alone, as we have many years
My wife mostly able and quite willing appears
To do up the work that all housekeepers do,
Though sometimes I help and kind neighbors, too,
When extra occasions increase the demands,
Or when she is feeble or lame in her hands,
Which often occurs—but we still move along,
And enjoy as much comfort as when we were young.
She is some younger and more easy to go,
And do several errands and pass to and fro.

Kind neighbors and friends respond to our call,
But the present collection seems to crown all,
For now they come in from the east and the west,
And send us their love and their hearts are blessed.
Their presence of body and the presents they brought
Gave rise to a feeling of reverent thought.
With a thankful emotion of heart-feeling praise,
To Him who in mercy has lengthened my days,
And I hope full reward in due time will be given
By His loving-kindness and grace are blessed.
And as to our end no mortal can tell,
So we leave it to Him who does everything well.

DAVID HUDDLESTON.

DUBLIN, IND., Tenth Month 6th, 1889.

It is a comfort to meet with such sound and peaceful sentiments coming from one in so elevated a position as were expressed by Secretary Blaine, in his address of welcome at the opening meeting of the delegates from the American nations, held at Washington on the 2d of Tenth Month:—

"We believe that hearty co-operation based on hearty confidence will save all American States from the burdens and evils which have long and cruelly afflicted the older nations of the world.

"We believe that a spirit of justice, of common and equal interest, between the American States will leave no room for an artificial balance of power like unto that which has led to wars abroad and drenched Europe in blood.

"We believe that friendship, avowed with candor and maintained with good faith, will remove from American States the necessity of guarding boundary lines between themselves with fortifications and military force.

"We believe that standing armies, beyond those which are needful for public order and the safety of internal administration, should be unknown on both American continents.

"We believe that friendship and not force,

the spirit of just law and not the violence of the mob, should be the recognized rule of administration between American nations and in American nations."

A letter has been received by the Editor from a Friend in North Carolina, enclosing a circular which solicits aid towards paying for the instruction of those girls at Guilford College, who are too poor to pay any part of the expense. A cottage has been erected, in which such girls can board themselves, while their tuition only (\$20 per term) will be paid out of this fund.

Persons willing to contribute to this object may forward the money to Mary M. Hobbs, Guilford College, N. C.

SUMMARY OF EVENTS.

UNITED STATES.—The United States steamer *Thetis* has arrived at Sitka from her summer cruise. She sailed along the entire Alaskan coast, past Point Barrow and the mouth of the Mackenzie River, in the Arctic Sea. A fleet of whaling vessels went with the *Thetis*. Ice caught the warship near Point Barrow, and she narrowly escaped being wrecked. Only two exploring expeditions have ever got to the Mackenzie River, and no Government vessel was ever that far before.

Charles J. Goff, U. S. Treasury Agent, in charge of the Behring Sea seal islands, arrived in San Francisco last week. He is quoted as saying that, unless effective measures are at once taken by the Government to stop illegal sealing operations in Behring's Sea, the seal will be totally extinct within five or six years.

vice President Morton has constructed a large apartment house at the corner of Fifteenth and H streets, Washington, which promises to be a popular one. The residents are comfortable and people high in official and social circles. The Vice President has selected a manager for the establishment, but the entire business, including the café, will be conducted in the name of Levi P. Morton, who has applied for and received a license to sell liquor at the establishment.

The Navy Department has received a letter from Rear Admiral Gillis, dated Montevideo, Uruguay, Ninth Month 11th, in which he says: "In a previous communication I reported to the Department that there was a great deal of yellow fever and other epidemic diseases existing in Rio Janeiro. I now deem it my duty to add that reports of the most reliable character show that yellow fever is breaking out in various parts of Brazil, besides the city of Rio de Janeiro. Commencing so early, even before the advent of warm weather, this would indicate an unusually sickly season."

A decision has been handed down by the Iowa Supreme Court, in which several old features and some new ones, of the probitatory law are passed upon. Among the questions at issue, the right of the legislative enactment to confiscate the personal property of a defendant without process of law, it being claimed that statutes authorizing such procedure are in conflict with the Constitutions of the United States and of Iowa. The opinion holds that in a criminal action of this nature the necessity of picking up the defendant on trial also, and therefore, there is due process of law. The property rendered valueless by this order of the Court exceeds \$400,000 in value, and consists of breweries in the city of Burlington. The Court probably be taken to the United States Supreme Court.

Reports continue of the terrible drought in the country around Fairbault, Minnesota. Many wells are dry and farmers have to go miles for water. At Fairbault itself there is fear that the water work's well will dry up.

A dispatch from Aurora, Illinois, says that T. H. Ball has just returned from Mississippi, where he went recently to test a new cotton picker. While some defects were found, it is said that it was demonstrated that cotton could be successfully picked by machinery. The machine was driven up and down the rows rapidly, and took up the cotton so clean that not a double handful was left, though the work of 100 negroes. A stronger machine is now being made, which will be finished in about two weeks, and again taken to Mississippi for another test upon the present crop of cotton.

A part of the expected drop in the cost of aluminum has come, and though it is not sufficient to make the

metal cheap, it will help to bring it into use. Not very long ago aluminum brought six dollars a pound, later it was reduced to four dollars, and now it is said that it can be bought in thousand-pound lots for two dollars per pound. At this rate, either pure or in bronzes, it will be available for making many small instruments and tools that can be improved by being hardened in weight.

The deaths in this city last week numbered 330, being 3 more than last week and 6 less than the corresponding week last year. The number of males and females was 165 each; 52 died of consumption of the lungs; 27 of pneumonia; 19 of diseases of the heart; 16 of paralysis; 12 of typhoid fever; 12 of convulsions; 11 of croup; 11 of marasmus; 11 of apoplexy; 9 of cancer; 9 of old age.—U. S. 8 1/2's, 106; 4's, 127; currency 6's, 114 for 130.

Corn was quiet, but steady, at 103 cts. per pound for middling uplands.
FEED.—Wheat, prime to choice, \$13.00 a \$13.50; do., fair to good, \$12.00 a \$12.75.
FLOUR AND MEAL.—Western and Pennsylvania superfine No. 1, do., do., \$3.50; do., do., \$3.55; No. 2 winter family, \$3.40 a \$3.75; Pennsylvania family, stone ground, \$3.75 a \$3.90; Pennsylvania roller process, \$4.00 a \$4.40; western winter, clear, \$4.00 a \$4.30; do., do., straight, \$4.35 a \$4.55; winter patent, \$4.00 a \$5.00; Minnesota, clear \$3.75 a \$4.12; do., straight, \$3.75 a \$4.12; do., straight, \$4.00 a \$4.25.

GRAIN.—No. 2 mixed red, 81 a 81 1/2 cts.; No. 2 mixed corn, 40 a 40 1/2 cts. No. 2 white oats, 25 a 25 1/2 cts.
BEEF CATTLE.—Extra, 4 1/2 cts.; good, 4 1/4 cts.; medium, 3 3/4 cts.; common, 3 a 3 1/2 cts.; fat cows, 2 1/2 a 3 1/2 cts.
SHEEP.—Extra, 5 a 5 1/2 cts.; good, 4 1/2 a 4 3/4 cts.; medium, 3 3/4 cts.; common, 3 a 3 1/2 cts.; culls, 2 a 2 1/2 cts.
LAMBS.—Extra, 6 1/2 a 7 cts.; good, 5 1/2 a 6 1/2 cts.; medium, 5 a 5 1/2 cts.; common, 3 3/4 a 4 cts.
HOGS.—No. 1, 6 a 6 1/2 cts.; No. 2, 5 a 6 cts.

FOREIGN.—The British ship *Dolan*, from Calcutta for Liverpool, has founded at sea. Thirty-three lives were lost.

A cable despatch has been received in Berlin from Captain Wissmann, stating that reliable news has been received concerning Emin Pasha, the British explorer, Casati and six Englishmen. They are all expected to arrive at Mpwapwa in the latter part of Eleventh Month. Captain Wissmann also says that he defeated a force of insurgents near Sombe, and killed seventy of them. A despatch received in Brussels confirms Captain Wissmann's advice regarding Henry M. Stanley and his party.

The docks in Koenigsberg were burned on Tenth Month 24th. This is the third time they have been damaged in a short period. An enormous amount of damage was done by the flames.
The Budget was presented to the German Reichstag on the 23d ultimo. It increases the army charges 146,000,000 marks, including 61,000,000 marks for the artillery. The naval estimates are increased 26,000,000 marks.
National Zeitung declares that Turkey occupies a solid position in the European concert, and that she enjoys the protection offered by the Berlin treaty. Regarding Emperor William's coming visit to Constantinople, the paper says that the omission of such courtesies would admit of the worst interpretation.

Hypollite, the leader of the successful faction in Havti, was formally elected President of the black republic on Tenth Month 14th. The election was, of course, unanimous, 81 delegates voting.
A despatch from Lima, Peru, says that Congress has authorized the Government to contract with the bondholders for the construction of a railroad connecting the Oroya Line with one of the navigable rivers on the eastern side of the Andes.

A despatch from Quebec, dated Tenth Month 14th, says that the Mayor of Quebec, of that city, who is now in London, stating that he has succeeded in forming a syndicate of English bankers to build a bridge over the St. Lawrence River at Quebec, and also a railroad on the north shore of Quebec to the Straits of Belle Isle.

A despatch from London, dated Tenth Month 14th, says that the Japanese arrived in London on the night of the 21st ultimo, from Hong Kong and Yokohama. In a review of the calamities caused by floods, during the year 1889, the *Japan Mail* says: "Incomplete returns show that twelve prefectures have been devastated, 2319 people killed, 158 wounded, and over 90,000 people deprived of means of subsistence. More than 50,000 houses have been swept away or submerged, 150,000 acres of crops destroyed, about 6000

bridges washed away and some hundreds of miles of road broken up.

NOTICES.

BIBLE ASSOCIATION OF FRIENDS.—The Annual Meeting of the Bible Association of Friends in America, will be held in the Committee-room of Arch Street Meeting-house, on Thursday evening, Eleventh Month 6th, at 8 o'clock.

Friends generally are invited to attend.

EHRAHM SMITH,
Secretary.

Tenth Month, 1889.

WANTED.—An experienced teacher, (a member of the Society of Friends) possessing good administrative and business abilities, to act as Superintendent of Friends' Free School, 140 N. 11th St., Philadelphia.

Apply to

Ephraim Smith, 1160 Pine St.
John W. Biddle, 119 North Fourth St., or
George Vaux, 1715 Arch Street.

CORRECTION.—In the article in *THE FRIEND*, No. 11, headed a "Visit to Sea Isle City," a mistake was made in the name of the shrub which has the curious habit of sending out horizontal shoots on the surface of the water, which send shoots into the air and roots into the water. It was spoken of as *Lythrum Salinarum*. It was formerly called a *Lythrum*, but has latterly been separated from that genus and its present name is *Neyoa verticillata*.

MARRIED. at Friends' Meeting-house, Germantown, Philadelphia, Tenth Month 17th, 1889, WALTER PENN SHIPLEY to ANNE, daughter of Samuel EMLEN.

— at Friends' Meeting-house, Haddonfield, N. J., CLAYTON EVANS to MARGARET C. BELL, daughter of E. Bell—all members of Haddonfield Monthly Meeting.

— at the same place and date, MERRITT PHARO, of Tuckerton, N. J., to CAROLINE R. BELL, daughter of Ezra Bell.

— at Fallington Meeting-house, Bucks Co., Pa., J. ALBERTSON, of Germantown, to LILLIAN EASTERN, daughter of Cyrus and Asenath Eastburn, a member of Falls Monthly Meeting, Pa.

DIED. on the 20th of Sixth Month, 1889, at the residence of his father Samuel L. Fox, Bryn Mawr, Pa., JOSEPH JOHN FOX, aged 24 years. With much manly energy, and ambitious of success, life had opened before him with bright prospects, when a protracted illness of five months, led him to deep thoughts of heaven. Through Divine mercy he came in a penitent yet trustful spirit to rely upon the Lord Jesus as his Saviour. He laid hold on the promise, "Whosoever cometh unto me I will in nowise cast out," and found abiding peace.

— at his residence in Philadelphia, on the 11th of Tenth Month, JOSEPH J. WALTON, a member of the Monthly Meeting of Friends of Philadelphia, in the 33th year of his age. Although removed from the life at an early age, yet the integrity and conscientiousness he manifested in his business transactions, and his concern to practically maintain the principles and testimonies of our religious Society, have lived in the minds of his friends an evidence that he was one who had been concerned to follow his Saviour in the way of the cross. It is believed that to him may be applied the language, "Honorable age is not that which standeth in length of time, nor that which is measured by number of years. But wisdom is the gray hair unto men, and an unspotted life is old age."

— at his residence in Philadelphia, on the 19th of Tenth Month, ROBERT PARKER, a member of the Monthly Meeting of Friends of Philadelphia, for the Western District, in the 85th year of his age. Though feeble from the effect of old age, he had recently paid a visit to Ohio, and attended the Yearly Meeting held at Stillwater, which for a considerable time he had desired to do. The summons to his heavenly home was a sudden one, but his innocent course of life, and the confidence which he had placed in the promises of the work of preparation had been evidenced by the Saviour of mankind. Of him it may be said as fully as of most people—"Behold an Israelite indeed, in whom is no guile."

— at her residence in Philadelphia, on the 22nd of Tenth Month, HANNAH W. ALLEN, daughter of John and Rebecca Allen, of Germantown, a member of the Monthly Meeting of Friends of Philadelphia.

Incidents and Reflections.—No. 196.

DIVINE PROTECTION.

The Psalmist declared, "The Lord is my rock, and my fortress, and my deliverer;" a passage which Luther introduced into his famous hymn—the translation of which reads,

"A mighty fortress is our God."

Many similar expressions are to be found in the Holy Scriptures, evincing the confidence of the writers in the reality and efficiency of the Divine protection; and surely there can be no firmer ground for faith, than the conviction that we have an all-powerful, ever-present, and most loving Friend, who will never leave nor forsake those that trust in Him. Many are the evidences of the extension of the watchful care of the Almighty over his obedient children, and several of these have been related in this series of essays; yet it is no cause for stumbling, or for doubting the goodness of the Lord, that we sometimes see the righteous meeting with those outward trials which are the common lot of mankind. We have no reason to expect otherwise, for in reference to them, "one event happeneth unto the righteous and the wicked." The apostle Peter tells those who were looking for "an inheritance incorruptible and undefiled, and that fadeeth not away;" that "the eyes of the Lord are over the righteous, and his ears are open unto their prayers;" and he queries, who is he that will harm you, if ye be followers of that which is good?" Yet, in the very next verse of his epistle, as if to guard them against confining the idea of *harm* to outward trials, he adds: "But, and if ye suffer for righteousness' sake, happy are ye." And further on he gives this exhortation, "Beloved, think it not strange concerning the fiery trial which is to try you, as though some strange thing happened unto you; but rejoice, inasmuch as ye are partakers of Christ's sufferings; that when his glory shall be revealed, ye may be glad also with exceeding joy." Our Saviour also pronounced a blessing on those who were persecuted for his sake, and bids them, "Rejoice and be exceeding glad; for great is your reward in Heaven."

One of those who were sustained in their sufferings by this blessing of our Saviour, was William Barber, of Norfolk, England, an early

member of the Society of Friends, of whom George Whitehead says, that he received the truth and Friends in great love and tenderness, in 1654. "I first met him at Diss, in Norfolk, and declared the truth to him and some others present, and opened something of the mystery of Christ, and of the ministry and work of his Spirit within, and also of the enemy's contrary work in man, as the Lord was pleased to open and enable me. William was very tenderly affected and broken into tears, and his spirit humbled, though he had been a great man and captain in the army; truth was near him, and I felt him near it, and my heart was open and tender toward him, in the love of Christ.

"It was sometime after before I saw his wife; she was an honest, sober woman, received the truth and Friends in great love and tenderness; and continued a faithful, innocent and loving Friend until her dying day. I observed the Lord endured her with much patience, considering the great and long suffering her husband endured by imprisonment in Norwich Castle, for the space of *twenty years*, or more, chiefly for non-payment of tithes to an old priest of the parish, who appeared implacably malicious in his prosecution, or rather persecution and revenge. William Barber bore a faithful testimony through patience and long suffering."

It would be a great mistake to suppose that this faithful, tender-spirited man, who thus endured separation from his family and confinement in prison for twenty years, was called upon to endure these sufferings because he had displeased his Divine Master. No! he was honored in being chosen as a witness for his Lord to bear a practical testimony against the unchristian system of tithes. Through the power of Divine grace his prison may often have been to him a place in which heavenly consolations, and the sense of Divine favor and acceptance, were richly poured upon him; and when the time came, that the oppressor could no longer hold him in bondage, but the freed spirit returned unto God who gave it, we doubt not that he was admitted into that number, "who came out of great tribulations," and who surrounded the throne of God and the Lamb.

Some may be ready to admit the correctness of these remarks as relates to the martyrs, and those who suffer for righteousness' sake, and yet be rather stumbled at the accidents which sometimes befall those who are living godly lives. But is it not still true in such cases, that no *evil* comes nigh their dwelling? Is there anything really to be called an evil, that does not involve moral guilt? Take the extreme case of the sudden death of a good man by violent hands. While such an event may cause great suffering and distress to his family and friends, yet to himself what is it, but a sudden translation from earth to heaven, without having to endure the often painful and long-continued sickness through which many others must pass? And may it not be, in some instances, that He who doeth all things well has permitted such an event in order to spare his servant from trials that were ap-

proaching him, or to shield him from temptations which he would have found it difficult to resist?

And it must not be overlooked that the moral or spiritual worth of a man does not exempt him from the operation of those laws which govern the world. Whatever a man's character may be, he cannot raise a crop of grain, unless he ploughs his field and sows the seed. Without the requisite exertion, physical and intellectual, he is not likely to be very successful in any business enterprise. Unless he exercises sufficient caution and discrimination he is liable to be imposed upon by the false pretences of deceitful and designing men, and may suffer loss or even injury at their hands. There is no doubt that even in these outward things, he who is living near to the Lord in spirit is often favored with warnings and impressions, which if heeded would preserve him from many mistakes. Yet it requires an unusually attentive mind to *always* hear the gentle voice of the Spirit. Nor is it unreasonable to suppose that even good men are at times permitted to make some blunders which do not involve anything morally wrong, in order to show them how easy it is for them to fall into error.

In the year 1665, the City of London was visited with a deadly pestilence, by which thousands of its inhabitants lost their lives. Among these were a number of Friends, many of whom then resided in that city. Some persons appear to have been stumbled at the fact that Friends were not divinely preserved from the pestilential disease. After the pestilence had subsided, George Whitehead addressed an epistle to his brethren, in which he exhorts them not to be discouraged or shaken in mind at things of this nature, "nor because of the seeming advantage or occasion, that the wicked and rebellious and envious spirits, or such as are in prejudice, do take against us, because of that common calamity, and late mortality, which has befallen many of the righteous, as well as the unrighteous, as to the outward man, in the city of London." After stating that the Lord's fatherly care was over his children in all their trials and tribulations, he says:—

"The life, peace, satisfaction and comfort that many innocent Friends felt, and that some expressed and signified on their death beds, I am a living witness of for them; having sometimes, as the Lord hath drawn me in his love, been present with many of them when they were very low in the outward man, and with divers when upon their death beds, in that destructive prison of Newgate, and some other places. Yes, when sorrow and sadness have seized upon my spirit, and my heart and soul have been pierced and wounded, when I have seen the sad sufferings of so many harmless lambs, on their sick beds in these noisome holes and prisons; yet at the same time having a deep sense and knowledge of the Lord's love and care to them in that condition, and truly felt his life and power striving amongst them; this on the other hand has refreshed and revived my spirit, knowing that Christ their

salvation and redemption was manifest to and in them, though in that suffering state. With such, to live was Christ in that state, and to die was gain; it being through death that the Lord had appointed the final deliverance of many from the cruelties and rod of their oppressors, and from the miseries and evils to come."

J. W.

FOR "THE FRIEND."

A Visit to Colorado.

(Continued from page 108.)

ON A TRIP TO LEADVILLE AND ITS MINES.

On the 18th of the Ninth Month, 1859, I left Colorado Springs by the Colorado Midland Railway to see Leadville, which has so long held first rank in this State as a great mining camp of the silver ores. The distance is 135 miles, nearly westward from Colorado Springs, the railroad passing through the front range at the foot of Pike's Peak, by Manitou, and up the gorge through what has long been known as the Ute Pass, over the same route travelled by the gold-hunting emigrant of 1859. There are no gold or silver mines on Pike's Peak, nor within many miles of it; but those who can remember the excitement of thirty years ago, when so many Eastern people started for Pike's Peak impelled by the wild reports of the discovery of gold in the Rocky Mountains, may be interested to know, that it was in the vicinity of Leadville where the actual gold deposits were found, and that the most available wagon-road over the mountain pass leading to it, was by the base of this mountain; also made famous by Col. J. C. Fremont's description and picture of it in his Journal of discovery in 1843.

As our train halted at the summit of the Pass, 9100 feet above sea level, called Hayden's Divide, a fine view was gained of the peak and range, now whitened with a recent fall of snow. A recent writer of this region makes the following statement:

"On the western slope of Hayden's Divide, seven miles from the summit, is the land of petrifications, and fossils and antiquities. Here not only the tourist and the ordinary traveller are interested, but the geologist and archaeologist find a field for an abundance of thought, study and labor. Florissant is the name of the town, located in an ancient lake basin of the tertiary period, and surrounding it are many natural wonders and curiosities.

"Chief among the geological attractions is the 'petrified forest,' which consists of two farms dotted with petrified stumps of trees. Petrified wood and petrified stumps may be found all through a section of country eight miles long and three miles wide. The chief attraction among the petrifications is found on 'petrified stump farm,' a mile and a half from the station. It is 'The Big Stump.' This wonderful petrification is the stump of a mammoth *sequoia* or redwood tree. As it stands now it is nineteen feet high and forty-five feet in circumference, and is estimated to weigh 150 tons. The grain of the wood, the knots and the bark are all clearly defined in the petrification. On the same farm are six other petrified stumps and a mound of what is called by the inhabitants of Florissant, charcoal, which, if it is charcoal, is surely a greater curiosity than the petrified stump. On the adjoining farm there are over a dozen petrified stumps all in one cluster. There are other geological curiosities about Florissant which can be mentioned only briefly. There are several beds in which are found many curious fossils of leaves,

insects and fishes. These shale beds have been quite extensively explored by geologists in the employ of the government, who pronounce them, in some respects, the most remarkable and prolific of any fossil beds in the country."

Descending from thence, our course brought us into the South Park, and led north-westward diagonally across it some 20 miles. A beautiful pastoral picture is enjoyed in these great parks, that soothe the feelings after the rugged aspect of rocks and peaks has absorbed the traveller so much. No trees, shrubs, or rocks, broke the smooth surface of the vale for miles in extent. Herds of fine cattle fed or reclined on the rich sward, and clear streams meandered over its bosom. Here and there a "rancho" and its inhabitants were visible, or a railroad station broke the monotony of the view. Soon this changed, and our engine was proving by its measured and heavy breath that the climb of another steep was begun. Through solid cliffs and boulders, the highway had been pushed by dynamite and pick for many miles, until a track was laid that led us to the western verge of the park range of mountains overlooking the valley of the Arkansas River, 100 miles from our starting point. The course of the stream here is nearly south. The valley is about five miles wide. On the east the Park or Mosquito range, on the west the more lofty Sawatch (or Saguache) mountains look down upon it. Our train halted at Buena Vista Station, on Gold Hill, some hundreds of feet above the town. The eye from this eyrie perch took in a magnificent *cap d'aile*. The peaks of Princeton, Yale and Harvard, gleamed up, white with snow, (each more than 14,000 feet high) across the vale, and the pretty spires and homes of the town stood in modest contrast between them. This eminence is said to be the spot where Bierstadt sketched his famous picture, "The Grand Valley of the Arkansas."

For 35 miles our course ran up the Arkansas River, with these grand mountains in full light, scores of them piercing the sky with dome and pinnacle, rivaling the loftiest in the State, snow-clad, and standing out to the front with steep sides and bold precipices. For the first time I realized my preconceptions of true Alpine scenery.

Leadville is built on the west slope of the Mosquito range, at the height of 10,000 feet above sea level, and overlooks the Arkansas Valley for many miles. Few cities can boast a more magnificent scenic outlook; but this grand elevation carries with it a serious drawback in the extreme rarity of the air and diminished pressure on the human body. The heart's pulsations are nearly doubled by it—mine rose to 120 in a minute. More blood than the normal and healthy measure is forced into the arteries and lungs, whilst the thin air affords less oxygen to purify it than is contained in the same bulk at tide level. The consequence to the human frame in many cases is congestion of the brain with head-ache and nausea; accompanied with great languor and oppressive respiration. These symptoms pass off greatly after 24 hours stay, and with some persons are hardly felt to be serious; yet I found upon inquiry that there are many of the residents of Leadville who consider a protracted sojourn in the place dangerous to health.

California Gulch is a locality at the foot of Carbonate Hill in Leadville, which has historic interest. It was the spot where gold was first discovered in these mountains, and which gave rise to the excitement in the East in 1860. One legend told me was this—two disappointed Cali-

fornia miners had wandered from that country to this region in hopes of better luck. Their food was nearly exhausted, and gloomy despair had led one of the men to contemplate self-destruction. As he sat in this mood a bird alighted near him and attracted his attention by its blithe song. This tended to dissipate his melancholy, and induced the thought that if so feeble a creature could live and enjoy its existence in this wild spot he might imitate it. Looking around him for indications of the precious treasures he was seeking, he noticed that the debris and gravel in the gulch where he was which had been carried down from the mountains by the stream, resembled the same minerals where gold was found in California. He began washing it with a rude pan and soon was rewarded by the sight of shining nuggets of the precious metal. From this circumstance, it is said, he and his companion named the place the "Bird Mine."

This was soon noised about, and by the midsummer of 1860 thousands of adventurers had settled in the place, and \$2,500,000 were washed out of the "placers." It was not long however before this shallow deposit of gold was exhausted, as has occurred in all such superficial deposits, and Leadville was nearly depopulated by its former inhabitants.

About 1877, however, the discovery was made that a certain black sand found by the gold washers in the bottom of their pans and rockers, and which had attracted their attention by its weight, contained lead and silver ores; and a certain A. B. Wood had this "black sand" analyzed, proving its true quality as carbonate of lead mixed with chloride of silver. Confiding his discovery to Wm. H. Stevens of Detroit, they searched in the hills above California Gulch by digging for the repository of this black sand, and were rewarded by success. Of this period Ernest Ingersoll writes thus: "As spring advanced and the mountains became passable there began a rush into the camp; for the report of this wonderful rejuvenation of the old district had spread far and wide. The Denver newspapers took up the laudation of the region. The railways approaching nearest advertised the camp all over the East, for the sake of patronage; and many an energetic prospector, and greedy saloon-keeper, and many a business man who wanted to profit by the excitement, started for Leadville. It was early spring; the snow lay deep on the lofty main range of the Rocky Mountains which had to be crossed, and filled the treacherous passes; but the impatient emigrants could not wait. To be first into Leadville was the aim and ambition of hundreds of excited men, and to accomplish this human life was endangered and mule-flesh recklessly sacrificed. Companies were organized, who put on six-horse stags from Denver, Cañon City and Colorado Springs, and ran three or four coaches together; yet private conveyances took even more than the stages, and hundreds walked, braving the mid-winter horrors of Mosquito Pass. Meanwhile an almost continuous procession of mule and ox-trains were striving to haul across that frightful hundred miles of mountains the food, machinery and furniture which the new settlement so sorely needed, and which it seemed so impossible to supply. Ten cents and more a pound was charged for freight, and prices ranged correspondingly with an exorbitant profit added. Hay, for example, reached \$200 per ton. With the beginning of 1879, the steady current that had flagged somewhat during the tempestuous last months of 1878, burst into a perfect freshet

of travel. Log huts, board shanties, canvas tents, kennels dug into the side hill and roofed with earth and pine boughs, were filled to repletion with men and women, and still proved insufficient to shield the eager immigrants from the Arctic air and pitiless storms of this plateau in the high Sierras. Men were glad to pay for the privilege of spreading their overcoats or blankets on the floor of a saloon, and sleeping in stale smoke and the fumes of bad whiskey. Even the sawdust floors of these reeking bar-rooms were not spacious enough to hold the two hundred persons a day who rushed into Leadville, and every dry-goods box upon the curbstone, every pile of hay bales in the alley became a bed-room for some belated traveller."

(To be continued.)

William Grover.

(Continued from page 107.)

1818.—*Eleventh Mo., 10th.* Amidst the contemplation of the subject of religious instruction, I have remembered with some comfort those expressions of our blessed Lord to his followers: "I have many things to say unto you, but ye cannot bear them now;" and I think it certainly requires care how we press religious truths too far beyond the religious capacity of young people, perhaps not possessing the essential preparation for the reception of diffuse religious instruction, a resignation of the mind to bear the cross. To excite a willingness to bear the cross, with an eye to the crown, I consider a first principle in Christian education. If I am not mistaken, it has often been inculcated as a sound principle, not to puzzle ourselves too much to comprehend doctrinal passages of Scripture; but to leave them to be opened to our understandings, if needful, in the due acceptable time.

"God is a Spirit, and they that worship Him must worship Him in spirit and in truth." And in order that this worship may, from time to time, be performed in the newness of life, it must be in fresh ability, which He giveth, or rather lendeth; for He does not bestow it as an abiding capacity, to be exercised in our will and time; but it must be, from time to time, humbly and patiently waited for.

1822.—*Twelfth Mo., 29th.* May we be preserved so humble, so lowly, so in the spirit of gospel self-denial, as becomes the devoted followers of Christ; and as would enable beholders to discover in us the genuine features of his flock. I hope I hate formality for formality's sake; but when Friends have had the privilege of being trained and accustomed to a plain, exemplary dress, I am concerned that those I love may use great caution, ere they depart from it.

My apprehension is, that the present time is a dangerous one to Friends. They are courted and smiled upon by the world; and, without very great caution, we are liable, in our civil and religious intercourse with them, to be drawn away from that weightiness of spirit wherein true religious advancement, I believe, is known. The true, real and genuine ground upon which Friends have been mercifully brought, I believe to be exceedingly precious; and our safety and usefulness to others much depend on our keeping upon it, that we may be strengthened availing by our example, to invite others on to it, instead of quitting it to go on to theirs.

1824.—*Third Mo., 15th.* If I have any good desires, I think one of them is, that the ministry may be increasingly weighty among us. Our dear friends in that station are much to be felt

for, and I wish that we may be favored with increased qualification to contribute to their help and comfort. How does the desire arise, that there may be quite as much in weight as measure. It is a very interesting time we live in; and I think we are a singularly-appointed people. How desirable is it, that we may know our place and keep it—a waiting, solid, self-denying people. Greatly favored we have been; and we have reason to believe, shall be, if we keep to our principles—I might say, to our principle; the Divine light, life and power, revealed in the soul. Believing in this with steadfastness, I believe we should often have to be very poor, and sit very low. But I fear to say much on this important and weighty subject. Before I quite quit it, perhaps I may as well say, that I have (of late particularly) thought on the benefit and excellence of quietness and retirement of mind, and the want of it in our religious and favored Society, as well as in the world at large. If it were possible to make Friends sufficiently in love with it, what blessed effects might be hoped for from it.

1825.—*Fourth Mo., 23d.* Since our last friendly conversation, I have felt much interested in the comfort of thy declining years. Thou hast often mentioned to me thy uncomfortable feelings and prospects, respecting thyself and human nature. I believe much of them is occasioned by thy not endeavoring to lay hold of the mercy of God, offered to his creature man, through the Spirit of Christ in the soul; because I think, and heartily believe, that by resorting to that, we are often permitted to free our minds, through its blessed influence, brought into a state of resignation to the dispensations of Providence, and into a belief that all He does, however inscrutable to our limited and finite comprehension, is in perfect wisdom; and that his power is sufficient to turn everything that He suffers to befall us to a good account in the end, agreeably to the apostle's testimony, "that all things work together for good, to them that love and fear God."

As we reverently believe that the Almighty is a being of infinite and adorable perfection in all his attributes, He stands in no need of anything from us; but we stand in need of everything from Him. And we cannot rationally suppose any motive in Him by the creation of man but the communication of happiness to his creature. And it is good to entertain the belief that this Divine good-will and gracious design to communicate happiness is not of a transient nature, but constant and perpetual, in Him in whom it is said "there is no variableness nor shadow of turning." And I cannot for a moment entertain the idea that this Divine and Almighty Being, who created man for happiness and immortality, is so little mindful of him as, when he is come into the world, to leave him to shift for himself—a creature who, He well knows, has daily and hourly occasion for His providential care and fatherly protection. Remember that interesting saying of our blessed Saviour, "the very hairs of your head are all numbered," as emphatically descriptive of the tender notice and regard of the Most High towards his rational and immortal creatures.

JOHN G. WHITTIER wrote the following lines to be read at the dedication of the Library building of the Gammon Theological School in Atlanta, Georgia:

"Light, Freedom, Truth, be ever these thine own:
Light to see Truth, Freedom to make it known:
Our Work God's Work, our Wills His Will alone."

For "THE FRIEND"

Progress of Temperance.

One of the most important political events that has occurred in our country the present year, took place on the 1st ult. The two great Territories of North and South Dakota, on that day, decided by vote to incorporate in the Constitutions with which they are about to enter the Union as States, a provision prohibiting the manufacture and sale of intoxicating liquors for beverage purposes. The character of the men elected to their respective Legislatures, the same day, are such as to render it almost absolutely certain that laws will be passed which will make this prohibition clause active.

The area of the two new prospective States, aggregates 149,100 square miles—equal in extent to that of the States of New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, and Maryland combined.

With a probability that the opening of the next century (only a little more than eleven years distant) will show the Dakotas with a population of several millions of people, who will be protected, as far as human legislation can protect, against the degrading influences of the liquor saloon, the result of the election on the 1st instant is seen to be of great and far-reaching consequence.

Let the friends of temperance take fresh courage! The two Dakotas and Iowa are contiguous to each other, and are separated from Kansas, Indian Territory and Oklahoma (all of which are under prohibition) by Nebraska. This last-named State is to vote on a prohibitory amendment to her Constitution, in the Eleventh Month, 1890. She has been under a high license law of \$1,000 for large cities and \$500 for other places, for the last seven years. The result is most alarming. In the city of Omaha, with a \$1,000 license, drunkenness among women, and many other forms of vice, with its attendant crime, have increased fearfully—the startling record for the past year showing that one out of every ten of the people, of all ages, have been under arrest! It is this patent exposure of the fallacy of the notion that high license is a step in the direction of prohibition, that has forced the Legislature of the State to submit the "constitutional amendment" to a popular vote.

Kansas and Iowa, the pioneer Western States in the prohibitory movement, have only accomplished their present immunity from the evils of the legalized liquor traffic, at a heavy pecuniary cost and against the most persistent opposition. Test-case after test-case has been appealed from the decision of the local Court, to the Supreme Court of the State, and from the latter to the United States Supreme Court. The final decisions have nearly always been favorable to the cause of temperance, but the citizens of the two States have been heavily taxed to pay the court-fees and necessary expenses. This, however, has been amply repaid with untold interest, by the protection to the youth and the homes of the people.

The query naturally arises, why is it that the temperance cause is gaining such headway in the West and Northwest, while it seems to be retrograding in the East. The answer seems to be, that emigration from New England of the Puritan element, and from New York and the Middle States, of descendants of the old settlers, has given a large part of the population of the new States and Territories, men and women who

are strong advocates of temperance. To these must also be added a respectable body of Scandinavians, with like feelings. On the other hand, in our Eastern and Seaboard States the descendants of our first settlers are being largely supplanted by European emigrants, many of whom have been accustomed to drinking habits at home. From this class a majority of the saloon-keepers are supplied.

If we compare the sentiment of the people of our country to-day, with that of the past, we must admit that the cause of temperance has made large strides. In the early part of the present century, it was the practice to give wine or brandy to visitors and callers; farmers supplied their workmen with strong drink; and few men were total abstainers. I have been told that my father and my grandfather were the first in their neighborhood to refuse liquor to their work-people in time of harvest. At first, they found much difficulty in procuring help to enable them to gather their crops. But, by firmly adhering to their conscientious scruples, and by substituting cider, a generous lunch and an increase of wages, they were able to secure the needed help. Gradually the neighbors followed their example—and my father lived to see the time when the farmers in his neighborhood, with very few exceptions, had discontinued giving even the most mild form of intoxicants to their men.

While the evils of intemperance are so great, and the enforcement of temperance measures seems to be so difficult and to encounter such persistent opposition, through the money in the control of the liquor-dealers, I feel there is ground for encouragement in the evidences that this righteous cause is steadily making progress, not only in the United States, but in Great Britain and her Provinces—notably in our neighbor, Canada. Revolutions do not go backward, and, when obstructions present, let us strive, individually, as the way may open before us, to bear a consistent and practical testimony against one of the most serious evils of the nineteenth century. E. M.
Tenth Month, 1859.

A PROFFERED objection to a peculiar form of evil may seem to imply an approval of that evil under another form. The man who objects to a ballet performance in a particular theatre, for example, on the score of the poor seating arrangements in that building, seems to suggest that he would not find so much fault with such a performance if he could obtain a clearer view of it. A similar inference is a fair one in the case of a clergyman who objects to the average adulterated liquors. It would seem that he thought pure liquor not a very bad thing for drinking; whereas the chief objection to intoxicating liquor is because it is intoxicating liquor. Who supposes that Noah drank adulterated wine, or that he would have been any drunker on a mixture of logwood, fusel oil, whiskey and sweet water, than he was on the pure juice of the grape from his own home vineyard?

If your religion don't make you more honest, more patient, more humble, more prayerful, and more watchful, you had better overhaul it and see whether it is the right sort or not. True religion—the genuine article—makes men better and if you are not growing better your religion is not of the saving kind. A man won't use salt that won't save his meat. He'll cast it out and get a better article.

FOR "THE FRIEND."

THE ROSE-TREE.

In the bright early days of the summer I met thee,
Profusion of splendor thy branches adorn,
Bending down by my path-way encumbered with beauty,

And freshening with fragrance the breezes of morn.
I pass by again, all thy verdure is faded,
Not a rose on thy crown, not a bud on thy stem;
This drapery so lately in scarlet deep shaded,
All withered and brown decks thy pendulous limb.

When I thought to myself how my autumn is wasting,
And how the chill frosts of the winter must come;
And how short are the days that are longest in lasting,
From the vigor of strength to the verge of the tomb.
And of those lovely ones that thy tendrils are training
That the bloom and the beauty of spring-time adorn,
How soon there shall be not a bud left remaining
That the rude blasts of ravaging time have not shorn.

As I pensively gazed on the picture before me,
All nature seemed draped in the weeds of the tomb,
When the bright rays of hope in the future spread
Of me.

To gild with their radiance the verge of the gloom,
Though the frosts of the season have withered the blooming.

And time's chilling blast all our vigor has slain,
Still the glories spring to the rose-tree are coming,
And we never fading may flourish again. C. S. COPE.

WEST CHESTER, Pa., Tenth Mo. 21st, 1859.

THE NEXT THING.

From an old English parsonage

Down by the sea,

There came in the twilight

A message to me;

Its quaint Saxon legend,

Deeply engraven,

Hath, as it seems to me,

Teaching for heaven;

And on through the hours

The quiet words ring,

Like a low inspiration—

"Doe the nexte thyng."

Many a questioning,

Many a fear,

Many a doubt,

Hath its guiding here;

Moment by moment

Let down from heaven,

Time, opportunely,

Guidance, are given;

Fear not to-morrow,

Child of the King,

Trust it with Jesus—

"Doe the nexte thyng."

Do it immediately,

Do it with prayer,

Do it religiously,

Casting all care;

Do it with reverence,

Tracing his hand,

Who hath placed it before thee

With earnest command;

Stayed on Omnipotence,

Safe 'neath his wing,

Leave all resultings—

"Doe the nexte thyng."

Looking to Jesus

Ever serene,

Working or suffering,

Be thy demeanor;

In the shade of his presence,

The rest of his calm,

The light of his countenance,

Live out thy psalm;

Strong in his faithfulness,

Praise Him and sing,

Then, as He beckons thee,

"Doe the nexte thyng."

—Unknown.

SIN is like the leaves of autumn
Falling in the public way;
Yesterday's most careful sweeping
Will not answer for to-day.

SELECTED.

WAIT ON THE LORD.

Wait on the Lord for what He hath to give,

O restless heart;

He knows the sorrows that beset thy way,

He knows thy fretful weariness to-day,

O fainting heart.

When thou hast stilled thyself to rest in Him,

O throbbing heart,

When thou hast learned to love Him, first and chief,

O weeping heart;

Then will He grant thee all thine own desire;

O longing heart,

Sunlight of joy may even here be given,

If so He will—if not sunrise in Heaven,

O waiting heart.

A Brief Memoir of Elizabeth P. Peel.

In gathering up the fragments that remain, after the hands that were for many years so ready to hand forth the blessed bread, have grown cold and still, it is the humble hope of the writer that not only her children but others also who read, as they trace the signal mercies of God, vouchsafed to this dear mother in Israel, may be not only incited to bless the name of the Lord on her behalf, but also gain some directions from her footprints to keep them in the way of holiness.

She was the daughter of Micaiah and Julia Parker, born 18th of Eighth Month, 1809, in Northampton County, North Carolina. The next year, she was taken by her parents to the "western wilderness" near Mt. Pleasant, Ohio, where she remained with them 'till the year 1821, when the father, who was but just planting and building his home, was suddenly called from time into eternity; thus leaving to the widowed mother (a stranger in a strange land) the care of seven children, of whom little "Betsy" was the eldest.

In the spring of 1823, the family, excepting two children who remained in Ohio, mounted a road-wagon and returned by it to Northampton County, N. C.

Although Elizabeth was not then fourteen years old, yet the memories of those childhood scenes and early friends remained green through life; and often in her latest years she would draw graphic pictures of those spacious Dutch barns, the hewed low dwellings, with their broad open fireplaces, and "huge back sticks," the happy scenes during maple sugar-making and nut gathering, the school-house on the hill, and the meeting-house at old Short Creek—how each individual occupied a particular seat in it—giving in detail the personal appearance, and to her, then, youthful judgment the special endowments of many of its members.

The scenes, too, along the way she vividly remembered; and, as they came before her, she would sometimes say "How I did enjoy that wagon-ride from Ohio. We had such long grand views of the mountains; a trip by sail can't be half so pleasant." And then proceed to describe the journey. After which she would add: "If I had ever doubted the existence of a great Creator I think I would not again, after beholding those masses. How infinitely great the Hand that made them!

The family being thus broken up, she was placed under the kind care and hospitable roof of Thomas and Lydia Peel. At this place she spent all her subsequent years.

And now began to appear extraordinary talents in some directions. She says, "I well remember the day I came over to my new home. How little and insignificant I felt, being rather a dwarf of not more than sixty pounds. However

my mother had so carefully taught me the use of the needle, that I could not only assist her in family sewing but could cut and make all my own clothes. The first work Aunt Lydia gave me to do was hand-stitching shirt fronts, (I knew by her looks that she thought I couldn't do it) which when I had finished and taken to her, she said, "My dear child I really believe it is better work than I can do. Thou hast done well." This little incident seemed to take away all her reserve, and caused her to look up to her protectress with great confidence and love.

As there was no daughter in the family, she occupied much a daughter's place.

Her literary advantages were very limited, there being so few schools in the land of slavery suitable for Friends' children to attend; but during the little time she did spend at school, her progress was rapid.

In the year 1855, she married John Pele, son of her kind care-takers, a man of excellent natural parts, and good mental discipline; and who was also a sound and exemplary Friend. This union proved a special blessing to her in that her spiritual gifts met in her husband a congenial and sympathizing friend; and the bud-dings of that Divine life which had previously begun to appear, now grew, blossomed, and brought forth fruit to the praise of the Great Husbandman.

She said she was not able to date the exact time of her acceptance with the dear Saviour, but from childhood she had often enjoyed the sweetness of his love in her heart, and felt grieved when she had done wrong. At one time, especially, when through unwatchfulness, she had let slip some hasty reflective words, her mind became deeply distressed, and for days the testing language of the Apostle James rested with her. If any man among you seem to be religious, and bridle not his tongue—this man's religion is vain." But at length, when He who spake peace to the raging sea, saw that her provings were enough, He spake again to her troubled spirit, in accents mingled with love and authority, the precious words of parol, "Go in peace and sin no more, lest a worse thing come upon thee." Then, she said, her peace flowed as a river. This was a life lesson to her.

A devoted wife and affectionate mother, she warmly espoused every interest of her family, and was thus likely to feel most keenly the loss of two promising little sons whom the angel-reaper saw fit to gather during the early years of her wedded life. But she said, "When little Joseph John died (Thomas Clarkson had gone four years before), I was compelled to hide my own grief and to try to comfort my poor husband, who seemed almost ready to sink beneath the trial." These ties now being loosed from earth and attached to heaven, she seemed more and more desirous of laying up treasures there.

At the close of the war of the Rebellion, most of their effects were in the hands of slaveholders; in consequence of which, their losses were heavy; but her firm faith in a gracious Providence never appeared to falter; and the writer has often heard both herself and her husband to say that, although the slaves that were being held, were for conscience' sake set at liberty, and so lost to them, yet they were willing now to give up all their possessions, should that sacrifice be required in order that the curse of slavery might be swept from our land. She was wont to say, "He who takes note of the falling sparrows will not forget his dependent children."

As a housewife, it might truly be said of her,

"She looketh well to the ways of her household, and catcheth not the bread of idleness."

The poor and ignorant, especially the colored people, she was ever ready to advise and assist; often saying, "I'm almost afraid to live in this crooked and perverse generation; I don't want, like the rich man, all my good things in this life."

Being of a buoyant and cheerful disposition, and spending much of her leisure time in solid reading, she was a most pleasant and profitable companion. And the memory of her sweet voice and animated countenance, as she sat and conversed by her own fireside, will long be cherished by her family and friends. Even to old age she retained the vivacity of youth.

She held in the church the various positions of clerk, overseer and elder, to the satisfaction and upbuilding of its members, and to her own peace.

Ready in discipline and sound in doctrine, she was ever anxious that the Bride, the Lamb's wife, should be kept clean and white, so that offenders sometimes quailed beneath her searching eye. Her chief grief was that of an Elder. Her spiritual ear being quickened to try words as the mouth tasteth meat, she endeavored to encourage those who walked in the Light to faithfulness in its manifestations, and had no fellowship with those who walked in darkness. For the young and inexperienced minister she often had a word of comfort or of caution.

During her latter years, when innovations and departures were abundantly prevalent in the Society of Friends, she stood quietly and firmly against them; and taught both by precept and example that *ancient Quakerism is vital religion*.

On one occasion, during a meeting of ministers and elders, when vocal prayer was improperly urged and truth likely to suffer thereby, she arose and repeated the text, "Nevertheless the foundation of God standeth sure, having this seal, the Lord knoweth them that are his." Such power accompanied these words that the enemy gave back and a sweet covering of peace overspread the company.

Once, when told that she and others were called —, a body of professors who are said to deny the Divinity of Jesus Christ, her eyes filled with tears as she replied, "I have no hope but in the merits and mercy of my dear Redeemer."

Being a regular attender of religious meetings herself, she sought to encourage others to faithfulness therein; and many remember with tender feelings her last words of sympathy and encouragement upon this subject, spoken in a monthly meeting a few days before her death.

She looked forward to the change which was surely to come with bright but solemn prospects. A short time before her departure she said, "I have lived to realize the grasshopper to become a burden, and desires to fall, that is, after the flesh, but surely goodness and mercy have followed me all the days of my life, and if I am only favored to dwell in the house of the Lord forever, it is sweet to be old."

Her death, on the 29th of Second Month, 1884, was very sudden; but as the testimony of a good life is surer than dying words, her friends were fully satisfied that she was prepared to meet the Bridegroom.

JULIANA PELLE.

THE kingdom is not for them that are born of flesh, but for those that are born of the Spirit.

From "THE FRIEND."

The following letter of our late valued Friend, Jos. Scutergood, has been sent to THE FRIEND for publication, with a hope that it may prove strengthening and comforting to the minds of some who mourn over departed relatives and friends.—

PHILADELPHIA, 12th Mo., 25th, 1863.

DEAR YOUNG FRIEND MARCY DOWNING:

I HAVE THOUGHT SO MUCH OF THIS SINCE HEARING OF THE DECESS OF thy dear mother, that I feel as if I should be best satisfied to convey to thee in this way the near sympathy I feel for thee and thy brothers and sister, under your afflictive bereavement. In seasons such as you have passed through, your friends can do but little to mitigate your sorrow. But, my dear young friend, there is One who can. He is the Judge of the whole earth, and doeth all things right. He giveth and He taketh away; and He is declared to be "a Father of the fatherless." What a favor it is in such times of trial to be enabled to look up to Him with childlike faith and confidence in his *warrior* wisdom and goodness!—How it stays the mind; how it calms and controls the feelings which will arise when those we tenderly love are taken from us, producing true resignation and submission to His divine will, although to our finite comprehension the dispensation is inscrutable. This holy settlement—as I may truly call it—I believe is the privilege of those who are concerned day by day to look up to and serve Him. I hope thou hast been favored with a measure of it; and if this season of affliction has been to any of you a time of renewed visitation of Divine love, esteem it a great mercy; do not dissipate it, or throw it off; endeavor to dwell under it in inward retirement of spirit, wherein true communion with our Heavenly Father is known, and strength is furnished to overcome the sin that so easily beset; and ability is given to conform ourselves to His holy will. Bereavements such as you have had not only bring to remembrance the uncertainty of time, but impress upon us the transitory nature of the joys and pleasures of this life; and if they do but wake up the unconcerned and indifferent to the importance of becoming prepared for that eternal abode where we are assured nothing unclean or impure can ever enter, it will be to such an unspeakable favor.

I have frequently recurred with satisfaction to the visit I made at your house a few weeks before the solemn event. I have alluded to occurred. I felt interested in thee, although until that time thou wast very much a stranger to me, and I have desired thou might be willing to yield more unreservedly to the convictions and restraints of the Divine monitor which I do not doubt thou hast often been favored with. I think I alluded then to the small number of young people in the Society who appear to be preparing to take the places of those who have been gathered from works to rewards. I often have to recur to it. It would be a cheering sight if we could witness a revival of ancient zeal and dedication among such; what a happy change it would soon make.

Well, if such a change is made, it will be by individual faithfulness—that is the only way it can be brought about. "The Lord's arm is not shortened that He cannot save—neither has his ear grown heavy that He cannot hear." He will help all that apply unto Him in sincerity. It has been a peculiar time of latter years among us—many conflicting opinions have been apparent, and some young people may

have made this diversity of views a cause for not entering upon the all-important work. But such are very unwise, to be looking out at others and allowing anything to deter them from yielding to the visitations of the Lord and submitting their hearts to the Great Refiner. They should bear in mind that the preparation for eternity is emphatically an *individual* work; for it is declared, "No man can redeem his brother or give to God a ransom for him." Hence, how important it is that each should be concerned for him or herself, and seek for ability to take up the noble resolution, "Let others do as they may, I will serve the Lord."

I do not wish to extend this little token of my interest in thee. I however do wish to encourage thee to be *faithful* to all thy religious duties. This is the way to become accepted in the Divine sight. Seek for strength to take up the *daily* cross—watch unto prayer; then wilt thou know Christ's yoke to be made easy and His burden light; and He will qualify thee to take that place in His church which He designs for thee to fill; and thy humble, consistent walk and conversation will have an effect upon not only thy brothers and sister, but others. Thy friend,

JOSEPH SCATTERGOOD,
413 Spruce Street.

Parental Folly.

A young woman of eighteen, in the city of New York, was brought up by her parents in all the gaiety of youth; by them encouraged to ornament her person, and engage in every vain amusement. When she was taken ill, three physicians were sent for immediately, who pronounced her to be near her dying hour. No sooner was their opinion made known, than she requested, as a favor, that all her gay companions might be collected with haste. They were soon around her bed, when she told them she was going to die; describing the awful manner in which they had spent their precious time, and exhorted them all to repentance before it was too late; in a very affecting manner she then, turning to her father and mother, addressed to them, in the presence of her acquaintance, these heart-rending words: "You have been the unhappy instruments of my being; you fostered me in pride, and led me in the paths of sin; you never once warned me of my danger, and now it is too late. In a few hours you will have to cover me with earth; but remember, while you are casting earth upon my body, my soul will be in hell, and yourselves the cause of my misery." She soon after expired.—*Episcopal Recorder.*

I have often thought danger might be apprehended in the attempt (now so frequently made) to define the exact period at which conversion takes place. This apprehension was revived by reading an obituary notice of a younger sister lately called away. "This dear girl was a beautiful character, always evincing the spirit of meekness and purity, winning all with whom she mingled." Such a life, according to Christ's teaching, is evidence of conversion; yet the notice continues—"She embraced Christ as her personal Saviour only a few weeks before her death in a revival meeting at —." "Not every one that saith unto Me, Lord, Lord, shall enter into the kingdom of heaven, but he that doeth the will of my Father which is in heaven," are appropriate words to remember when wishing to demonstrate the fact that conversion has taken place.—*British Friend.*

Natural History, Science, &c.

Flowers as an Article of Food.—The new *Kew Bulletin* contains a memorandum by — Duthie, botanical director for Northern India, on the use of the flowers of the *Calligonum* for food in Northwestern India. The use of flowers such as those of the lily in China as a condiment is not uncommon, but it is quite unusual to find them used as food. In the present case they are used by the poorer classes only, and are either mixed with flour or are eaten separately with salt and condiments, to which a little ghee is added by those who are able to afford it. The flowers are swept up from the ground, and are kept for a night in a closed earthenware vessel, so as to fade. They may be kept for a long time. Usually they are eaten as a vegetable, but sometimes they are kneaded with thin alta and baked in cakes. An analysis of the flowers shows that their chief peculiarity from a dietetic point of view is their richness in nitrogenous compounds, and consequently their importance as an addition to foods which are poor in nitrogen.

Insects in Indian Wheat.—Charles Whitehead, Agricultural Adviser to the Privy Council, (England), says the foreign matter mixed with wheat imported from India serves as a medium for the wholesale transportation of insects injurious to the crops. Among these are weevils, which sometimes propagate unusually on the ship passage, and cause serious loss.

The Golden-winged Woodpecker.—Near the edge of the grove stands a dead Lombardy poplar, its tall, straight trunk stretching many feet into the air, and its bare whitish branches outlined against the blue of a summer sky. Around it the maples are rustling in the warm breeze, and a young robin, perched on a limb near by, is filling the air with short, sharp notes.

In the rapidly decaying trunk of the poplar, about ten feet from the base, may be seen an irregular oval hole, and the ground beneath the tree is covered with small chips which look as though they might have been made by an auger. Evidently the tree has been utilized as a domicile by some inhabitant of the out-door world.

Suddenly, at the opening, which serves alike for door and window, appears the head of the architect and owner of the home—commonly known as the Flicker, or Golden-winged Woodpecker. Scientifically speaking, it is *Colaptes auratus*.

"In most of our species," says Coates, speaking of the woodpecker, "the bill is perfectly straight, wide, and stout at the base, tapering regularly to a compressed and vertically truncate tip." The flicker, however, forms an exception to this rule and the strong, black bill which protrudes from the opening is slightly curved and pointed. A black patch just at each "corner" of the mouth denotes that this is the male bird, that mark being absent in the female. The front of the head and neck are of a soft, light brown color, shading into gray near the royal scarlet crescent at the back of the head. A collar of jetty black sets off the breast, which is handsomely spotted with the same color.

The bird turns its head from side to side and its black, beadlike eyes survey the intruder. Then it moves with rather heavy, lumbering flight to the branch of a maple near by, revealing, as it flies, the bright golden color of the under side of the wings and tail. The back and upper side of the wings are brownish, barred with black, the rump is white, and the tail black.

The cavity in the tree extends perhaps a foot below the opening, and the four white eggs which their hard, crystalline shells, have no soft resting place of hair and moss and grass, but lie on a few chips at the bottom of the nest.

Birds differ widely as to the stage of development they attain before leaving the shell. The young of our domestic fowls, for instance, as well as those of many other birds of similar habits, are able at birth to take care of themselves without much assistance from the parent; others are completely helpless, and require several weeks of care before they can maintain themselves. To the latter class belongs the woodpecker, which makes its appearance in the world with very little preparation for the battle of life. Its eyes are unopened, its body is entirely destitute of covering, and its wide-gaping mouth and feeble cry are its only provision for obtaining sustenance, as it is quite incapable of locomotion.

The flicker is said to be nearly resident in those regions of which it is a native. I have never seen it here during the winter, but its harsh cry is one of the first bird-notes heard in the spring. Living largely upon those insects which lie dormant in wood, it can readily maintain itself even when vegetation is scarce and the hum of insect life is stilled by cold.

The toes of the flicker, like those of other climbing birds, are paired, two in front and two behind, and it is also assisted in climbing by the stiff quills of the tail. Another characteristic which it shares with most of the other woodpeckers, is the peculiar formation of the tongue, which can sometimes be thrust out several inches.—*Anna L. Nichols, in Friends' Intelligence and Journal.*

A Valley of Death.—"In Yellowstone Park there is a ravine that proves as deadly to animal life as that Death Valley of Java, where wild beasts perish by the score," said Henry W. McIntyre at the Palace Hotel. He was connected with the party who surveyed the reservation, under the leadership of Arnold Hague, the park geologist. While following the streams to trace the extinct hot springs the explorers reached a ravine in which the bones of many animals, bears, deer, rabbits and squirrels, were found. The presence of the remains caused the party much wonder, and a solution of the strange affair was found only when a crow that had been seen to fly from the side of the valley to a carcass that was yet fresh, lit on its prey, and almost immediately fell to the ground.

"The death of the bird," continued Mr. McIntyre, "was caused by gaseous exhalations, whose presence in the park had been before unsuspected. The larger game also met its death by inhaling the deadly gas. The ravine is in the northeastern part of the park, in the vicinity of the mining camp of Cooke Creek, and not far from the line of the mail route. All about this region gaseous exhalations are given off, which form sulphurous deposits. In the almost extinct hot springs, areas of Soda Butte, Lamar River and Cache and Miller Creeks the ravine was found. This region is rarely visited, although it is an admirable spot for game, which, however, goes unmolested by man, the laws against hunting being very severe. The road to the valley has very few attractions, and the visitors to the Fossil forests and Hindoo basin seldom make the trip.

"In the centre of a meadow, reached by an old elk trail, is a shallow depression that was once the bed of a hot-spring pool. This is now dry and is covered with a slight deposit of salt, and that is the bait that attracts the elk and

other game of the region. The 'lick' extends for seventy-five yards up the ravine, and is thicker and more palpable towards the upper end. The creek runs past along the side of the valley and boils and bubbles as if it were the outlet of a hot spring. But the water is cold, and the disturbance of its surface is caused by the emissions of gas, mainly carbonic acid. It also contains sulphur, as particles of that are seen on the sides of the creek. As we went up the stream, the odor of sulphur became very strong, and caused irritation of the bronchial passages. About eighty yards above Cache Creek were the bones of a large bear, and near by was a smaller grizzly, decomposed, but with the skin and hair yet fresh. Only a short distance farther on were the skeletons of many more animals, such as elk and deer, and other large game. Squirrels, rabbits, birds and insects were lying about in quantities, and the ravine looked as if it had been the 'scoop' of a drive into which the animals of the park had been hunted and had there been left to die of hunger out of mere wantonness. There were no wounds apparent on the bodies before us; all the animals had been asphyxiated by the deadly gases that hung a few feet from the surface of the gulch in the dense, palpable curtain.

"The first bear we saw was a good way down the gulch, where a neck is formed. To that point the gas must have been driven by the wind, and its deadly nature may be easily guessed, when it is remembered that the slightest motion causes a diffusion of the ether that would tend to decrease its noxious properties. Here is the explanation of the oft-repeated assertion, that game was being exterminated by hunters in the Yellowstone, notwithstanding the stringent laws that had been passed for the protection of animals there. I had seen it noted that each year bears, deer, mountain tigers and other wild animals were disappearing from the reservation, and it was asserted that friends of the people who had charge of the park were allowed to hunt there in defiance of the law. There were probably 150 bodies of wild animals in the gulch when I was there. But, although there were skeletons entire, and single bones, it must not be supposed that these were the remains of all the game that had found death in the ravine. They had accumulated only since the last rainstorm. Through this gulch a mountain torrent runs when the snows have melted from the mountains or after a hard rain. Then all things, stones, bones and bodies, are tumbled together on their way to the mouth of the gulch, whence they are carried away in the creeks or are left to mark the course of the stream and bleach on the table lands. I had noticed near the mammoth hot springs the bodies of mice and bugs, but had never attributed their presence to the deadly gases that were so rapidly killing off the large game of the park."

Items.

The Transmitted Results of Drinking Habits.—In an article by Dr. L. D. Mason in *The Quarterly Journal of Inebriety*, a number of testimonies are quoted to the fact that the use of alcoholic drinks tends to inflict physical and mental wrongs on the descendants of those who thus indulge.

Dr. Arthur Mitchell, Commissioner of Lunacy for Scotland, testified: "The children of habitual drunkards are in a larger proportion idiotic than other children, and in a larger proportion themselves drunkards."

Dr. F. E. Austie said: "In the course of a large experience on alcoholism among hospital out pa-

tients, I have been greatly struck with the number of drinkers who have informed me that their relatives either on the paternal or maternal side have been given to drink; my own experience has led me to a firm conviction that particular causes of nervous debility, in an affected individual, do very frequently lead to the transmission of those qualities to those persons of an infected nervous organization which renders them peculiarly liable to the severer necrosis and which also makes them facile victims of the temptations to seek oblivion for their mental and bodily pains in narcotic indulgence. I believe that things often work in a vicious circle to this effect, and that the excesses in drink, produced in an ancestor by great excesses in drink, is reproduced in his various descendants with the effect of producing insanity in one, epilepsy in another, neuralgia in a third, alcoholic excesses in a fourth, and so on. There is an inherited nervous weakness which renders all kinds of bodily and mental trouble specially hard to be borne."

Public Meetings.—A public meeting appointed by the Yearly Meeting's Committee, was held in Jersey City, N. J., on the afternoon of the 27th of Tenth Month, in the Dutch Reformed place of worship. The meeting was attended by a considerable number of persons, and included in the other probability hindered many from coming, who otherwise would have attended.

The meeting was a quiet and impressive one, and the belief was felt that some of those present were affected with a sense of the love and goodness of God to them in particular; and that fervent desires were raised for a closer acquaintance with Him and his will, and a deeper insight into his truth.

Among the subjects dwelt upon in the vocal ministry was the evil of allowing our wicked passions to prevail, instead of earnestly seeking Divine Grace to overcome them. Another Friend pressed the importance of holiness and of doing the will of God only. The children, of whom a number were present, were encouragingly addressed, and a caution was extended to the inclusion of testimonies given to them by the Holy Spirit was enforced by reference to the Psalmist's declaration "The law of the Lord is perfect converting the soul," &c.

It was believed that the meeting was one calculated to have a good effect upon the community; and the minister of the congregation in whose house it was held, expressed his unity with the public service, and extended a cordial welcome to the Friends present.

The next evening (28th) a similar meeting was held in the Court House at Trenton, N. J., which was thought to be a very favored time, in which caution was extended to beware of the wiles of the devil, and attention was drawn to the need of spiritual purification of spirit on the part of the professing church, and the text quoted "Not every one that saith, Lord, Lord! shall enter into the kingdom of heaven, but he that doeth the will of our Father in heaven." The evil practice of reading "Sunday newspapers" was closely commented on; and finally thanksgiving and prayer to God closed the vocal services.

The Christianization of Heathen Nations.—A writer in the *Christian Advocate*, advances the opinion that the Pagan and Mahometan portions of the world are being prepared for great changes in religious profession, and this not only from the direct religious efforts of missionaries, but from the spread of the civilization and institutions of Western Europe and of America among the people of Asia and Africa.

In India the more progressive and influential of the youth are being educated in the Government schools, and though the masses are professedly in religion, yet the pupils cannot retain their belief in the superstitions of their fathers. India is now more or less threaded with railroads from its southernmost cape to the Himalayas, and its great

cities, Bombay, Calcutta, &c., have good tramways. Heretofore caste, the most formidable evil of Hinduinism, seemed an insurmountable obstacle to Missions. The contact, the very shadow of a low-caste Hindu was pollution to one of higher caste. You could not readily gather them together in schools or mission churches. But the tramways and railroads (started chiefly by foreigners) cannot recognize this old institution; it would cost too much; the result has been that, after much useless pleading on the part of the higher castes for special accommodations, the European system has taken its own course, and all castes now travel, more or less, pell-mell. We can hardly doubt that in less than a hundred years all Asia will be threaded with railways, telegraphs, telephones, and steam-boat lines on her rivers; and nearly as much may be predicted of Africa, now that missionary steamers are reaching her very heart by the Congo. Can we conceive of the old superstitions of the one and the fetishism of the other coexisting with such advanced civilization? It cannot be.

The Christianization of a nation is not absolutely dependent upon the numerical proportions of its individual converts. It may adopt Christian civilization collectively, while only a minority of its people may be church members. Such, in fact, is the actual condition of every Christian land. Even in the day of severe adversity the kingdom of heaven may be at hand, and quite contrary to Canon Taylor's Malthusian logic, a nation may be born in a day. An apparently slight but providential event may precipitate its religious revolution. An English writer remarks that "the heathenism of the Roman Empire was never apparently so strong as in the days of Diocletian, when Christianity—everywhere profaned and persecuted—seemed on the verge of extinction. Five and twenty years later the whole fabric came down as with a mighty crash, and although the empire was by no means converted to the faith, the tremendous subversion prepared the way for modern Christendom. We do not venture to forecast a similar crisis; but all over the heathen world there seems in the air the sense of some impending change."

THE FRIEND.

ELEVENTH MONTH 9, 1899.

A special dispatch to the *Public Ledger*, of Philadelphia, dated the 21st of Tenth Month, states that "the Adventists of Virginia have been holding a series of meetings at Screemersville, in Spottsylvania County, near Fredericksburg, preaching to the people to prepare for the coming of the Lord. The date for the coming has been set for the 22d instant."

The dispatch says: "Great excitement now exists among certain classes of people in the vicinity of Screemersville over the coming day of judgment, which they now believe is close at hand. All day, to-day and to-morrow night, the believers will assemble to watch for the coming of the King of kings. Should these predictions fail, and the Lord not appear, the meeting will close Wednesday morning at sunrise, and the members of the Union return to their homes."

The expectation, which some entertain, that the Lord Jesus Christ will reappear on earth, in an outward, personal shape, to reign over the kingdoms of earth, seems to us one of those mysterious questions which it is unprofitable to discuss. When He told his disciples that He would not leave them comfortless, but would come again to them, we may well suppose that He referred to his spiritual appearance in their hearts, which all his true followers will have the blessed experience of. It is this coming, without sin unto salvation, which we should all earnestly look for and most highly prize.

But we do not believe the cause of vital religion will be promoted in a community by looking for that without, which is to be experienced within; or by the excitement caused by anticipating such a wonderful event as the personal reappearance of Christ. Although many may, for a time, be awakened to a sense of their own sinfulness and want of preparation to appear in the presence of a Judge who seeth all things and to whom all iniquity and uncleanness is hateful; yet, when the day passes without any unusual manifestation of Divine Power, there will necessarily be a reaction from the state of excitement, which may lead the people to doubt the reality of all religion; and the last state of many may be worse than the first.

The certainty of death to every one and the judgment for the deeds done in the body, through which all must pass, are powerful incentives to impel the careless to repentance and amendment of life; and these may properly be urged on their attention, without connecting them with doubtful questions.

We have received a small pamphlet written by Tønnes Andraesen, George Street, Docks, Cardiff, entitled "A Guide to the Truth, as Held by the People (in scorn) called Quakers." It appears to be designed for the help of those who feel weary and heavy laden with their sins, and yet do not understand how to come unto the Lord. The author recommends waiting in silence until they feel the moving of the Holy Spirit, and in all things obeying the inward call of God.

Copies of it can be obtained for distribution by writing to the author (whose address is given above), or to Julia A. Sargent, No. 83 Gloucester Road, Croydon, Surrey, England.

SUMMARY OF EVENTS.

UNITED STATES.—The public debt statement shows that the reduction during the Tenth Month amounted to \$9,104,553.72. The total cash in the Treasury is \$625,967,725.

On Seventh-day, the 2nd instant, President Harrison signed the proclamations admitting North and South Dakota to the Union.

Acting Secretary Batcheller has decided that Chinese laundries are laborers within the meaning of the Chinese Restrictive act, and are therefore prohibited from landing in the United States, no matter whether they have been here before or not.

A telegram from Pittsburg says the Westinghouse Electric Light Company has just secured the contract to erect a central station for a very large electric light plant in Pekin, China. The machinery for the plant was shipped by the company on the 30th ultimo. Pekin is to be lit up throughout with incandescent lamps.

One of the largest land transactions ever made in the South was published on the 1st instant. All the un-sold lands in Florida of the plant system of railroads and steamships of the Tampa and Southern Railroads, and of the Jacksonville, Tampa and Key West system, including the Florida Southern Railway and of the Florida Commercial Company, have been consolidated under the name of the Associated Land Department of Florida, with headquarters of the syndicate at Sanford, Florida, under the management of Col. D. H. Elliott, as general agent. Over 6,000,000 acres of land are consolidated under one management by the formation of this syndicate.

It is reported from Cheyenne that the 2000 Indians on the Wind River Reservation, just south of the Yellowstone National Park, in Wyoming Territory, "are actually in want, and many will die of starvation before spring." Their allotment of rations is said to be insufficient; those who cultivated the ground lost their crops through lack of irrigation and an early frost, and, while many others who have agricultural implements and horses would farm, they cannot run irrigating ditches and have no money to buy seeds. Their

straits are already desperate—"the game has left the country, and is not to be discarded carcasses of domestic animals." Governor Varnen, it is said, will report the facts to the Interior Department.

Suit has been brought in Leavenworth, Kansas, by a Pottawatomie Chief, representing his tribe, for the recovery of large tracts of land out of which the Indians claim to have been swindled. As soon as it was learned that the Indians were to have their lands in severally a number of men came on the reservation, and, working on the ignorance of the Pottawatomies, induced them to sell for \$10 an acre of land worth \$300, the Indians signing the papers under the impression that they had something to do with the severely matter. Depositions of General McCook and others bring out these facts. The suit was brought through the General's efforts.

The New York Presbytery, on the 4th instant, by a vote of 92 to 23, declared in favor of a revision of the Westminster Confession of Faith.

Joseph Fleming, a liquor dealer in Pittsburg, having filled an order for liquor to be sent into Mercer County, Penna., C. O. D., he was indicted in the Court of Quarter Sessions of Mercer County. Upon conviction, he was sentenced to three months imprisonment. An appeal to the State Supreme Court was taken upon the ground that the contract of sale was made and the sale consummated in Allegheny County, where the defendant had a license, and not in Mercer County, notwithstanding the goods were sent C. O. D. to the latter place. The Supreme Court, through four of the Justices, sustained this position, and reversed the decision of the lower Court. Three of the Justices dissent from the opinion of the majority.

Deaths in this city last week numbered 399, which is 65 more than the previous week and 76 more than during the corresponding period last year. Of the whole number 203 were males and 196 females: 60 died of consumption; 25 of pneumonia; 31 of diseases of the heart; 16 of typhoid fever; 15 of old age; 15 of convulsions; 13 of bronchitis; 12 of crop; 12 of marasmus of Bright's disease; 11 of inflammation, and 11 of debility.

Markets.—(U. S. A.)'s, 106; 4's, 127; currency 6's, 117 a 128.

COTTON was quiet, and fairly steady. Middling uplands were quoted at 107 cts., but transactions were made below this rate.

FEED.—Winter bran, prime to choice, \$13.00 a \$13.50; do., fair to good, \$12.00 a \$12.75.

FLOUR AND MEAL.—Western and Pennsylvania super, \$2.50 a \$2.75; do., extras, \$2.50 a \$2.75; No. 2, \$2.40 a \$2.60; No. 3, \$2.30 a \$2.50; Pennsylvania family, stone ground, \$3.75 a \$3.90; tenney, \$3.75 a \$3.90; do., \$4.00 a \$4.40; western winter, clear, \$4.00 a \$4.30; do., do., straight, \$4.35 a \$4.55; winter patent, \$4.60 a \$5.00; Minnesota, clear, \$3.75 a \$4.15; do., straight, \$4.45 a \$4.75; do., patent, \$4.85 a \$5.25. Eye flour firm and clear, \$2.00 a \$2.25; do., clear, \$1.90 a \$2.00 per 100 pounds for choice new, and \$1.25 a \$1.75 for old, as to quality.

GRAIN.—No. 2 red wheat, 80 a 81 cts. No. 2 mixed corn, 40 a 40 cts. No. 2 white oats, 38 a 38 1/2 cts.

BEEF CATTLE.—Extra, 43 a 45 cts.; fat cows, 2 1/2 a 3 cts.; common, 3 a 4 cts.

SHEEP.—Extra, 5 a 5 1/2 cts.; good, 4 1/2 a 4 3/4 cts.; medium, 3 1/2 a 4 cts.; common, 3 a 3 1/2 cts.; culls, not wanted over 2 cts.

LAMBS.—Extra, 6 1/2 a 6 3/4 cts.; good, 5 1/2 a 6 cts.; 4 a 4 1/2 cts.; common, 3 1/2 a 4 cts.

HOGS.—Good light Western sold for 6 a 6 1/2 cts., while heavy Western sold for 5 1/2 a 6 cts.

FOREIGN.—The main Relief Committee has received a despatch from Hesham at Suvaey. The explorer says: "I reached the Albert Nyanza from Banalaya, for the third time, in 140 days, and found that Emin and Jephson had both been prisoners since the 19th of August, 1888, being the day after I made the discovery that the British caravan had been wrecked. The troops in the Equatorial Province had revolted and shaken off all allegiance. Shortly after the Mahdists invaded the Province in full force. After the first battle in May the stations yielded and a panic seized the cities, who joined the invaders and assisted in the work of destruction. The invaders subsequently suffered reverses, and despatched a steamer to Khartoum for reinforcements. I found a letter waiting for me near the Albert Nyanza exposing the same position of the survivors, and urging the immediate departure of my party. The day is the 10th of December, otherwise it would be too late. I arrived there on the 18th of January for the third time. From

the 14th of February to the 8th of May I waited for my outfit, and then left the Albert Nyanza forward bound."

"By the route taken I traversed the Semliki Valley, the Awamba, the Unsongora, the Toro, the Uhaiyana, the Unyampaka, the Anzori, the Karagie, the Uhaiya, the Wanza, the South Victoria and the Nyanza. No hostile natives were met."

A dreadful disaster occurred in the city of Glasgow on the 1st instant. The gable wall of a building that was being erected alongside of Templeton's carpet factory on William street, was blown down. An immense mass of debris fell on the roof of the western department of the factory, crushing it in, and burying 50 girls and women employed in the weaving rooms, and killing 30 of them. The wrecked building was 300 feet long. Survivors relate that a sudden extinguishment of the lights in the weaving department was the only warning they had of the disaster. All of the occupants rushed with one accord to the main exit, where most of the bodies of the victims were found.

Advises received in London from Brisbane state that the natives of Southwest New Guinea have massacred a missionary named Savage, who was sent out by the Government for the purpose of a number of native teachers and the crew of the cutter Mary, belonging to the society. The steamer Albatross, belonging to the Queensland Government, has been despatched to the scene of the murders.

James Watson Parkes, in a speech at Sydney, New South Wales, said that the time has come for the formation of a distinct Parliamentary executive in Australia to deal with national questions. He proposed that a convention of delegates from the various colonies be held for the purpose of constructing a Federal Government on an equal footing with the British Empire.

The overflow of the Po and other rivers in Italy last week, has caused the loss of several lives and the destruction of much property. Many bridges and a large number of houses have been swept away by the floods. Mantua is flooded and five persons have been drowned there. Several persons have been drowned in the vicinity of Modena. Communication with Robbi, Genoa and Piacenza is stopped. Travel on the Parma and Spezia Railway is interrupted by a landslip. The floods are increasing in Turkey.

Bavaria's mad king smokes nearly one hundred cigarettes a day.

On the night of the 30th ultimo Mexico took up a proposal of the Legislature of Guerrero, seconded by the Legislature of Colima, "to make the term of the President of the Republic unlimited." *Monitor* reports that the Conservative Mexican press oppose the proposal.

Our consul at Buenos Ayres has sent to the State Department a copy of a decree just issued by the Government of the Argentine Republic for the sale of 24,000 square leagues of public lands, at the upset price of \$2 per hectare, or about \$1.25 per acre. The proceeds of the sale are to be devoted to a conversion of the excessive issue of paper currency. Some of the lands are said to be quite undesirable, especially those in Terra del Fuego.

NOTICES.

WANTED.—An experienced teacher, (a member of the Society of Friends) possessing good administrative and business abilities, to act as Superintendent of Friends' Select School, 140 N. 16th St., Philadelphia.

Apply to
Ephraim Smith, 1110 Pine St.
John W. Biddle, 119 South Fourth St.,
or George Vaux, 1715 Arch Street.

MARRIED. Sixth Mo. 12th, 1889, SAMUEL BAKER, of Philadelphia, to SARAH L. RUDOLPH, daughter of Abram P. Rudolph, of Woodbury, N. J.

DIED. In Salem, Ohio, on the 13th of Ninth Month, 1889, JOHN PERRY, 67 years of age, an elder and member of Middleton Monthly and Particular Meeting, Ohio. He had a short time before moved to Salem in order to be nearer meeting. And although the summons for which this dear Friend was summoned to the Church had long been waited for, unexpected at the time to those about him, yet it is believed it was joyfully received, and that, through reverent love and mercy, he has been admitted among the just where the weary soul is forever at rest.

THE FRIEND.

FOR "THE FRIEND"

Incidents and Reflections.—No. 197.

INDIAN PETER, JEMMY WILSON, AND HANS
AFRICANEER.

The following letter, written by John Langdale to Benjamin Franklin, in the year 1764, gives an interesting account of some instances of true nobility of character among the American Indians. It says:—

"Soon after I went to Pittsburg, in the year 1760, George Allen, my predecessor in the agency at the provincial store, told me the following stories, which from the strong impression they made upon my mind at that time, I believe I remember circumstantially now, especially Peter's, as I had an intimate acquaintance with him, and had examined his wife with respect to the latter generous part of his offer to her—entire liberty of choice. And Jemmy Wilson I questioned as far as I dared intrude without offence to his singular modesty. When he came to the store, as he frequently did, I seldom bought less than forty pounds worth of skins (for he was an excellent hunter); he usually bought many suits of Indian clothing.

"Once I asked him if he kept store; he answered no, and I thought looked sour and disordered, as if he would take ill any particular questions on that subject. He never inquired into the value of each bundle of skins sold, nor into the particulars of the goods bought, as if he did not want to know the value of the favors he intended to confer, and as if he thought the person he dealt with would not cheat him, but through poverty and want, and was in that case welcome. His stature was small for an Indian, his person disagreeable to look at, having, to appearance, a bit cut off the end of his nose. But this I was told is a natural family mark, and I remember to have seen other Indians disfigured in the same way. He was very reserved in common, one of few words; but to those with whom he would be free, there appeared under his outside cloudy countenance a very captivating brightness, innocency and cheerful simplicity. Peter was born and brought up (he told me) near Albany, is a Mingo (or six nations), and of the tribe of the Mohawks; has lived several years among the Delawares on Ohio, but I think he said he never was at war. This Peter, with two

of his friends, was at a council held by a party of Delawares then lately returned from an incursion into Virginia, from whence they had brought captive a woman; and as they had lost one or more of their number, this council was held whether, as customary in such cases, they should sacrifice their captive. The result was for the sacrifice. The woman was bound to a stake, and wood brought for the purpose.

"Peter, as he confesses, was in love with this woman, and offered to the council for her redemption 300 bucks, which at Ohio are worth £100, and was the whole of what he had, which he also told the council, earnestly pressing them to take it. This offer was rejected, and the council persisted in their determination, and were about to set fire to the pile. Peter went then with his gun to the place, and beckoned to his friends to do the same; calling to the council and desiring to see who would set fire to the wood, declaring it should not be done until they had killed him and his friends. For such it is reported are the obligations of friendship among Indians, that each must support the other, and give up himself implicitly in all cases of exigency. The resolution of the three caused another council to be held, in which it appeared they were not so thirsty of an enemy's blood as to make way to shed it through the bodies of their friends. They agreed to take Peter's goods and delivered to him the woman. When he had taken her to his cabin, he told her what he had given, and his passion for her; adding it was beneath him to take any advantage of his property in her towards forcing her will, and that she was at full liberty to refuse or accept him, as would be most easy to her own mind. She considered it, and told him, 'The obligation she lay under to him was of such a nature that though he gave her entire liberty, she could not be easy to accept it, but was at his disposal.' He then made her his wife, and as she told me, was a tender, kind husband; and though she could not say she loved him, yet she hoped she would do all in her power faithfully to serve him.

"Jemmy Wilson is a Delaware and no warrior, which I wondered at and asked him his reason for. He answered that killing people was against his mind, and he could not do it. Some of his warrior relations had presented him with two captives, a woman and a little boy. The woman became his wife. At a treaty held with the western Indians, in the year 1759, at Fort Pitt, it was agreed, as at other treaties, that the Indians should restore their captives. Jemmy Wilson, to comply as far as was incumbent on himself with the national engagement, and at the same time undoubtedly gratifying his own humane disposition, the following Spring brought his wife and £100's worth of skins to the provincial store, and ordered them to be divided into two equal parts, and gave one of them to his wife, desiring her to take the value in such goods as she best liked, which she accordingly did. He then gave her a horse, and conducted her safe to her friends among the inhabitants, and after staying with her a week, said to her,

'Now you are safe from danger among your friends, and out of my power. You know how I have wept and loved you. Speak freely: are you willing to go back with me and continue to be my wife, or not?' She acknowledged his kind usage of her, but was not willing to return with him. The generous spirit of this good man, this friend of the human race, was not damped by his wife's refusal. He returned directly to his own home and brought the captive boy also to the provincial store, and he had the remaining £50 divided into two parcels, and gave the boy one of them, desiring him to take the value in such goods as best pleased his fancy, which he accordingly did, and then Jemmy Wilson conducted him also to the inhabitants.

(Haddonfield, March 24th, 1764.)

One cannot but feel sympathy for poor Jemmy Wilson in thus being deserted by the wife whom he had loved and kindly cared for, as well as admiration for his unselfish liberality.

An interesting account has been preserved of the effects of Divine Grace operating on one of the Hottentot race in South Africa. These people were the original inhabitants of the neighborhood of the Cape of Good Hope, and were treated with great brutality and tyranny by the Dutch colonists, in whom avarice seemed to overpower all sense of right and justice. A boor named Pinaar, who lived on one of the frontier settlements of the colony, had in his service a Hottentot named Hans Africaneer. In a fit of rage, the boor attempted to kill the brother of Hans, but was shot to the heart by the latter before he perpetrated his purpose.

The Hottentots in Pinaar's service seized the arms and ammunition in their master's house, and fled to Great Namaqualand,—where they commenced a predatory life under the command of Africaneer. Their chief soon rendered himself formidable to the colonists, filling the whole frontier, to an extent of 300 miles, with the terror of his name. He had attacked and destroyed one of the missionary stations, and was supposed to be meditating the destruction of the rest, when a message from one of the missionaries arrested his progress, and was the means of producing an entire revolution in his sentiments and feelings.

"Immediately after his conversion to Christianity, he sent messages to the chiefs of all the different tribes with whom he had ever been at war, mentioning the change which had taken place in his sentiments, expressing his regret for the blood he had been the occasion of shedding, and inviting them to co-operate with him in putting an end to war.

"After a visit to Cape Town, while halting for a few days at Talbagh, on his return to his own country, a woman, under the influence of prejudice excited by his former character, meeting him in the public street, followed him for some time, as Shimei followed King David, calling after him with all her might, and heaping upon him all the coarse and bad names which she could think of. Reaching the place

where his people were standing by his wagon, with a number of persons whom this woman had drawn together, still following him—his only remarks were: "This is hard to bear, but it is part of my cross, and I must take it up."

On one occasion he visited Berands, an old Griqua chief, with whom he had fought 24 years before on the banks of the Great Orange River. Being now both converts to the faith of Christ, their former animosities were laid aside, and they saluted each other as friends.

Those chiefs, followed by their people, walked together to the tent, when all united in singing a hymn of praise to God, after which they knelt together, and Berands offered up a prayer. The ferocious warriors of former days, were like lions changed into lambs, their hatred having been removed by the power of the Gospel.

In his last sickness, Africaneer bore this testimony: "I feel that I love God, and that He hath done much for me, of which I am totally unworthy. My former life is stained with blood, but Jesus Christ has pardoned me, and I am going to Heaven." J. W.

FOR "THE FRIEND."

A Visit to Colorado.

(Continued from page 115.)

"But the era of saloon floors and empty barrels did not last long. Enterprising men built huge hotels and opened restaurants and great lodging tents and barracks, strangers joined in twos and threes, cut logs and planted cabins. Every day chronicled some new accession of wealth; some additional tapping of the silver deposits which were firmly believed to underlie every square foot of the region. One mine had its shaft down 135 feet and the indications of success were good. Some capitalists proposed to purchase an interest in it, and a half of the mine was offered them for \$10,000, if taken before five o'clock. At half-past four rich silver ore was struck, and when at half-past five the tardy men of money came leisurely up and signified their consent to the bargain, the manager pointed to the clock and quietly remarked, 'The price of a half interest in this mine now, gentlemen, is sixty thousand dollars!'"

The population of Leadville at this time (1889) is estimated at 16,000. The excitement of former years appears to have subsided into calmer and more prudent business enterprise. Many of the mining shafts on Fryers Hill (once so noted) I found were idle. Carbonate Hill and Iron Hill have latterly been proved rich in ore deposits, and are covered thickly with buildings and "dumps" of mineral where active mining is proceeding underneath, at depths varying from 300 to 700 feet from the hill top. Many of these mines are worked at a large expense of capital, and with all the appliances that modern ingenuity and machinery can supply. Some of them are lighted with electricity. A mining claim on these hills is restricted to a space 300 feet by 1500. The lead and silver ores are found in "pockets" deposited between strata of porphyry (a whitish rock which is about the color and appearance of hardened mortar) lying above, and limestone lying at the bottom or floor of the deposit.

Professor Lakes considers that the metals found here originally came from the body of the porphyry which is found in immense masses one thousand feet thick about this region, and contains small quantities of gold and silver in its composition. It is supposed that by the action of hot water and carbonic acid on the

porphyry it has been dissolved, and its elements concentrated on the underlying dolomite or limestone in the form of sulphide of lead and silver, which were chemically changed afterwards in part into carbonate of lead and chloride of silver. The ores as they are dug out appear in various forms according to the materials with which they are mixed. Some as masses of dark brown and reddish rock; others as grey stone, and again some like brick clay. These are assorted at the pit's mouth, according to richness of quality, and transported to the "smelters," which are numerous now in the lower suburbs of Leadville. Here they are mixed in certain proportions with limestone and iron-ores, which are necessary as a "flux" to promote the separation of the constituent parts; then these materials with charcoal and coke are dumped in alternate wheelbarrow loads into the great furnace, and the fires being heated to whiteness by a "steam-blast," soon fuse the rock and metals which descend below. The worthless slag and silica runs off in a red molten stream into pots placed for it by the workmen, whilst the silver and lead, by their superior weight, pass into a lower receptacle alone. From this the bright metals flow out when the attendant removes the plug into moulds which contain over 100 pounds each. When cooled these bars of lead and silver are weighed, a small sample is punched out of each and retained by the Smelting Company, whilst the bars or "pigs" of mixed lead and silver are sent off to the assaying works to have the final separation of the lead, gold, silver, and perhaps copper or zinc, perfected by chemical and mechanical processes. The workman engaged in weighing these bars at the Harrison Reduction Works informed me that those then before him weighed about 112 pounds each, of which there would be about 300 ounces of silver, 2 ounces of gold, and the remainder about 93 pounds, principally lead. The silver is worth about one dollar per ounce, the gold twenty dollars per ounce, and the lead at Denver, about four cents per pound. At these rates the silver in one of these bars would be worth \$200, the gold \$40, and the lead \$3.72; the relative values therefore of the products of any given mass of such ore are, silver 75, gold 10, and lead one.

With regard to the grade or value of the different ores, Professor Lakes remarks, that "in the silver mines of Leadville the average of the ton is rarely more than \$40, and the bulk of the ores of that richest of camps is generally of low grade. There are a few mines of extraordinary high grade in sufficient quantities to yield from \$75 to \$100 per ton, such as some of the mines of Aspen, but these are exceptions rather than rules." A publication before me, issued by the Union Pacific Railroad Company this year, contains the following:

"Another marvellous ore body is that opened in the Minnie Mine at Leadville, where there is estimated to be over \$10,000,000 gross, in sight. Adjoining this mine are a number of others opening up a continuation of the vein, and calculated to disclose over 3,000,000 tons of ore, averaging about ten ounces in silver per ton, 25 cent of lead, and about 20 cent. in zinc. The Maid of Erin Mine, in the same district, shows an ore body several hundred feet wide, of great thickness, and extending through a number of adjoining claims, and which, it is estimated, will yield not less than \$5,000,000."

I will close this account of Leadville with the following statement taken from a publication put forth by the Colorado Midland Railway, and prepared by Horace A. Bird.

"Who has not heard of Leadville? Who has not heard of its so-called palmy days, when the great boom was on, and everything was at fever heat and the excitement knew no bounds? Who has not heard the predictions that after the excitement and the fever the great camp would sink and fade away and die; that 'the bottom would fall out,' and Leadville would become a reminiscence? Who, has or will live to see the prediction fulfilled? Not the man or the child of this generation. Leadville has been and is to-day the greatest and most marvellous mining camp in the world, and it bids fair to hold its proud position for many years to come, for no other district in the world can show such extensive and diversified mineral resources. Within a radius of ten miles ore deposits of every nature and character are found, and the prospecting and development of the hundreds of mines, both great and small, show that the vast treasure vault of Leadville has as yet only been tapped. The combination has been found, the door has been opened, and the treasures at the door-sill have been removed, but the numberless apartments, with their stores of wealth, have not yet been entered. The developments of the past two years are leading the way to these as yet closed apartments.

"The year 1887 was noted for prospecting and development, which opened up more paying mines than were opened in any one previous year, and while quite a number of new discoveries were made in new properties during the year just closed, the record of 1888 is chiefly noted for the new strikes in old mines. The bonanzas of former years which were thought to be exhausted have come to the front again with big bodies of ore, and each year's development in the old mines as well as the new, only prove more clearly that the rich storehouses of Leadville have only begun to yield their treasures. The product of the camp for 1888 was \$11,830,205, nearly \$1,000,000 per month, and an annual production of about \$740 for every man, woman and child in the city.

"The new year (1889) opens with some very promising strikes, and for the month just closed (March) the output is a million and a quarter. A quarter of a million of this is accredited to one mine, the Mikado, whose recent developments have caused no little amount of excitement among the mining men of Leadville. In some of the ore recently opened up are found pockets of chloride of silver assaying from 5,000 to 10,000 ounces of silver per ton. A lot of 100 tons shipped one day brought a net return of \$56,000, while at another time the shipments of six days brought \$100,000. This wonderful mine, claimed by some to be the richest silver mine in the world, and produced \$1,250,000 during the past year, and is now averaging \$200,000 per month. Leadville's product for the ten years closing with 1888, was \$134,021,144.00."

(To be Concluded.)

"CROWDING OUT" is often practicable where "rooting out" is not. It is, at the best, a tedious and uncertain process by which the gardener roots out the weeds from the vegetable patch or the green sward. But it is, in many a case, a sure and effectual process by which the weeds crowd out the grass and the vegetables. The weed's way is nature's way, and it is the surer way. Let a good desire take root in the heart, a noble thought in the mind, a useful work in the hand; then there will be so much the less room for evil to spring up and to spread.

Adam Spencer.

[A notice of the decease of this Canadian Friend, so well known and justly esteemed, has already been published in THE FRIEND. Since then we have received several numbers of a local paper, containing extracts from a family history commenced by Adam Spencer, but left unfinished in consequence of his increasing illness. From these the following items are taken.

This history is preceded by a notice of the funeral, and a tribute to the sterling worth and kindness of character of the deceased.—Ed.]

"The following brief history of the Spencer family is partly of a traditional character; particulars having been related in my hearing by my honored father, Robert Spencer. I do not remember hearing the name of our great grand father, who came over from England via Ireland about the year A. D. 1739. My own grandfather's name was Robert Spencer. He was born in Ireland (of English parents) about the year 1733. He was one of a large family.

"The first incident known in active life of grandfather Robert Spencer, was his marriage with Catherine Sternburg, of German parents. Her father, Adam Sternburg, lived on the Mohawk River, in New York State. He had a farm on each side of the river, which required frequent crossing, and the daughter Catherine once became an expert manager of a boat. Robert Spencer and wife settled on a farm of 200 acres at Schoharie beside the Mohawk. The Indians owned a tract of land along that river, and the Red Men formed a part of their neighbors.

"The general kindness showed them by our grandparents, made very warm friends of the Indians. On one occasion grandfather made a rolling bear, and asked only his white neighbors, which seemed to hurt the feelings of the Indians. He afterwards said to them, 'he did not invite them to come with the whites for fear the latter would look down upon the Indians, but he had plenty left for them to do, and he would be thankful if they would help him.' The Indians came and did much more work than the white men had done, and seemed pleased with the notice given them. During the time of living on the farm at Schoharie, they had six children, born to them, viz: Jacob, Abigail, Elizabeth, Sarah, Robert, and Adam. The latter was a child at his mother's breast when grandfather joined the British standard, as member of a volunteer corps, the company were noted for their daring bravery. Robert Spencer's action in joining the British incensed his neighbors, many of who were in sympathy with the Rebels (as they were called) that in his absence the family was robbed and sadly despoiled of their goods, and soon the family were taken to Montreal, Canada, by the king's conveyance, and for eight years Robert Spencer did not see his family, his farm at Schoharie was confiscated to the State; but at the close of the war the British government gave to the sufferers land in Canada in lieu of their losses as well as a reward for their services. When Robert Spencer got his discharge from the army, he went direct to Niagara and wrote for his family to meet him there. By the help of the king's conveyance, the family soon joined the husband and father. In a short time he drew 200 acres of land, situated at the summit of the banks of the Whirlpool, where the united family settled, and soon succeeded in making a comfortable home. But a few years elapsed when a serious occurrence caused mourning to the family. The mother was induced to assume the care of an invalid

child belonging to an officer living at Youngstown. The child soon made such improvement that the father wished to see it, and he would furnish the child with the needful supply. Accordingly Robert Spencer and wife undertook to cross the Niagara River in a boat, from Queenstown. The ice was running at the time, and the boat was upset, and the wife with her infant care was drowned, and Robert Spencer barely escaped with his life.

"This made a serious blank in the family. Jacob, the eldest son, went to work for himself, and the daughters subsequently married, and the father took to himself a second wife.

"Robert purchased 100 acres of land in Pelham, (now known as the Church Farm) three quarters of a mile north-west of Fort Hill. He soon married Sarah Rice, our honored mother, and a large share of hard labor was their united portion. In the year 1812 they removed into the township of Thorold. They had acquired 300 acres of land on what is now known as the "Quaker Road." There again father had enough to do in lifting up the axe upon the thick trees, and mother had a full share of burdens in providing for the wants of an increasing family. She gave birth to thirteen children. To those only, who are acquainted with pioneer life can be understood the toil, perseverance and indomitable courage which had to be endured by Robert and Sarah Spencer. He was his own carpenter, blacksmith, tanner and shoemaker, &c., while she superintended the preparation of the wool and flax, and the spinning of the same; and when the fabrics returned from the weaver, she made the garments. In fact, industry and frugality formed the basis of their success. Their home became furnished with the necessaries of life, and many a needy and weary person partook of their hospitality.

"As time passed on, grandfather made frequent visits to his children, who were settled within a radius of twelve miles of his home. He had his favorite horse, which he rode upon. The writer can remember the exciting shouts of "grandfather," which saluted the old man's ears from the children, as he rode up the lane leading to the house of his son Robert. His visits to the said home became more frequent, and each time his stay was longer. At length he said to Robert and Sarah "if they were willing he would like to make his home permanently with them." They gave him a cordial welcome, and the father and grandfather became an inmate of his son Robert's family. He gave no reason for his desire to change, but no doubt there was felt a congeniality in Robert's family, that he did not witness where he left. This was about the year 1815.

"In the early part of the year 1837, Adam Spencer and family removed to South Norwich, Oxford County, accompanied by the father. The bond of social and fraternal ties was very strong in him toward the family. The father lived in the enjoyment of nearly uninterrupted good health until the latter part of the year 1859, he fell and dislocated, or broke one of his hips, which deprived him of ever walking again. He lingered five and one half months, when death terminated his sufferings.

"When I was a few months old, my parents removed from Pelham Township into Thorold, the adjoining one, and settled on a farm with but little improvements, where my father employed his energy and skill in clearing and improving for a home. My mother also bore her share in performing the domestic duties which devolved upon her. I had early and

full opportunity to observe and to take in pioneer life.

"In the very early settlement of the country a heavy wind or hurricane passed over the country and leveled the forest to the ground from one half to a mile wide. Two years afterward a fire consumed the fullen timber and a large and productive pasture-field was the result. This field lay about one mile from my father's farm, to which the cattle daily resorted and from which they had to be brought home at night, and which caused at times a good deal of hunting to find them. Each herd was supplied with a bell; the variation in the sound enabled the practiced ear to determine the location of the herd. I could not perform the service of cow-boy until I became old enough to become acquainted with the routes, but I was early put to driving oxen and horses, the former more particularly, as they were much used. It required much skill to drive from two to four yoke of oxen to plough among the stumps.

"The farmers tried each year to clear a new field to put into wheat. It took many hard knocks to fell the big trees. The logging-time took place in the fall, in time to secure a sowing in a proper time. As each farmer was usually alone, the rolling of the logs into heaps was mostly performed by what they termed bees; that is, one of the farmers would invite his neighbors to assist him in clearing his fallow. A general turnout was commonly the result, each party who had a yoke of oxen would bring them, the men would divide off into companies of four or five, including the ox-driver. Said driver was considered the captain of his party, who would plan heaps and divide the work; each company would commence at the same side of the clearing and take equal space as near as possible; and a vigorous strife would be persevered in in order to come out first-best, or which should pile the greatest number of heaps. A similar scene would occur each day, until all the neighbors had their logging done. At the time of chopping, such timber as would make rails were cut into suitable lengths for rails. These logs were drawn to the outside of the clearing; and several large piles of the best wood was commonly piled outside of the clearing, for the coming winter's fire-wood.

"The work of burning the heaps would be entered upon as soon as possible, and with diligent closing together, the burning pieces would soon be consumed. It required a good deal of raking and picking up small stuff.

"When the ground was cleared, a harrow, made three-square, with from seven to nine strong teeth, was drawn several times over among the roots by oxen, which was most severe on their necks, caused by the continuous jerking. The ground thus prepared, the seed was sown, and a more perfect harrowing would be given, until the soil was pulverized sufficiently. Soon the wheat would appear a beautiful green.

"As soon as the sowing was done, the outlying logs were split into rails and the fence put up. The following year the farmer was rewarded by a good harvest, as a general thing. The process of clearing was repeated each year by the thrifty farmer, until his clearing was large enough. In five or six years the smaller stumps would be sufficiently rotted to be pulled from the ground, and another clearing would follow; and the ground which had furnished meadow as pasture was ploughed and cultivated as the farmer thought best."

FOR "THE FRIEND."

Central New York.

A recent visit to the country bordering on Cayuga Lake awakened an interest in the geological features of that portion of the State of New York.

The oldest of the rocks found on the earth's surface contain no trace of animal or vegetable remains, so that, either they were deposited before life existed on the globe or else the changes which they underwent were so great as to destroy all the organized forms of the plants and animals which had existed.

In North America these rocks are found in a wide belt of country extending in a southwest direction, from the coasts of Labrador to the great lakes, and from them, in a northwest direction, to the Arctic Ocean. A few smaller areas of them can be traced in Southeastern Pennsylvania and other places; but they are mostly only visible in the regions already mentioned. We say *visible*, because it is probable the whole Continent is underlaid by similar rocks, which would be reached at almost any spot by boring to a sufficient depth through the strata which have been spread over them in the course of ages, by the action of water when North America was covered by the sea.

The wearing effect of the elements, especially of water, which is partly mechanical in its action, but also assisted by the solvent power of this fluid, especially when charged with acid and alkaline substances, is one of the principal means which an all-wise and beneficent Creator has employed to so modify the surface of the earth as to render it fit for the habitation of man and other animals. By these means the rough rocks have been partially broken up, their materials sorted out and spread in immense layers over the hard, unyielding and barren surface which before existed. The various metals and other minerals, which man needs for the arts of civilized life, have been brought together so as to be available for his purposes; the rocks, on the surface, exposed to air and water, have almost everywhere been rotted or decomposed, and turned into earth, which forms the basis of our soils, on which various forms of vegetables can grow; and these, in their turn, supply the materials for animal life.

There is abundant proof that the greater part of North America, south of the primary, lifeless rocks which have been spoken of, was in ancient times covered to a moderate depth with a body of salt water, and that it underwent, through a series of ages, a succession of changes, sometimes sinking and sometimes rising. In no other way can we account for the presence of the various strata or layers spread over the surface of the underlying primary rocks.

My line of travel took me to Ithaca, at the southern extremity of Cayuga Lake, and from thence northward along the railroad which skirts its eastern border. Much of the way the rock was cut in the rocky banks of a soft, slaty stratum. The layers of which it was composed are very thin, and the material soft and brittle. It is, indeed, nothing but layers of mud, which slowly settled out of the primeval ocean, and hardened into a kind of rock. From the lake the ground ascends by a slope, at first rather steep, but afterwards very gradual to a height of about 500 feet. The slate soon becomes covered with a bed of gravel, or drift; and as we reach the upper levels, we find a fertile soil containing lime, and very productive.

The fragile character of the slaty layers is shown by the deep gorges, with steep sides,

which are made in it by the streams which carry off the rainfall on the upper plateau. Several of these streams have excavated such deep ravines as to furnish beautiful waterfalls where the streams pour over the ledges of rock into chasms below.

The rocky strata in this section appear to be nearly horizontal, so that they are, probably, but little changed since their first deposition; and do not show those upheavals and twistings which are so common along the Appalachian hills and mountains. They contain numerous remains of the shell-fish and other animals, which in former ages inhabited the seas in which they were deposited.

Cayuga Lake is about forty miles long and three wide—a great trough excavated in a north and south direction. Its waters find an outlet at the north end, and finally empty into Lake Ontario. In addition to the 300-foot depression from the summit of the ridge to the level of the water, one must go 300 feet deeper to reach the bottom of this excavation—over 300 feet. The depth opposite Aurora of the lake has the bottom of this excavation—over 300 feet. The principal agents in ploughing out this great floor of perhaps ten miles wide and 800 or 900 feet deep in the middle, have been water and ice. If the strata lie horizontally, one must suppose there was a time in the remote past when they continued nearly in a straight line from the summit of the ridge on the east side of the lake to that on the west, and there was little or no depression in the middle, where the water now lies.

The summit of the plateau to the east of the lake is called Poplar Ridge, because, when the country was first settled by white people many of the early settlers planted Lombardy poplars as ornamental trees about their dwellings. Some of these still remain, and are the largest of the kind that I have ever seen, and looking quite venerable. The native woods are principally Sugar Maple, Beech, Elm, Basswood, and Iron wood; Walnut, Chestnut and Hickory are scarce. Hay, grain and fruits are among the principal crops raised for sale. It is a good apple country, and the produce of the orchards is largely shipped to other places.

Among the plants which were still in bloom (for it was in the Tenth Month that the visit was paid, and most of the summer flowers had disappeared), was a sweet clover (*Melilotus alba*), which it was said had only been introduced within a few years, but which appeared to be thoroughly naturalized, especially along the roadsides. There were several asters still lingering—the most beautiful and conspicuous of these was the New England Aster (*Aster Novæ Angliæ*), with large and showy flowers of a rich violet or rose-colored purple color. This handsome plant was quite abundant.

The farmers in this section mentioned three plants which were the most troublesome of their weeds—one of these was the couch-grass, or Quitch-grass (*Triticum repens*). It belongs to the same genus as our cultivated wheat, and has some value for pasturage. The peculiarity of the plant is a long underground root-stalk, with several joints. When ground is ploughed the root-stalks readily break at these joints, and each piece may become a new plant, sending out rootlets below and a stem above. This renders it very hurtful in the raising of wheat or other cultivated crops. Another weed, which was too commonly to be seen, was the well-known Canada thistle; and a third, which was still more dreaded, was a species of wild mustard, the English Charlock (*Brassica Sina-*

distrum), as I supposed; the yellow flowers of whose second growth were frequently met with in cultivated fields. This plant has been introduced from Europe, and is very common in the New England States and in Canada, where it is regarded as a noxious weed in grain-fields.

Among the agricultural novelties were hedges of Honey Locust. The formidable thorns which this plant produces seem to render it a suitable plant for the purpose; but several of the hedges which I saw were so open near the ground, that they would scarcely prevent the passage of pigs or other small animals.

Scattered over the fields were some boulders of granite, and other rocks, which do not belong to that neighborhood. They had probably been transported from more northern regions by the ice-sheets which geologists believe at one time spread over a considerable area of North America.

The social mingling with Friends in that neighborhood was pleasant, and was enlivened by anecdotes of departed worthies. One characteristic incident was related of Joseph Hoag. He observed, on one occasion, that a drowsy feeling seemed to have place in a meeting for worship. So, when the time to close it had arrived, he rapped on the floor with his cane to arrest their attention, and said, "If Friends had gotten through with their naps, we will go home."

One Friend mentioned being at a Yearly Meeting of Ministers and Elders in Canada, where there seemed rather a superabundance of words, which was finally checked by the late Adam Spencer, who said, we have been having a sort of love-feast, and are full. It is now drawing towards night, and there is yet some business to transact—and suggested that they should dispense with any more preaching and attend to the business on hand. J. W.

A LITTLE SUNBEAM.

A little sunbeam in the sky
Said to itself one day:
"I'm very small, but why should I
Do nothing else but lay,
"I'll go down to the earth and see
If there is any use for me?"

The violet beds were wet with dew,
Which filled each heavy cup;
The little sunbeam darted through,
And raised their blue heads up.
They smiled to see it, and they lent
The morning breeze their sweetest scent.

A mother neath a shady tree
Had left her babe asleep;
It woke and cried, but when it spied
The little sunbeam peep
So shy in, with glance so bright,
It laughed and chuckled with delight.

On, on it went, it might not stay;
Now through a window small
It peered its glad but happy ray,
And danced upon the wall.
A pale young face looked up to meet
The sunbeam she had watched to greet.

And so it travelled to and fro,
And glanced and danced about;
And not a door was shut, I know,
To keep that sunbeam out;
But ever as it touched the earth,
It woke up happiness and mirth.

For loving words, like sunbeams, will
Dry up a fallen tear,
And loving deeds will often help
A broken heart to cheer.
So loving and so living, you
Will be a little sunbeam too.

IMPROVEMENTS ON THE HOMESTEAD.

In the busy, dusty city,
I dreamed of boyhood's days,
And the old stone homestead far away
Mid quiet country ways,
Its shingled roof all moss-grown,
Its walls so cool and gray,
And the vine-clad stoop, where the old folks sat
To rest to close of day.

Then the dream became a longing,
And, travelling far and fast,
I came to the little village where
My childhood's years were passed,
And sought the quiet stone mansion,
But O! what change was there!
Bay-windows, balconies, and, at
One end, a *porte-cochere*.

The walls were pumpkin yellow,
The shingled roof bright red,
And at the side a rounded tower
Reared high its upstart head.
No trace of home beloved!
No signs of days gone by!
Not even the long well-sweep that used
To point toward the sky.

I felt as one who, bending
To look in some old face
He loves, beholds it clanked with rouge,
Bereft of each dear grace.
So now when of improvements
Men talk, my heart is sore,
And longs for the stoop where the old folks sat
To rest when the day was o'er.
—Virginia B. Hanson, in "The Home-Maker."

THE EVENING BRINGS US HOME.

Upon the hills the wind is sharp and cold,
The sweet young grasses withered on the world,
And we, O Lord, have wandered from thy fold;
But evening brings us home.

Among the mists we stumbled, and the rocks
Where the brown lichen whitens, and the fox
Watches the straggler from the scattered flocks;
But evening brings us home.

The sharp thorns prick us, and our tender feet
Are cut and bleeding, and the lambs repeat
Their pitiful complaints—oh! rest is sweet
When evening brings us home.

We have been wounded by the hunter's darts,
Our eyes are very heavy and our hearts
Search for thy coming—when the light departs
At evening, bring us home.

The darkness gathers. Through the gloom no star
Rises to guide us. We have wandered far,
Without thy lamp we know not where we are—
At evening, bring us home.

The clouds are round us, and the snow drifts thicken.
O thou dear Shepherd, leave us not to sicken
In the waste night—our tarry footsteps quicken:
At evening, bring us home.
—Dr. John Shelton.

Honoring a Child's Individuality.

A little babe is not a mere bit of child-matter, to be worked up by outside efforts and influences into a child-reality; but he is already a living organism, with all the possibilities of his highest manhood working within him toward their independent development. Here is the difference, on a lower plane, between a mass of clay being molded by a sculptor's hands into a statue of grace and beauty, and a seed of herb or tree containing within itself the germ of a new and peculiar individual specimen of its own unchanging species. An acorn is more than the fruit of the oak that bore it; it is the germ of another oak, like, and yet unlike all the oaks that the world has known before the growth of this one. So, also, a child is more than the mere child of his earthly pa-

rents; he is, in embryo, a man with characteristics and qualities such as his parents could never attain to, and which, it may be, the world has never before seen equaled.

In little things as in larger, a child's individuality is liable to be overlooked, or to be disregarded. A little boy was taken alarmingly ill one day; for several hours his loving mother watched him anxiously. The next day he was in his accustomed health again. His mother, with the evident thought that a child could have no comprehension like a parent's of such a state of things as that, said to him, tenderly: "My dear boy, you do not know how sick you were yesterday." "Oh, yes, I do, dear mamma," he answered; "I know a great deal better than you do; for I was the one that was sick." And many a child has the thought that was in that child's mind, when he is spoken to as though he must get all his ideas of his own feelings and conditions and needs from some one, who is supposed to represent him better than he can represent himself—while he is still in childhood.

It is such the same in the matter of personal rights, as in the matter of personal feelings. A child finds that his individuality is constantly lost sight of, because he is a child; as it ought not to be. A little fellow who had been given a real watch, was conscious of an advance in his relative position by that possession. His uncle, having taken his own watch to the watchmaker, asked the loan of the little fellow's watch for the time-being, saying that he could not get along without one. "Can't you get along without a watch?" asked the nephew. "No, I cannot," replied the uncle. "If I had mine at the watchmaker's, would you lend me yours till mine came back?" was the little fellow's searching inquiry. "Why, no; I don't suppose I would," replied the other. "But then, you know, I'm a man—and you are a boy." "Well, then," said the individual boy to the individual man: "If you can't get along without a watch, and you wouldn't lend me yours if I needed it; I can't get along without a watch, and I can't let you have mine."

Now, the trouble in that case was, that the boy's individuality was not sufficiently recognized and honored, by the manner of that request for his watch. It seemed to be taken for granted, that, because he was a child, he had no such rights in his own possessions as a man has in his, and that he put no such value on that which he had, as a man would be sure to put on his belongings. Against that assumption the child quite naturally, and with a good show of logic, resolutely asserted himself. If, on the other hand, the boy had been appealed to as an equal, to render a favor to the other because of a special and a clearly explained need, there is no reason to doubt that he would have been prompt to respond to it, with a feeling of satisfaction in being able to render that favor.

Just here is where so many children are deprived of their rights as individuals, by inconsiderate parents or others. When seats are lacking for new comers into a room, or a street-car, and two or three children are seated together by themselves in absorbing chat, the temptation is to speak quickly to the little ones, telling them to vacate their seats for their elders, in a tone that seems to indicate that a child has no rights in comparison with a grown person; instead of showing, by the very manner of address, that the children's attention is called to their privilege of showing courtesy to their el-

ders. In the one case, every child of that party feels aggrieved through being made to feel that his rights are not recognized as rights. In the other case, he is gratified by the implied confidence in his gentleness, and in his readiness to yield his rights gracefully. A child's rights as an individual are as positive and as sacred as a man's; and it is never proper to ignore these rights in a child any more than it would be in a man.—S. S. Times.

FROM "FRIENDS' INTELLIGENCE."

Mary Griffin.

At the time of our late Yearly Meeting we received a visit from a couple of Friends from Chester County for whom I related a circumstance connected with the memory of our aged friend, Mary Griffin, of Nine Partners. My visitors desired I would furnish them the account in writing, which I herewith append. Mary Griffin was twice married. The incident refers to the period of her first marriage, near the time that she and her husband embraced the religious views of Friends. They had been educated in the Presbyterian faith. It is the record of a joint conversion, evincing great simplicity, earnestness, and integrity of heart,—as also an interesting record of olden times. It is as follows:

Be it forever recorded in Heaven that we, William and Mary Moore, do with great concern of mind, yet with alacrity of soul, devote and dedicate, yea, we do absolutely and actually give and deliver our whole selves, souls and bodies, unto the Almighty God Jehovah and thereby through his grace do covenant and promise to serve Him in newness of life; and that we will keep as nigh to his light as we possibly can in all intents and purposes of soul, every minute, hour, day, week, month, year, or years of our mortal lives,—always depending on a measure of thy strength, O God, to assist and abilitate us. And now, firmly believing and that from the word, internal and external, that thou Father of Mercy and Love! doth accept and receive us, we herunto set our hands and seals, this 15th day of Third Month, in the year since Christ Jesus came into the flesh, 1749.

"Signed, WILLIAM MOORE,
MARY MOORE."

Appended to the above, in her own handwriting, was the following:

"This was written almost in the first of our conviction, and it was signed I believe in the simplicity of our hearts, I thought best to leave it behind me, hoping that wherein we failed in performing it mercy hath been and will be extended to us.
MARY GRIFFIN.
"First Month 3, 1782."

SKETCH OF MARY GRIFFIN.

Mary Griffin, of Nine Partners, New York, was the daughter of a zealous Pre-bytarian. Her quickness of perception was apparent about her sixth year, when, being present while her parents were conversing about their minister's salary, the mother remarked, "We must not starve the Gospel." Mary replied, "That is impossible, mother, for it is the power of God unto salvation, to every one that believeth." Being allowed by her parents to frequent balls, she was once engaged in dancing, when her mind was solemnly impressed with the sin of thus spending her time, and she immediately took her seat. On being asked the cause, she honestly told it, and refused ever again to partake in like amusements, thus bearing testimony to the principles of a society of which she had never heard.

When quite young she married among her own people, and continued a member with her till hearing that one called a Quaker had appointed a meeting in the neighborhood, her mind was drawn to attend it; but her husband being away, and only two little children in the family, she was at a loss how to manage, as the meeting was to be in the evening. But she put her children to bed, and when they were asleep, set out for the meeting, secretly saying, "I have faith to believe that kind Providence will care for them." She had to travel on foot four miles and cross a stream from which the bridge had been carried away; but she waded through the strong current, and arrived at the meeting; during which the following passage was so frequently presented, that she believed it right to express it: "Though thou exalt thyself as the eagle, and though thou set thy nest among the stars, thence will I bring thee down, saith the Lord." After sitting down she felt great peace; returned home rejoicing, and found her children safe. At that time she wore a scarlet cloak, edged with fur.

It afterward appeared there was a man in that meeting about to engage in conduct injurious to his friends, who was so overcome by her communication, that he made a public acknowledgment thereof, and afterward became a member.

She soon after joined herself to Friends, and became an approved minister in her 20th year. It appeared that she had not reflected on the inconsistency of her dress until a Friend remarked to her, "Laces proceed from pride—pride from sin, and sin leads down lower than the grave." She immediately laid aside all superfluities.

When about ninety-five years of age, she paid a satisfactory visit to some of the meetings in Nine Partners and Stamford Quarters; and in her one hundredth year, visited the families of Nine Partners Meeting, and had several public meetings in which she was greatly favored. Her natural faculties were reduced to a state of second childhood, while the spiritual part grew brighter and brighter. At one of these public meetings, a Baptist preacher was present, who afterwards called at her lodgings to converse with her on the subject of inspiration, in which he did not believe. Being shown into her room, he found her sitting upon the floor, amused with playthings. He immediately withdrew, saying all his inquiries were answered, as she was herself a memorable proof of Divine Inspiration.

Near the close of her life she thus addressed her children and grandchildren: "Fear the Lord above all things, and keep to your religious meetings." She died 20th of Twelfth Month, 1810, aged upward of one hundred years—a minister four-score.

Silence is Golden.

If, as we fear is the case, the article which we copied from the "Transcript" of Portland, Maine, correctly describes the present tendency in the denomination of Friends, it is high time either to call a new denomination into existence to emphasize that feature of spiritual life which the Friends did formerly, but apparently do not now emphasize, or else it will be necessary—and this would be better, certainly—for other denominations to accept as a heritage the gift of silence which the Friends seem to be relinquishing. In no sphere of human experience is it more important to remember and act upon the aphorism that speech is silver and silence is golden than in the sphere of religious

experience. Much talk, without correspondingly great silences, becomes chatter; and religious chatter, if not less profitable, is certainly more discordant than political or social chatter. In our rituals we leave small spaces for that "waiting on God" which is the highest act of devotion. The few moments of quiet meditation which we might have at the opening of our church services, we begrudge or know not how to use, and either escape the opportunity by being habitually late, or throw it away by social conversation, or by watching the later arrivals and studying the new modes of dress of which the church services afford even a better, because a more leisurely, display than the promenade. * * *

In a prayer-meeting nothing is so dreaded by either leader or people as a "pause." The idea that God might possibly speak to us, and that we might profitably in every prayer-meeting close our ears to all human utterances, that we might for a few moments open them to the voice of the Spirit, is rarely entertained and still more rarely acted on. * * *

If, now, the Friends who have borne such witness to the beauty of a silent attitude, to the worth of a quiet spirit, to the experience that communicates itself only to him who hears and heeds the counsel "Be still; and know that I am God"—if the Friends are going to abandon the listening attitude and be carried away by the passion to perpetual talking, which is the sign not of a full but of a restless soul, we may well pause and consider whether the symptom is not a grave one. Where, then, will there be left in any Protestant service any element analogous to the opportunities which the nooks and corners of a great cathedral give to souls who wish to be alone with God in all intercourse unaccompanied by any interpreter?

For we apprehend that the tendency to restless, eager saying and doing something which characterizes our religious gatherings, characterizes also personal religious experience; that while there are more to-day than ever before that are trying to serve God, to stand up for Jesus, to speak for Him, etc., etc.; that while there are perhaps as many as ever before who are earnestly and sincerely seeking to know his will, and praying to Him—there are very few who know the art of listening—very few who ever say, "Speak, Lord, for Thy servant heareth"—very few who know how to quietly wait on God. We approach Him as through a telephone, and, if we do not straightway get a reply, think the connection is broken, and begin to wonder whether God answers prayer. There are voices that are quiet and must be listened for; and we are too busy with our own thoughts, and make too great a buzzing oftentimes, to listen. He that would follow Christ as a teacher must learn to follow Him as a listener as well. Perhaps those nights He spent on the mountain-top were partly spent in listening as well as in praying; or, to speak more truly, perhaps listening to God and waiting on God is the best and highest part of praying.

Silence is golden. Listen!—*Christian Union.*

Natural History, Science, &c.

Useless and Cruel Shooting.—Forest and Stream says, "it was once the common practice to shoot birds and alligators from the decks of steamers on Florida rivers and lakes. This abominable, because cruel and useless warfare, was waged until the supply of victims for the brutality was nearly exhausted. The development of the

Florida railway systems, by which the tide of travel has been diverted from the water-courses has had a direct and marked effect on the wild life of the country. Instead of the leisurely progress by water-craft, tourists are now whirled through the country by rail, and the blood-thirsty contingent has no opportunity to deal out death at every turn. The waters and shores are once again becoming populated with birds of plume, even the alligator is coming again into peaceable possession of his mud-bank, and the moss-draped stretches of shore line are enlivened by the welcome chorus of living creatures."

Wild Boars of New Zealand.—In 1774 Captain James Cook put ashore on the Island of New Zealand a number of pigs and goats. The pigs increased in number and took possession of the mountain fastnesses of the Island, and held their own notwithstanding the increase of European population, and the war that is waged upon them. The savage life they lead have developed the original characteristics of the animal, and the boar now resemble the wild boar of Westphalia far more than the domestic pig, from which it is descended. The muscles of the fore part of the body have been greatly developed by constant use, and it is a powerful and dangerous antagonist.

The mountainous interior of New Zealand abounds in a tussock grass, which is excellent pasture for sheep. Intermingled with this is a sharp-leaved plant, somewhat akin to the Yucca of the Rocky Mountains, which has a huge succulent root like a parsnip, a foot or two long, and as thick as a man's leg. This root is a favorite food of the wild boars, and to find it they will often rove over miles of grass country leaving it very much like a plowed field.

Hibernation of Reptiles.—*Catharine C. Hopley* says that reptiles are so much affected by the weather that even during summer a chilly day produces inactivity. "More sensitive than the most delicate invalid, your pet batrachians will inform you of a change of weather almost before you perceive it yourself, by their suddenly becoming dull and inactive."

Olariferous Grasses.—In India and Ceylon several species of grass belonging to the genus *Andropogon* yield essential oils of strong and agreeable odor.

Phœnician Tombs.—A most interesting confirmation of both history and archeology at once has recently been made by Mr. J. Theodore Bent at the Bahrein Islands, off the coast of Arabia, in the Persian Gulf. Herodotus, Strabo, Pliny, Ptolemy, all agree that the Phœnicians emigrated from these islands as their original home, bringing with them to the coast of Syria the names of the two largest, Tyros and Aradus, and bestowing them upon the renowned isles Tyre and Arvad. Phœnician tombs also from Amrit to Sardania, are found to take the form of one chamber over another, and to contain shells from the Persian Gulf, as well as peculiarly marked ivories and ostrich eggs. It has been known for a long time that one of the largest of these islands is covered in great part by a vast necropolis, the tombs many thousands in number, stretching along the southwest side, and ranging from fifty feet in height down to mere heap of stones. At a distance of several feet from most of the tumuli are traces of an encircling wall, similar to the inclosure of Lydian tombs. With a view of testing the records of history and the indications of archeology, Mr. Bent has recently exploited two of the largest of these mounds. At a certain point in the encir-

clung wall, six feet in height, in each case a passage-way formed by walls of large unwhet stones, diminishing in size toward the top, led him to the door of the tomb, closed by similar unwhet blocks of stone. The tomb was found to be constructed of two chambers, one above the other, covered by large slabs six feet in length. The upper chamber was thirty feet long by four and a half high, and contained the remains of a bull or a horse, quantities of ivory fragments of circular boxes, utensils and tablets, bits of pottery, some resembling the early ware of Asia Minor and other specimens from Italy. In the Island of Rhodes, also numerous pieces of ostrich egg-shells colored and scratched with rough patterns in bands like examples from Naukratis. The lower chamber, of the same length, but higher, six and a half feet, was more carefully built, and coated on all sides, as well as ceiling and floor, with cement. Into holes along the sides poles had been inserted, for the support of drapery. Its floor was covered with a snuff-like earth a foot in depth—evidently the dust of the poles and curtains that had fallen ages ago, and of the shrouds in which the dead were wrapped, as well of the human bodies themselves there interred, for this dust on being sifted yielded human bones. Thus it is clear that these tombs were constructed by a race so early in time as to be among those who were accustomed to bury the utensils and the favorite animals belonging to the deceased, with him yet apart from him in a separate chamber. Such two-story tombs have their parallels at Amrit in Phœnicia, where they were all rectangular and where the bodies were imbedded in cement, also in Sardinia as reported by Della Marmora. The ivories, too, inscribed with rude rosettes, circles encircling chains, the wings of a bird and two parallel lines, have their analogy in the ivories obtained at Kameiros in Rhodes, and in those derived from Nimrud in Assyria, ascribed to Phœnician artists. Everything, therefore, about these tombs, whether in respect of character or contents, betokens Phœnician work, and of earliest Phœnician workmanship prior to the invention of the alphabet, that these Bahrain Islands were the primitive home of the Phœnician race now seems to be more creditably confirmed and well established.

Iowa Yearly Meeting [Conservative].—In its account of this gathering, the *Western Friend* says of the meeting for worship held on First-day, p. M.,—“prayer was offered by a Norwegian girl in the Norwegian tongue; though not understood by the meeting, yet the words were so inspiring, it was so great that many were moved to tears. It was an incident never to be forgotten, wonderful as an evidence that power and not words is the essence of true ministry. The doctrine of the Atonement was largely spoken to, from the words of John, ‘This is that came by water and by blood, not by water only but by blood.’” The need was shown of a Saviour to take away the sins of the world, because of the impossibility of a man ever doing any thing more than his simple duty, as payment for their removal. The precious and heart-touching office of the High Priesthood of Christ who is “touched with a feeling of our infirmities” was dwelt on in the language in which it is so vividly portrayed in the Epistle to the Hebrews. The clear, strong language of the Apostle on the humanity of Christ was quoted in full, without comment, but commended to the prayerful and reverential consideration of all, while the Divinity as declared by Christ and his apostles was held up and commended to the faith of all, as equally a cardinal doctrine of the Gospel. The people and all were encouraged to avoid the field of speculation, as to the *how*

of this marvellous union in Christ Jesus, and accept in faith the declaration of Holy Scripture as that which is needful to be received.

Among those who attended the Yearly Meeting it mentions Joel Bean of San Jose, California.

Kansas [Progressive] Yearly Meeting.—From the accounts published in the *Friend's Review and Christian Worker*, we condense the following statements: It convened at Lawrence, Kansas, on Sixth-day, Tenth Mo. 11th, 1889. Edmund Stanley was appointed to act as Clerk for the day, as the Clerk, William Nicholson, who was in California, was unable to be present on account of his health.

Among the strangers present were Henry Stanley Newman, and William Jones, and their wives, from London Yearly Meeting.

The statistics showed that seven new Monthly Meetings and one meeting for worship had been established during the past year; and one Monthly Meeting at two meetings for worship had been discontinued. The total membership was reported to be 8,565.

A report was received from a Committee on a Conference, recommending the establishment of a conference of ultimate authority and appeal, to be held once in every four years. The report was adopted.

A resolution was passed directing the members to endeavor to secure the election to office of persons “who are known to be fully committed to the complete enforcement of the prohibitory law.”

Religious Societies in Ireland.—Presbyterians and Methodists have been increasing in Ireland, but the Episcopal church has greatly declined since its disestablishment. In 1869 the Episcopalians had 2,174 preachers in Ireland. The number is now 1,590.

Tradition.—“Long prior to the foundation of the Reformed Episcopal Church, the party warfare which was inextinguishable in the Protestant Episcopal Church until then, was waged over the claims put forth by those who maintained the authority of God's Word Written, as being in some measure equal to that of God's Word Spoken. It was the holding of this view by an ever-growing majority of its members, which separated the Protestant Episcopal Church from all other Reformed churches, and it was the emphatic repudiation of this claim which brought the Reformed Episcopal Church into substantial unity with all the other Protestant churches.”

The Shakers.—It is a mark of the decay of the sect of the Shakers that they now are under the necessity of hiring men to work on their farms. The United Society of Christian Believers was at its height during the years which followed the second war with Great Britain. Up to that time it managed to take advantage of every revival excitement which had agitated the country, and each of these was marked by the organizing of a new Shaker community. From that time it ceased to gain in numbers, and for a long time back it has been decaying. It has been obliged to sell several of its great farms, and it is not likely that it will last long into the next century. As all Shakers are celibates in principle, they can keep up their numbers only by conversions and adoption of children. The former have become very few, in spite of the efforts of Elder Evans to press the merits of the sect upon the attention of the public. The latter are frequently taken from the military, the principle of heathenism in the children proving a powerful shaker training. But the Society serves to show what the conditions of communistic success; (1) Religious enthusiasm to overcome individualism; (2) the exclusion of the family, as the natural unit otherwise would prove too strong for the artificial one; (3) compromising despotism in control.—*The American.*

The Divorce Question.—A public meeting was recently held in Philadelphia, under the auspices of the National Reform Association, to consider the evils of divorce. It was stated that the number of divorces in the past twenty years had amounted to nearly 400,000, and that it is yearly increasing.

Judge Thayer in his speech showed that the responsibility does not rest upon the Judges of the Courts, for the terms of the law in Pennsylvania

gives them no discretion. He advocated the abolition by law of all divorces except for the one cause recognized by the Divine Authority of Christianity.

The True Specific for Evil.—Looking on society as it is with extreme poverty and abounding wealth, the grievously burdened laborer and the tyrannical combination of strikes and dynamite and powerful capitalists, for selfish and ambitious purposes, it is easy to see that something is wrong. Many theorists are now proposing methods of reform whereby they believe all these wrongs may be righted. It is noteworthy that these schemes ignore one great fact. Human depravity is at the bottom of all this social wrong and confusion and trouble. The hope to cure the disease by abolishing old laws and enacting new ones is vain. If by legal enactments the present apparent ill could be remedied, the corruption which is in men's hearts would break out in another form. The Christian religion proposes the only effectual remedy. By renewing men in the image of their Creator, it proposes to set up a new social order in the world. When Christ is acknowledged as Lord, and men are loyal to Him, they will be true to all their obligations and interests. If this process is slow, it is the fault of those who refuse to adopt it. There is no swifter method. The ills of which men complain are being removed just as fast as the kingdom of God is extending. No pet theories or clever devices or political schemes can hasten the good work beyond that limit. Those who sincerely wish “thy kingdom come,” and do what in them lies to extend its borders, are doing all that is being done to redeem society from the curses under which it writhes.—*Christian Advocate.*

A False Messiah.—A false messiah has lately appeared in Arabia, and multitudes of Jews are following him. A man of high education, with tremendous force of character, he has been greeted by the poor among his people as the very deliverer they need. Regiments of life-guards, composed of Hebrew youths, protect his person, and he has even deceived some of the wise and prudent of the Jews of Northern Arabia. The rabbis are fully occupied in pacifying the excitement, and preventing the further spread of the movement.

THE FRIEND.

ELEVENTH MONTH 16, 1889.

When David Barclay was near the end of his life, he made this impressive exclamation: “The perfect discovery of the day-spring from on high, how great a blessing it hath been to me and to my family!” The clear shining of the Light of Christ in his heart, by which he had been led to walk in the narrow way of the cross, had brought him much suffering and outward loss. He who, as a military ruler and political leader, had once been obsequiously waited upon and treated with great deference by the magistrates and people, after he had cast in his lot with the despised people of God called Quakers, had to endure the scouls of the populace, and to suffer persecution and imprisonment for his religious principles. Yet notwithstanding all this, he could exclaim in truth and sincerity, that the knowledge of the Lord's will had been a “great blessing” to him. It is probable that when he thus spoke he was sensible of the goodness of the Almighty extended to him, and was animated by the soul-sustaining hope of receiving one of those crowns laid up in heaven for all of those who love the appearing of the Lord Jesus.

There is something very noble and very stimulating in the example of those who, like the Apostle Paul, David Barclay, and hundreds of others, have not counted their lives dear unto themselves, so that they might finish their course with joy, and accomplish that work which the Lord had assigned to each one to perform in this state of existence.

Is it not the case with many of our members at this day, as Thomas Story states was the condition of some of the young people in the early part of the last century. They were sober and orderly, but too few of them had experienced the sanctifying baptism of Christ, and so were in danger of settling into a traditional profession of the doctrines and discipline of the Church, or else of renouncing Christ and despising his cross, being taken with the sinful fashions, customs and notions of the world. Oh! that all such might cherish as the choicest of all blessings, the strivings of the Spirit of Christ, graciously bestowed for their help and furtherance in the way of salvation. Though at times the work may be painful, and the self-denial into which it leads may be irksome, yet afterwards it yieldeth the peaceable fruit of righteousness to those who are exercised thereby. Job Scott, who had passed through many severe trials, shortly before his death, when taking a retrospective view of the exercises through which he had passed, said: "all the former conflicts, however grievous in their time, are lighter now than vanity, except as they are clearings of the soil, as they are remembered with awfulness and gratitude before him who has not been wanting to preserve through them all."

SUMMARY OF EVENTS.

UNITED STATES.—On the 8th instant, President Harrison issued a proclamation admitting Montana, and on the 11th, one admitting Washington to the Union.

The American Bank Note Company has given the \$200,000 bond required by the Government as a guarantee that its contract, to make twenty billion postage stamps a year, will be faithfully carried out. The elections in the aggregate the success of the Democratic ticket in New York, New Jersey, Virginia, Maryland and Ohio. In Iowa a Democratic Governor was elected for the first time since its existence as a State. Pennsylvania, Massachusetts and Nebraska, went Republican. In the aggregate the States which have recently increased their relative vote—about 160,000 it is believed since last election. The Prohibition vote is not yet given.

The Supreme Court of Indiana has decided that natural gas may become a commercial commodity, and that the State Legislature cannot enact any law regulating commerce between the States for the reason that the Federal Constitution forbids the States from legislating on that subject. Therefore the legislative act of last winter, prohibiting the piping of gas out of the State, is unconstitutional. The new passenger car of the Chicago Gas Trust from piping gas to Chicago, and, under this decision, work will be begun at once to connect the gas fields with the City by the Lake.

The New Orleans Cotton Exchange statement issued last week, makes the cotton movement over the Ohio, Michigan rivers to New Orleans, from the American and Canadian mills for the week ending Eleventh Mo. 8th, 48,837 bales, against 48,779 last year, and a total since Ninth Mo. 1st, 188,078 bales, against 230,471 last year. Total American mill takings North and South for the first ten weeks of the season, 317,832 against the 317,836 of Chicago Gas Trust from piping gas to Chicago, and, under this decision, work will be begun at once to connect the gas fields with the City by the Lake.

The New Orleans Cotton Exchange statement issued last week, makes the cotton movement over the Ohio, Michigan rivers to New Orleans, from the American and Canadian mills for the week ending Eleventh Mo. 8th, 48,837 bales, against 48,779 last year, and a total since Ninth Mo. 1st, 188,078 bales, against 230,471 last year. Total American mill takings North and South for the first ten weeks of the season, 317,832 against the 317,836 of Chicago Gas Trust from piping gas to Chicago, and, under this decision, work will be begun at once to connect the gas fields with the City by the Lake.

A despatch from Helena, Ark., says: "A recent experiment made by a gentleman of this city has demonstrated that the growth of cotton here hitherto wanted a very valuable and important part of the cotton plant. Major John J. Horner, thinking that there could be some use made of the cotton stalk, gathered about ten pounds of the material and sent it to a factory in New York to be spun into thread. The material was made into a hempe. A few days ago he received from there the results of his experiment, which, if the material can be extracted cheaply, will result in incalculable good to the cotton growing States. There were returned to him about 20 different grades of fibre material, from coarse strands of the stalk to the glossy fibre as soft as silk. Persons are now engaged in perfecting a machine that will spin the material. There is no doubt but that the fibre of the stalk is sufficiently strong to make

the best of lagging, as well as cloth as fine as linen. This material was extracted from the stalk by a electric process in about six hours.

Iowa's potato crop is estimated at over twenty million bushels.

Several Mexican herders were frozen to death on the Great Smoky Creek near Clayton, New Mexico, during the snow storm last week. Railroad men experienced great difficulty in different cuts, which, in some places, were completely filled with dead cattle and sheep. Several cowboys who drifted off with herds have not been heard from, and rescuing parties are looking for them.

A telegram from Dayton, New Mexico, says that the snow there is 26 inches deep on a level, and that the drifts are seven feet high. Seven men have been frozen to death, and thousands of cattle and sheep have perished. At Tecolote 20 passenger trains for one week, and at Lordsburg 10 passenger trains for one week. The passengers are obliged to snowbound in the storm and kill cattle, the quarters of which are taken into the cars and roasted for food.

The snow at Clarendon, Texas, is six inches deep. The drifts are nine feet deep. All trains on the Fort Worth and Denver Railroad are blocked.

A snowstorm prevailed in Southern and Western Kansas on the 6th instant. Snow, hail and sleet fell so thick and were driven so fiercely by the wind that in many places people did not even dare to venture out of doors. Trains were delayed.

Statistics in this city last week numbered 559, which is 40 less than during the previous week and 25 more than during the corresponding period last year. Of the foregoing 184 were males and 175 females; 52 died of consumption; 38 of pneumonia; 23 of diseases of the heart; 17 of old age; 14 of debility; 13 of marasmus; 12 of convulsions; 11 of cancer; 10 of paralysis and 10 of crop.

Markets, &c.—U. S. A's, reg. 105; conpon, 106; 4's, 127; currency, 6's, 117 & 128.

COTTON was quiet, but steady, at 10¢ per pound for middling upland.

WHEAT.—Winter, prime to choice, \$13.00 a \$13.50; do, fair to good, \$12.25 a \$12.75.

FLOUR AND MEAL.—Western and Pennsylvania super, \$2.50 a \$2.75; do, do, extra, \$2.50 a \$3.25; No. 2 winter family, \$3.40 a \$3.75; Pennsylvania family, fine ground, \$3.75 a \$4.00; Pennsylvania, No. 1, \$3.75 a \$4.00; do, straight, \$4.35 a \$4.50; winter patent, \$4.00 a \$5.00; Minnesota, cat, \$3.50 a \$4.12; do, straight, \$4.25 a \$4.75; do, patent, \$4.50 a \$5.25; special brands, \$3.50 a \$5.40. Rye flour sold in a small way at 85¢ per barrel for choice. Buckwheat flour moved slowly, at \$1.90 a \$2.00; and corn, \$1.25 a \$1.75 per 100 pounds for old, as to quality.

GRAIN.—No. 2 red wheat, 80¢ a 80¢ cts.

No. 2 mixed corn, 40¢ a 41¢ cts.

No. 2 white oats, 28¢ a 29¢ cts.

BEEF CATTLE.—Extra, 44¢ a 44¢ cts; good, 41¢ a 41¢ cts; medium, 38¢ a 41¢ cts; common, 35¢ a 35¢ cts; fat cows, 22¢ a 31¢ cts.

SHEEP.—Extra, 61¢ a 61¢ cts; good, 44¢ a 45¢ cts; medium, 44¢ a 44¢ cts; common, 34¢ a 34¢ cts.

LAMBS.—Extra, 61¢ a 61¢ cts; good, 51¢ a 61¢ cts; medium, 44¢ a 44¢ cts; common, 34¢ a 41¢ cts.

WESTERN.—Light Western, 65¢ a 61¢ cts; heavy Western, 51¢ a 51¢ cts.

FOREIGN.—The London correspondent of the New York Sun, says there is reason to believe the Government will indefinitely postpone taking action upon the Irish Catholic University question, in consequence of discontent in their own ranks, and doubts as to the support they could command from the Radical Unionists.

The attitude of the latter is just now causing serious anxiety to the Ministers.

Despatches received at the Foreign Office from Zanzibar on the 11th, confirm the report of the massacre of the 16 Peters and his party by natives near Korkora, East Africa.

The Paris Exhibition having closed, the Parisians are now engaged in contemplating the statistics and counting the gains. It is estimated that 5,000,000 French people came from the provinces, and that their expenditure was 100,000,000 francs, or \$4,000,000,000 francs. At least 1,500,000 foreigners visited Paris and the Exhibition and spent 750,000,000 francs. The Englishmen head the foreign list with 380,000, the Belgians coming next with 226,000, the Germans third with 160,000, and the Americans a good fourth with nearly 120,000.

The German Emperor, on his return from Turkey, is to stop at Carlu, and visit the Empress of Austria, who is stopping there, and then to go to Vienna. The

Emperor appears to have urged the Sultan to cultivate an alliance with England, or linking Turkey to the *dreidand*. The exchange of views by the monarchs is certain to influence strongly the policy of the Porte, though no hard and fast agreement can be made.

It is stated that as a result of the recent conferences Austria and the Porte will not regard Prince Ferdinand as ruler of Bulgaria.

In the Greek Chamber of Deputies on the 11th instant, Prime Minister Trikoupi said he must confess to be disappointed and deceived by the Turks, but Greece would one day vindicate Cretan rights. The Government had hitherto desired to maintain cordial relations with Turkey, but after recent events in Crete that was impossible.

The *New York Times*, referring to the statement made by Lord Salisbury, at the Lord Mayor's banquet at the Guildhall, in London, on the night of the 9th inst., that the difficulties in Europe appeared to be tending toward a peaceful solution, and that all the world had the optimism of the British Premier is artificial and insincere.

The Government of Peru has authorized a contract for the construction of a railroad, either broad or narrow gauge, from the fertile and rich wine-growing districts of the Department of Moquegua to the port of Callao. The contract includes the right to construct any branch roads deemed desirable.

A telegram from San Juan del Norte, Nicaragua, says that the first sod of the Nicaragua Canal was turned on the 10th instant, amid the booming of cannon and the cheers of the 30,000 spectators. The Chinese in great numbers are arriving at Mazatlan, and are making their way to California and Arizona overland.

A telegram from the City of Mexico reports the volcanic eruption of Colima in active operation. Many houses in the neighborhood of the mountain have fallen, and the woods for miles around are on fire.

Incidents and Reflections.—No. 198.

PRAYER.

A few years ago, a friend related to me an anecdote which illustrates the long-suffering mercy of our Father in Heaven; and shows that He continues to hear the petitions of his servants. It is still true, that "the fervent, effectual prayers" which the Lord puts into the hearts of the righteous, are regarded by Him.

It was the case of a farmer who he knew. He had prospered in his business, until he became fond of strong drink, and increasingly gave way to indulgence in it. This was greatly to the distress of his wife, who labored with him, but was unable to produce a reformation. His pecuniary affairs became in a worse and worse condition; and he often remained at the public house drinking during much of the night, while his faithful partner would wait for him at home with a saddened heart. One night, as she was thus sitting, she decided to go to the public house and bring him away. It was midnight, and she was alone, but she started on her errand. On her way, she felt an impulse to kneel and spread her case before her Father in heaven, who he holds with an eye of pity the distresses of his children. The prayer had a very relieving effect on her mind; and when she arose a load of exercise was rolled off from her. She felt that it would be best for her to return home.

About the same time her drunken husband started from his drinking habit, and on his way homeward fell into a ditch. The water in it was not deep, but he was too helpless to extricate himself; and he lay there for some hours struggling, and in apparent danger of losing his life. While in this situation he was awakened to a sense of his awful condition. Through Divine help, he was enabled to turn away from his easily-besetting sin, and to lead a sober and respectable life.

The interesting incident which follows, was furnished by an intimate friend of the writer, who heard it related by the person whose experience it records, and who subsequently read it to him, so that any inaccuracy, arising from defect of memory, might be prevented.

In the year 1854, W. M. P., a minister of the Free Methodist denomination, was living in the

northern part of the State of New York. At one time he was about four or five miles from his home attending a Quarterly Meeting. At about six o'clock in the evening he, with several others, ministers and members of the same society, was seated at the supper table. He says that while thus engaged, eating his supper, he felt an uncommon sense of the Divine presence and blessing, and he was so deeply affected by this spiritual exercise that he did not feel disposed to eat, and accordingly laid his knife and fork upon his plate. He relates that soon he heard what seemed as a voice speaking to him and saying: "Go at once to the loft over the stable and pray for the life of your daughter A—, that it may be spared until she shall be prepared to die." He promptly obeyed the voice, leaving the table and going to the place designated, where he wrestled in spirit, praying for the life of his daughter.

After being thus engaged for a time he became aware of the presence of some one, and found that another man of the company had followed him to this place under a similar exercise of spirit for the same person. W. M. P. says, that after a time he received an assurance that his prayer was answered and his daughter's life was spared. He then returned to the supper table and finished his meal.

The daughter in question, a young woman engaged in teaching school, started from home with her father's horse and carriage, to go to the place where her father was, with a view of attending the meeting to be held there in the evening. Her brother went with her the first mile, and then left her to drive the balance of the way alone, while he should walk back to their home. As the brother got out of the carriage he looked at his watch and found it to be just six o'clock. From some cause the horse, usually a gent, one, became frightened and becoming unmanageable ran at full speed down the road. The brother followed as fast as he could, and about a mile farther on he found his sister under the wrecked carriage badly hurt, her side smashed in, and some of her ribs broken.

The father's concern for his daughter passing away, he attended the evening meeting in peace of mind. At the close of the meeting a man living in the neighborhood where his daughter taught, came to W. M. P. and said to him: "I want you to go home with me to-night." W. M. P. objecting, the friend then told him that his daughter was at his house, and had been badly hurt, perhaps fatally.

When W. M. P. entered the room where his daughter was lying, she looked up at him and said: "Father, why is it that you must always be praying for me?" Thus it seems that at the very time when this father, in obedience to the voice which spoke in his heart, was engaged in earnest supplication for the life of his daughter, she was in great danger of losing her life. Who can doubt that the prayers offered by this father were put up in obedience to a Divine requiring revealed to him by the Spirit of the Lord? and that the incident was an illustration of what the

Apostle John says, "If we ask anything according to [God's] will, He heareth us."

The term prayer may be properly used in speaking of that condition of the mind, in which it is turned towards God with reverence and filial submission, even though there are no definite aspirations formed in it. To such a condition the Apostle may have referred, when he spoke of "praying without ceasing," for as H. Barclay says, a man cannot be always on his knees uttering words of prayer, for this would conflict with other duties which are no less imperative. But in some form or other, whether vocal or silent, with definite petitions, or simply reaching out after God; prayer is the frequent experience of all true Christians, and of all who are in earnest in seeking after peace and salvation. It is their refuge in times of trial and perplexity; and they are often enabled to feel, that "underneath are the everlasting arms," to strengthen and support. Thomas Story mentions that at one time he was closely proved by a demand that he should appear in a court of law and bear witness to certain deeds of conveyance, which he had himself drawn up. On them depended the proof of title to some houses of his client, which formed the greater part of his worldly possessions. The English law at that time required such evidence to be given on oath; and Thomas Story had then been enlightened to see, that even judicial oaths were an infringement on Christ's command not to swear. His refusal to swear to the documents, greatly enraged his friend who had relied on him as a witness, who left him after uttering many threats and reproaches.

"Immediately," says T. Story, "I retired into my chamber; for perceiving my grand enemy to be yet at work to introduce a slavish fear, and by that means subject my mind and bring me again into captivity and bondage, I was willing to be alone and free from all the interruptions of company, that I might more fully experience the arm of the Lord and his Divine instructions and counsel in this great exercise.

"The enemy being a crafty and subtle spirit, wrought upon my passions, not fully subjected, and artfully applied to my natural reason, my understanding not being fully illuminated, as his most suitable instrument. He urged the fine and imprisonment, and the hardships accompanying that condition, and how little help I could expect from my father or friends, who would be highly displeased with me, for so foolish and unaccountable a resolution, as they would think it; and also, the scoffings, mockings, derisions, scorn, contempt, loss of friends and friendships in the world, with such other inconveniences, hardships, and ill consequences as the enemy could invent and suggest.

"During all this time, from about eight in the evening till midnight, the eye of my mind was fixed on the love of God, which still remained sensibly in me, and my soul cleaved thereto in great simplicity, humbly and trust therein, without any yielding to Satan and his reasonings on those subjects, where flesh and blood in its own

strength is easily overcome by him. But about twelve at night, the Lord put him to utter silence with all his temptations, for that season, and the life of God alone remained in my soul; and then, from a sense of his wonderful work and redeeming arm, this saying of the Apostle arose in me with power, "The law of the spirit of life in Christ Jesus hath made me free from the law of sin and death."

"Then the teachings of the Lord were plentiful and glorious; my understanding was further cleared, and his holy law of love and life settled in me, and I admitted into sweet rest with the Lord and Saviour, and given up in perfect resignation to his holy will, in whatsoever might relate to this great trial of my faith and obedience to the Lord. In the morning I went up towards the hall where the judges sat, expecting to be called as a witness in the case before mentioned; but before I reached the place, I saw my said acquaintance approaching me, with an air in his countenance denoting friendship and affection; and when met, he said, "I can tell you good news; my adversary has yielded the cause; we are agreed to my satisfaction."

"Upon this I stood still in the street, and reviewing in my mind the work of the Lord in me the night before, as already related, this Scripture came fresh into my remembrance, in the life of it, 'It is God who worketh in you, both to will and to do of his good pleasure.' I was sensible it was the Lord's doing, and accounted it a great mercy and deliverance."

It was true prayer on the part of Thomas Story thus to keep "the eye of his mind fixed on the love of God," during those evening hours when the enemy of all good was endeavoring to confuse and unsettle him by his suggestions. It was a continued *heartfelt* appeal to the Lord for help and strength. And "without the heart," says Charles Spurgeon, "prayer is a wretched mockery. Unless the heart speaks with God, thou hast done nothing for thine own good with all thy temptations or other godly words. It is not the best words put together by the most devout men that ever lived, nor the holiest language composed extemporaneously by yourself, that can make up prayer if the heart be gone."

FOR "THE FRIEND."

The Inspiration of the Almighty.

"There is a spirit in man, and the inspiration of the Almighty giveth them understanding." (Job xxii, 8), and Solomon says, "the spirit of man is the candle of the Lord," (Prov. xx, 27), and he says this candle of the Lord searcheth all the inward parts; and how can we understand the darkness of the heart unless we can see it? and how can we see it without the light of the Lord? For darkness cannot discover darkness, neither can it comprehend the light; so how can we understand the deep things of God without the inspiration of the Almighty? And how can we search the inward or dark parts of the heart without the candle or light of the Lord? But some may say that the Scriptures were given by inspiration of the Almighty, and why not search them and there get all that we need? So they were given by inspiration; but Peter speaks of some wresting them, or turning them aside from their true meaning, to their own destruction: so does it not seem that an immediate inspiration from the Lord with his candle or light shining upon it, is a more sure prophetic word of intelligence than any thing outward can be? For it is as a light shining in a dark place to give us the light of the knowledge of the

glory of God in the face, or visible appearance of Jesus Christ himself, who alone has immortality and eternal life, and who alone has the key of David, and can open in the mysteries of the heavenly kingdom, without any intervening medium that might come in as a secondary help, however acceptable. And as the things of man can only be known by the spirit of man, so the deep things of God can only be known by the inspiration of the Almighty shining immediately in the dark heart. And to this we would all do well to give more earnest heed until the perfect day dawns, and the day star more fully arises in the heart; so we have this sure prophetic Word in addition to the Scriptures; which we all, as without excuse. But I believe that we leave, in our weakness and depravity, need instrumental help; and that all Scripture is given by inspiration of God, and that it is all profitable—some for one thing and some for another. Though they contain the sayings of wicked men and of Satan himself, yet I believe the writers were Divinely inspired to give them as they did, that the man of God might be thoroughly furnished. So I call them a Divinely inspired record. But do not think that in them we have eternal life; neither are they able to save us, but they point us to Him who is the Way, the Truth and the Life; and no man cometh to the Father but by Him.

So the Scriptures without,
And the Spirit within,
May free us from doubt,
And preserve us from sin.

(Continued from page 123.)

The people had largely to depend on domestic manufactures. Each farmer endeavored to grow sufficient flax for their own use, commonly ranging from one-half to one acre. When ripe it had to be pulled up by the roots and laid in small bundles, and set up to dry; said work was often performed by women and children; when sufficiently dry it was taken into the barn and the seed threshed off by a flail. The next process was to spread the stalks on a smooth floor, to be exposed to wet and sunshine until the inner stalk became rotten, but the outer fibre remained strong. Care was required not to let the flax remain exposed too long, to the injury of the fibre. At a proper time it was gathered up and housed until the time for cleaning, which was commonly done late in the fall. It had to be kiln-dried, then placed under a heavy brake made for the purpose, until the inner stem was broken into items. Then it had to pass under the hands of a swinger who separated the refuse from the fibre. The process of cleaning was very dusty and unpleasant. The fibre was then taken to the house, and the next process was performed by the women. By means of a machine called a hatchel the tow was removed from the pure fibre and both were spun on small wheels adapted for the purpose. The female portion of the family would sit in concert with feet on the treadles of the wheel and hands on the distaff, discussing or singing, as the case might be. When the spinning was done, the yarn was sent to the weaver, care being taken to have a fine piece for better wear, and some coarser.

Each farmer endeavored to keep a flock of sheep, the wool from which was also manufactured into suitable fabrics. After shearing, the wool was sent to the carding-machine and made

into rolls; after which, the women would spin them into yarn; a large wheel was used for the purpose, the spinners being employed on their feet. The yarn was next sent to the weaver, to be made into flannel, which was afterwards made into bedding or underwear. Some parts of the flannel was sent to the fulling-mill and cloth-dressing made.

My father was a sort of natural mechanic, and could do useful jobs in various departments. He had a blacksmith-shop, and did his own work and some of his neighbors'; he also tanned his own leather, and made shoes for his family. He worked in and did most of his own building; and, among other things, he made a loom and employed a weaver to work it on shares—the weaver to have his board and the spooling and quilting and assistance to put in the web—for which he received half the earnings. The spooling, etc., often fell to my lot. I had no objection to the work, except that it interfered with my play. Sometimes I managed to play the truant and get out of hearing, and the sisters would have to do it; but my father's discipline exercised a salutary restraint upon me. My sisters soon learned to weave, which enabled them to earn a good deal of money.

When quite young I helped father in the blacksmith-shop, and learned to do a little in that way. I also tried my skill at mending my own shoes. The last pair father made were so much too large that I never enjoyed them; therefore, when they were worn, I made myself a pair, which so commended me as a shoemaker that mother concluded to have me make her a pair, which was such an improvement on my first attempt, that for some years I made a portion of the shoes for the family. I was about eleven years old when I made the first shoes. A large share of praise was bestowed upon the youngster for those feats.

The chances for school learning were very limited. The first school-house at which I attended school was built of round logs, notched together at the corners and the open spaces between the logs were filled with pieces of wood fitted for the openings, and plastered over with clay. They were called log-houses.

This one was about 18x20 feet to the beams, on which the upper floor was laid. The hearth was of earth, and the back part of the fireplace was built of iron or bog-ore, and nearly four feet high. Above that the chimney was built. Strips of wood, covered with mud, supported on the back wall and on each side by circular pieces of wood reaching from the logs of the house to the nearest beam—said chimney being so constructed that often the smoke remained in the school-room, causing much discomfort. The writing-desks were made of plank, and placed around the inside of the room against the logs. The seats were made of slabs, with the round side down, and four legs to each bench.

The law regulating schools was very meagre. The teacher proposing to teach would get up a subscription for a term of three months, charging a certain amount for each scholar and divide his board among the employees at an equal ratio, according to the scholars sent—which was called 'boarding-round'—and designed to lessen the cash payment. The subscription would describe what was to be taught. Reading, writing and arithmetic only were taught by all the teachers I went to, except one, and he taught grammar and geography in addition. The teachers were very poor scholars themselves. The sessions were four hours each forenoon and afternoon, with a short intermission each session,

FOR "THE FRIEND."

A Visit to Colorado.

(Continued from page 122.)

COLORADO SPRINGS AS A HEALTH RESORT
AND HOME.

This city was laid out by an incorporated company of capitalists from the Atlantic States, in 1871. They did their work well in making Avenues 140 feet wide; planting aspen trees along the side-walks; introducing water to irrigate them and the private lawns through a canal from the mountain streams; and by placing a clause in all the deeds of conveyance for lots sold by the company, prohibiting the sale of intoxicating liquors on pain of forfeiture of the title.

The situation of the place as a residence is unique in the fact that it combines both mountain and plain, with most of the advantages and few of the drawbacks peculiar to either. It is on a slightly sloping plain of table land, five miles East of the base of the front or Pike's Peak range of the Rocky Mountains. Its elevation above sea-level is about 6000 feet. The views from its streets and residences are always pleasing to the eye. The great stretch of rolling prairie eastward and southward, Austin's bluffs to the North, and the mountains to the West rising 8000 feet above the town, are constantly visible by simply turning one's position. The residences are mostly of frame in cottage style, from one-and-a-half to two-and-a-half stories high, neatly painted, and surrounded with shrubbery and vines, and verdant lawns. Private boarding houses are numerous, well kept and commodious, with rates ranging from \$10 to \$15 per week. Many handsome and costly dwellings are scattered through the town, and the society is refined and moral.

There are various points of great natural interest and beauty within from five to ten miles of the city, to which excursions may be made by rail or carriage. Manitou Springs are reached by the Midland railway, and lie in a rocky gorge at the foot of Pike's Peak. Here many fine villa residences have been built on the steep hill sides, and near the gushing creek which flows from the recesses of the cañon. Two miles north of Manitou one enters the wierd area called "the Garden of the gods" from its red sandstone and clay rocks rising from 10 to 300 feet from the earth, and assuming a variety of fantastic shapes. Here the head of a Dutch burgher crowns a neck and shoulders of colossal proportions; there a blacksmith's anvil tops out a column of gneiss; nuts attired in maroon drapery stand side by side, perhaps 100 feet tall; bears, seals and birds are easily imagined in the outlines of many sculptured rocks by the tourist. The most notable feature of this place, however, is the renowned "gateway" which is portrayed by photographs so often. To form this, nature has in some of her convulsions during the geologic epoch, known as the Jurassic period, uplifted the red sandstone, conglomerate and clay strata of rock nearly to a vertical position. The color is a deep brick red, similar to the best pressed brick of Philadelphia; and the texture of the two principal walls on each side of the gateway nearly resembles each clay. They have an elevation of about 300 feet, are probably 200 feet wide at base, and from 600 to 1000 feet long. Their tops are corroded by weather and frost into points and pinnacles. The gateway or opening is about 150 feet wide, and just to the southwest of it and immediately in the centre, stands another pillar of the same species

of rock and nearly as lofty. Adjoining it a few yards east, three great towers shoot up two hundred feet high, sharp at top and having their roots in a mass of this clay rock, the whole group resembling a man's uplifted hand. The "Balanced rock" is a huge boulder 20 feet high and of greater thickness, with its base so worn away by the elements as to stand on a foundation about 4 feet wide. The curious shapes assumed by these rocks are evidently to be attributed to the variable character of the material of which they are composed. Unlike those of the "gateway" which are more homogeneous, I found them to consist of pebbles of gneiss and quartz conglomerated together by a matrix of sand and ferruginous clay in different strata and degrees of hardness. Some of the layers were so friable as to gradually loosen and fall asunder by the weather, leaving the upper and harder portions intact. No one who has a taste for nature's handywork can fail to be gratified with the scenes in this wonderful garden of rocks. It is like Niagara in growing upon one's imagination the longer it is studied.

Monument Park, ten miles north of the city, is similar in its display though less grand. Glen-Eyrie near by, is the charming seat of General Palmer, in a cleft of the mountain side where the sublime and beautiful in nature are supplemented by artistic taste in architecture and trim lawns and bright flowers. Here are other specimens of rocky towers, buttresses, and natural castles, on one of which an eagle has made his eyrie—hence the title of the villa.

Cheyenne Mountain has its two cañons four miles southwest of the town; in the southernmost of these the brook flowing through it makes seven cascades or successive leaps in descending about 200 feet vertically; above the visitor huge walls of granite tower a thousand feet, capped with spires and buttresses. Helen Hunt Jackson, the authoress, enjoyed nature so much in this cañon, that she requested before her decease to be interred on one of its heights. This was complied with, and her rocky sepulchre is visited by many tourists.

The climate of Colorado Springs is the paramount object, however, for most persons who seek a residence in it to restore or preserve health. Its sanitary qualities arise from the *dryness* of the atmosphere, and the great amount of *sunshine* enjoyed here in comparison with more Eastern districts of the United States. The rainfall at Colorado Springs average about 15 inches per annum. That of Philadelphia about 42 inches. The mean relative humidity of the air in Colorado Springs in the Eighth Month of 1888, was 52.8, assuming 100 as the maximum. That of Philadelphia for the Eighth Month of 1889 was 72.6. The humidity of Colorado Springs for the whole of 1888, averaged 53.8. The total rainfall of 1888 was 8.12 inches only. Of this only .90 of an inch fell in the 1st, 2nd, 3rd and 12th months. The winter is generally the clearest and driest part of the year; the greatest precipitation occurring in the 4th, 5th, 6th, 7th and 8th months. These rains are usually showers which occur in the afternoons, and only last a few minutes. The soil being of a gravelly nature without clay and very porous, the moisture soon sinks into it, so that mud is seldom noticed and the walking is pleasant. The number of clear or fair days here in the year is in great contrast to those of the Eastern States. By a series of observations recorded by Professor Loud, of the College of this city, it appears that the average number of clear, fair, and cloudy days in each year, for a period of

with five and one-half days per week, but every other Seventh-day was taken as a holiday. The school terms were very much detached, the schools being without a teacher for months together, and the scholars would forget much they had learned. During my young days I went to school, at detached intervals, for two years, and one term of three months. I made the greatest advance in arithmetic, of which I was particularly fond. Again, at about sixteen, I went one three-months to school, at which I gained satisfactorily. As I grew in years my reading improved by use, and a teacher we boarded when our children were in school, gave me useful lessons in writing. From various ways I added to my little stock of learning, as occasion demanded.

A few years after my birth my parents joined the Society of Friends, but did not request for their children to do so, but they were concerned to train us in a right course by example and precept. By them I was early taught that there is a God to whom I was accountable; that there was a heaven of happiness for those who loved and served Him, and also that there was a place of misery for those who disobeyed Him. These things made me very thoughtful while young, particularly after retiring to bed at night; but I got rid of my convictions by the thought that little children were of the kingdom of heaven, and that I was too young to be held accountable. As years passed on I could not plead such immunity. Then the thought "there is time enough yet," was the excuse for a disregard to the will of God; therefore, although held in restraint by the judicious care of my parents and a regard to my reputation, I shunned many of the evils in the world; yet, I virtually lived without God and without hope in the world the greater part of my minority. Yet I was preserved from serious departures, and as far as I know, maintained a fair character as a young man of the world.

Soon after the commencement of my twenty-first year a great trial took place in my father's family, which brought great sorrow upon my mind. My pleasant pictures were marred and my vain hopes were frustrated. At length I appealed to my Heavenly Father for redress, which was the first prayer I ever made to God. The answer was—how long have I suffered thy ingratitude? This answer to my petition sealed conviction on my mind in regard to my sinfulness in the sight of God, and I became a mourner in very deed, which continued for some time without my being able to take up the resolution to mend my ways. One day I attended a Methodist meeting, which was held in a private house. As the minister read the following text: "Behold, the end of all things is at hand; be ye therefore sober and watchful unto prayer," a change took place in my purposes, and I resolved henceforth to turn my face heavenward. I could not retain what the minister further said, I was so absorbed with my own thoughts.

I never faltered or turned back from that resolution, though I often tried an easier path than the way of the Cross. For some months I kept retired from young company and endeavored to maintain a watch against evil courses, as was shown me by my Heavenly Father.

(To be continued.)

NOTHING is more important in the mental training of a child than the bringing him to do what he ought to do, and to do it in its proper time, whether he enjoys doing it or not.

five years prior to 1883, was as follows: Clear, 194; fair, 128; cloudy, 43—less than 4 cloudy days to each month.

From my own observation here during the period intervening between the 15th of the Eighth Month and the 1st of the Tenth, as also from that of a relative who passed a winter and spring at the place, the almost invariable bright, clear mornings, and pure dry atmosphere, cause an invigoration of the physical frame and cheerfulness of mind, which conduce greatly to good health and recuperation from prostrated strength.

For probably thirty years I have suffered from annual attacks of autumnal influenza known as "hay-fever," with asthma supervening. Resort has been made to Beach Haven, N. J., and the White Mountains, N. Y., for relief from these attacks at different times, but with only partial success; but the sojourn and travel in Colorado since the 10th of Eighth Month this year, has entirely warded off the attack. I am informed by Dr. S. E. Solly, who has practised here for fifteen years, that "hay-fever" patients are generally relieved in this climate from that complaint and asthma. Most of those who resort here for health are those afflicted with consumption of the lungs or kindred diseases; with regard to the advantages derived by this class, Dr. Solly informs me that if they come here in the early stages of the attack a large majority are benefited and often cured, but if it is delayed until the disease gains a strong hold upon the system, the per centage of improvement is reduced greatly. There is a small volume published and on sale in Colorado Springs, by Howbert Brothers, and P. Blakiston, Son & Co., 1012 Walnut St., Phila., entitled "The Health Resorts of Colorado Springs and Manitou," by S. E. Solly M. D., which would be a valuable work for consultation by any one proposing to come here for health. In Sec. VI on "Phtisis" he writes: "What Dr. Weber has written upon this disease in connection with elevated resorts is fully endorsed by clinical experience in Colorado Springs and Manitou; and I believe, speaking broadly, that these two places present more favorable conditions for the climatic relief of consumption than any other places at present available to invalids." * * * "The advantages that such a resort as Colorado Springs presents for the relief of this fell malady are very great; notably in the fact that out of the whole 365 days in the year, the days that are positively unfavorable are few and far between; and there are no months or seasons that have to be shunned as in most cure places."

An article written by W. C. Drew, published in the Colorado *Weather Bulletin*, compares the famous European health resort of Davos Platz, in Switzerland, with Colorado Springs. The writer states that he has recently spent a winter at Davos Platz. I quote some of his remarks and statistics. The number of clear days there in the 11th and 12th months of 1887, and 1st, 2nd, 3rd and 4th months of 1888 was 45, of fair days 60, and cloudy 77. In Colorado Springs in the 11th and 12th months of 1888, and 1st, 2nd, and 3rd of 1889, the clear days were 76, fair 48, and cloudy 27. This indicates 42.3 per cent. of cloudy days at Davos, and 14.5 at Colorado Springs, out of those recorded. The winter at Davos is more severe than at Colorado Springs; the mean winter temperature at the former being 25°, while at Colorado Springs it is 34°. At Davos the ground is covered with snow all winter to the depth of several feet; at Colorado Springs very little snow falls, and is usually soon melted and evaporated by the hot sun, whose

rays even in winter often raise the thermometer to 110 degrees of heat, and to 63 degrees in the shade, whilst perhaps the temperature may fall below zero by midnight.

It should be observed in this connection that probably one of the most serious objections to the climate of Colorado Springs is the rapid and extreme fluctuations of temperature. On one day in the Eighth Month of 1889, the mercury in the shade marked 91° at noon; exposed to the direct rays of the sun it was 130°. That night a strong breeze sprang up from the mountains, and by sunrise the thermometer had fallen to 46°! This was an extreme case, but I followed by observation whilst there that there was generally 30 degrees difference between the temperature of sunrise and noon. It is to be noticed, however, that the great heat of the sun's rays is to be ascribed to the purity of the air from vapor as well as its rarity on account of the altitude; these qualities at the same time favor the human system in sustaining heat without discomfort by assisting evaporation from the surface. Sultry, damp days and sunstroke are unknown here.

THE CUP OF BLOOD.

BY JAMES BURCKHAM.

When deep in Adullam's cave David the king,
Lay, hemmed by the troop of the insolent foe,
He dreamed of the beautiful Bethlehem spring
That flowed by the gate of the city below.

He saw there the maidens with pitcher and jar,
The faint caresses kneeling and stirring the tide,
And the stream flowing down and refreshing afar
The cool, waving palm-trees that sprang by its side.

Then waking from slumber, the king started up,
With thirst of the soul and the body distraught,
And he cried: "O that some one would bring me a cup
Of the crystal, sweet well by the Bethlehem gate!"

Then the three mighty men who had followed him
there,
The chief and the bravest of thirty, arose,
And girded their loins, and laid their swords bare,
And mightily broke through the midst of their foes.

Then back, with the cup of the Bethlehem spring,
They fought their fierce way through the Philistine
land,

And fled to the fastness, and came to the king,
And proudly delivered the cup to his hand.

For a moment he stood, all his veins hot as fire,
And drank with his eyes; then he marked the red
stain

On the cup, and turned quickly, and crushed his
desire,
And poured out the draught on the sand of the
plain.

And he looked up and said: "Be it far from me, Lord!
Shall I drink of the blood of the men who went
forlorn?"

At the price of their lives, against spear, against
sword?
Shall I quench my vile thirst with a draught of such
worth?"

O David! O kingly one, mighty of soul!
I would we were great with greatness of thine,
That royal unselfishness, noble control,
That so in this act of thy majesty shine!

I would that we thought of the price of our gain,
Of the cost unto others of what we possess—
Of the labor it cost them, the anguish, the pain,
The weal and the toil, and the strain and the stress.

I would we might add to each blessing, each gift,
Some thought of its price, some appraisal of love—
Not hating one on life without sorrow or strife,
Not rendering the weak as the hawk renders the dove.

But O, might we feel, as did David, the king,
The infinite cost of the hardly-won good,
And steep not our lips in that too sacred thing—
The over-ful cup of our fellow-man's blood!

Christian Advocate.

"WE WOULD SEE JESUS."

BY MARGARET J. PRESTON.

We would see Jesus, when our hopes are brightest,
And all that earth can grant is at its best;
When not a drift of shadow, even the lightest,
Blurs our clear atmosphere of perfect rest.

We would see Jesus, when the joy of living
Holds all our senses in a realm of bliss,
That we may know He hath the power of giving
Enduring rapture more supreme than this.

We would see Jesus, when our pathway darkens,
Beneath the dread of some impending ill;
When the discouraged soul no longer hearkens
To Hope, who beckons in the distance still.

We would see Jesus when the stress of sorrow
Strains to their utmost tension heart and brain;
That He may teach us how despair may borrow
From faith, the one sure antidote of pain.

We would see Jesus when our best are taken,
And we must meet, unshared, all shocks of woe;
Because He bore for us, alone, forsaken,
Burdens whose weight no human heart could know.

We would see Jesus when our fading vision,
Lost to the consciousness of earth and sky,
Has only insight for the Father's vision;
We would see Jesus when we come to die!

One Thing at a Time.

"Early in life," relates a gentleman who has now spent many decades in the service of God and his fellow-man, "I learned from a very simple incident a wholesome lesson, and one which has since been of incalculable benefit to me.

"When I was between twelve and fourteen years old, my father broke up a new field on his farm, and planted it with potatoes; and when the plants were two or three inches high he sent me to hoe it. The ground of that piece was hard to till; it was matted with grass roots and sprinkled with stones. I hoed the first row, and then stopped to take a general look at the task before me. Grass as high as the potatoes was everywhere, and looking at the whole from any point it seemed to be a solid mass. I had the work to do all alone, and as I stood staring at the broad reach of weedy soil, I felt a good mind not to try to do anything further than with it.

"Just that minute I happened to look down at the hill nearest my feet. The grass didn't seem just quite as thick there, and I said to myself, 'I can hoe this one well enough.'

"When it was done, another thought came to help me: I shan't have to hoe but one hill at a time, at any rate.

"And so I went to the next and next. But here I stopped again to look over the field. That gave me another thought, too. I could hoe every hill as I came to it; it was only looking away off to all the hills that made the whole seem impossible.

"I won't look at it!' I said; and I pulled my hat over my eyes so I could see nothing but the spot where my hoe had to dig.

"In course of time I had gone over the whole field, looking only at the hill in hand, and my work was done.

"I learned a lesson tugging away at those grass roots which I never forgot. It was to look right down at the one thing to be done now, and not hinder and discourage myself by looking off at the things I haven't come to. I've been working ever since that summer at the hill nearest my feet, and I have always found it the easiest way to get a hard task accomplished, as it is the true way to prepare a field for the harvest."—Anon.

FOR "THE FRIEND."

Extracted from the Memoir of Hannah Williams,
Widow of Jesse Williams.

Hannah Williams was frequently in the practice of keeping an account of the Yearly Meeting in her day, and one of these I have thought particularly instructive—so much so that I have considered it worthy of a space in THE FRIEND, if the Editor sees proper to do so. It may be a means of helping to stir up the pure mind in some, into that which leads to peace and happiness. H. W. was an Elder worthy of double honor, and she being dead yet speaketh.

E. C. COOPER.

The account is as follows, with some of her feelings expressed:

"Fourth Mo. 1829. I came to Philadelphia, to attend the Yearly Meeting. Morning and afternoon was at the meeting of Ministers and Elders. An exercise prevailed respecting the care of parents over their children, that they should be educated consistently with our Christian profession. A concern also prevailed that ministers should dwell with their gifts and minister only in right ability. Thomas Shillito did not fail to exhort to put away out of our houses, gods of gold, of silver, of wood and of stone, together with that disposition which is not in accordance with the Spirit of Truth; and said he had seen in the visions of light, that as this became the concern of Friends, we should again come forth in ancient brightness.

"I had unity with the exercise of the meetings, though feeling very low. The importance of properly being a member of that meeting, and my own sense of the qualifications I possessed, were so at variance, that only a hope I might improve, made me willing again to go." "On Second-day, during the morning and afternoon sitting, epistles from all the Yearly Meetings were read, the language of which was unusually grateful to my feelings. It is a time when what we feel and communicate in this epistolary way, is not the floating imaginations of the head, but as "Deep calling unto deep."

"Third-day. Whilst the third Query was under consideration, pertinent counsel was given relative to the right education of youth, and to the care of parents, first over themselves, then toward their children. Ann Jones [of England], was concerned for the younger part of families, spoke of the impropriety of young persons associating in companies out of the company of their older friends, of exposing them to frivolous talk and much laughing, whereby precious time was consumed, and weakness added; not prohibiting proper association with each other, and letting their parents be their nearest friends, to whom all their little grievances might be committed. Parents cannot be too careful to keep open this communicative channel. It is a source of much comfort and consolation often, both to parents and children.

"The daily reading of the Holy Scriptures was recommended. So much evidence of its being a pure concern accompanied the opening, that I have no doubt many amongst us if faithful, will have not only to approve, but adopt it." "The use of the plain language in its true grammatical way, was left by dear Ann Jones as a testimony to the truth; that the time was at hand, or coming, that 'My people shall have a pure language,' and that we must come to be a more spiritually minded people; that those who are looking to us for examples, may not be turned away in disappointment, saying, these people are not the people they profess to be, professing to be led

and guided by the Spirit of Truth, and yet in their movements disregarding it."

"I do feel prepared to unite with the precious testimonies of the Friends exercised this day in meeting, amongst whom was dear Sarah Cresson, setting her seal to the benefit of silent waiting in families, and to the reading of the Holy Scriptures. But whether human weakness will prevail to prevent any attempts in humility and simplicity to be more careful in these respects than heretofore, with heart and mind to look to Him who is able to bless, I know not; but I crave the blessing of preservation, and to be found coming up in my place."

"While the State of Society was before the meeting, much excellent counsel was handed on various subjects. Friends were encouraged to faithfulness in the attendance of meetings, both for worship and discipline; parents of children, especially young mothers and young housekeepers, were very tenderly and affectionately entreated to be moderate in their expenses in their families, and on their little children, and to labor day by day to bring them up in the nurture and admonition of the Lord."

"Seventh-day morning, met at 9 o'clock. Shortly after the meeting settled, men Friends informed us that Thomas Shillito wished to pay a visit to women's meeting; which being united with, he came, and was favored to address the youth with an earnest call, which he believed would not always be extended to the children of this people; but if disregarded and slighted, not being willing to deny themselves, and come forward in the Lord's cause of truth and righteousness, that the very stones of the street would cry out, and those from highways and hedges would be called in to take their places, even the places of the children of professing Abraham. 'I thought the fervency and earnest travail of this faithful servant did indeed claim the very close attention of all; I did believe it to be a Gospel call.' He then addressed the female heads of families; encouraged them so to manage their domestic matters, as to have more quiet in their families. His mind had often been pained to see the bustle and hurry many were in; hardly time to sit down at all. That in consequence of their tables being furnished with such a variety, they were much engaged in cooking; that three times a day to cook warm victuals, kept the female head, and her help (if she had any) almost all day cooking and washing dishes, that time for retirement or reading was precluded. He gave solid advice respecting silence before meals, that as this practice was carefully observed with hearts of gratitude for bold refreshment, their souls would sometimes be spiritually refreshed. He mentioned also his exercises, on account of the manner in which mothers dress their children in infant life; though, to appearance, tolerably consistent themselves, yet, by their conduct in these matters, proved they were not abiding under the power of the cross in themselves. Mentioned the little boys; when at an age to put on buttoned clothes, his feelings had been hurt to see how fantastically their clothes were made—so many needless buttons, &c.

"After he withdrew, the way was left open for many exercised minds to obtain some relief. Sarah Cresson strengthened the concern by adding her portion, believing, as she said, the time was coming that the Babylonish garments would be searched out; that though some might say these were little things, yet they were an outward and visible sign of inward want; encouraged heads of families to be faithful to those

placed under their care. Take time to sit down in retirement with their little ones, that so a blessing might attend. She expressed a hope, that by discharging their duty in these respects, a little army would be raised up for the Lord from among the youth in this Yearly Meeting, who would stand faithful for the law and testimony.

"There was much solemnity over the meeting under these communications; no doubt it was the language of the Spirit to the church, through these instruments. There was one part of dear T. Shillito's concern which I omitted. It was speaking of the children's dress—it prepared the way for deparures as they grew up, and often was the means of introducing them into unsuitable company, whereby there were outgoings in marriage."

FOR "THE FRIEND."

Friend's Boarding-School of Ohio.

Much interesting information has, from time to time, been placed before the readers of THE FRIEND respecting Westtown School, and very little respect to its sister school at Stillwater, near Barnesville, which was opened about ten years ago. The school-house, well-levicord, and substantially built of brick, after a plan prepared by Addison Hutton, is a credit to the Friends of Ohio Yearly Meeting, who gave freely of their means towards its erection, being in earnest that their young people should have the opportunity of a good education, under Friends' influence.

Many members of that Yearly Meeting, who could not contribute largely in money, came upon the school-farm, and with their own hands and by the aid of their teams, rendered most important service to the building-work, into which they entered with earnest loving spirits. All of the bricks used were made from clay dug on the farm and burnt near at hand, and the grounds have been neatly graded and planted.

Since its erection the school has done a good work, the accommodations being comfortable and ample; and its affairs have been administered with admirable economy, by superintendents possessing excellent qualifications of various kinds, among which has been conspicuous a living desire for the religious growth of the pupils committed to the care of the school.

The most pressing necessity of the institution now is, an endowment fund, from the income of which the salaries of teachers may be enlarged, and helps rendered to introduce pupils whose parents are in moderate circumstances.

From the fact that a large part of the Friends of Ohio are engaged in agricultural pursuits, and do not handle much money, while their families of children often number six or eight, it is easily seen that it is often impossible to set aside for their school education the sum necessary to enable their children to complete the course of study at the Boarding-School. The result is, that many bright-minded children must receive nearly their whole school training at the public schools, exposed to influences often quite unfavorable to moral and religious development of character.

There are, within the limits of the Yearly Meeting, over 600 children of age to be sent to school, and an endowment of 50,000 dollars would be a very modest one towards rendering such aid to these as would be desirable.

The writer was much interested, recently, on the occasion of a meeting of an association of the Younger Friends of Ohio, who have nobly and disinterestedly banded themselves together,

with the desire to promote the establishment of such a fund; and pledged himself there to raise in its aid a certain amount, from Friends outside of Ohio Yearly Meeting.

The children of Philadelphia Yearly Meeting, all of them, rich and poor, who are now being educated at Westtown, are deriving benefits from the gifts and legacies of Friends who have passed away, which benefits, but for this aid, would increase the cost to their parents, for each child, of many dollars a year.

Shall we now step forward and lend a helping hand, at this opportune moment, to our brothers of Ohio, in the establishment of a fund, which in like manner may bear fruit through their succeeding generations?

Any one who walks through the rooms or halls of the School at Stillwater, during the evenings of the Yearly Meeting week (when many families are boarded there), and sees the intelligent, thoughtful faces of the young people, many of them indicative of religious awakening, might appreciate the advantage to the future well-being of those children and to our religious Society, of their having the opportunity of a thorough school education, under religiously guarded influences.

FOR "THE FRIEND."

Inaccurate Scripture Quotations.

Believing it has always been considered important by Friends, in giving quotations from Scripture, to observe accuracy, I desire to call attention to one which is nearly always misquoted from our galleries, and often in print. It is misquoted on page 118 of the present vol. of "THE FRIEND," thus: "No man can redeem his brother or give to God a ransom for him." Both the Authorized and Revised versions read: "They that trust in their wealth, and boast themselves in the multitude of their riches; none of them can by any means redeem his brother, nor give to God a ransom for him." Psalm xli: 7.

R. J. A.

[Although the expression "No man can redeem his brother or give to God a ransom for him," is not (in that form) a quotation from the Bible, yet it is a sound scriptural truth. The correct quotation from Psalm xli: 7, shows that it is true as respects those who trust in riches. And the language of Ezekiel, that where the judgments of the Lord visit the land, "though Noah, Job and Daniel were in it, they shall deliver neither son nor daughter; they shall but deliver their own souls by their righteousness," applies the same principle to those who were pre-eminent as righteous men, in favor of the Almighty. This is further confirmed by the testimony of Peter to the Jewish Council, "There is none other name under heaven given among men, whereby we must be saved," [than the name of Jesus].

In *The British Friend*, for Eleventh Month, 1st, are some remarks on misquotation, which it may be worth while to quote.

After stating that the text "Mind your calling, brethren," is not to be found in the Bible in these exact words, the article adds, "Many other familiar religious maxims and phrases that savor of the Bible, are not precisely to be found there. For instance, the descriptive expressions, 'Rock of Ages,' and 'Great Physician,' so often fitly applied to Christ, are not to be found

in any part of the sacred records. But the meaning involved in all three phrases is abundantly to be found, and that is the only point of importance."]

Extracts from an Essay entitled "WEALTH," by Andrew Carnegie, a wealthy Iron Manufacturer of Pittsburgh, published in the "North American Review," Sixth Month, 1889.

"There are but three modes in which surplus wealth can be disposed of. It can be left to the families of the decedents; or it can be bequeathed for public purposes; or, finally, it can be administered during their lives by its possessors."—"The first is the most injudicious." "It will be understood that fortunes are here spoken of, not moderate sums saved by many years of effort, the returns from which are required for the comfortable maintenance and education of families. This is not wealth, but only competence, which it should be the aim of all to acquire."

"Why should men leave great fortunes to their children? If this is done from affection, is it not misguided affection? Observation teaches that, generally speaking, it is not well for the children that they should be so burdened. Neither is it well for the State. Beyond providing for the wife and daughters moderate sources of income, and very moderate allowances indeed, if any, for the sons, men may well hesitate; for it is no longer questionable that great sums bequeathed often work more for the injury than for the good of the recipients. Wise men will soon conclude that, for the best interests of the members of their families, and of the State, such bequests are an improper use of their means."

"The growing disposition to tax more and more heavily large estates left at death, is a cheering indication of the growth of a salutary change in public opinion."—"The State of Pennsylvania now takes—subject to some exceptions—one-tenth of the property left by its citizens."

It is desirable that nations should go much farther in this direction. Indeed, it is difficult to set bounds to the share of a rich man's estate which should go at his death to the public through the agency of the State; and by all means such taxes should be graduated, beginning at nothing upon moderate sums to dependents, and increasing rapidly as the amounts swell, until of the millionaire's hoard, as of Shylock's—at least

—"The other half
Comes to the privy coffer of the State."

"This policy would work powerfully to induce the rich man to attend to the administration of wealth during his life, which is the end that society should always have in view, as being that by far most fruitful for the people."

"Even the poorest can be made to see this, and to agree that great sums gathered by some of their fellow-citizens and spent for public purposes, from which the masses reap the principal benefit, are more valuable to them than if scattered among them through the course of many years in trifling amounts."

"Rich men should be thankful for one inestimable boon. They have it in their power during their lives to busy themselves in organizing benefactions, from which the masses of their fellow-citizens will derive lasting advantage, and thus dignify their own lives. The highest life is probably to be reached, not by such imitation of the life of Christ as Count Tolstoy gives us, but, while animated by Christ's spirit, by recog-

nizing the changed conditions of this age, and adopting modes of expressing this spirit suitable to the changed conditions under which we live; still laboring for the good of our fellows, which was the essence of his life and teaching, but laboring in a different manner."

"This, then, is held to be the duty of the man of wealth: First, to set an example of modest, unostentatious living, shunning display or extravagance, to provide moderately for the legitimate wants of those dependent upon him; and, after doing so, to consider all surplus revenue which come to him, simply as trust-funds, which he is called upon to administer, and strictly bound as a matter of duty to administer in the manner which, in his judgment, is best calculated to produce the most beneficial results for the community: the man of wealth thus becoming the mere agent and trustee for his poor brethren, bringing to their service his superior wisdom, experience and ability to administer—doing for them better than they would or could do for themselves."

"In this manner returning their surplus wealth to the mass of their fellows in the forms best calculated to do them lasting good."

"In bestowing charity, the main consideration should be to help those who will help themselves; to provide part of the means by which those who desire to improve may do so; to give those who desire to rise the aids by which they may rise, to assist but rarely or never to do all."

"He is the only true reformer who is as careful and as anxious not to aid the unworthy as he is to aid the worthy, and perhaps even more so, for in almost-giving more injury is probably done by rewarding vice than benefit by relieving virtue."

Natural History, Science, &c.

How Dr. Bowditch Cured Himself of Consumption.—Dr. Henry J. Bowditch, of Boston, recently recited to the American Climatological Association a most instructive story of the way in which his father, when apparently far advanced in consumption, overcame it by open-air travel and exercise; and by a systematic training of his children in similar open-air habits of living, overcame in them strong hereditary tendencies to the same disease.

According to the story, in 1808, the elder Bowditch had cough, spitting of blood, hectic fever, and great debility. In August of that year, though very ill, he started, with a friend as his companion and driver, in an open, one-horse chaise for a tour through New England. During the trip he travelled 748 miles, the time occupied being thirty days. The first day, after a drive of twenty-five miles, he was so much exhausted, and spat blood to such an extent, that the landlord of the hotel at which they put up advised his friend to take him back home to die. At the end of the next day's journey he felt somewhat better; he persevered in his journey, grew steadily better, and finally when he reached home again was in much better health than he had when starting. Afterward, under walks of one-and-a-half to two miles, taken three times daily during thirty years of life, all pulmonary troubles disappeared.

Having thus experienced, in his own case, the vast benefits resulting from constant, regular exercise out-of-doors, he apparently determined that his children should be early instructed in the same course. As soon as we were old enough, says the younger Bowditch, he required of us daily morning walks down to a certain well-

known divine's meeting-house, about three-quarters of a mile, or a mile, from our home.

If any of us, while attending school, were observed to be drooping, or made the least pretence even to being not "exactly well," he took us from school, and very often sent us to the country to have farm-life and out-of-door "play to our heart's content." Once he told me to go and play, and to "stay away from study as long as you choose." In fact, he believed heartily in the old Roman maxim, of a "healthy mind is a healthy body." In consequence of this early instruction, all of his descendants have become thoroughly impressed with the advantages of daily walking, of summer vacations in the country, and of camping out, etc., among the mountains. These habits have been transmitted, I think, to his grandchildren in a stronger form, if possible, than he himself had them. Such habits are among the surest guarantees against the prevalence of phthisis in a family.

Dr. Bowditch adds, that for his part he fully believes that many patients now die from want of this open-air treatment. For years, he says, I have directed every phthisical patient to walk daily from three to six miles—never to stay all day at home, unless a violent storm be raging. When they are in doubt about going out, owing to "bad weather," I direct them to "solve the doubt, not by staying in the house, but by going out."

A cloudy day, or a mild rain, or the coldest weather should not deter them. If the weather be very cold, let them put on respirators before leaving the house, and be thoroughly wrapped in proper clothing for the season. I direct them never to stand still and gossip with friends in the open street, as by so doing they are much more liable to get a chill than by walking.

Hence, summer and winter alike, my patients usually get plenty of fresh air, uncontaminated in a great part, at least, by the previous breathing of it by themselves or by other occupants of the house. This course, I believe, might be pursued in any part of our common country.—*The Medical News.*

Items.

Prohibition in Kansas.—*The Christian Advocate* publishes an article, with this heading, written by Richard Wheatley, D. D., who has recently made a tour extending through the length and breadth of Kansas. In reply to the question whether "Prohibition does prohibit?" He says, "It is hardly too much to say of Prohibitory law in Kansas, that it is as much respected and enforced as the law against gambling, fraud, theft and personal violence."

As to the effect of the law on the social prosperity of the State, he says: "The State of Kansas, under Prohibition, rejoices in decrease of taxation, many vacant poor-houses, cheaper money, the best class of foreign and domestic immigrants, and the finest cereal crops in the United States."

Episcopal Convention.—At the recent Episcopal Convention, the question of omitting the words "Protestant Episcopal" on the title page of the Prayer Book, was indefinitely postponed. A canon was adopted establishing an order of deaconesses. Several changes of minor importance were introduced into the order of service as laid down in the Prayer Book.

Concord Quarterly Meeting.—At this meeting, held at Media, Pa., on the 12th of Eleventh Month, the most striking feature was the harmonious exercise that prevailed for the extension of the Lord's kingdom. It was shown in the prayers that were offered, for the renewed visitations of Divine Grace, (without which man is spiritually helpless); and in the pleadings with the people to yield themselves

submissively to the work of the Holy Spirit, so that they might be favored with repentance and general sanctification through the water of life, and waiting upon God, come to a nearer acquaintance with that Divine Being, whom to know is life eternal.

The way to life and salvation, and the way to death and destruction were set before those assembled. The gathering was a large one, and it was a solemn and favored opportunity, which it is hoped will not pass without producing some good fruits.

In the business meeting attention was drawn to the increasing use of music in the Society of Friends—an indulgence which from very early times had been discouraged among them, because of the waste of time involved in its study and practice, and because its effect on the mind was not favorable to religious growth. It is both a symptom and a branch of that worldly-mindedness, which is perhaps the most dangerous enemy our branch of the Church is called upon to encounter in the present day; and it is as clearly prohibited by the discipline of Philadelphia Yearly Meeting as other practices which claim the attention of overseers and church officers.

Protestants of the Alps.—The Protestants of Val Freisamiers, in the French Alps, are in a desperate need, and appeal to their fellow-Christians for aid to emigrate to Algeria. Descendants of those faithful witnesses who centuries ago found refuge from persecution in these almost inaccessible mountain heights, they have for generations endured increasing tribulations. Much of their property has been swept away by avalanches, and during half the year they are entirely isolated from the outer world, while, owing to the intense cold they are forced to inhabit their stables, in order to make the most of the animal warmth of their cattle. Each succeeding spring finds them more poverty-stricken and with fewer resources. Some ten families have already been transported to the Protestant colony of Tlemcen, situated in Algeria. The Protestant Colonization Society issues an appeal for funds sufficient to transport the remaining families, some twenty in all.—*American Messenger.*

THE FRIEND.

ELEVENTH MONTH 23, 1859.

The plea is often advanced for making changes which tend to relax the discipline of the Society of Friends, and to lower the standard of self-denial which it requires of our members, that such changes will have the effect of keeping within the pale of the Society some who are not willing to conform to the degree of cross-bearing which is necessary to come up to the standard of old-fashioned Quakerism; and therefore that by modifying our discipline, and satisfying this class, we may expect an increase in numbers.

It would be well for those who advocate such a course, to consider what are the objects of maintaining a separate organization as a religious Society—and whether these objects can be obtained in such a manner.

The Society of Friends was called into existence by the adoption of certain religious doctrines and the observance of the testimonies which grew out of them—the holders of which were drawn together by the unity of their views. One great object of its continued existence has been to hold up to the world an organized and united testimony to the truth, precious, and binding authority of those doctrines and testimonies. If it departs from them, it loses its value as an exponent of them and as a witness for the Truth. If we were to lay aside our convictions as to the spiritual nature of Divine worship and of the Christian religion, and permit the introduction into our meetings of stated observances, such as reading, singing, and elaborately

prepared sermons, in place of humble waiting on God for help and direction, we might retain among us some who now go to other places where there is more to please the ear and gratify the intellect than in the humbling effort to feel the Divine Power acting upon the mind, which is the proper attitude of a Quaker worshipper. In the same manner, by adopting other practices which are fashionable among many professors of Christianity, and by allowing greater liberties in the manner of life, we might still further widen the platform of church fellowship, until it might become broad enough to embrace almost every one who wished to make any profession of religion. But it is evident that the value of the Society as a testimony-bearer to the truth, would be proportionally diminished; and the motive for its maintenance would become less and less, until it might be permitted to drop out of existence, with none to mourn its departure.

It seems to us that the principal use of such a Society as our own, is the presenting to the world of a pure standard of doctrines, and the example of a body of people, whose lives are consistent therewith. Such an example cannot fail to have an animating effect on others, whose hearts are touched by the finger of God, and who are convinced in themselves that the Lord requires of them a holy and watchful course of conduct.

The more upright and blameless, the more consistent with the self-denying precepts of Christ, the lives of our members are, the brighter the light which they will hold up to the world, and the stronger will be its attractive power on holders—saying in effect to them, "Come and have fellowship with us, for truly our fellowship is with the Father and with his Son, Jesus Christ."

The trials at the present time special need to be on our guard against the gradual introduction among our members of indulgences which tend to promote the increase of worldliness. In the limits of Philadelphia Yearly Meeting, the Divine blessing on the labors of faithful Friends has largely prevented of latter times the introduction of erroneous doctrines, which have caused trouble in many parts of the Society. But the enemy of all good has other baits and snares; and if he can prevail on the members to slide into worldly indulgences, such as music, and other things which tend to dissipate serious thoughtfulness, and to please the vain mind, so that they lose the tenderness of spirit and watchfulness over their spiritual interests, which is the proper condition for a Christian to dwell in, their power for good will be destroyed, and they themselves will have fallen from a state of grace.

William Penn says of the early converts among Friends, "We did not think ourselves at our own disposal, to go where we list, or say or do what we list or when we list. Our liberty stood in the liberty of the Spirit of Truth; and no pleasure, no profit, no fear, no favor, could draw us from this retired, strict and watchful frame." "This retired and strict sort of life was our preservation from many snares, to which others were continually exposed, by the prevalence of the lust of the eye, the lust of the flesh and the pride of life." The more fully our members are brought into that "strict and watchful frame" of which William Penn speaks, the greater will be our influence for good in the world, and the more healthy will be the spiritual condition of the body.

A friend has kindly called our attention to a misquotation of the 4th verse of the 1st chapter

of John, which was contained in an extract from the valuable writings of William Grove, published in No. 12, p. 90 of the present volume of THE FRIEND. The extract says, "In Christ (the Word) was Light, and that Light was the Life of men." This reverses the order of the text, which says, "In Him was Life, and the Life was the Light of men."

Our friend thinks that it was "as a warning against the heresy of rationalism that the beloved disciple was there led to emphasize the precedence of Life the food of the heart, over Light, the food of the brain." The obedience of faith is still a needful preparation for the reception of Divine mysteries. Our Saviour said, "If any man will do [God's] will, he shall know of the doctrine."

The article on the *Protestants of the Alps*, published under the head of "Items" was forwarded by our friend ELIZABETH R. HUTCHINSON, South West corner of Seventh and Orange Streets, Philadelphia, whose sympathies had been awakened for the sufferers, and who offers "to receive, receipt for and forward" such sums of money as may be contributed for the purpose of aiding the removal of these people to a more hospitable home.

SUMMARY OF EVENTS.

UNITED STATES.—Complaint has been made to the Treasury Department that the alien labor contract law is being violated at Detroit, Michigan, by Canadian laborers, who cross the line every day to perform labor in the United States, and return to their homes at night. Acting Secretary Batcheller on the 18th inst., referred the matter to the Collector of Customs at Detroit, with instructions to see that the provisions of the law are strictly enforced.

Nellie Bly, a correspondent of the *New York World*, started from that city on the 14th instant, for a journey round the world in 75 days. Every step of her trip has been mapped out, and barring accidents, she will achieve what no man or vessel has ever attempted. Apart from the picturesque interest which such a trip possesses, it will serve a useful purpose of showing the development of transportation facilities of the world, and also in demonstrating that the untraveled woman can travel as well as the man with perfect safety. Nellie Bly is provided with tickets for her entire trip, and they were all purchased in New York, which is another interesting fact. She will journey without a trunk, taking only a bag, which she can carry in her hand. She left on the *Augusta Victoria* of the Southampton-Bremen line, will proceed to London, and take, the morning after her arrival, the Indian mail steamer, which goes by the way of the Suez Canal. She will be due in Hong Kong on the 25th of next month. The cost of the trip will be about \$200.

The Report of the State Department of Agriculture of Alabama shows that but 86 per cent. of a cotton crop has been made in the State. The corn crop is above a full one, the Report showing an average of 105. The Chickasaw legislature has passed a resolution memorializing Congress to allot in severalty the Chickasaw lands, giving to each Chickasaw citizen 160 acres of land, and the remainder of the lands, after the allotment is made, to be purchased by the Government at \$1.25 per acre.

Despatch from the Vermilion Reservation, in Northern Minnesota, says that the Bois Fort Chipewas have accepted the propositions of the Government made through the Chipewas Commission, in regard to taking lands in severalty, and for this purpose have agreed to the United States their reservation, embracing about 116,000 acres.

A movement is on foot to appoint a joint commission to determine the disputed boundary between Alaska and the British possessions.

The *Caroline* steamer, published in Salisbury, North Carolina, sent a mining expert to Montgomery County, to investigate rumors of an important gold field there, and he reports that all the statements are true. The find is said to be the richest ever discovered in the State. Three parallel veins were found, about half an inch in thickness, and only a few feet

apart. The ore pans out a large percentage of pure gold. The place is owned by three brothers named Sanders.

The brewers of New York City have assessed themselves ten cents on every barrel of beer sold by them during the year ending Fifth Mo., 1st, 1889, for the benefit of the proposed World's Fair to be held in that city in 1892. The amount is stated to be \$446,000; which shows that 4,460,000 barrels of beer are sold by the New York brewers every year, or about three barrels for each man, woman and child living in that city.

A despatch from Topeka, Kansas, says, that Senator Ingalls will not succeed himself in the United States Senate. There is a growing sentiment in favor of re-submitting the prohibition question to a vote of the people, with the end in view of repealing the law. It is reported that the late Senator Ingalls, who was re-elected in 1886, had offered his resignation, but that the people don't want it. Judge Foster, of the U. S. Circuit Court, has sent in his resignation, to join in the re-submission crusade and contest Senator Ingalls' seat. He is a Republican, and very popular.

A correspondent informs that a statement in the Summary of Eleventh Month 2d, in regard to Vice-President Morton having applied for and obtained a license to sell liquor in the café of his apartment house in Washington, is a falsehood. Great care is exercised to endeavor to avoid placing anything in this department reflecting upon the character of any person, without being quite clear that it is correct. Upon careful inquiry it is ascertained that the Vice-President has obtained a "bar-room license," but that the wines, rum, brandy, &c., which are on a "wine list" of his apartment house, are not sold over the bar, but are supplied to customers at the tables in the restaurant.

Deaths in this city last week numbered 370, 11 more than during the previous week and 16 more than during the corresponding period of last year. The foregoing 197 were males and 173 females; 43 died of consumption; 30 of diseases of the heart; 26 of inflammation of the lungs; 21 of old age; 14 of debility; 12 of inanition; 12 of inflammation of the brain; 12 of influenza; 11 of pneumonia; 10 of cholera; 10 of apoplexy; 12 of convulsions; 11 of cramp; 10 of casualties; 10 of bronchitis and 8 of typhoid fever.

Markets, &c.—U. S. 5's, reg, 105; coupon, 106; 4's, 127; currency 6's, 117 & 128.

COTTONS was quiet, but steady, at 10 $\frac{1}{2}$ cts. per pound for Middling.

FEED.—Winter bran, prime to choice, \$13.25 a \$13.50; do, fair to good, \$12.50 a \$13.00.

FLOUR AND MEAL.—Western and Pennsylvania super, \$2.50 a \$2.75; do, extras, \$2.85 a \$3.25; No. 2 winter family, \$3.30 a \$3.75; Pennsylvania family, do, \$3.75 a \$3.90; Pennsylvania rolls, extra, \$4.00 a \$4.40; winter winter, clear, \$4.00 a \$4.30; do, straight, \$4.35 a \$4.50; winter patent, \$4.60 a \$5.00; Minnesota, clear, \$3.50 a \$4.12; do, straight, \$4.25 a \$4.75; do, patent, \$4.85 a \$5.25. Rye flour was quiet and easier. New Souths at \$1.85 a \$1.90, and old at \$1.25 a \$1.65 per 100 pounds as to quality.

GRAIN.—No. 1 red wheat, 80 $\frac{1}{2}$ a 81 cts.
No. 2 mixed corn, 40 $\frac{1}{2}$ a 41 cts.
No. 1 white oats, 28 $\frac{1}{2}$ a 29 cts.

BEEF CATTLE.—Extra, 4 $\frac{1}{2}$ a 4 $\frac{3}{4}$ cts.; medium, 4 a 4 $\frac{1}{2}$ cts.; common, 3 $\frac{1}{2}$ a 3 $\frac{3}{4}$ cts.; fat cows, 2 $\frac{1}{2}$ a 3 $\frac{1}{2}$ cts.

SHEEP.—Extra, 5 $\frac{1}{2}$ a 5 $\frac{3}{4}$ cts.; good, 5 a 5 $\frac{1}{2}$ cts.; medium, 4 $\frac{1}{2}$ a 4 $\frac{3}{4}$ cts.; common, 3 $\frac{1}{2}$ a 4 $\frac{1}{2}$ cts.; culls, 2 a 2 $\frac{1}{2}$ cts. LAMBS.—Extra, 6 $\frac{1}{2}$ a 6 $\frac{3}{4}$ cts.; good, 5 $\frac{1}{2}$ a 5 $\frac{3}{4}$ cts.; medium, 5 a 5 $\frac{1}{2}$ cts.; common, 4 a 4 $\frac{1}{2}$ cts.

Hogs were in fair request, although prices in sympathy with the Western market declined $\frac{1}{2}$. Good light Western held at 5 $\frac{1}{2}$ a 5 $\frac{3}{4}$ cts.; heavy Western, 5 $\frac{1}{4}$ a 5 $\frac{1}{2}$ cts.

FOREIGN.—A revolution occurred on the 15th inst. in Brazil, on which day a Republic was proclaimed. General Da Fonseca appears to be at the head of the movement.

Dr. Barbosa, the new Brazilian Minister of Finance, has taken the same position in regard to London, to the following effect: The Government is constituted as the United States of Brazil. The monarchy is deposed, and Dom Pedro and his family have left the country. The provinces have signified their adhesion to the Republic, and the tranquillity and general satisfaction prevail. The Republic will respect all State engagements, obligations and contracts.

The world's output of tobacco is reported to be increasing more rapidly than any other vital or corn.

Dr. Kraft-Ebing, of the University of Vienna, recognized in Europe as an authority, thinks that no proper legal measure should be neglected that may combat intemperance, and that the formation of societies to counteract it should be urged. He declares that 20 per cent. of all cases, intemperance is found to be the sole or chief cause, and 80 per cent. more, one of the causes of mental disease.

It is estimated that the Egyptian cotton crop will yield over 3,000,000 bales.

On the 16th instant Floquet was elected President of the French Chamber of Deputies. He received 338 votes out of the 400 required.

The Emin Pasha Relief Committee will instruct Captain Wissmann to despatch, with all possible speed a caravan to the relief of Henry M. Stanley and his party.

The Porte is ready, as soon as it learns that Austria and Russia have accepted Prince Sigmarek's mediation, to send a circular letter to the signatory Powers denouncing the illegality of the present government of Bulgaria.

The Paris correspondent of the *Daily News* says: The Mexican Government, in an interview stated that a draft of a protocol for the federal union of Guatemala, San Salvador, Honduras, Nicaragua and Costa Rica had been already signed, but required ratification by the Congresses of the five countries.

H. Benson Whitehouse, United States Charge d'Affaires in the city of Mexico, has just succeeded in climbing the extinct volcano of Iztaccihuatl, 18,000 feet high. In the ascent he was obliged to cut over 2,000 steps in solid ice, and one night he camped in a cave at a height of 14,000 feet.

The Mexican Government has authorized the construction of a railroad from Bagdad, on the Gulf of Mexico, to Matamoros, opposite Brownsville, Texas. A new coal bed, which is estimated to contain 19,000,000 tons, has been discovered at North Sydney, Nova Scotia.

RECEIPTS.

Received from Henry Bell, Agent, Ireland, £4, 5s., being 18s. each for himself, S. Fayle, William White, John H. Hart, George W. H. Hart, John E. W. W. John H. Colvin, and John E. Southall, vol. 63, and 5s. for Benjamin Bishop, to No. 52, vol. 62.

NOTICES.

WESTWOLD BOARDING SCHOOL.—The Committee in charge will meet on Seventh-day, the 30th inst., at 10 A. M., to consider report of joint committee on the Farm, and other business.

WM. EVANS, Clerk.

Philad'a, Eleventh Mo. 1889.

MARRIED, at Friends' Meeting-house, Springville, Iowa, Tenth Mo. 24th, 1889, ELWOOD D. EMMONS to IDA BREDL, daughter of Samuel and Esther J. Bredl, all members of Springville Monthly Meeting of the Friends' Church, on Fifth-day, Eleventh Month 14th, 1889, at Friends' Meeting in Medford, ISAAC L. son of Henry W. and Miriam Roberts, of Moorestown, to MARY E., daughter of Benjamin J. and Sarah A. Wilkins, of Medford, N. J.

[THE FRIEND of Eleventh Month 2d, contained a notice of the decease of Hannah W. Allen. Since its publication, the following account has been received, containing fuller particulars.]

DIED, on the 22d of Tenth Month, 1889, HANNAH WILKINS ALLEN, daughter of John C. and Rebecca S. Allen, the wife of George W. Allen, a member of the Monthly Meeting of Friends of Philadelphia. Whilst this beloved young friend had much to bind her to this life, it was instructive and touching to witness, during a protracted illness, her struggle for resignation to the Divine will, and her trust in the Holy Help, we reverently believe, was mercifully strengthened to her attainment to this, and to know a preparation for the solemn change; so that she was enabled to look forward with calmness and resignation to life's close. She was graciously permitted to feel her Saviour near, and to realize the preciousness of his peace; leaving to her beloved family and friends, the consolation of believing that, through redeeming love and mercy, she is now an inhabitant of that city, where none can say, "I am sick."

FOR "THE FRIEND."

Incidents and Reflections.—No. 199.

CONFESSING AND FORSAKING SIN.

A few years since, after attending a country Quarterly Meeting, I spent part of the afternoon in company with a friend, who related some interesting incidents in his own experience.

Many years before, when visiting the prisoners in the Eastern Penitentiary of Pennsylvania, he became much interested in one of the prisoners, a young man, who had been a physician in a small town in the interior of the State. He had yielded to the temptation to connect himself with a gang of men engaged in the business of counterfeiting bank notes, but had been detected, convicted, and sentenced to an imprisonment of three years and six months. He had then a wife and one small child; and seemed fully repentant, and determined to live an upright life in the future.

When the term of his imprisonment expired, my friend took him to his own house, and sheltered him there for a time, until some plans could be devised, and arrangements be made for his future course. Ultimately, he removed to one of the cities on the Pacific coast, obtained a position as a physician to a public institution at a good salary, invested his savings in land which increased in value, and became prosperous and wealthy. He was a man of good abilities, and soon came to be esteemed as a prominent and influential citizen.

He was made President of the Board of Education, which had charge of the public schools of the city in which he lived; and exerted himself to promote their efficiency. A school for young women was established at the same place, under the control, as I suppose, of an Episcopal organization in the Eastern States; and a clergyman sent out to conduct it, who had formerly lived near Philadelphia. Some rivalry arose between this and the public schools; and the latter were so ably managed as to interfere with the success of the other. It was probably due to this rivalry and a desire to destroy the influence of the President of the School Board, that the clergyman spread the information of his former crime, of which he happened to have some knowledge.

This cruel act was a most grievous blow to the Doctor, who had for years been living an

upright life, and had gained the esteem and confidence of his fellow-citizens. In his distress, his thoughts turned to the one who had visited him in prison, sheltered him when homeless, and encouraged him in his good resolutions; and he came on to Philadelphia to consult with this friend, in whom he felt that he could confide. He had some thoughts of disposing of his property where he then lived, and of removing to some distant point such as Japan or Calcutta, where he would be unknown, and where the taint of his former misdeeds would no longer attach to his name. "No," said his friend, "go back to thy own home, and there live down all unfavorable reports." This advice he concluded to follow; but before returning he felt that one unpleasant duty must be performed.

His family by this time had arrived at years of understanding. One son had graduated as a physician, two others were then students at Harvard University, and a daughter had been receiving her education in an Eastern city. He felt that he could not gather these into their western home without first preparing their minds for the reports respecting their father, which would probably reach their ears at some time. This information he could not communicate to them himself, and his wife would not do it; so it devolved upon his faithful and long-proved Philadelphia friend. He sent for all the members of his family, and one evening, as they were gathered together at the house of his friend, he asked him to tell his children where it was that they had first met with each other. The scene that followed was a very affecting one; in which the daughter fainted.

Some friends in Philadelphia, who had known the Doctor in former years, drew up and signed a paper expressive of their confidence in him; and this was given to him. He returned to the place of his abode, and continued to prosper there.

There was much wisdom in the advice given to this person—to live down unfavorable reports in the place of his abode. The way of the transgressor is hard; and however sincerely he may repent of his evil deeds, he cannot expect entirely to escape from the sufferings which follow them. But there is nothing which so effectually opens the way in the minds of others for him who is desirous of reforming, as humble confession of our faults, and the evidence of sincere repentance. "He that confesseth and forsaketh his sins shall find mercy," not only with Him who is the great Judge of all, but with those who are living under the government of his Spirit.

Not long since the case of Henry V. Lesley, who, when Secretary and Treasurer of a Canal Company, had defrauded it of considerable sums of money, came before the courts of Philadelphia. The guilty man had gone to Canada, but had voluntarily returned, prepared to submit to any punishment that justice might demand. He had made pecuniary restitution so far as was in his power. When brought to trial, he pleaded

guilty and made the following touching and instructive statement:

"I don't wish to take up much of the time of the Court. It was my intention not to say anything; but simply to plead guilty. In June, 1883, I was dismissed from the company, and soon after that, by the assistance of my brother and other relatives, I re-funded to the company from \$12,000 to \$15,000, I don't know exactly. For three years I suffered extremely. No man can know how great my suffering was, and the fear of punishment at last became so great that I left the city and went to Toronto. I then took a false name, and under it made many friends. Two events then took place during that year, that were the means of inducing me to come home. I recognized the false position I was in, and the full responsibility I owed to God and man, and I could not live any longer in that lying way; that I was really an impostor while living there. I know that I have done right in coming home, and I don't regret it. I have thought the matter over in prison, and am satisfied that I have done all that I can to secure perfect peace. If ever I am able to repay the company I will do so. If a legacy is ever left to me—there were two left me—and if an other should be, the company will surely get the benefit of it. I have nothing more to say, and I throw myself on the mercy of the Court."

Who can doubt that this man would be happier in prison, while he was suffering the legal penalty for his offence, but with a hope in that mercy which allows him "that confesseth an I forsaketh his sins," than he was when concealed under an assumed name, and tormented by an uneasy conscience?

The following incident, which was published in *The Episcopal Recorder*, shows the power of conscience in compelling a man to acknowledge a wrong he had committed years before. He felt that without such "confession" he could not obtain peace of mind:—

"Some years ago, a fine vessel, bound for Canada, was wrecked off the coast of Newfoundland. She had on board an experienced captain, a competent crew, and several passengers. All perished in the boisterous waves one very stormy night, and the name of the ship was found out only by some of her boats being washed ashore. Many a home was made desolate by this sad calamity, and it was a matter of wonder that the captain had ventured so near the dangerous shore, instead of keeping to the open sea.

"A light-house stood on the very spot where the vessel in question was dashed to pieces, and a few months ago the light-house keeper was taken seriously ill. The man, who knew that he was not likely to recover, sent for a friend, saying that he had an important secret to tell, and begging him to come at once. The dying man said that he had kept the secret for many years, but now felt that he could keep it no longer, although, when made public, it would deprive him of the good name for faithful attention to duty that he had always wished to maintain be-

fore the world. He had held the post of light-house keeper for a great many years, and until illness obliged him to give place to another man, he had every night carefully lighted the lamp. "Every night," said he, "except one!" That evening and night I drank so hard that I became insensible, and quite forgot the lantern. The next morning the — was found on the rocks, and I knew that I had been the cause of it; for had the light been up, the captain, who knew this coast, would have kept far enough off; seeing no light, of course he mistook where he was. This has preyed upon my mind ever since, and I could not let die without telling it. I have heard of one gentleman having been lost in that vessel, whose mother I knew in Canada, and I think she is still living. Will you find her out, if possible, and tell her all that I have told you?"

"The old light-house keeper died soon after. His wishes were obeyed, and it seemed like a voice from the depths of the sea when his confession was made known to the mother in Canada, and to the widow and orphan children in England.

"How powerful is the conscience! Like a worm gnawing at the root of a plant, must the remembrance of that one night of sinful self-indulgence have preyed upon the light-house keeper's heart, and often embittered his happiest moments."

J. W.

FOR "THE FRIEND."

A Letter to Friends Everywhere.

Dear Friends: My mind has long dwelt on the necessity there was, for us who belong to the religious Society of Friends, to remember that our meetings for discipline are to be held as much to the glory of God, (the work being his) as those for worship; that we should have our minds turned to Him for right direction to transact the business in a manner becoming the disciples of the Lord Jesus; not in any wisdom of our own, but in that wisdom which cometh down from above, which is "first pure, then peaceable, gentle, easy to be entreated, full of mercy and good fruits, without partiality, and without hypocrisy."

I was glad to see an editorial in THE FRIEND of Tenth Mo. 5th, drawing attention to this important subject, in which are these words: "It would be a mark of serious declension from the true principles of Friends, if its members should come to feel, that they might transact the business of our meetings for discipline, relying on their natural wisdom, and reasoning powers, as they would in a political gathering, or in the ordinary course of outward affairs." This is indeed true; then let us all watch ourselves, and seek for Divine help, and hold these meetings in the power of God; and let us be careful in answering the Queries, which let us come before us from time to time, that they be answered according to Truth, and the real state of the meeting. We cannot expect the overseers to know everything that transpires among us, in large meetings, therefore the answers are brought to our Monthly Meetings for their approval, and it has long felt to me that if Friends know of anything, by which the answer is not correct, and let it pass without a protest, they become a party to sending an untruth up to the Quarterly Meeting; it is very comfortable and pleasant when we can truthfully send up a clear answer to any of our Queries, but let us beware of wanting to appear better than we really are; it feels to me that it were better not to answer them at all, than knowingly to send up answers which are not correct; it is, I believe, as offensive in the Divine sight, as for an individual to give an in-

correct statement to another. We all need to humble ourselves at the footstool of our dear Master, ere we can be prepared to enter upon these weighty subjects; then there would be more true love and wisdom shown in these important meetings.

There is also another subject that has weightily rested upon my mind, and which I feel like calling the attention of Friends everywhere to—the too much giving way to sleeping in our meetings for worship. George Fox says: "Friends take heed of sleeping in meetings, and of sottishness and dullness, for it is an unsavory thing to see one sit nodding in meeting, and so to lose the sense of the Lord's presence." And, indeed, what most strangers think, on coming into one of our meetings, where we profess in the "silence of all flesh" to have our hearts bowed in true worship at the Master's footstool, and seeing a plain Friend sitting there asleep; would they not have a right to say, our profession was far above our performance; and discredit be brought upon the cause of Truth, as held by us as a Society.

I have great sympathy for those thus afflicted, and especially for the young mothers, who often lose much of the needed night's rest, and yet feel that they lose much by staying away from meeting. Well do I know the fight that is needed to try our faith; but let us cry mightily unto God, who answereth prayer, and, I believe, as we keep on crying and watching, we shall overcome, for "He never said unto the wrestling seed of Jacob, seek ye my face in vain!" But there must be a wrestling, not sitting down in a supine, indifferent state, in which the enemy will soon overcome us; but pleading with our dear Lord and Master, who was tempted in all points as we are, and knows so well how to succor his tempted children, when He has engaged to try them; for the trial of our faith is more precious than gold, that perisheth.

I have been myself so tried with drowsiness, that I have gone home from meeting sick with the battle fought; but the dear Lord has never, to my knowledge, permitted me to be overcome. So while feeling tender sympathy for those who have lost their rest, through duty to others, and also for the dear aged travellers who are feeling the fading away of their natural powers, I would encourage all to seek to the Lord for help, wrestling for the blessing, saying, with Jacob of old, "I will not let thee go, except thou bless me," and He will give thee strength.

Oh! how different would be some of our meetings, if each one were to know this travail of soul, looking inward instead of outward, in dependence upon Israel's unsleeping Shepherd, then the true living water would flow, as from vessel to vessel and all would be fed, though no human voice were heard; and He who knows our needs would, in his own good time, raise up those who should through his Almighty power, be willing to speak well of his great name, and testify of his exceeding love and power toward his weak but trusting children.

Your loving and exercised friend,

R.

I HAVE pondered it much, and this morning it has opened to my view, that to manifest by consistency of conduct, that we live in the spirit of prayer, may have an influence on those around us, which we are not conscious of, though our family and connections may not see us on our knees, nor witness our supplications in secret, when the door being shut, we bow low, at the feet of the Redeemer.—*Mary Capper.*

FOR "THE FRIEND."

The Late Summer-Flora of Colorado.

A visit extending from the 8th of the Eighth Month to the 4th of the Tenth, did not embrace the height of "the flower season," as we were very frequently told by residents there, yet some notice of the plants then in bloom may prove of interest.

Whilst yet travelling by rail over the vast plain which reaches from the Mississippi River to the Rocky Mountains and, as we neared the City of Denver, our attention was drawn to a large and showy white flower set among prickly leaves which we scarce knew whether to place among the thistles or the poppies. A closer examination, whilst the car stopped, decided in favor of the latter, and we learned from a fellow-passenger that the familiar name was Rocky Mountain Poppy (*Argemone polytaera*). We noticed whilst still upon the barren plains two other plants, vast beds of a dull pink Cleome, or Butterfly-weed, growing in some places many feet high, and in other situations less than a foot, apparently the same variety. The sight of a brighter color after the long stretch of pale Buffalo grass, which had surrounded us for many long miles as our train travelled on and toward the great West, was refreshing. In some sterile neighborhoods grew also a coarse prickly plant with bright yellow flowers easily distinguished as a member of our Potato family (*Solanum rostratum*).

But our floral feast was yet to come, and on reaching, some days later, by stage, the beautiful Estes Park, northwest of Denver about forty-five miles, our road was literally gay with bright flowers. The lovely hare-bell was first to greet us, nodding a welcome from a bare rock. There is a delicacy about this plant in Colorado which causes it to differ from any we had before met with, and we were constantly surprised during our whole visit in finding its beautiful bells mingling freely with other flowers upon the level ground, the hillsides, or on the mountains. Another variety of Campanula, about four inches in height, was very attractive, the bells upright, seldom nodding, and blue approaching to purple. This plant we met with in the neighborhood of Colorado Springs. But, to return to Estes Park where we found by far the greatest number and variety of flowers. Its sheltered enclosure, with its mild climate, favored the lab of some of our plants, though many others told only by their seed-vessels of the beauty which had preceded us; and residents regretted that we were too late for their favorite, Anemone, Primula, and Columbine. One very showy plant with large red and orange colored flowers, the Rocky Mountain Daisy, was still abundant, with its relative, Rudbeckia, growing side by side with hare-bell and gentian. The ground immediately surrounding the cabin where we lodged (whilst our meals were taken in a ranch-house near by) was crowded with flowers; so much so that in a few moments one could gather a bouquet of great and astonishing variety. At the time of our leaving Estes Park, whilst the passengers were seating themselves in the stage-coach, one of our party hastily gathered a few specimens to mail for home, folding them hurriedly into a newspaper as for ordinary posting. This is perhaps the best mode of preparing flowers for a journey of several days. If enclosed in a tin box the petals expand and fall off, or even become mouldy, and a paper box is liable to be crushed; but, by partly opening a folded newspaper and laying the specimens side by side,

then folding all carefully, and just as we post a paper, the flowers are ready for their departure, and will retain their color and condition so as to be both recognized and enjoyed at their journey's end. When time and opportunity permit, an hour or more of moderate pressure, while wrapped before starting is an advantage. Our specimens so hastily plucked at Estes Park while the stage waited for its passengers (five minutes perhaps) carried well their two thousand miles, and when counted numbered twenty-one species, among which was conspicuous a beautiful large white Primrose.

Our readers will not wonder that we left this beautiful spot with regret, but as our point of destination had not been attained we travelled once more; and henceforward our chief acquaintance with Colorado flora was in the immediate neighborhood of Colorado Springs. An ascent of Pike's Peak, from that interesting city, and about fifteen miles distant, gave us an opportunity to enjoy some of our Alpine and Sub-Alpine flowers whilst bright berries of the Kinnikinnick and the white snow-berry cheered our way during the ascent. After passing the timber line, we were charmed by the flowers peculiar to highest altitudes which cling closely to the mountain-sides and quite differ from flowers of the low lands. They seemed reluctant to be torn from their native soil, and were deeply rooted to our surprise and admiration, so braving the cold winds and storms. Their height was seldom more than half an inch—a lovely Forget-me-not of intense blue, and of delightful scent, reminding of our Arbutus, and a very small Pink, especially awakened our admiration.

Other flowers quite new to us of different colors grew close upon the sand among the stones. As we approached the very top of the peak these altogether vanished, and, I doubt whether any flora exists there at any season of the year. In winter months the place is uninhabitable for man or other animal. Upon the day of our ascent (the 21st of the Eighth Mo.) the weather at the foot of the mountain had been quite warm but kind friends had advised carrying winter wraps and coats, and these were all needed after timber line was passed. Some of the flowers gathered by our party were a tricolored violet and a small white one, with several bright yellow flowers and three varieties of Gentian. Among the most universal plants of Colorado must be mentioned the Artemisia, Sage-brush, or Wormwood. In Coulter's Botany of the Rocky Mountains we find twenty-four species of this plant. These vary in height from 4 in. to 12 ft., though the greatest number of these are about one foot. Fremont often speaks of these plants in his Reports of his Exploring Expeditions in our Western Country. They are generally recognized by an aromatic smell and a grey foliage and blossom.

Very abundant too during the Eighth Month was a pretty variety of Burghamot of a fresh pink color and fine effect, also the universal Yarrow, but here of so much more slender and graceful form than our own that we often thought we had made some new discovery, but believe it to be the *Achillea Millefolium*, though a very attractive variety. Although not a native, the *Alfalfa* is so noticeable a plant in the cultivated parts of Colorado that it is deserving of notice. It was imported from Chili, and is highly valued as pasture and hay for cattle, and the color being a brilliant green adds greatly to the beauty of the landscape. Four and five crops are often cut and gathered during the summer.

In appearance the plant resembles a slender red clover, elongated to 2 and 3 feet and the bloom a purplish pink.

A flower which about sunset unfolds its white petals and reveals numberless fine threadlike stamens is the *Montezulia*, very justly a favorite in the neighborhood of Colorado Springs where we found at least three species. The common and very appropriate name is Star Flower. Another plant which we left still blooming and quite abundant along the side paths of the wide streets of the city bore the less suitable name of Blazing Star (the *Liatris Spicata*). This is a bright purple, and bears no resemblance whatever to either a star or a flame.

So numerous are the flowers of Colorado, that one ceases to wonder that the residents are seldom prepared with names for even familiar plants. A few extracts from the Report to our Government, of John C. Fremont's "Exploring Expedition in the years 1843-44," may give to our readers some impression of the floral beauty which is lavished so profusely over our Western country.

Under date of Seventh Month, 20th, 1843, he notes: "This morning (as we generally found the mornings under these mountains) was very clear and beautiful, and the air cool and pleasant, with the thermometer at 44°. We continued our march up the stream along a green sloping bottom, between pine hills on the one hand, and the main Black Hills on the other, toward the ridge which separates the waters of the Platte from those of the Arkansas. As we approached the dividing ridge, the whole valley was radiant with flowers; blue, yellow, pink, white, scarlet, and purple vied with each other in splendor. Crossing to the waters of the Platte, fields of blue flax added to the magnificence of this mountain garden; this was occasionally four feet in height!"

Again, eleven days later, he writes: "The weather was pleasant and cool, we were disturbed by neither mosquitoes nor flies; and the country was certainly extremely beautiful. The slopes and broad ravines were absolutely covered with fields of flowers of the most exquisitely beautiful colors. Among those which had not hitherto made their appearance and which here were characteristic, was a new *delphinium* (Larkspur), of a green and lustrous metallic blue color, mingled with compact fields of several bright colored varieties of *astagalus*, which were crowded together in splendid profusion."

Of this leguminous plant Coulter, in his Rocky Mountain Manual gives sixty-four species; and the mind unfamiliar with our Western flora, can scarcely grasp such profusion. Fremont was here travelling through a very interesting country, in sight of Long's Peak, northwest of Denver. He adds, "As we emerged on a small tributary of the Laramie River, coming in sight of its principal stream, the flora became perfectly magnificent."

The universally acknowledged "flower season" of Colorado embraces the Fifth and Sixth months, when lilies and roses abound, filling the air with their fragrance.

Upon a hillside, within a short ride from Colorado Springs, and familiarly known as Helen Hunt's Garden, we found, with the seed-vessels of the Mariposa Lily (a slender, graceful plant, about a foot in height, the ground covered with small rose-plants, some five inches high, yet complete, with their bright red hips— which hinted of the charm and beauty of the Spring where one most truly could have trodden upon roses and in a flowery path.

Although it may not be our lot to revel in the outward enjoyment of all this beauty, we can admire and ever rejoice in the handiwork of its great Creator, and in "that unwearied love"

"That plants and built and still upholds a world
So clothed with beauty for rebellious man!"

B. M. R.

From "The British Friend"

Our Duty Towards Animals.

Not long ago I heard of a Highland poet who is able also, like "Cobbler Kozzar," to call the wild birds from the trees. This is John Campbell, the post-master of Ledaig, near Oban. A friend of his, in giving some personal reminiscences of a visit to his Highland home, writes:

"One morning we were out walking together on the high road which runs parallel with and above the shore in front of his romantic dwelling. When Mr. Campbell, calling a halt, said to me: 'There now is one of my birds that I told you about,' and holding out his hand called out, 'Robin, Robin, come pet, come, come!' when the bird, a robin redbreast, came flying from the pine wood, alighted on his hand, and having eaten the crumbs placed there for it, flew away."

"He told me that at first, for a time, had come hesitatingly, but soon getting bolder, it ventured also to bring its mate. She was still more shy, to begin with; but soon gaining confidence, came to feed, perching on the hand as fearlessly as herself. Mr. Campbell gave me some bread to lure the bird, called Robin back, and it forthwith alighted on my hand, eating the crumbs placed there for it, but ever jerking up its head and looking warily into my face with his bright, black, bead-like eyes after every pick, to make sure that all was right. The sensation of being so trusted was to me strange, pleasing, new, and curious; and I wondered how anyone could ever be so mean as to betray such confidence."

"Being once more at Ledaig, after an interval of two months, I again saw and recognized one of the robins sitting on a spray of sweetbrier which trailed from the garden hedge. Speedily getting some crumbs, and calling to it as Mr. Campbell had done when I was last there, it answered my call, came, and alighting on my hand, ate as before, but seemed much more at its ease. This it repeatedly did during my stay."

A. J. Symington, the writer to whom I am indebted for these interesting reminiscences, has also written a sketch of the life of Thomas Aird, another of his Scottish poet acquaintances. Aird, who died a few years ago, was a naturalist as well as a poet. He lived in Dumfries, where he edited a newspaper. In this sketch of his life, A. J. Symington says: "I remember seeing him seated on a rustic seat in his garden at Dumfries, and hearing him call wild birds of different kinds by pet names he had given them, when they would come, alight on his knee, climb and flutter up on his breast in order to thrust their bills into his mouth for sugar biscuits which he had there masticated and prepared for them. He would sometimes close his lips hard, on purpose to see their persistent efforts to bore in their beaks for their accustomed treat, which they knew was to be had for the taking. . . . He had different names and calls for each, and would interest his friends by pointing out a particular bird on a distant tree, tell them he was about to call it to him, and forthwith do so, when, to their utter amazement, it would at once come. Sometimes a bird that was not called

would come as well, on which he would order it off and make it wait its own turn."

In a letter which Thomas Aird wrote to a niece, but intended for her two little children, and which suits our Young Friends' column exactly, he says:—

"Tibbie and Christy are well, and so are Robin and our other little friends. Tibbie takes crumbs from the hand now. One day as I was nusing on the gate up the road, she sat down on it close beside me, and let me touch her with my finger. Another day she followed me as far as the lodge, when I advised her to go home, and not make a fool of herself and me in the Dumfries market. Tell all this to Tottie and Tom—it is meant for them." And again he writes: "I trust Tom is finding his tongue, and conquering on from word to word. Tell him to throw the crumbs carefully to Bobby at first, and keep him back till little Red-waistcoat gets faith in him. Dr. Brown, author of 'Rab and his Friends,' was visiting me lately. He was charmed with Robin feeding on my hand, but Tibbie was not at home. Under the high pressure of the general gregarious instinct overriding the special familiarity, she has been much away in the fields of late with the flocks of finches. On Sunday last, when I was at the head of our little field by the gate, she detached herself from a flock on a high tree, and came and sat down quite beside me. I almost touched her with my hand as I held crumbs to her, but she did not care for them even when I laid them down. Her object was pure friendly recognition. Dear we Tibbie! Since her ancestress came out of Noah's ark there has been no such shiftness, nor will there ever be such another, at least till the millennium."

What is the secret of thus getting acquainted with wild animals? Listen to what is said about those men who learned the secret, and to what they say themselves. Thomas Aird, whom I have mentioned last, when asked the secret of the power he had gained over birds, replied, "A pure conscience and a steady eye are the only rules; they will know at once if you mean to harm, and disguise is useless;" and he used to maintain "that if anybody were at the trouble to become acquainted with their ways, so as to humor them, and avoid sudden motions and things that would alarm them, treat them kindly and never deceive them, birds would not fear man; and that he had no doubt they came freely to Adam in Eden."

In his essay on John Campbell, A. J. Symington himself says: "Were it not for the wanton cruelty to which living creatures are often exposed, I firmly believe that birds, and other animals, would be far more confiding, and in time get over that enforced salutary fear of man which long painful experience has moulded into an instinct."

Of Thoreau, his friend Emerson writes: "He knew how to sit immovable, as part of the rock he rested on, until the bird, the reptile, the fish which had retired from him should come back and resume its habits—nay, watched by curiosity, should come to him and watch him."

It is strange that Christians should so often utter with hesitancy the petition, "Thy will be done," or express it plaintively in sacred song—unless God's ordering of affairs might prove unacceptable, and should be invoked with reserve, and accepted only in resignation. A lurking wish to have our own way, at all hazard, underlies the spirit; an injustice toward our heavenly Father, that connects nothing but trials with his will, forgetting the innumerable

joys which come to us directly from his hand. Yet it is just because God's will shall be done for his children, that they are bidden to be strong, very courageous, not anxious, not afraid, always thankful, to abound in hope, to rejoice in the Lord always. This state of mind is, however, a high standard of Christian character, and one not easily attained. He is reaching toward it who, when he has prayed "Thy will be done," is quieted in heart, knowing that he has committed his way to the wisdom which makes no mistakes, and to the love that will never tire.—S. & Times.

FOR "THE FRIEND."
"WHERE IT LISTETH."

JOHN III. 8.

Up the long woodland reach, a gentle breeze is playing,
And it lifts with touch caressing, each leaf of gold and brown;

And lets in the Autumn sunlight, where the shadows
Dark were laying,

And scatters white-winged seedlets, Clematis
And Thistle's down.

Sways Golden-rod and Asters, and scarlet haws of
Brier;

And the long and seedy meshes of gray bleached
Summer grass,

And sets the blue-eyed Gentian nodding, to the coarse
Sedge in the mire;

Loosens russet bars of Chestnuts, where happy children
Droop in ease;

Bears their echoed laughter, thro' a low shadowed
doorway,

To a sad and lonely mother, whose darling is laid
low;

Dries the trace of fallen tear-drops, lays a sunbeam
'cross her doorway,

Holds back the crimson woodbine, till the whole
room is aglow.

One little breeze, so busy, so varied its mission;

And "whence came it?" Who can answer? or
"whither does it go?"

Chosen as our Master's symbol, to foreshow the great
transition,

Where the spirit's-breath doth quicken, and birth-right
gift bestow.

Mystery of Earth! deeper mystery concealing;
No wealth of human knowledge makes thy hidden
meaning plain,

Waits the truth for higher wisdom, e'en the Spirit's
own revealing?

Oh "come from the four winds, O breath, and breathe
upon the slain."

Tenth Mo. 1889.

"AT EVENING."

SELECTED.

Weary and worn at evening

With bearing the cross of the day,

Still bending beneath its burden,

O, Father! we kneel to pray.

Lifting the hands that are falling,

We seek the clasp of Thine own;

The cross is so very heavy

We cannot bear it alone.

Dim are our eyes from our weeping,

And bleeding our feet from the way;

For thorny and rough was the journey

We've wearily trodden to-day.

Darker and darker the shadows

Are folding us closer around,

Thy love is our only refuge;

No other shelter is found.

Turn not away from our crying;

Refuse not the strength of Thine arm;

O, wipe all the tears from our faces,

And shield us from night and alarm.

Darker the shadows are falling,

More lowly we bend at thy feet;

Thy love is a refuge unfailing,

And rest in that refuge is sweet.

Adam Spencer.

(Concluded from page 131.)

About the seventeenth year of my age a separation took place in the Society of Friends. The parties were designated by the terms "Orthodox" and "Hicksites." The Hicksites adhered to Unitarian doctrines, but the Orthodox held to the Divinity of Christ and the work of the Spirit of God upon the minds of men.

The Hicksites were the most numerous at Gotham, and the one who had the care of the meeting-house being one of them, shut the house against Orthodox Friends. My father offered them the use of his dwelling-house as a meeting place until they could be better provided for. Accordingly, the meeting was held at my father's for one year; and, as a result, it became a sort of headquarters for travelling Friends. It was my place to take care of their horses. The example and conversation of those stranger Friends, as we called them, represented the Christian.

As a consequence of the separation there was much disputing on the subject of religion. There was also a body of professors who called themselves Christians, putting the long sound of the vowel "i" in the first part of the word. With these people the Methodists had a controversy. In the hearing of the arguments, *pro and con*, there were some things adduced from Scripture against the Divinity of Christ, which caused a doubt on my own mind, but of which I did not approve.

About that time my father hired a man as foreman in brick-making, who was a Universalist, and held the same doctrine as the Hicksites. With that man I had many arguments, and some of his arguments against the Divinity of Christ I could not answer. About that time my brother Thomas handed me a newspaper which had enclosed one of his purchases from a store, it having an extract from the "Age of Reason," by T. Paine. Altogether, from those various sources, my mind was troubled with doubts that were like fire in my bones and not easily removed. Yet I did not adopt them.

One thing I may mention in connection with the separation among the Friends. The hold took upon my parents' minds. They seemed borne down by the weight of it, and it was imprinted on their countenances, which caused with me a secret sympathy with them and was a remote help to myself.

I may here remark, there was about four years of my life which I have looked upon as lost time, which were the years from seventeen to twenty inclusive. Those years were devoted (that is, my spare time,) to amusement and the reading of works of fiction; and whilst, I became somewhat conceited with my ability as an arguer of religion; although I had no practical religious experience.

I soon became a strict attendant of the Friends' meeting for worship, both First-days and in the middle of the week. For a time, before making a profession, at attending meetings I often sought places of retirement where I spent a time on bended knees in silent supplication. Often after the family had retired for the night, I spent a time on my knees invoking the mercy and guidance of my Heavenly Father. On one occasion my mother had been out, and coming in behind me, upon my knees, I have reason to believe it was a cause of joy to my parents. The next morning my father's feelings encouraged me in right things. Frequently, for some months in summer, I would take a walk at the

hour of twilight to meditate. The glories of the setting sun reminded me of the Creator of all things, and the vast western expanse was typical of eternity. It was such a new discipline that I was often lonely, but I felt it safest for me. On First-day afternoons during that summer, I taught a First-day school in an old house of my father's; or, rather, I heard the children who came recite in concert well-selected verses, which the children appeared to enjoy and afforded comfort to myself.

I found myself encompassed with infirmity, and began to think if I was joined in fellowship with some religious body, it would be a help to me. My great sympathy for my parents was one cause of inclining towards the Society of Friends. I therefore studiously read their books, particularly Sewall's "History of Friends," where I found, in a condensed form, the testimony of so many different persons who were united to the Christian religion as recorded in the Scripture of Truth. While bearing ample testimony to the Divinity of Christ and the atonement He made for the sins of the world by His suffering on the cross, they also bore testimony to the work of Christ in the soul of man, by His Spirit, and producing the change from nature to grace, which brought man into harmony with his Creator. I was convinced that Friends maintained a standard of Christian doctrine and of religious attainment. I made application and was received into membership with Friends. This was in my twenty-second year.

An experience of note took place with me before I joined the Society. On one occasion I found my two youngest brothers disputing, for which I admonished them and gave them some serious advice. The act on my part was right; but for the first time I named the name of Christ as a religious teacher, and it was important that I should know of departing from iniquity. My mind was filled with a great sense of guilt, by reason of my past sins. Those sins for which I felt the greatest condemnation, at the time of their commission, appeared to have the penalty of death in them; I hastened to a retired place and there, on bended knees, my Judge appearing to me as before me, I pleaded for mercy in the most earnest and penitent manner. Soon my gracious Lord extended the sceptre of His love toward me, and the language was presented to my spiritual ear as had been addressed to Israel through the prophet Isaiah: "Though your sins be as scarlet, they shall be as white as snow; though red like crimson they shall be as wool." Gratitude and praise to God so filled my mouth that I said: "I will praise thee, Oh Lord, while I have my being; I will praise thee before the sons of men."

That was a most blessed experience; so that I have reason to say, "I love the Lord, because He hath heard the voice of my supplication and my cry." That love and mercy hath been extended all my life-long. My sins had been such in the sight of God and made manifest to myself, that doubts would occasionally arise as to the possibility of their having been forgiven; those doubts were evidently "the buffetings of Satan."

On one blessed occasion a language was addressed to my spiritual ear, as from my Saviour the Lord Jesus Christ: "The reproaches of them that reproached thee fell on me." My glorious Advocate so revealed himself in me, that doubts never afterwards troubled me; blessed be the name of the Lord!

Having become a member among Friends,

and interested in church affairs, time passed on comfortably. An event followed of life-long interest, on the eighth day of the Tenth Month of 1834, I was united in marriage with Catharine Gainer, daughter of Jacob and Christiana Gainer, who were leading members among Friends, and gave careful attention to the right training of their children. The union proved to be a happy one through life.

In order to be a true Christian the whole mind must be given up to the will of God, with faithful watchfulness into prayers. There are many things if not resisted and guarded against will choke the Word until it becometh fruitful.

For several years I attended meeting and lost ground in religious life, until there was "neither dew nor rain nor field of offering."

Belonging to the meeting was a minister who was a man of considerable ability, affable in his manner and a genial companion. He largely occupied the time in local ministry nearly every meeting, and it was pleasant to listen to him; therefore the meeting-time was spent without an earnest seeking unto God to know and to do his will. His ministry was not of a deep, guarding character. His sermons were mostly drawn from the Old Testament history, and sometimes appeared more like a lullaby than anything else. At length such service began to tire, particularly as I began again to realize my own condition. I sometimes thought that the said minister feared that the children would wake up and see what was going on. He did not bear a character for upright dealings with many people in the community.

On one occasion I had dealings with him myself, and I thought he tried to take the advantage, so deep was my conviction of the fact that I lost all confidence in his preaching; which was additional cause for me to seek to the alone Source of good. A new zeal was awakened in me.

About that time the subject of First-day schools was introduced and urged with a good deal of force by travelling ministers, as a antidote against unbelief, etc. I entered the work with a thought of doing good, and also with the thought that Friends were in a lukewarm state. I was superintendent of a First-day school held in a school-house for several years, but was careful to keep within proper limits, or rather, to keep to the more literal instruction of the Scriptures. At one time I ventured on the more spiritual exercise and explanation of Divine things. After dismissing the school, as I was leaving, the house the language accompanied with Divine authority arrested me: "Who hath required these things at thy hands to read my courts? Bring no more oblations." Such was the effect that I dare not resist the solemn command, and I bowed under a sense of God's greatness and my own unworthiness. Many months passed while I was not at liberty to engage in religious services, or even to say more than very little about religion. I had to withhold my mouth even from good—I could not understand how some could say they were constrained to speak, while restraint was my continued discipline. At length I became content to bear the yoke in my youth, to put my mouth in the dust, if so be there might be hope. It was to me the time of learning the shuttings of Him who hath the keys, who shutteth and no man openeth—who openeth and no man shutteth.

I have many times since in the exercise of the ministry, known the shuttings first to pass over my mind, and as the true openings fol-

lowed I could rest in confidence that it was of the Lord, and not my own imagination. The lesson that Jesus taught his disciples He still teaches to every one of his learners: "Without me ye can do nothing."

As I abode in this state of self-abnegation, my gracious Lord and Master was pleased to visit and bless me with the incomes of his love and a loving sense of his Divine presence, which made me greatly rejoice. It was like joy in the Holy Ghost. But I soon found that I could not retain the spirit or the blessing, as it was of the Lord's dispensing; I felt the need of a faithful "abiding in the Vine," which involved a strict watch unto prayer, both at meetings and at all times. The Lord was pleased often to fill my heart with a sense of his love, and to open my understanding in Scripture truths, inasmuch that all my past doubts respecting the Divinity of Christ were dispelled, and I could call Him Lord by the Holy Ghost. When I was arrested in my sinful course and called to give my heart to the Lord, I received an intimation that if I was faithful, a gift to the ministry would be conferred upon me. How it was to be brought about I could not foresee.

But while for years doubts of the Divinity of Christ beset me, I felt sure that I would never be authorized to speak in his name, until said doubts were removed. It is a blessed thing to have the truths contained in the Holy Scriptures opened to the mind and sealed by the Holy Spirit. Our Saviour said to Peter, "Blessed art thou, Simon Barjona, for flesh and blood hath not revealed this unto thee, but my Father who art in heaven." If the church is built upon Christ the Rock, it must be the immediate revelation of God, whatever instrumentalities He may be pleased to use for his gracious purposes.

I had not only openings in Divine truths, but I had great temptations to believe doctrines which were not true. The enemy, taking advantage of my tenderness and teachableness of mind, he appeared as an angel of light. These invitations were presented so nearly like the Divine openings, that I had to be very deliberate in reference to the things to be believed. But, as patience was abate in, I was given to discern between truth and error. At length, I appealed to my Heavenly Father with the inquiry, why is it that I am so tempted? The reply was, how wilt thou be able to speak on these conditions if thou hast not been tried with them thyself? I thankfully submitted; believing the Divine hand had permitted the temptations.

As I witnessed an over-coming and an increase in the fellowship of God, strong desires were raised within me, that others might partake of like precious faith.

Judicious Neglect.

The thoughtful mother, as her cares increase with an increasing family, finds that she must neglect many things she had thought indispensable. The attention she has bestowed on side issues must be concentrated upon central issues. She must contract her enterprises, and many of them, perhaps, must be given up for the time altogether. With three or four little children to look after, she cannot devote hours every day to practicing music or painting pictures or embroidering fancy patterns. She may have to relinquish courses of reading, give up society to a large extent, and confine her activities to what may seem a very narrow sphere.

Especially is all this true if, in addition to

the care of her children, she does all or the greater part of her own work.

In counting over the items that must be done, those that may be left undone, and those that must be left undone, judicious and discriminating choice is necessary. The family must have good food, wisely selected, well cooked, abundant, and at regular intervals; but all fancy dishes and all that consume a great deal of time in the preparation may be omitted. Children and growing people thrive best on simple and plainly prepared food. Yet this must be selected and cooked with skill and judgment to be good.

Sufficient and suitable clothing must be provided. It should be neatly fitting and becoming; but it need not have a superfluity of stitches and trimming. A plain garment is quickly made, and with the abundance and variety of patterns of every description for sale in the stores, a woman of moderate mechanical ability can cut and make all ordinary garments worn by her children.

The house must be kept in order. Following the two rules, "A time for every thing and every thing in its time," "A place for every thing and every thing in its place," the house-mother will be able to get round the circle of her work more or less thoroughly. It will help if all the superfluous ornamentation of her rooms is put away; if the number of pieces to be handled and dusted and cleaned is reduced to the minimum; if comfort is consulted, to the exclusion of style and luxury. These last two items are very expensive of time and enthusiasm. High thinking is easier if the living be plain.

It is unnecessary to pursue this line of remark further. The house-mother who has courage to draw the line of her activities at those things that must be done, will find time to care for all the essential interests of her family, and will not waste herself on unnecessary enterprises and superfluities.—*Selected.*

FOR "THE FRIEND."

During my confinement with age, and the infirmities attendant, I have enjoyed very much reading the Philadelphia FRIEND, the paper that I had admired from its first publication. But I may say with regret, there was a time years ago that I questioned the propriety of its continuance. This condition of mind, however, was not from anything objectionable that I had ever read in THE FRIEND. One thing I know now, that whereas I was then blind, now I see. I have been much interested in the accounts given of the public meetings appointed by the Yearly Meeting's Committee of Philadelphia Yearly Meeting, for the benefit of Friends and others. It appears to me remarkable indeed that such meetings can be held free from excess, and reported comfortable meetings held in the order of Friends. I think the accompanying evidence that these meetings have been blessed by the great Head of the Church should encourage the Committee to persevere, whenever there is an opening for such labor in the life and authority of those upon whom the vocal services of the meetings rested, seemed so practical and suited to the occasion, as mentioned in some of the reports. And more recently as to the account of Iowa Yearly Meeting, held at West Branch, Iowa, it has seemed good to me to read the proceedings. It reminded me of former times when the contriving influence of the Holy Spirit rested upon the congregation. It appears to me that

there is cause for us to thank God and take courage. I feel grateful that I am privileged now in advanced life to witness signs of gathering to the standard of ancient times; and that love and forbearance mark our deportment towards each other. Truth is truth, and should it be denied by all it still remains Truth. Moth, rust, or any other destroying element, cannot change it; and how simple and easy are its requirements! I feel much sympathy and concern for those who are situated as I have been. But hope they may be favored to know what is best. I may only say that I feel satisfied that my lot is cast with Friends, for the longer I remained from them the more uncomfortable and less enjoyment was my experience; and now, feeling myself a legitimate member of the Society of Friends again, a retrospect of the past in my own case, seems pleasant and comfortable.

With kind regard to all, as ever,

JOSEPH MORRIS.

CARDINGTON, OHIO, Eleventh Mo, 12th, 1889.

Natural History, Science, &c.

Oil from Indian Corn.—For some manufacturing purposes it is desirable to separate the germ part of the seed of Maize from the hard starchy part. The germ contains a portion of oil which may be obtained by the usual process of submitting it to hydraulic pressure. The oil thus procured is similar to olive oil, does not readily oxidize, and may be used in medicinal preparations as a substitute for olive or cotton seed oil.

The Giant Madrona or Arbutus Tree of California.—The genus really belongs to the Old World. Asia has its species, and Mexico claims one or two representatives, but the pride of the family and the delight of arboriculturists is the strong, healthy and handsome child of the west coast. It is often eighty to one hundred feet high, three feet in diameter, and a famous specimen in Marin county has a measured girth of twenty-three feet at the branching point of the tremendous stem, with many of the branches three feet through. The foliage is light and airy, the leaves oblong, pale beneath, bright green above. The bloom is in dense racemes of cream-white flowers; the fruit, a dry orange-colored berry, rough and uninteresting. But the charm of the madrona, outside of its general appearance, is in its bark—no, it is not a bark, it is a skin—delicate in texture, smooth, and as soft to the touch as the shoulders of an infant. In the strong sunlight of the summer these trees glisten with the rich color of polished cinnamon, and in the moist shadow of the springtime they are velvety in combination colors of old gold and sage green.

Pudding Science.—An article in the *Scientific American* calls attention to the scientific principles involved in making a pudding:—First, a fire is built. The kindling point of coal is at so high a temperature that the heat of a match is not sufficient to ignite it; therefore some wood is first set on fire. But this cannot be lighted by the heat of a match unless it is in shavings or fine splinters, which will in their turn give heat enough to set on fire the larger pieces, and this will heat the coal so that it will burn. None of these substances will burn unless they have sufficient oxygen to combine with the carbon and hydrogen which they contain. If they do not burn there will be no heat, hence the amount of air which passes through the wood and coal must be regulated by the draughts of the stove. After a fire is well started, steam to cook the pudding is required. A pan of water is set over

the fire, and by means of the conducting power of the metal of which the pan is made, the water is heated. First, little bubbles of air are so expanded by the heat as to rise to the surface and escape; then, some of the water nearest the metal is so heated that it becomes gaseous and rises in large bubbles to the top. Soon, the top becomes heated by these bubbles of steam, so that they escape as steam, carrying with them the heat which was required to form them; this heat is given up to any cooler substance with which the steam comes in contact, and so it becomes heated. While water is coming to this temperature, the dough is to be prepared. Wheat flour is used because it contains all the substances needed for the nutrition of the human body—starch and some fat to be combined with oxygen in the tissues to furnish the heat needed to keep the body from ten to one hundred degrees warmer than the outside air, according to the season, and to furnish some of the tissues with food which they need. Flour also contains gluten and some other nitrogenous substances, which not only enable the cakes made from flour to become light, i. e. porous, because of its glutinous character, but also to furnish nitrogenous material for the repair of the muscular tissues, and probably to fulfil some other as yet unknown office in the economy of the human body.

The flour being good for food in itself must be made digestible and palatable. Being dry, it must be moistened; therefore water is added in just such quantity as will be taken up by the starch grains and swell them, but not allow them to become pasty. But the saliva must penetrate every particle of starch with its change-producing ferment; and while savage man ate the cereal grain, chewing it a long time, civilized man prefers a quicker method, and so makes the mass of cooked flour porous with the aid of carbonic acid gas introduced either by the aid of ferment yeast, or more quickly by a chemical preparation of baking powder. When the batter is heated all through, to the boiling point of water, the gluten is stiffened so that the mass is elastic, the starch has taken up the water and become dry. The pudding has now to be taken out and served with some sauce.

Ancient Norwegian Tomb.—A discovery, referring to the iron age, has been made at Gløppen, on the coast of Norway. A burial chamber, formed of stone slabs and containing the remains of a man, has been uncovered. There were also in the chamber a bucket, ornamented with bronze, made of limewood; two iron lanceheads, twelve inches long; a double-edged sword, in scabbard, with a ferrule of bronze; an iron shield, a bronze buckle, some Roman gold coins, perforated and worn as ornaments; a glass beaker, green and blue in color and ornamented with etched tracings; a pair of bronze scales, some iron arrow heads and a pair of shears in a wooden case. On the body lay two large red stones and some bronze ornaments. The lining of the coat around the neck was in a perfect state of preservation, and revealed rich embroidery of images of animals. In the hands were three interlaced wooden rings, resembling the well-known puzzle rings.

A Floating Island.—A small book has been published in London on "The Floating Island in Derwentwater: Its History and Mystery." As far back as authentic records go, there has appeared from time to time in the southeast corner of Derwentwater Lake, a small island or group of islands, which sooner or later have regularly disappeared. The island rises but a

few inches above the surface of the lake, is covered with vegetation, and is firm enough to bear the weight of a man. Its area varies from a few square feet to two acres. The author, (G. J. Symons, F. R. S.), concludes that the island is merely the highest part of a great upheaval of the peat which forms the lake-bottom; when this blister-like elevation subsides the islands disappear. During the 150 years over which authentic records extend there have been about 400 appearances of the lake-bottom. By far the most common period for the recurrence of the phenomenon is in the apt to occur when there has been hot weather Seventh and Eighth Months, it being especially during this period.

An Expert in Mental Diseases on Faith-healing.—It is not to be gainsaid that faith, even in its abridged or degenerated phases as monstrous or dilapidated superstition, has a potent effect on the human organism, and is capable of relieving and removing certain functional disorders; and credit may therefore be given to "faith-healing" and "Christian science" for some of the cures which they claim. Their professors, like empirics of all sorts, have wrought modern miracles on hypochondriacal men, who have fallen into drivelling egotism; on hysterical girls, who have entertained demons not unawares; and on a few sincere but highly sensitive persons, who can pass at a touch out of one allotropic state of the nervous system into another. But the small good they have done these has been more than counterbalanced by the mischief they have wrought in encouraging imposture, in postponing medical treatment where it is needed, and in inducing in their adherents, now a large class, an attitude of mind that is debilitating and conducive to the incursion of disease. What has struck me most in scanning, as I have done, a number of their published cases is the credulity of those who can be duped by such records.

Before faith-healers and Christian scientists can claim a hearing they must learn how to make an accurate clinical report, apprehend what induction really means, and abandon the baseless assertions in which they at present deal. Only impatience comes to the medical man who peruses their proud archives of cures in such cases in which disease was evidently simulated, in which it ran its natural course, in which its existence is asserted, no proof being given, or in which it was of a purely subjective character, and might or might not depart at the word of command—such archives being, in one or two instances, accompanied by minute directions as to how post-office orders are to be forwarded. Let the faith-healers and Christian scientists commence with skin diseases—woo the acarus scabiei from its burrow without aid of brimstone, arrest lupus, and wipe out a nevus—and we shall then be ready to follow them with some hope in their campaign against hidden maladies.

Impossible to Exterminate the Eels.—Maryland's Fish Commissioner has abandoned the attempt to exterminate eels from the Chesapeake tributaries. Under a law passed by the last Legislature two cents were paid for each eel delivered to the State inspectors, and in a short time 70,000 eels were caught in Wicomico River alone, and paid for. The Commissioner, however, says that there are more eels in the Wicomico River to-day than when he began his work of extermination. He says he is now satisfied that eels do not destroy the spawn of shad and other fish, as was believed by those who framed the eel law. A score of traps set

in the spawning grounds failed to capture a single eel, and in the hundreds of eels cut open there was not found a particle of spawn.

Items.

Presbyterian Confession of Faith.—Among the Presbyterians in this country there is considerable discussion at this time over a proposal to revise the Confession of Faith. The points in it which have given uneasiness are thus pointed out by Theodore L. Cuyler in *The Evangelist*.

"There is no demand, as far as I can learn, for any general revision of our excellent and venerable Confession of Faith. The whole controversy is waged on a false and hazardous ground.

"1. There is a clause of the Confession which asserts the salvation of 'elect infants.' This clearly implies that there are 'non-elect' infants who may be sent to perdition. Who preaches that doctrine, or believes it?"

"2. There is another clause which declares that God, for his own pleasure, has decreed himself to be the Father of the elect only. What is still worse, our Confession asserts that our Heavenly Father 'passes by' these unhappy souls whom He has created! I would cut my right hand off before I would preach such a doctrine before an audience of unconverted sinners.

"3. There is a most lamentable *error* in our Confession of Faith, in representing God's infinite love in sending his son into this world to die for sinners, and that whosoever believed on Him shall be saved. The Confession emphasizes what *nobody* preaches, and is almost silent in regard to the greatest truth that *everybody* preaches.

"Brethren, these are not merely blemishes on our venerable Confession; they are terrible and damaging errors, which, if they were to prevail, would who were trained in the class-rooms of Archibald Alexander, Charles Hodge, and James Richards—have lamented the existence of those offensive clauses, but we were powerless to remove them. Now our General Assembly submits to our whole Church the question, Shall we *retain* those clauses, or shall we *revise* them? If a majority vote to retain the clauses, how beloved of church members, *before this land and the world the belief of those offensive clauses!* And that would drop a boulder across the track of Presbyterianism, which would impede its progress more than our noble Home Mission Board can advance it. Those unhappy clauses have done us immense damage in the past; they will do us ten-fold more damage in the future. While these offensive articles so wound the conscience of tens of thousands of us loyal and orthodox Presbyterians, is it right, is it fraternal that our brethren should continue to force them upon us? And is it *honored* to ask our candidates for ordination to subscribe to what ninety-nine hundredths of them do not believe?"

Commerce of Two Kinds in Equatorial Africa.—Under this heading, our friend Josiah W. Leeds publishes an article in *The Christian Statesman* of 14th inst., in which he would call attention given by William Taylor, the Methodist Missionary Bishop in Equatorial Africa, detailing the methods of two merchant missionaries, Withey and Gordon, in dealing with the natives, as contrasted with the popular method of doing business on the part of the European traders. It shows how the one way is conservative of sobriety, thriftiness and peace, and the other is the opposite of drunkenness, wastefulness and war.

"When a caravan laden with rubber, beeswax, ivory, &c., arrives, the dealers of the one class serve the native traders and carriers with free rations of both rum and food, and thus encourage them to have a 'jolly time' in feasting, drinking, clapping of hands, and shouting. The next stage is a free distribution of cheap fancy goods; then the dealer for the rubber, wax, ivory, &c., and the payment in guns, powder, beads, knives, fancy goods in variety and rum in huge bottles encased in willow wicker-work. Finally the 'dispatch' or send-off just before the departure of the caravan, which consists in throwing out into the creek, and into the toys in various ways, such as the carriers."

The other method is described as follows: "Our

Christian traders provide some accommodations for shelter and comfort for native carriers and traders. Those who come for the first time call for rum. 'We don't sell rum; don't use nor keep it in the store.' 'Well, we want some tobacco.' 'We don't use tobacco; don't sell it; don't keep it to sell.' 'Do you want to buy rubber?' 'Yes, I can ready to buy your rubber.' 'What will you give us in exchange for your rubber?' 'I will give you money, if you like; or give you cloth, rice, fish, sugar, soap, anything you want, except rum, tobacco, beads and trinkets—such things can do you no good. We sell nothing but what will be useful to you.'

"How much you give us for our rubber?" "When I examine to see its quality I will show you what I will give you, and how much I will give you for each 'arboot' of rubber." "Will you not 'match' you no 'match'—gits—like the other traders, and can afford to give you a good price for your rubber. If you then think that you can do better elsewhere, you can take your rubber away to the best market you can find. We want you to do the best you can for yourselves; remember, the men who are going to buy your rubber are not going to take it out of their own pockets; they must therefore take it out of you in their prices of purchase or sale."

"Some leave us quietly, but many remain and see, and confess to a fair deal. Then comes a free, friendly talk about their country and their people, and a gospel talk about 'Nzambi'—God. The people who thus trade with us go away, in every direction, telling their friends they have become acquainted with 'another people.' Thus our holy brethren are making more than a missionary visit—support, and business increasing daily, and not only have their regular Sabbath services in the Kimbunda, but are talking six days a week beside; from morning till night they are talking in the Kimbunda of Jews and Scribes, and the people who listen attentively and repeat with great accuracy and earnestness any new thing that comes into their ears."

An Old French Bible.—In the course of the visit of William and Susan T. Thompson to the Friends in the South of France, they were much interested, when at Fontanes in seeing the large old Bible, preserved in one of the families of Friends there, and greatly valued. This Bible, in the days when the Protestants presented their place in competition of one of the thick walls of the old house in which one of these families live, and was sealed up by plastering over the place where it was secreted until the force of persecution abated. Thus it has been preserved from the destruction with which it was threatened.

Samuel Morris and Thomas P. Cope, from Philadelphia, have been visiting the Meetings of Friends in Scotland during the greater part of the past month, having been at Aberdeen and Kinnock; thence to the Two Months' Meeting at Edinburgh on the 10th ult.; afterwards to Kilmarlock, Greenock, Arbroath, &c. At Glasgow, from the 19th to the 25th, when they attended to Dundee, and intended to be at Edinburgh during a portion of this week.—*British Friend of Eleventh Mo., 1st.*

On Secret Societies.—General F. S. Grant: "All secret, oath-bound political parties are dangerous to any nation, no matter how pure or how patriotic the motives and principles which first bring them together." Edward Everett: "A secret society so widely diffused and connected as this, puts a vast power, capable of the most dangerous abuse, into hands irresponsible to the public."

Lutheran General Council.—A meeting of this body, held in Pittsburgh, represented 1450 congregations and 245,000 confirmed members. The subject presented for consideration was that which led to the adoption of the following resolution:

"Resolved, That we, the representatives of the Evangelical Lutheran Churches in General Council assembled: 'In the name of God and righteousness and in dutifulness to our holy Christian faith and confessions, express and record our indignant protest against the adoption of any resolutions which shall have the effect of casting numbers of our fellow-believers in the Russian dominions, and declare our deep sympathy

with them in their sore affliction, and earnestly implore the Almighty Head of the Church to direct them in their trouble, to sustain them in the confession of his name and to send them speedy deliverance according to his infinite wisdom, goodness and mercy."

PARENTS in the training of their children should be specially careful that they do not seek their temporal and worldly advancement at the expense of their spiritual interests. The first and all-controlling idea should be to bring up their children "in the nurture and admonition of the Lord." If here they fail, they commit the greatest possible mistake.

THE FRIEND.

ELEVENTH MONTH 30, 1859.

In a late number of the *Christian Worker* occurs the following paragraph:—

"A. H. Hussey has recently labored in the limits of Alum-Creek and Goshen Quarterly Meeting. He reports these meetings in a better condition than he has ever known them. Much spiritual life and desire for Gospel work prevails, and there is great harmony of feeling among Friends."

By a rather singular coincidence, about the time this came to hand, we received a letter from our aged friend Joseph Morris of Cardington, in the same section of country of which A. H. Hussey speaks. His letter was dated Eleventh Mo. 12th. In it he mourns over the condition of the Society there, saying: "Marks of desolation are so apparent in our parts. Where we used to have comfortable and edifying meetings [they] are almost broken up. Our comfortable meeting-house is now in a pasturefield enclosure—no meetings held in it for a long time. The Ranters or New Friends established a meeting in Cardington. It is also abandoned, and Gilead Meetings is fast declining. Alum-Creek Meeting bears but little resemblance of a Friends' meeting—and all this done by the urgent workings of the Yearly Meetings, and Greenwich has gone equal strides."

Joseph Morris is now a member of Ohio Yearly Meeting that assembles at Stillwater—having some years since joined that body. To this change of membership he refers in the latter part of a communication from him, published in another part of this number.

SUMMARY OF EVENTS.

UNITED STATES.—The exports for the twelve months ended Tenth Month, 1859, were \$738,468,752, and for the corresponding period in 1858, \$678,428,844. The imports in 1859 were \$765,413,767, and in 1858 \$729,978,245.

The National Grange, in session in Sacramento, California, has adopted resolutions favoring the restriction of foreign immigration; condemning the single tax system; memorializing Congress in favor of manufacture of jute and other textile fabrics for use instead of cotton bagging; favoring an increase of silver coinage; advocating the circulation of paper money, independent of national banks, in sufficient quantities to prevent financial embarrassment.

Each of the new States of North Dakota, South Dakota and Washington, have elected two United States Senators; they are all Republicans. In Montana two Houses of Representatives have organized—one Democratic and the other Republican. The Governor has recognized the latter.

A telegram from Chicago says that a new organization was effected there yesterday representing an invested capital of over \$25,000,000, including all the prominent mineral water springs of the country. The object of the organization is to secure protection by legislation from foreign manufactured mineral

waters. It is said that "nearly all of the imported mineral water is manufactured, but that it is entered as natural water, and is sold as such, thereby defrauding the Government of large revenue, and injuring legitimate trade in this country."

It is reported from Hiawatha, Kansas, that the farmers of that vicinity are using corn for their fuel. Corn sells on the farm at 20 cents per bushel, while the price for defracting the Government of large revenue, and injuring legitimate trade in this country."

On the 19th inst., the Presbytery of Cincinnati, by a vote of 29 to 13, revised the standard of doctrine on infant salvation to read thus: "All infants dying in infancy and other elect persons are saved."

A fine specimen of meteoric iron has just been received at the North Carolina State Museum. Its greatest length is 12 inches, with an average breadth of 8 inches, and it is about 2 inches thick. "Its general shape is flat, though it is somewhat concave on one side and convex on the other, as if broken off from a large mass of surface of a rounded and larger mass. The specimen is coated with a thick crust of dark brown rust, and weighs 25½ pounds. It is from the same neighborhood (Rockingham County, N. C.), as the specimen obtained in 1866, and the composition of the two specimens appear to be identical. An analysis of the specimen revealed the following: 90 parts; nickel, 8 parts, with traces of cobalt, copper and phosphorus. They have also in the museum a meteorite from Nash County, which is totally different in appearance and composition, being gray in color and of a fine granular texture. The specimen from Nash was seen to fall in a field in the daytime, and was immediately dug out, when it was found to be very hot."

Deaths in this city last week numbered 327, 43 less than during the previous week and 18 less than during the corresponding week last year. Of the foregoing, 166 were males and 161 females; 166 of consumption; 31 of pneumonia; 29 of diseases of the heart; 18 of old age; 14 of bronchitis; 14 of cancer; 14 of crop; 11 of inflammation of the brain; 10 of typhoid fever; 10 of convulsions; 10 of inanition and 10 of mania.

Markets, &c.—U. S. 4½'s, 105; 4's, 127½; currency 6's, 114; 12's.

COTTON was quiet, but firm under light supplies. Small sales of middling uplands at 10½ cts. per pound.

FEED.—Winter bran, prime to choice, \$13 a \$13.50; do, fair to good, \$12 a \$12.50.

FLOUR AND MEAL.—Western and Pennsylvania super, \$2.50 a \$2.75; do, do., extras, \$2.25 a \$2.35; No. 2 winter family, \$3.30 a \$3.65; Pennsylvania family, stone ground, \$3.75 a \$3.90; Pennsylvania roller process, \$4.00 a \$5.25; western winter, clear, \$4.00 a \$4.30; do, do, straight, \$4.25 a \$4.50; do, do, patent, \$4.50 a \$5.00; Minnesota, clear, \$3.50 a \$4.12; do., straight, \$4.25 a \$4.70; do., patent, \$4.85 a \$5.35.

GRAIN.—No. 2 red wheat, 40 a 80½ cts. No. 2 mixed corn, 40 a 40½ cts. No. 3 white oats, 28½ a 29½ cts.

BEEF CATTLE.—Extra, 43 a 45 cts.; good, 44 a 46 cts.; medium, 44 a 45 cts.; common, 31 a 33 cts.; fat cows, 21 a 23 cts.

SHEEP.—Extra, 54 a 55½ cts.; good, 51 a 53 cts.; medium, 41 a 55 cts.; common, 31 a 41 cts.; culls, 25 a 33 cts.

LAMBS.—Extra, 61 a 7 cts.; good, 60 a 63 cts.; medium, 51 a 55 cts.; common, 41 a 55 cts.; cull, 31 a 33 cts.

HOGS.—Good Western, 54 a 55 cts.; all others, 43 a 51 cts.

FOREIGN.—William Henry Smith, in a speech at Toronto on the 21st inst., announced that the Port of London Convention had been dissolved in 1859. Referring to the Irish affairs, he said he hoped soon to see an extension of local government to Ireland.

The London correspondent of the *New York Mail and Express* says: "The declaration which was made by Lord Russell at the Conference of the Scottish Liberal Association in Glasgow, that drastic measures would be taken for a reform of the House of Lords must be taken in precedence of almost all other measures for the benefit of the realm, as otherwise the Lords would be sure to return to their original position. The proposal which was made in accordance with the late proposal has resulted immediately in definite action by the association."

It is at once adopted a resolution that the abolition of hereditary peers must be the first care of the Liberal party after the meeting of the Convention. The National Liberal Federation is expected to confirm this resolution.

tion, and perhaps adopt it as an integral part of the electoral platform."

John Morley has appeared as the leader of the great masses of labor, who demand not increased political freedom, as they already have all they desire of that, but a fairer share of labor's earnings, a more equal distribution of the people's aggregate wealth, a fairer division of the land among all classes.

The construction of milk in London is said to be 40,000,000 gallons yearly, and most of this is brought to the city by rail, as only about 4,000,000 gallons are produced in the metropolitan area. It is computed that a herd of 84,000 cows is required to supply the whole of the milk for the year.

Two letters, dated Eighth Mo. 5th and Eighth Mo. 17th, have been received by the chairman of the Emancipation Relief Committee from Henry M. Stanley. The explorer with Emin Pasha and their attendants, are expected at the sea coast in a few days.

The Anti-Slavery Conference which is now in session in Brussels, has sent cable despatches to Henry M. Stanley and Emin Pasha, asking them to telegraph an account of their experience with slaves and slave-dealers in the interior of Africa. The despatches state that if it is found necessary the Conference will prolong its session in order to receive the narrative they desire.

The reported massacre of Dr. Peters and his party, in Africa, is now decided.

Despatches from Samoa, by way of Sydney, N. S. W., say that a split up of the 300,000 Germans in Samoa. On the 9th inst. the British and German consuls and agents issued proclamations recognizing American as king. Fear of a famine in Samoa are ended.

The Berlin correspondent of the *London Chronicle* says: The hope is generally expressed here that, in the event of a split up, the 300,000 Germans in Southern Brazil will ask for German protection.

It is not improbable that an attempt will be made, with the help of the Colonial party here, to secure partial if not complete independence.

The *North German Gazette* (Prince Bismarck's organ) says that the Emperor of Brazil causes the Powers no anxiety. The Government at Rio Janeiro appears to lack neither the power nor the will to maintain order. There is no need, the *Gazette* says, of sending a German man-of-war to Brazil.

The *Public Ledger* of this city, has received the following cablegrams:—

"Rio Janeiro, Nov. 24th.—I inform you that all the provinces have signified their adherence to the Republic and provisional government without any resistance or protest. The government of each State is rapidly being organized. A decree of the provisional government has extended the right to vote to all citizens, except only those unable to read or write. The Archbishop, head of the Church in Brazil, has conferred to-day his solemn benediction upon the Government and the Republic."

RYU BARBOSA, "Minister of Finance." VALENTE.

NOTICES.

WESTWOOD BOARDING SCHOOL.—The Committee in charge will meet on Seventh-day, the 30th inst., at 10 A. M., to consider report of joint committee on the Farm, and other business.

WM. EVANS, Clerk.

Phila'd., Eleventh Mo. 1859.

WANTED, by a young Friend, a situation as companion or to assist in housekeeping, or to take care of children.

Apply by letter or in person, to S. M. SCULL, Overbrook, Pa.

WANTED.—An experienced teacher, (a member of the Society of Friends) possessing good administrative and business abilities, to act as Superintendent of Friends' Select School, 140 N. 16th St., Philadelphia.

Apply to—

Ephraim Smith, 1110 Pine St.
John W. Biddle, 119 South Fourth St.,
or George Vaux, 1715 Arch Street.

MARRIED, at Friends' Meeting-house in Ulster Tompkins County, N. York, on Fourth-day, Eleventh Mo. 13th, 1859, EDWARD FYLE to FRELVE OWEN, both of the same place.

DIED, at West Chester, Seventh Month 29th, 1859, HELEN A., wife of Curtis H. Warrington, in the 57th year of her age.

Incidents and Reflections.—No. 200.

FAITHFUL TO DUTY.

Some months ago, William Wright of London, sent to the *Sunday School Times* of Philadelphia, the following narrative respecting Dr. Lasserre, the father of Henri Lasserre, who has given to the French people a new translation of the four Gospels.

"On the 21st of October, 1895, the English fleet encountered the united French and Spanish squadrons in the battle of Trafalgar. During the progress of that battle, a furious storm arose, and continued to rage when the cannon had ceased to roar.

The *Berwick*, a French frigate, on which Dr. Lasserre was surgeon-major, had been seriously damaged in the combat. The captain and second in command had been killed. The frigate had been pierced through and through like a sponge, and at the close of the engagement the cry arose from the survivors, 'The ship is sinking!'

Dr. Lasserre had been busy for many hours in cutting off shattered arms and legs, and in dressing the wounds of the victims that lay around him, when suddenly he heard, above the groans of the wounded and the sound of the storm, the wild cry, 'The ship is sinking! Every man to the pumps!'

The united efforts of the diminished crew were unavailing, and the vessel began gradually to settle down. A great ship, however, does not go to the bottom suddenly, like a scallop-shell. The water increased in spite of the pumping, but increased slowly. The storm raged tempestuously, though as yet it had not reached its greatest force.

The defeat of the united French and Spanish squadrons was complete, and the *Berwick*, whose masts were broken, could no longer manoeuvre, and stood almost alone in front of the British fleet. The condition of the shattered, sinking ship became desperate. Suddenly the cry rose again above the sound of the hurricane, 'Launch all the boats!'

Of the frigate's boats there were scarcely two that remained seaworthy. These were launched, but it was painfully evident that they could not accommodate the entire crew. It was necessary to make a selection, and those who were able,

forced their way into the boats. They called on Dr. Lasserre to accompany them. He replied: 'I am captain of the wounded, and I wish either to be saved with them, or to perish with them.'

'How absurd! how mad!' they cried impatiently.

'Either take my wounded, whom I cannot leave and will not leave, or go without me,' he responded.

The wounded men were crowded between decks, and it would have been absolutely impossible to have had them embarked under the circumstances.

Dr. Lasserre, having voluntarily made the sacrifice of his life, remained on the sinking ship. The two boats departed without him; but they were suddenly swamped by the tempest, and the entire effective crew of the *Berwick* perished.

About an hour after the crew had abandoned the *Berwick*, Dr. Lasserre was standing on the deck, looking out on the wild, sweltering sea, when suddenly he saw an English pinnace, manned by five English sailors, bounding over the waves towards him. The commander of the pinnace called for the doctor.

'I am the doctor,' replied Lasserre.

'Very good,' said the English captain. 'We offer you your safety if you will come aboard our ship.'

'I accept your offer gratefully,' said Lasserre, 'but on one condition,—that all my wounded shall be removed to your ship before me.'

'Impossible!' said the English captain. 'You see we are caught in a hurricane, and we have no time to make a number of transshipments. It is impossible.'

The English sailors prepared to take Lasserre by force, but he cried, 'I shall throw myself into the sea if you attempt to seize me.'

The doctor in the English ship had been killed by a shell, and the wounded were lying without surgical aid.

'I wish to go with you,' cried Lasserre, as he prepared to plunge, 'but you must first take my wounded.'

When threats proved of no avail, the captain accepted Lasserre's conditions. The English sailors boarded the sinking vessel, and by the help of the doctor proceeded to remove the wounded. But the little pinnace was too small to take all on board, and it had to make four voyages before all the wounded Frenchmen were safely conveyed aboard the English ship.

As the removal proceeded, the storm increased in violence, and the difficulty of getting the men from the one ship to the other increased. It was a work requiring great patience, courage, and endurance. At last Lasserre saw every one of his men safely removed, and himself alone on the foundering ship. When narrating the story in after years, he always spoke of the overwhelming desire to live that possessed him as he saw the last boat-load of his men move off from him, and found himself alone on the foundering ship. He stood on the deck over which the waves surged and swept. He watched the last cargo

deposited in the English vessel, and the little pinnace coming toward him, now on the crest of some mountain wave, now in the trough of the sea, and, fearing lest it might be dashed against the sinking *Berwick*, he flung himself into the sea, and swam with all his might towards the returning boat. A strong English hand seized him, and drew him into the boat, which sped like an arrow to the English vessel.

The story of Lasserre's devotion to his wounded had preceded him, and the English received him with a ringing cheer. The captain pressed his hand in silence. The officers placed dry clothes at his service, several pressing upon him their own top-coats, as they vied with each other in acts of kindness. While receiving the hearty English welcome, Dr. Lasserre noticed a sudden sensation among the officers. He turned his eyes in the direction in which they were looking. The broken masts of the *Berwick* were disappearing beneath the waves.

Dr. Lasserre attended to the wounded English sailors with as much skill and tenderness as he had shown to his own wounded countrymen. The English in return loaded him with presents, and set him free at Gibraltar, with one companion, who was liberated for his sake. Lasserre and his companion marched on foot through the length of Spain, and reached France and home long after they had been given up as lost."

The *Religious Herald* gives an account of devotion to duty in a London fireman—which is perhaps equally impressive.

"One evening the fire-signal sounded at the station house. The firemen were on hand with their apparatus. Arriving at the burning house, they found it on all sides enveloped in flames. Terrified men and women stood at the windows wringing their hands. These were soon rescued; but later, when the roof already threatened to fall in, it was discovered that there were still some children in the burning building. Brave and strong men stood in silence, watching the flames as they licked up the house with their fiery tongues. Some were thinking of their wives and children at home. Others shrank from the terrible death; and still others delayed because they thought it impossible for any one who should enter the house to get back again alive. It was a fearful moment. At length a voice was heard from the distance, falling on the ears of the affrighted hearers: 'Isn't there one fireman here who fears God? Who will be a hero to-day?' At this call Christopher Benn stepped forward. 'I'll go,' he said; 'I have faith to live, or faith to die. If I come out of the flames alive my life shall be consecrated to God. Do you hear that, comrades? How solemn, under such circumstances, sounded this vow, with which the brave man ascended the ladder, to vanish instantly in the smoke and flames. A few minutes passed. Men and women stood in breathless expectation before the scene. Will the brave man, who has risked his life, succeed in saving even one child from the flames? He had been out of sight already three minutes.

Every face was pale with fear, when suddenly every one breathed more freely—Christopher was descending the ladder with a child in each of his arms. Arrived at the foot, he fell fainting to the ground. His face and hands were terribly burned; but soon reviving he solemnly consecrated himself to the God who in the moment of greatest peril had saved his life. Many wondered at his earnestness; all were moved by its fitness. He told afterward what he experienced in the hour of peril in the burning house. Almost stifled with smoke, he crept along to the chamber where little ones were in bed. Here he heard a feeble voice, which said: "Brother Willie, I can hear the Lord Jesus coming. He will take care of you and me, Willie; He loves us so! But keep under the bed-clothes, or you will be suffocated." Christopher seized the children, bedclothes and all, and with wonderful courage reached the window. Just then the roof fell in. When he had gotten his precious burden out of the reach of danger, one of the children said to him, "O Jesus, I am so glad you came! Are you the Lord Jesus?" But Christopher could not speak. The danger escaped, the excitement, and the new thoughts now awakened in his heart, were too much for him. He descended, fainting from the window, and fell, as before stated, dizzy to the earth. On returning to consciousness, gazing upon the children and pointing to his burns, he said: "See, dear children, what I got when I saved you from the flames, but I would not be without these wounds for any price. Your childish faith strengthened mine." From this day Christ is my Lord and Master." Christopher's companions said his religion shone like his helmet—a fit comparison for the brave fireman's helmet was so bright that one could see his face in it as in a mirror. From that time Christopher went to his work with a far deeper sense of responsibility whenever the fire alarm sounded. He has never forgotten that night in the burning house, when the children took him for his Lord and Master. Looking back to that scene, he is in the habit of saying: "I am not Christ, but He goes with me. He stands at my side. And it is wonderful how safe I feel myself. I have faith to live and faith to die, because the Lord Jesus is my Saviour."

J. W.

FOR "THE FRIEND."

Holiness and Perfection.

We are all called to holiness and purity of life. This call is abundantly extended through various parts of the Holy Scriptures. And we all have it, also, inwardly and immediately through the Holy Spirit striving against sin. Are we so heeding the call as to make our calling and election sure? This should be the great business of our life; as we are told that without holiness no man shall see the Lord. And obedience to this call can alone cleanse us from the defilements of sin, and produce sanctification and holiness, and give us acceptance in the Divine sight; and finally an admittance into the holy of holies, where no unclean thing can ever enter. And if we obey the call we shall escape the wrath of God which comes upon the children of disobedience.

And we surely ought to have a more charitable view of our merciful Preserver and Caretaker than to think He would call us to that which is not attainable. This would be casting a gross imputation on the Divine character. For He calls us all to holiness and purity of life, and to be followers of that which is good; and that we put on the new man, which after God is cre-

ated in righteousness and true holiness, so as to walk with Him in newness of life, being renewed in the spirit of our minds. If this is impossible why should we be exhorted to it? But we must know, if we are believers at all, that Christ is able to save to the uttermost all that come unto God by Him. And He says, be ye holy, for I the Lord your God am holy. But we have our part of this great work of purification and holiness to do. Man took a voluntary part in the transgression, and we have a voluntary part to take in the restoration. So God says, through the prophet, "Wash you, make you clean; put away the evil of your doings from before mine eyes, cease to do evil, learn to do well." Then, though their sins had been as scarlet He would make them white as snow. And their sins and iniquities would be remembered no more against them. But it is the willing and obedient only that shall eat the good of the heavenly land. And it is such as do his commandments, as inwardly revealed, and not such as merely hear them, that have a right to the tree of life, and to enter in to the paradise of God, and to enjoy that blessed communion and spiritual happiness and life which was lost in the fall.

And though I believe in a state of perfection and holiness and a freedom from sin, yet I do not believe it is experienced by the natural man, only as he is born again by the overshadowing Spirit of the Almighty. Thus it is that he is renewed in his mind, and raised by Christ into newness of life, and made meet to become a partaker of the inheritance of the saints in light; and is governed by the law of the spirit of life in Christ Jesus, and has gone on unto perfection. Being made free from the law of sin and death, and come out into the glorious liberty of the children of God. Here is not only sanctification, but full perfection and complete justification, as such are ruling and reigning in newness of life; and whosoever abideth therein smeth not, but they bring forth fruit unto holiness, and their end is everlasting life, while death is the wages of sin. And every one that hath this hope, purifieth himself, even as He is pure. And for this purpose the Son of God was manifested, that He might destroy the works of the devil, and make an end of sin, and bring in an everlasting righteousness into every individual heart: so that He might be anointed as the most Holy, where nothing impure or unholy can ever enter nor bear rule. Then let us lay aside every weight, and the sins which so easily beset our progress Zionward, and run with patience the balance of the race that is set before us; looking unto Jesus, and not unto man; who for the joy that was set before Him, endured the cross and despised the shame, leaving us an example that we should follow his steps, and stand perfect and complete in all the will of God. For the old outward law made nothing perfect, but the bringing in of a better hope did; and this better hope brings us into the new and living way, which is consecrated for us by Christ himself, who is the author and will be the finisher of our faith, if we hold to our confidence steadfastly unto the end. And this new and living way is the highway to holiness and purity. And if we take the Scriptures for authority, we shall find ample proof in support of the belief that it is possible for us, with Divine aid, to obtain a complete victory over all sin in this life. And thus be prepared to join the general assembly of the purified saints in heaven.

Paul, in writing to the Corinthian Church of such as had drifted away from the restraints of holiness and perfection, says, "and such were

some of you; but ye are washed, but ye are sanctified, but ye are justified in the name of the Lord Jesus, and by the Spirit of our God." These had witnessed the baptism, not merely of water which typifies an outward cleansing, but the baptism of fire, a more inward and purifying work, for it more thoroughly purges the heart. So we need the baptism of the Holy Ghost and fire, which supersedes elementary signs, as all shadows of holiness flee away. And as we abide the day of his coming, when He comes as a purifier, like He now has, we shall have less of the spirit of worldliness and more of the spirit of holiness in our meetings. And our ministry will be more edifying to the people, and more pleasant to the Lord, as in days of old, and as in former years. And more often have vocal free course and be glorified. And we, with the help of his Spirit, will be more often made as swift witnesses against the evils that surround us; and in upholding in our every day walk and conversation, the spirit of holiness before an intelligent, but too often a gainsaying world.

DUBLIN, IRE., Eighth Month 25th, 1859.

"A Beautiful Old Lady."

In August, 1885, passed away an old French lady whom I have called beautiful, for there is the beauty of old age as well as the beauty of youth. Every one in Versailles, and many people in Paris, knew the venerable Madame André Walther, who, when eighty years old, and her hair silvered with age, had still a countenance beaming with intelligence and goodness, and seemed to bear her cheerfulness and buoyancy of spirit to the end. But it was the beauty of her disposition and character that made her most loved and best known, and many of our young readers may like to know something about one who will be long remembered in her own country, although her name may be known to few in America.

Madame André Walther was the daughter of Count Walther, general in the French army, and commandant of the great Napoleon's Imperial Guard. At the age of eighteen she was married to M. J. André, Receiver General of Revenue at Tours, a man of great wealth. Rich, beautiful and highly accomplished, she was universally adored, and in society had the prospect of a brilliant career. But all this splendor did not satisfy her heart. Her sound sense and good feeling made her feel sad amidst the amusements of "Vanity Fair." Her wealth and position seemed to require her presence in public assemblies, although she had no pleasure in the frivolous gayeties of the fashionable world.

While in this frame of mind she made the acquaintance of a well known and much respected Christian, Pastor L. Meyer. At the very first interview she felt that she had found a wise and kind counsellor, and it proved the turning point in her life. All the time not required for the duties of her home and family she devoted to works of piety, and she did this without retiring from her position in society, and without taking upon herself any of the vows and rules of religious life—she lived in the world, yet was not of the world. And all who came in contact with her, recognized the influence of her beneficence, which in her was the influence of the Spirit of God.

I am not giving her biography, but only wish to refer to one part of her life where her name was widely known and honored.

In her widowhood she lived in a charming residence, "Les Ombrages," not far from the

magnificent palace and gardens of Versailles. At the time when the Communists had possession of Paris and the French Government, and its head-quarters at Versailles, that old "Court suburb" presented a scene of busy and anxious excitement. The whole country-side was disturbed by the events of war, and for a time was overcast with the gloom of anxiety. But in the darkest time there was one spot on which the light of heaven seemed always to shine, and where the peace of heaven seemed always to abide. This was the home of Madame André Walthers. It was like a rural "city of refuge," or one of those sanctuaries during the Middle Ages, which were respected by the most turbulent spirits, even during times of revolution and war. To this refuge the prefects of police, the railway station masters, the general and staff of the army—all were in the habit of directing the homeless and helpless.

Every spare room in the chateau, the green-houses and tool-sheds, every place that afforded shelter, was crowded with fugitives and the homeless poor, till one day a miserable outcast was heard to say, "There is no more room."

The most remarkable fact of that Versailles time has yet to be mentioned. There are many who have hearts as kind as Madame André, but who have not the means for deeds of charity. The singular feature in her position at that time, was that while every part of the place was crowded with the poor recipients of her hospitality, each night she received in her salon, statesmen, ambassadors, cabinet ministers, deputies, generals, and notables of all degrees, civil and military.

Outwardly, the scene resembled the salons of Parisian dames of high degree, where rank and fashion, art and literature and talent are brought together mainly for display and ostentation. There was a loftier tone pervading the assemblies at Les Ombrages. No one who was present will ever forget the impression on the evening that Paris was in flames, and the sky was lurid with the light from the burning of the Tuileries and other public buildings. Madame André had a son at the front with the army that night, yet the mother appeared to her guests as calm and dignified as ever, and thrilled the audience by intoning, in her clear musical voice, a prayer and hymn to the Almighty, to save the poor people whose crimes had justly exposed them to Divine judgment.

Though old in years, she was young in heart, because she renewed her youth at the source of eternal life. Until her death she manifested an ever-ripening beauty of character and fruitfulness in good deeds. No wonder that the following tribute was paid to her memory in the obituary notice in one of the leading Catholic journals:

"This soul was influenced by two powerful passions—faith and goodness. Her faith was truly Christian, above all sects and all controversies. Her goodness was bright and sunny, and shone everywhere and on all alike. Stern as regards sin, she was pitiful towards the sinner, and no one knew better how to comfort the mourner, and to cheer the broken-hearted, as well as to relieve the indigent. This goodness was not the result of mere feminine sensibility, her mind was of lofty, masculine tone. The most tragic events, the calamities of war, the horrors of revolution, did not disturb her calm and resolute courage."

This was a remarkable testimony, but the truth of it was felt by all who knew her. Her friend, M. Revillaud, the editor of the "Signal,"

the leading Protestant journal, who took up his residence at Versailles to be near her, could not have expressed the truth about her more forcibly: "In her courage and dignity, and in the air of command in her manner, one could see the daughter of the old chief of the Imperial Guard. But this air of authority was tempered by gentleness and goodness, the fruit of Christian humility."

Translated from the French. V. C. H.
—Banner and Herald.

FOR "THE FRIEND."

The Great Meeting-house.

In early times the meeting-house at the southwest corner of Market (then High) Street, and Second Street, Philadelphia, was known as the "Great Meeting-house," probably because it was much larger than the first building on the Bank or Delaware side.

The preliminary steps for procuring the site were taken at the Monthly Meeting held on the 29th of the Fourth Month, 1694, when the "meeting considering the want of a convenient place for a meeting-house, desired Samuel Carpenter and others to inquire after a more commodious place, as near the High Street and the Front of Delaware as can be conveniently got."

The following Tenth Month, the meeting requested "Anthony Morris and others to speak to Governor Markham about his lot of land that layeth in the High Street near the market-place, and inquire the length and breadth, and if it may be thought convenient, to erect a meeting-house thereon; and they, with Edward Shippen, are desired to agree with Governor Markham as reasonably as they can." A month later the committee reported that Governor Markham was "very ready to serve Friends therein, and Friends agree to present him with fifty pounds, and acknowledge his kindness therein;" and the following month this committee was directed to pay the Governor the money, and desire him to make a title to the lot to Edward Shippen, Anthony Morris and Samuel Carpenter as trustees.

The lot as granted by Markham in 1695 appears to have been 90 feet on Market Street and 80 feet on Second Street, with an additional piece adjoining it on the south, about 69 feet west of Second Street, 66 feet in length east and west, with a frontage of 25 feet on Strawberry Street. About three years afterwards Lyonell Brittain granted to trustees for Friends an additional piece of ground on the south, running through to Strawberry Street, which made the whole frontage on Second Street 125 feet, and on Strawberry Street 45 feet.

Lyonel Brittain was an early emigrant, having arrived in America some years before William Penn, and settled in Bucks County. He was originally in membership with Friends, but renounced his profession early, and joined the Roman Catholics. This was probably before he sold the lot on Second Street to Friends.

It was subsequently ascertained that neither Markham or Brittain had title to these lots. They were in fact only squatters, and the conveyances which they had made were worthless.

The whole subject was fully discussed in 1705, and the application made to William Penn to confirm the land to Friends. This he agreed to do as a gift, but the meeting in view of the fact that it had bought the land in good faith, declined to accept it in that way.

This was certainly a most ungracious position for Friends of that day to take, when we consider how generous the Founder had been to

them in all matters connected with Society affairs, as well as in many other particulars. There appears to have been some feeling about it, but ultimately a patent was granted to Friends upon the payment of forty pounds—probably a kind of a generous compromise on the part of William Penn—as the land must have been worth much more than that sum, even at that early day. This is indicated by the fact heretofore mentioned, that the price of fifty pounds accepted originally by Markham for a part of the lot only, was esteemed so reasonable, that the meeting considered it appropriate to acknowledge his kindness in having it sold for that sum.

This patent, which was dated the 31st of the Seventh Month, 1705, covered both the lot bought of Markham and that conveyed by Brittain. Markham was then dead, but an effort was made to obtain damages from Brittain for selling a lot which he did not own, with what success does not appear. That part of the ground which had a frontage of ninety feet on Market Street, and about eighty feet on Second Street, was appropriated as a site for the meeting-house, and the residue was granted by the patentees to the overseers of the public schools, to be devoted to school purposes; which seems to have been a part of the design in making the purchase.

Immediately after the purchase from Markham in 1695, steps were taken to raise funds by subscription for the erection of the proposed meeting-house, and in the Tenth Month of that year directions were given to "agree with workmen to build [it], sixty feet long, forty feet wide, and as high as may be thought convenient." The following month a report was made that an agreement had been entered into with "Thomas Dickett and William Harwood for the building of the said house, which is to contain fifty feet square, with cellars all underneath and [the committee] deem the charge of the whole will amount to about £1000."

Some effort seems to have been made to obtain aid from country Friends to erect the building, as was done in the case of the Centre Square meeting-house. The subject was brought before the Monthly Meeting held at Havertford in the Eleventh Month, 1692, and referred for consideration to the next meeting. The following month a committee was appointed to receive Friends' subscriptions for this object; and in the Sixth Month, 1696, another committee was named for the same purpose. How far the effort was successful does not appear.

The first Monthly Meeting in the Market Street house was held in the Eleventh Month, 1696, but it was then in an unfinished condition, as the plastering was still in progress in the Second Month following. This meeting-house from the first seems to have been inadequate for the accommodation of Friends; and in the summer of 1699 it was decided to enlarge it, by erecting a gallery.

In 1712 an effort was made to increase the size of the Market Street lot, by purchasing the ground lying between it and Strawberry Alley, but it proved unsuccessful. It would have been a valuable addition, and if acquired might have had an important bearing on subsequent arrangements.

In 1738 the question of increased meeting-house accommodations again came into prominence, and the suggestion was made that instead of enlarging the Market Street house an entirely new building should be erected on the Burial Ground at Arch and Fourth Streets. Subscriptions were started to raise funds for the purpose,

to which Friends in Barbadoes contributed £50, but the project afterwards fell through.

For many years the subject of a larger meeting-house does not appear to have been prominently discussed; but at the close of 1754 it was revived, when it was proposed to make an addition to the Great Meeting-house on its western side, to accommodate meetings for business and provide room for those who attended public meetings on occasions when they were very large.

This proposal was not, however, carried into effect. Two months later it was decided to build a new meeting-house on the foundations of the old one, "and to extend as far westward as our ground goes," and a committee was appointed to proceed with the work immediately after the general meeting in the spring, and to have the new building ready for the accommodation of the Yearly Meeting in the fall. The new house was to contain two apartments on the lower floor at the west end, for holding meetings for business.

This plan was however afterwards modified, and the new building seems to have been erected regardless of the old foundations. It was seventy-three feet in length east and west, and fifty-five feet in width north and south, and was set back eight and a half feet from the south line of Market Street, and ten feet from the line of Second Street; and there was also a passage-way on the westward of six feet in width.

There was an upper room approached by a stairway, which was not, however, finished until some months after the building was occupied. A few years after there were doubts as to whether the floors were strong enough to bear the weight of those likely to assemble, and pillars were introduced to strengthen them.

The entire cost of the new building was £2145, 19s., 6d., which was mainly paid by a special subscription made by Friends for the purpose. Thus after the lapse of half a century from the time the first building was erected, Friends seemed more generously disposed, which probably indicates increased prosperity, if not fresh zeal in the cause of religion.

The new Meeting-house was so far completed in the autumn of 1755, that the Yearly Meeting (then held in the Ninth Month) convened in it, and in the Tenth Month of that year it was arranged to have morning, afternoon and evening meetings there.

The writer possesses an interesting water color picture of the second great Meeting-house. In its general appearance it was not unlike our present Twelfth Street Meeting-house. It was built of brick. The gable faced Second Street, and windows are shown for two stories. There were doors with porticos on the north and east sides, and probably one on the south side also. The windows of the first story were provided with outside shutters. The lot around it was enclosed with a high brick wall, which was pierced with two gateways on Second Street and one on Market Street.

In 1763 gates were placed in the yard "to prevent the boys running round the house," and at the same time considerable alterations were made in the interior arrangements. The stairway leading to the gallery on the women's side, was removed to the north side of the house, and continued into the upper chamber. These alterations resulted in an injury to the acoustic qualities of the meeting-room, and it was found necessary "to fix up a suitable board for the conveyance of the voice when friends are concerned in public testimony."

Shortly after the Declaration of Independ-

ence, the Market Street Meeting-house was occupied by a considerable number of Provincial troops from Maryland, under a commanding officer named William Smallwood (afterwards a Major General in the Continental army, and at one time Governor of Maryland), who were on the march to New York. Inquiry was made of friends in advance, as to which meeting-house in the city it would be least inconvenient to spare; to which the reply was given that consent could not be had for the use of either of them. This was followed by a demand for the keys, which being also refused, forcible possession was taken of the premises. Immediately afterwards a committee called on the commandant, and informed him that a meeting for Divine worship was held weekly in the house which was occupied by his soldiers, and that Friends had decided to hold it there the following morning as usual, not being easy to hold it at any other place. He replied that it was contrary to his judgment and principles to interrupt any in their religious duty, and that early in the morning he would order the soldiers away during the time of the meeting. The committee told him if any of the soldiers desired to be present, there might be room for them, but asked that they might be enjoined to behave in a manner becoming the solemn occasion. This he told the committee he would certainly do, and added that the occupancy of the place gave him uneasiness, but that he was a stranger and had been ordered by the quartermaster to take possession, though there were other places which he thought more proper and convenient. The meeting was accordingly held in a quiet and peaceable manner without interruption, the few soldiers who attended behaving as well as could be expected. The occupation of the premises by the soldiers continued until the following First-day morning, when it was vacated about the hour for the usual meeting.

With the increase of its members, the necessity of providing better accommodations for holding Philadelphia Yearly Meeting became more and more apparent, and about 1796 the scheme which had originated nearly sixty years before, as above stated, for building a large meeting-house at Arch and Fourth Streets was fully developed; and at the same time the proposal was made for the sale of the Great Meeting-house and lot at Second and Market Streets. The latter suggestion was not, however, carried out until many years later, when the increased travel on the two streets made it so noisy that it became evident that the old premises no longer possessed a value for meeting-house purposes.

In 1809 the holding of meetings there had been entirely discontinued, and it was decided to sell the ground in building lots of a suitable size. The building was reserved, and part of the materials derived from it were used in connection with the erection of the present Twelfth Street Meeting-house.

The sale of the ground produced \$76,000, and the materials derived from the old building which were sold realized \$1,459.37. In addition \$10,572.12 was received from interest on moneys loaned, before being required for other purposes, so that when the committee made their final report to the Monthly Meeting in the First month, 1823, the total avails from the old premises, realized to the Society the handsome sum of upwards of \$88,000.

The proceeds of the sales were mainly devoted to the following purposes:

Purchase of lot and erection of meeting-house on Twelfth Street, about \$33,000; purchase of

lot and erection of meeting-house on Green Street, about \$25,000; erection of west wing of Arch Street Meeting-house, about \$20,000.

The deeds for the sale of the lots into which the Second and Market Streets estate was divided, contained covenants on the part of the purchasers that no "Dram-shops" should ever be located on the premises, thus evidencing the care of the Friends of that day, to promote temperance so far as it was in their power to do so.

G. V.

"The Memory of the Just is Blessed."

Proverbs x. 7.

Polycarp lived contemporary with John, "the disciple whom Jesus loved." When about to be burned at the stake, being pressed to recant and deny Christ, he said: "Eighty and six and deny Christ, I served Him, and He never did me any injury; I have then can I blaspheme my King and my Saviour?" Having confidence that he would be supported in suffering he refused to be tied; hearing a voice from heaven saying unto him: "Be strong and show thyself a man, O Polycarp."

MUSINGS.

Most noble Polycarp!

Thus to maintain thy Master's cause,
Whilst human hate and human laws
Denounce thy lyre and harp;
Well knowing that the mortal part
Must test thy loyalty of heart
By provings sore and sharp.

Meek, trusting, valiant soul!
Unto thy Master's will resigned,
No fear affects thy heart or mind
Or moves thy self-control;
Though fire destroy this house of clay,
The spirit freed will soar away
Faith-crowned—to reach its goal.

Dear innocent! Assigned
To suffer for the cause of truth,
Nort to deny Him who in all,
So drew thy tender mind
To win his love—and owning, crave
His blessing—fraught with power to save
The sick, the halt, the blind.

Eighty and six long years'
Devoted service crowns thy head,
In which his guiding hand has led
Through trials, hopes and tears;
"No injury" his hand has done
To mar the good and pleasure won—
Shall all now fall through fears?

Rejoice O Church of Christ!
In every clime, and in all lands,
This protest firm 'gainst Satan's bands
Has weakened and sufficed
To mar his rule—though void of shame,
Men still own not that blessed name
Which bought them—double-priced.

Hear this sweet minstrelsy!
"Be strong and show thyself a man,
O Polycarp!" 'tis heaven's plan
To set her churches free;
Through sufferings borne on Calvary's mount—
And should the heirs of Christ not count
A share their lot to be?

"Like 'him whom Jesus loved,'
Who leaned confiding on his breast,
Thy tried heart finds its peace and rest
Thy constancy approved;
Demonic fury of this world
Falls at thy feet—Love's flag unfurled,
The soul's immersed in its Beloved.

Marshallton, Pa.

ROBERT HALL was once asked his opinion of a flowery sermon, which seemed to be much admired by the audience for its beauty and polish—"very fine, but a man cannot live upon flowers."

FOR "THE FRIEND."

A Curious Plant.

Some days ago a botanical friend presented me with a large and curious flower of a plant allied to the *Calla*, or Egyptian Lily—not really a lily, but belonging to the Arum family, in which the florets are closely packed along a stem and the whole surrounded by one large spathe or envelope. The Arum family are mostly found in tropical countries, yet a few of them grow in our own temperate zone. The most common and best known of these are the Skunk Cabbage, whose mottled spathes protrude above ground in damp places among the earliest of spring flowers, and the still more abundant Indian Turnip, or Jack in the Pulpit (*Arisaema triphyllum*).

In the flower brought me the spathe was unrolled so as to form a broad, slightly curved cream-colored dish of thick texture, on which lay the long and thick central stem of florets. It was a remarkable looking flower. The name I was informed was *Monstera deltoidea*.

On examining Curtis' *Botanical Magazine*, I found a figure and description of an allied species—*Monstera Adansonii*, which is a native to the West India Islands and Tropical America, and was introduced into English gardens more than one hundred years ago—in 1752. It was known to Linnæus, who called it *Dracontium pertusum*—the specific name meaning perforated, and doubtless given to the plant because the leaves have in them several rather large openings, as if part of the substance had been cut away with a knife. It is described as a climbing plant, which in its native haunts, attaches itself to the trunks of trees by thick, fleshy fibres.

A few days after the reception of the flower came a kind note from the friend in whose green-house the plant had grown, stating that it had matured some of the fruit from the flowers that grew on it a year ago, and inviting me to visit the spot and examine the fruit. Accordingly, I went to the residence of Samuel Conard at Sharon Hill, Delaware County. The plant seemed to be very vigorous, with stout stems of two inches or more in thickness, from which depended numerous long rootlets. The leaves were large and pierced with oblong apertures, as in the species described by Curtis. On removing the outer green scales from the ripened fruit, the part below somewhat resembled oblong grains of Indian corn in shape, but white and soft—and with a pleasant, acid-sweet taste, somewhat resembling that of the Pine Apple.

As I walked through the green-house of my friend, and noticed the many peculiarities in the leaves of the different plants, I was impressed with the variety which is displayed in this part of the vegetable kingdom in form, size, outline, substance and color.

A leaf consists essentially of two parts—a set of woody fibres, which form its skeleton or frame work, and a mass of cellular material, usually green, which is supported by the woody fibres or veins, which also convey to it the sap derived from the roots and ascending through the stem, of which the veins may be regarded as branches. It is an interesting study to observe the various forms of these veins assume in different plants—sometimes regularly branching from opposite sides of the mid rib, as in the Chestnut leaves; at others, running side by side, nearly parallel, as in the grasses, lilies and many other plants.

In many leaves, they appear to grow so freely, that the deposit of cellular tissue cannot keep pace with them, so that they project in points

beyond the general expansion of the leaf, forming the many shapes of pointed or lobed outline, which are presented by different plants, as by the oaks, beeches, &c. In the *Monstera* already described, it would seem that the plant, being unable to create enough cellular tissue to fill up the spaces between the rapidly extending ribs or veins of the leaves, had chosen to build as it were bridges of this material from one vein to another, and leave open spaces unfilled near the centre of the leaf. This is so unusual a manner of growth that its singularity at once arrests the attention of the observer.

I have before me one of these leaves, the general outline of which is round. It is about two feet in diameter. From the massive mid-rib, eight or nine branches diverge on each side, each of which is bordered with a margin of green cellular material, which is not wide enough to reach to its neighbors, so that there are deep lobes between the adjoining ribs of the leaf. About half of these lobes are shortened by a growth of tissue, reaching from one rib to its neighbor, cutting off a space near the base which is left unfilled, and forms the openings already mentioned as a peculiarity of the foliage.

A similar mode of leaf formation is even more strikingly shown in the Lace Leaf *Ouvriandra fenestrabilis*, a water plant of Madagascar, the leaves of which resemble open needle-work of a most regular pattern. The blade of the leaf is of an elongated oval form. The longitudinal ribs are crossed at right angles by fine tendrils, the intervening spaces being open.

FOR "THE FRIEND."

The Honey Bee and Hive.

We can go back to an early day in the world's history in reference to the honey bee. They were brought to this country soon after it was discovered by Christopher Columbus. The wild Indian called them "the white man's fly." To-day they are largely scattered, and have become quite a source of wealth in this country. Apiaries can be numbered by the hundreds, some containing hundreds of colonies. The poet did not get it quite right when he alluded to the yellow wax on the thighs of the bees; the substance seen there being pollen, adhered from flowers, and used to feed the young bees. The wax is a secretion from the folds of the abdomen, and is the result of a fattening process. The bees can grow wax whenever they want to by eating all the honey they can, and hanging idly.

One among the improvements is the manufacturing of comb foundation from wax, saving a good deal of time and labor. It is estimated that a swarm will have to eat about twenty pounds of honey to grow wax enough to fill an ordinary hive. Iowa perhaps ranks amongst the foremost states in resources for honey. Her streams are lined with Basswood timber and other trees that furnish abundance of the best of honey; the country is well set with white clover, and in the fall, when seasonable, we have abundant pastures that furnish nectar in abundance. Thousands of pounds of honey go to waste by not having bees enough to gather it; the business is only in its infancy.

There has been a great improvement in the hives that are used to-day over what our fathers used. The hollow gum and box hives were in general use fifty years ago. Perhaps Langstroth was amongst the first to invent and use the movable frame, which has been one of the greatest improvements, enabling the apiarist

to take to pieces and examine any hive. The moth which seemed as though it would largely engineer the business, has been overcome by introducing the Italian bee from Italy. The wintering problem has been a difficult question to solve satisfactorily. Some have succeeded fairly in cellar wintering, while others have resorted to a hive made double and filled in with sawdust or chaff, to make a frost-protection. The outdoor wintering has many advantages over cellar wintering. I have used a live molded out of plaster of Paris for the last ten years, and find it has advantages over any wooden hive, in that it is cooler in summer and warmer in winter (plaster being a non-conductor), is cheaper, and requires no paint.

GEORGE BRIGGS.

NEW SHARON, IOWA.

FROM "THE BRITISH FRIEND."

Early Friends in Montgomeryshire.

LLANWGDYNS.

Having occasion to spend a week or two in this part of Montgomeryshire—chiefly at Llanstffraid—it has given me the opportunity of looking over a number of manuscripts and contributions to public journals by the late Thomas Griffiths Jones, of the village shop in this place. He made many inquiries and researches into the history of the early Friends in Wales, the situation of their meeting-houses, burial grounds, &c., and I thought the accompanying, as one of the least heard of, might be interesting to some of the readers of *The British Friend*. It was contributed by T. G. Jones to an Oswestry miscellany called "Bye-gones," in Eighth Mo. 1883. Not one member of our Society is now, I believe, a resident in this county, and the last regular meeting was at Llanidloes. And although in early times there were meetings at Welshpool, Coddiau-Cochion, Dolobran, Escairgoch, Machynlleth, and near Llanwgdyn—possibly also at a few other places—yet they were not large ones. And I am, therefore, led to think that the estimate given in Thomas Ross's History of Protestant Nonconformity in Wales, of 3,000 Friends in the whole Principality must have been rather an exaggerated one.

The ancient (but now destroyed) village of Llanwgdyn was in the centre of the valley, now occupied in its highest part by the reservoir of the Liverpool water works. This is so extensive as to be larger in area and circumference than any other of the inland waters of Wales, and is called Lake Vyrnwy. The lake is beautifully situated in the midst of high hills and mountains, Aran Fowldry being the chief one in view, but not contiguous. There is also a fine turnpike road, newly made, along both sides and round it, perhaps 15 miles in all, and likely to be one of the finest drives of its kind in the Principality. One singular feature of this lake is, that being a constructed one, it does not fill the valley, but terminates abruptly by a stone-built roadway dam at its eastern end. The new village of Llanwgdyn is also in process of being established near the eastern end of the lake.

DANIEL PICKARD.

LLANSTFFRAID,
Near Oswestry, Ninth Mo. 20, 1889.

The extract from "Bye-gones," Wales, &c., is as follows:—

"Caean ycheyn (or the small fields) is a farm situated in one of the valleys of Llanwgdyn, called Cwm Cowni. This secluded spot was once the scene of much active Christian work. It was

then—the latter half of the 17th century—the abode of the proprietor, John Thomas Morris, who was the son and heir of Thomas Morris, gent., who lived in the reign of Queen Elizabeth. Before he was thirty years of age, J. T. M. had adopted the doctrines of George Fox and his followers, and very soon knew, to his bitter cost, the result of so decided a step. Fines, persecutions, and law proceedings of that persecuting age drove our friend to that haven of rest, Pennsylvania, where the statute of preminence, sequestrations, spiritual courts, acts of uniformity, oaths of allegiance, heretics, rebels, and other such implements of cruelty and words of reproach were not known. Here, in William Penn's miniature kingdom, the superior education this Llanwddyn Friend had received in the Shrewsbury school proved a valuable help to him, and his intelligent industry soon enabled him to accumulate sufficient wealth to pay off all the mortgages and liabilities his paternal estate in Llanwddyn was encumbered with—because of the above fines and penalties. Taking, then, advantage of more tolerant times, he returned to his mountain home in Wales, where he settled for the remainder of his life. Meetings were regularly held at Caeu bychain, and Friends came there to worship from Glynud, Cynoniss, and other farmsteads in the Mechain Valley, whilst others from the more distant localities of Hlman and Pennant Melangell wended their way over the mountains and for the same sacred purpose. John Thomas Morris, therefore, for the convenience of these Friends, caused a bridge road to be made from near Cynoniss, over the Garthwlch hill, making the distance much shorter for them. Traces of this road are still to be seen, and it is called to this day 'Ffordd, or Stryd y Cwaers' (the Quakers' road). A footbridge over the river once stood, of a peculiar construction, called 'Pont y Cwaers,' and a ford, higher up the river, is called 'Rhyd y Cwaers' (the Quakers' ford;) but the Liverpool Corporation Waterworks will very shortly (1883) hide all vestiges of these remains in the lower valley, and nothing will be left but the mountain path 'Stryd y Cwaers' and the 'Ard gladdu' at Caeu bychain as mementoes of the past. The burial ground, called by the inhabitants 'Gardd Gladdu' (the burial garden), is a small enclosure, almost square, measuring 50 feet by 48 feet, situate close to and at the back of the house. No mounds are visible to mark the resting-place of the thirteen Friends buried there. The growth of the unknown grass completely hides all traces, if any exist, from view. Several trees grow where the stone fence once enclosed this interesting spot, and of the wall itself but few stones are left. It is worthy of note that the present proprietor has fenced the ground in so as to prevent the spot from being trampled upon by the farm stock. The 'little room,' or meeting-house, I could not identify; and the furniture has been scattered by those who had no respect for the Friend nor his creed. The last Friend said to have been buried there was John Thomas Morris, the proprietor of the estate. When on his death-bed he desired another old Friend, Cadwaladr Morgan of Glynud, to carry his body to the spot he himself had chosen at the back of his dwelling-house, as the place for his long rest. "These directions were faithfully carried out. John Thomas Morris had made his will, whereby he ordered that a room in his house was to be kept furnished with a table, chairs, and a Bible, for the perpetual use of Friends meeting there

for worship; and he further directed in his will that the room over the bill from Glynud should be for ever declared a public path. The will, however, was not long left undisturbed, for it is recorded that in 1713, J. M. Davies, then of Llanidloes, made a statement of Friends having, at their own cost, 'repaired the meeting-house and grave-yard at Caeu bychain, in Llanwthin.' Tradition still exists stating that John Thomas Morris was a bachelor and a person of great influence.

[The following communication, addressed to the Editor, furnishes a needed correction.—Ed.]

There is an error in the "Extracts from an essay entitled 'Wealth' by Andrew Carnegie," published in THE FRIEND of Eleventh Mo. 23rd, in stating that "the State of Pennsylvania now takes—subject to some exceptions—one tenth of the property left by its citizens."

The tax imposed by the State of Pennsylvania on the estates of deceased persons, is five per cent, not ten: and it is only charged on that part of the property of the decedent which is bequeathed to collateral relations or persons not related to the testator, or corporations. That which goes to wife, children, husband, father, mother or grandchildren, is exempt, both when passing by will or under the intestate laws. Hence the designation, "collateral inheritance tax."

FOR "THE FRIEND."

On Religious Labor.

[The following letter was written by the late Joseph Scattergood to a young woman, engaged as a teacher upon the Cattaraugus Reservation, in New York, and who was acting as a missionary among the Indians there. The views it contains are so applicable to persons similarly situated, and so clearly expressed, that it has been sent to THE FRIEND for publication.—Ed.]

PHILADELPHIA, First Mo., 7th, 1866.

If you continue to perform what is required of you in simple, humble obedience to your Heavenly Father's will, looking for his approbation and not for the applause of men, your reward will be sure. I recur with satisfaction to the conversations I had with thee and H. Your acknowledgment of your sense of the necessity and importance of Divine assistance in your efforts to profit the people you are laboring among, was very satisfactory, and I hope you will be favored more and more with it. Its importance cannot be exaggerated. Our Saviour's words are very full: "Without me ye can do nothing." There is reason to fear that some who assent to this doctrine in the abstract are not sufficiently careful to wait for and seek His aid before entering upon their labors, and on that account fail of the success which they otherwise would have. Let it therefore be constantly borne in mind by all of us that we must be endued with power from on high before we can be made instrumental in turning our fellow creatures "from darkness to light and from the power of Satan unto God." We may teach them the Scriptures, and it is very proper they should be made familiar with them. We may instruct them in many useful precepts and sentiments, but unless the heart is changed and they become thereby new creatures, their knowledge will not procure salvation; for it is written unless ye are born again ye cannot see the kingdom of heaven.

The work of regeneration can only be produced by the operations of Divine grace. How

essential therefore it is that the minds of the people should be turned to the teachings of the Holy Spirit and weaned from a dependence upon forms and ceremonies.

The work of religion being inward and spiritual, outward forms and ceremonies would seem to be of little consequence. To one who was seeking inward communion with God would they not rather prove clogs than helps—I mean that communion which is portrayed in the language of our Saviour, "Behold, I stand at the door and knock. If any man hear my voice and open the door, I will come into him, and will sup with him and he with me." This glorious privilege I do not doubt thou believest may be enjoyed without the intervention of any man or any form of man's invention. I believe we should be more frequently favored with his Divine presence if we were more watchful and humble.

To those who adopt these spiritual views of our holy religion and sincerely strive to carry them into daily practice set forms of prayer which may be committed to memory would be dry and formal; they would know from experience the truth of what the apostle declares "we know not what to pray for as we ought." They would therefore feel the necessity of experiencing a preparation of heart to offer acceptable prayer and that worship "which is in spirit and in truth."

If thou assents to these views, thou mayest be ready to query, "Is instrumental music or singing of hymns a necessary part of public worship?" The Society of Friends think that neither of them are necessary, because they believe that He that knoweth the heart is not pleased with tones, however solemn they may be, as the volatile and fashionable part of mankind are; nor do they think it right to convert the most solemn acts of devotion into opportunities of amusement and creature gratification. If we plan our devotions to please our own ears, do we not render ourselves liable to the imputation of serving ourselves and one another rather than Him who has declared "He will not give his glory to another nor his praise to graven images?" The words of hymns like set prayers do not express the feelings of all who use them.

But why am I writing so? Simply because I feel a freedom to write as I would converse were I by thy side.

FOR "THE FRIEND."

The Brief Career of a Badly Named Paper.

Some time last winter there began to be published in this city an eight paged weekly journal, devoted to theatricals, called "The Quaker." The appearance of this sheet upon newsstands and hawked about the streets, was felt by a number of our members who knew of it, to be a reproach upon a religious Society which, from its rise, has borne a faithful testimony against the theatre, and it was hence not long before several Friends waited on the publishers to express their concern upon the matter. The suggestion that an unwarranted and unfair use of the name of a religious body had been made, and the fact that such use must be distasteful to Friends, seemed to make no impression upon the publishers; while the intimation that, legally considered, the use of the title in this offensive connection might be deemed equivalent to a libel, was met with the response that they would be very glad to have that point tested by law. The Friends, however, were satisfied that it would not be worth their while to advertise the enterprise by taking the latter course, but, hav-

ing relieved their minds, to allow the publishers to pursue their own way.

It is gratifying now to add, that upon inquiry lately made, it was learnt that the sheet in question ceased to be published several months ago, having run its course in about half a year.

Natural History, Science, &c.

Disinfectants used at Johnstown.—When the representatives of the State Board of Health reached the desolate Conemaugh Valley on the 1st of Sixth Month, to prevent the occurrence and spread of disease, the best estimates that could hastily be procured were that 10,000 human beings (the real number was probably considerably less), 1000 horses, 1000 cows, together with a great number of other animals were buried in the debris. There was mud, slime and carcasses everywhere.

Every house in the flooded district left standing was covered with mud and filled with offensive matter.

On the evening of that day telegrams were sent to all the sheriffs of counties bordering the river below Johnstown to tear open the drift piles, and to burn all bodies of domestic animals. For fully three weeks immense fires were burning at Johnstown, formed of the debris.

As soon as the railroads were opened large gifts of disinfectants began to come in. The following is an incomplete list of the disinfectants used by the Board:

- 4000 barrels quick lime.
- 500 " chloride of lime.
- 1700 four pound bottles of bromine.
- 110 barrels bullen.
- 100 tons coppers.
- 1000 gallons carbolic acid.
- 3 carboys muriatic acid,
- 40 gallons nitric acid.
- 180 barrels resin.
- 200 " pine tar.
- 73 " pitch.
- 5 " liquid phenile.
- 15 " sanitas.
- 3 " phenique.
- 100 kegs utopia.
- 10 carboys embalming fluid.
- 720 bottles sodium hypochlorides.
- 700 " Platt's chlorides.
- 116 pounds corrosive sublimate.
- 100 Wether's disinfectants.
- 50 bottles R. R. R. disinfectants.
- 100 " purity "
- 5 packages santative.
- 100 bottles bromo-chloralum.
- 1 cargo of Quibble's disinfectants, valued at \$2500, and donated by Quibble Brothers, England.

Just so soon as communication could be restored, twelve depots were selected where disinfectants could be obtained free, and circulars of information were sent to every house, and posted up all over the region, giving plain information what precautions were needed to preserve health, and how to use the disinfectants.

As soon as the streets were cleared of debris, they were sprinkled with disinfectants, and whenever a spot became offensive, they were freely used.

The result of these measures has been that there was a remarkably small amount of sickness.

Arboreal Tadpoles.—During the travels of the U. S. Eclipse Expedition to Japan, 1887, one of the naturalists found pendent from the branches

of a clump of willows, several objects nearly one foot in diameter, which proved to be nests of tadpoles. They were masses of tough, gluing froth, all over the surface of which were the bodies and wings of small insects which had evidently been entrapped on the mass when soft. In one of them, which he opened, the observer found twenty-two small tadpoles, in a lively condition. These nests were probably made by some species of tree frog.

THE FRIEND.

TWELFTH MONTH 7, 1880.

A Friend, who, under a religious concern, attended Indiana Yearly Meeting about seventeen years ago, was invited, along with others, to attend a meeting of ministers, from which the elders were to be excluded. After the company had gathered, it was explained that the object of assembling was to consider a proposal to divide those who spoke in meetings for worship into three classes. The first to be called *exhorters*, who were to earn their own livelihood, and to be limited in the exercise of their gifts to their own Quarterly Meeting. The second to have the title of *ministers*, who might receive some pecuniary assistance when needed, and who might travel within the limits of their Yearly Meeting. The third to be designated as *evangelists*, who were to travel wherever they saw an opening for labor, who were to give all their time to the work, and to be supported by the church.

The proposal was to some of the visitors from a distance a startling revelation of the extent to which some of the leaders of the people had departed from the principles of Primitive Quakerism; and it was probably useful in putting them on their guard against the introduction of unsoundness in other parts of the Society. We believe no immediate action was taken in the direction desired by those who introduced the proposal; but since that day the practice of employing paid preachers has been widely spread among those professing the name of Friends.

When our Lord sent forth his disciples by two and two, to preach in the surrounding villages, He instructed them to depend for their maintenance on the hospitality of those to whom they were sent. And this has been largely practised by the Society of Friends, who have believed it a duty to receive and care for those who come among them in the service of the Gospel, and whose ministry they were prepared to own, as coming from the fresh anointing of the Spirit of Christ. This practice is in accordance with the testimony of Paul, who told the Corinthians that the "Lord had ordained that they which preach the Gospel should live of the Gospel," although he himself forbore to exercise this right, desiring to make the Gospel of Christ "without charge."

Further, Friends have from their very rise, exercised a care that the spread of the Truth might not be hindered by want of pecuniary means to defray the necessary expenses of travel of those ministers, whose concerns had received the approval of the Church. In many cases, those called into such labors either had means of their own, or their Divine Master gave them intervals in which they could earn the funds necessary for the prosecution of the religious concern he was about to lay upon them. Gough, in his History of the People called Quakers, relates that Samuel Bownas, when a young man,

paid a religious visit on foot to Scotland. This consumed nearly all the money he had, and he returned home almost penniless; "therefore he applied himself to mowing and other harvest-work as a day laborer, for his present support; and to lay up a part of his earnings to put himself in proper condition for another journey; and for his expenses and accommodation the rein; at the same time he attended such neighboring meetings as he felt an engagement to visit, going to one or another to the distance of ten or twelve miles on foot, and returned back the same way to follow his labor." "It was thus," adds Gough, "these disinterested men, after the apostolic practice, divided their time; disengaging themselves from the world and all worldly engagements, when they apprehended the call of duty to go forth with the message of the Gospel, and when discharged from their concern, to labor with their hands to supply their necessities, that they might not make the Gospel chargeable."

The care which Friends have ever exercised to keep the exercise of the ministry unconnected with pecuniary considerations, is not only a compliance with our Saviour's command, "Freely ye have received, freely give;" but its wisdom is justified by experience. We have been spared the unseemly exhibitions of ministers going from one congregation to another for an increase of salary, and of several of them exhibiting their oratorical powers before a criticizing congregation, that the people might select the one that pleased them best.

The primitive minister coveted no man's silver or gold, neither did they count their lives dear unto themselves, so that they might finish their course with joy, and the ministry which they had received of the Lord Jesus, to testify the Gospel of the Grace of God.

If a man really believes the doctrines held by our Society respecting ministry—that it is a Divine gift, which can be exercised only as a fresh qualification is extended on every occasion, and that the preacher must look to the Lord to direct him when to speak and when to be silent, and where to go; we do not see how he can accept a salary which implies a certain obligation to speak at stated times and places. It seems to us that such an one who felt the love of God operating on his heart, and leading him to desire the welfare of his fellow-men, and yet knew that of himself he could do nothing that would promote their spiritual interests, would rather free from such embarrassing and hindering obstacles, and be willing to trust the Lord to provide those things which were necessary for his subsistence in some other way.

Although the supported pastors among Friends who are employed to preach to particular congregations, may properly be called "hired ministers," yet we by no means suppose that they are all mere mercenaries,—whose main object is to obtain the salary attached to their office,—we hope there are many among them, as we believe there are among the ministers of other denominations who are conscientiously desirous of doing good. But the system, which by their practice they endorse, is one that is foreign to the Gospel system as ever held by the Society of Friends.

Instead of deserting our own principles, we would gladly see them faithfully upheld, and other bodies of Christians adopting them, and literally accepting the command of Christ,— "Freely ye have received, freely give," withholding all pay for preaching. Then, "silent, inward, spiritual worship would prevail, and men and women whom Christ selects, teaches

in his school, and ordains by his Spirit for the work of the ministry, would come forth in the churches, and occupy the gifts which He dispenses."

SUMMARY OF EVENTS.

UNITED STATES.—The public debt statement issued on the 2nd inst., shows a reduction during the Eleventh Month of \$4,869,672. Total cash in the Treasury, \$87,224,505.

The Department of State is informed by our minister in Persia of the increase of cholera in that country, and of the proposed establishment by the Russian authorities at Baku and Julfa of a general quarantine against arrivals from Persia. The disease has now reached Kernanshan, but has not yet made its appearance at Teheran.

A confederation of the Fifty-first Congress opened on the 2nd instant. In the Senate the oath of office was administered to Vice President Morton and the new Senators, including those from the States of the Dakotas and Washington. The usual committee to wait upon the President was appointed. In the House of Representatives the Hon. John P. Hale, of New Hampshire, was elected Speaker by a vote of 168 to 154 for J. G. Carlisle, Democrat. The members were then sworn in. The Republican candidates for other House offices were elected excepting the Chaplain, who is a Democrat.

A conflagration in Lynn, Massachusetts, on the 26th ultimo, devastated a square mile of territory in the business section of the city, consuming four newspaper offices, three bank buildings, twelve shoe blocks, a church, twenty-five stores, and many dwellings, mostly of the poorer classes. The assessed value of the property burned is reported to be \$1,003,500, and the number of buildings burned at 830.

On the 28th of the Eleventh Month a conflagration occurred in Boston, burning over two acres of business blocks, and causing a loss estimated at more than \$200,000. The property destroyed included over a hundred firms in the dry goods and leather section, and one hundred headquarters of agents of New York and Boston firms, were burned out. Four firemen lost their lives, and eight men were injured by a falling wall—one of them, it is believed, fatally.

At a late hour of the night of the 30th ultimo, a fire destroyed by fire on the night of the 30th ultimo, and twenty persons are believed to have perished in the building. Sixty-five newspaper employees were at work on the seventh floor, and there were other persons in other parts of the building. The bodies were taken out of the ruins and have been identified.

Captains of vessels arriving at Port Huron, Michigan, report the recent storm on Lake Huron as the worst for a number of years.

A cyclone passed over Beauport County, N. Carolina, on the 27th ultimo, blowing down homes and tearing up trees by the roots. The residence of a farmer near Washington, was blown to pieces, and the family of six persons was killed. A factory was blown down and two persons were killed and many others injured. But most reports have this far been unconfirmed.

The Legislative deadlock in Montana still exists. Democratic members of the Senate absenting themselves from that body, and the Republican and Democratic members of the House holding separate sessions.

Plans for united effort to the temperance people of various States in the United States, for the amendment in Nebraska are still being proposed. The idea of effecting a strong non-partisan league to be made up of friends of Prohibition in Nebraska, Iowa, Kansas, and the two Dakotas, is advanced in a call issued by J. C. Cattman, a President of the Central Temperance Alliance, for an Inter-State Convention to be held in Omaha on the first of next month. The call says: "The success of Prohibition next year in Nebraska closes the gap, and cements five imperial States, lying side by side, in a united crusade against the liquor traffic. There ought to be a strong central organization embracing these five Commonwealths, which can add adjacent ones whenever they submit the question of Prohibition."

Deaths in this city last week numbered 360; 33 more than during the previous week and 38 more than during the corresponding week last year. Of the foregoing 177 were males and 183 females; 55 died of consumption; 24 of diseases of the heart; 33 of pneumonia; 16 of diphtheria; 14 of inflammation of the brain; 13 of cholera; 13 of scarlet fever; 12 of typhoid fever; 11 of diseases of the kidneys; 10 of mania and 9 of senile fever.

Markets, &c.—U. S. 4½, reg. 104½; coupon, 100; 4½, 124½; currency 6½, 117 a 128.

COTTON was in small supply and firm, at 6½ cts. per pound for middling uplands.

FEED.—Wheat bran, prime to choice, \$13 a \$13.50; do., fair to good, \$12.50 a \$12.75.

FLOUR AND MEAL.—Western and Pennsylvania 2 cuttings, \$2.50 a \$2.75; do., do., \$2.45 a \$3.25; No. super, \$2.50 a \$2.75; do., do., \$3.65; Pennsylvania family, stone ground, \$5.75 a \$3.90; Pennsylvania roller process, \$4.00 a \$4.25; Western winter, clear, \$4.00 a \$4.25; do., do., straight, \$4.20 a \$4.50; winter patent, \$4.50 a \$5.00; Minnesota, clear, \$3.50 a \$4.12½; do., straight, \$3.50 a \$4.00; do., do., \$3.50 a \$3.25. Eye flour was sold at \$3.15 per barrel for choice. Buckwheat flour; new quoted at \$1.80 a \$1.90 per 100 pounds.

GRAIN.—No. 2 red wheat, 79½ a 80 cts.

No. 2 mixed corn, 41 a 42 cts.

No. 2 white oats, 29 a 29½ cts.

BEEF CATTLE.—Extra, a, 45 cts.; good, 44 a 44½ cts.; medium, 3½ a 4½ cts.; common, 3 a 3½ cts.; fat cows, 21 a 2½ cts.

SHEEP.—Extra, 5½ a 5½ cts.; good, 5½ a 5½ cts.; fair, 4½ a 5 cts.; common, 3½ a 4 cts.; culls, 2 a 3 cts.

LAMBS.—Extra, 3½ a 7 cts.; good, 6 a 6½ cts.; medium, 5½ cts.; common, 4½ a 5 cts.; 2½ a 4 cts.

HOGS.—A few choice Chicago hogs sold at a retail rate at 5½ a 5½ cts.; good Western, 5½ a 5½ cts.

FOREIGN.—On the 29th ultimo, Balfour and Lord Ashbourne presented to a Committee of the Cabinet a memorial by Lord Salisbury, in relation to a land scheme, which is to be submitted to the whole Cabinet.

It is reported that the first demand is for 47,000,000 to £10,000,000, with which to deal with the disaffected portions of Ireland.

At a meeting of the Liberal League, held in Manchester on the 2nd instant, W. E. Gladstone made a speech, in the course of which he said that the local government bill did not meet the legitimate demands of the country. He advocated the granting to county councils powers of taxation, the control of the police to the liquor trade, the sale of countries, road and death duty, a question of grand juries, and to form distinct counties, and he would possibly go further and establish the parish principle of government, and thus convey to the rural population the first elements of their public education and create a sense of public duty.

W. E. Gladstone said that since 1855, there had been an enormous stimulus to the public mind in regard to dwellings for the poor, enfranchisement, lease holds, creditor legislation, shorter Parliaments, the disestablishment of the Church in Scotland, and Wales, the currency, and the Corn Law. He also said that the present unsatisfactory condition of affairs in Armenia and Crete, and spoke of the difficulty of treating with the Turkish Government. Gladstone predicted a Liberal victory at the next election for members of Parliament.

Martin Farquhar Tupper, the well known poet and prosodist, died on the 29th of last month.

The *Pull Mall Gazette* publishes a despatch from Prime Minister Salisbury to the British Minister at Lisbon, ordering the latter to protest against the Portuguese claims in Africa.

The Portuguese claims in Africa, north and south of the Zambezi River, in Africa. Lord Salisbury says that Mashonaland, which is part of the territory referred to in the Portuguese proclamation, is under British protection.

The newspapers in Lisbon of all cities, concur in denouncing Lord Salisbury's despatch regarding the Portuguese claims in Africa. The papers insist that the Government support Portuguese rights to the whole of the Zambezi territory, including the land claimed by the British South Africa Company. The accusations against the British Government are repeated. The slave traders are denied, and documents have been sent to the Anti-Slavery Conference at Brussels showing that Portugal was the first European power to abolish slavery.

A despatch from Lisbon indicates the imminence of a demonstration in favor of a republic, which will even menace the overthrow of the monarchy. The Republicans of Lisbon, Oporto, Villared and Aveiro, are co-operating. They have 57 working committees and 17,000 enrolled members.

On the 27th ultimo, the Cape de Verd Islands, to London, dated Eleventh Month 30th, says: "The Portuguese steamer Alagoas, with ex-Emperor Dom Pedro and his party on board, arrived at St. Vincent to-day. All the members of the party are well."

After his arrival an attempt was made to interview Dom Pedro, but he refused to be seen, and he left his disposition and exile. He declined, however, to enter into any discussion relative to the revolution, but said he had been treated with the utmost kindness through-

out. The Alagoas proceeded to Lisbon on the 1st instant.

Emiu Pasha has sent to the Belgian Anti-Slavery Society a communication in which he thanks the Society for sympathy, and expresses regret for the loss of the equatorial provinces. He says that, notwithstanding his unfortunate experience, he still hopes to be able to do effective work against the slave trade.

The Anti-Slavery Conference is discussing a proposal to establish military stations in the interior of Africa, with sufficient force to overcome slave hunters. The British delegate advocates that war ships of all the Powers represented in the Conference shall have the right of search, but limited to those and other native craft.

NOTICES.

A meeting of the Teachers' Association of Friends of Philadelphia and vicinity, will be held at 140 N. 16th St., Twelfth Mo. 7th, 1889, at 2 P. M.

Program:

1. The Teaching of United States History in schools. — James Backe McMaster, University of Penna.
 2. The Teaching of Elementary Science.—C. Hanford Henderson, Phila. Manual Training School.
- All interested are invited to attend.

WANTED.—Two qualified Teachers for The Shelter for Colored Orphans, West Philadelphia.

Apply to
Lydia E. Pennock, No. 2145 Green St.
Rebecca B. P. Haines, 1516 Arch St.

WANTED.—A Friend to teach the Preparative Meeting School at Malvern, Penna.

Apply to David Evans, John G. Haines, Rebecca P. Haines, of Malvern; or S. W. Roberts, Paoli, Pa.

A woman Friend desires board in a Friend's family—four dollars per week. Address this office.

DIED, on the 11th of Eighth Month, 1889, MARY C. WALTER, of West Chester, Pa., in the 86th year of her age, a member of Kennett Monthly Meeting of Friends, Penna.

Tenth Month 12th, 1889, JONATHAN COX, in the 89th year of his age, a member of Little Egg Harbor Monthly Meeting of Friends, held at Tuckerton, N. J. He was much attached to the doctrines and principles of Friends, and was a regular attendant of meetings, both for worship and discipline, until prevented by increasing infirmities. In him was verified the words of the Psalmist which says: "With long life will I satisfy him and show him my salvation."

At the residence of his parents, Columbus, N. J., Tenth Mo. 15th, 1889, WILLIAM JOSEPH CARLISLE, aged 21 years, 7 months and 2 days, son of Nathan and Mary W. Carlisle, no grandson of Jonathan Cox, a member of Upper Springfield Monthly Meeting of Friends. This dear youth, although called so early in life as we trust, through redeeming love and mercy, entered into everlasting rest and peace realizing the precious promise: "He that overcometh shall inherit all things; and I will be his God and he shall be my son."

After a year of declining health, at his residence near Hadley, Hendricks Co., Indiana, Eleventh Month 17th, 1889, WILLIAM T. HADLEY, a member and elder of the M. E. Church, and a Monthly Meeting of Friends, in the 76th year of his age. By the release of this dear Friend from his bodily sufferings, his meeting loses a diligent attendant, and the Society one who has borne a faithful testimony, both by precept and example, against the modern innovations, and the country in which he lives, an honorable citizen. Retaining consciousness until near the close, he was retaining concerned for the welfare of those around him, giving forth especially to the youth, much Christian counsel and advice; saying: "there is nothing in my heart but love for every body," and often expressing his desire to be taken to the Lord's throne should come, and that "I am resigned to give up the affairs of the world, as all must do at the close of life." He gave abundant evidence that his end was peace, expressing near the last, "I feel a perfect peace and I thank my Maker for the perfect man, and behold the upright; for the end of that man is peace." "Him that overcometh will I make a pillar in the temple of my God, and he shall go no more out."

Incidents and Reflections.—No. 201.

WORLDLINESS.

Edward Judson, in speaking of worldly-minded professors of Christianity, makes the following comparisons:—

There is a kind of fish which resembles sea-grass. It hides itself in the midst of marine vegetation. Below is the head, looking like a bulb of the plant, and above is the body and the tail, looking like the blade of a sea-grass. The ocean currents sway the fish and the grass alike, and so the little fish escapes being devoured by its enemies. They swim along and one can hardly see where fish leaves off and grass begins, so perfect is the disguise. Now, there are a great many Christians whose lives are so blended with the world that they cannot easily be distinguished. They are swayed by worldly maxims and habits; they share with the world in its sinful pleasures. The difference between such Christians and worldlings is not apparent. If this is the kind of Christian life you are living, you need not be afraid of persecution; the world will not think it worth while to molest such a Christian as that. You will not know what it is to drink of the cup that Christ drank of, and to be baptized with the baptism that He was baptized with. But let a man come out into the open; let him confess Christ as his Master, let him engage in some aggressive Christian work, and he will meet the same opposition which was experienced by the One who said, "I came not to send peace, but a sword."

There are various ways in which the love of the world manifests itself. Sometimes it is in a fondness for outward adorning. An anecdote is told of a candidate for the ministry at one of the theological colleges, who was addicted to the weakness of wearing a rather elaborate gold chain, with appendages, which drooped more or less gracefully, over the front of his vest. It happened that on a certain day being engaged in catechising a "Sunday-school class, he had occasion, in due course, to enquire of the children what they understood by the expression, the pomp and glory of the world." For some time, the whole class seemed unequal to the emergency, preserving perfect silence. At last one little mite of a boy held up a hand, and

stepped forward out of the ranks; then walking directly up to his teacher, he deliberately laid his hand on the gold chain with its brilliant belongings, and exclaimed with great emphasis: "Them!"

It is recorded of Gilbert Lacey, one of the early ministers in the Society of Friends, that his business integrity procured him employment from many persons of considerable rank and station in the world. He was a tailor, and employed many journeymen. Coming under the power of the cross of Christ, he found it his duty to lay aside all superfluous and needless ornaments in his own apparel, in conformity with the plainness of his profession, and the doctrine of the apostles of Christ, which was against the wearing of gold and silver and costly array. The same principle of light and grace which had instructed him to lay aside all superfluities in his own person, instructed him further that he could not keep up his testimony for the simplicity of the gospel with clearness, while he was in the practice of furnishing to others those superfluities which he had laid aside. In order to preserve an easy conscience, he was obliged to submit to the cross of declining to adorn any apparel with superfluous ornaments of lace, ribbons and such like needless trimming; or suffering his servants to do it. His customers left him; his trade declined; he was obliged to dismiss his journeymen for want of employment; his outward prospects were so discouraging that he did not know but that he might now be reduced to the necessity of working as a journeyman himself, and of earning his bread by his daily labor. But possessing his soul in patience, and submitting to be accounted a fool for Christ's sake, he was supported through his trials; so that as outward discouragements abounded, his inward peace did much more abound; and all things necessary for his accommodation in this life were added to his full content.

Gilbert Lacey experienced the truth of the Apostle Paul's saying—that "To be spiritually-minded is life and peace;" for in his old age, he was heard to say, "that he had done the work of his day faithfully, and was now sat down in the will of God; and his peace he felt abounding towards him; that he waited the Lord's call and time of being removed, and that there was no cloud in his way." A few hours before his departure, he said to those about him, "There is no condemnation to them that are in Christ Jesus; He is the lifer up of my head; He is my strength and great salvation."

The following article, published in the *Friendly Companion*, contains a forcible illustration of the difference between a *worthily-minded* man, and one of a different character—

"I conducted, two months ago," said a clergyman, "the funeral service of one of my parishioners. He had been a farmer. Forty years ago he commenced work with 100 acres of land, and he ended with 100. He was a skilful, industrious working man, but he had laid by no

money in the bank. I understood the reason, as I listened to the comments of his friends and neighbors."

"It was always a warm, hospitable home," said one. "The poor man was never turned away from that door. His sons and daughters all received the best education which his means could command. One is a clergyman, one a civil engineer, two are teachers—all lead useful and happy lives." Said another, "Those children sitting there and weeping are the orphans of a friend. He gave them a home. That crippled girl is his wife's niece. She lived with them far years. That young fellow who is also weeping so bitterly, was a waif that he rescued from the slums of the city."

And so the story went on—not of a miser who had heaped dollar on dollar, but of a servant of God who had helped many lives, and had lifted many of them out of misery and ignorance into life and joy.

On my way home from the funeral, I stopped at the farm of another parishioner, who said to me, in a shrill, rasping tone: "So poor Gould is dead! He left a poor account—not a penny more than he got from his father. Now I started with nothing; and look here, pointing to his broad fields. "I own down to the Creek! D'ye know why? When I started to keep house, I brought this into it the first thing," taking an iron savings-bank in the shape of a wolf out of the closet. "Every penny I could save went into its jaws. It is surprising how many pennies you can save when you've a purpose. My purpose was to die worth 100,000 dollars. Other folks ate meat; we ate molasses. Other folks dressed their wives in merino; mine wore calico. Other men wasted money on schooling; my boys and girls learned to work early and keep it up late. I wasted no money on churches, sick people, paupers, or books. And," he concluded triumphantly, "now I own to the Creek; and that land, with the fields yonder, and the stock in the barns, are worth 100,000 dollars! Do you see?"

And on the thin, hard lips was a wretched attempt to laugh. The house was bare and comfortless; his wife, worn out with work, had long ago gone to her grave. Of his children, taught only to make money a god, one daughter, starved in body and mind, was still drudging in his kitchen; one son had taken to drink, having no other resource, and died in prison. The other, a harder miser than his father, remained at home to fight with him over every penny wrung out of their fertile fields.

"Yesterday I buried this man, simply a rich fool, a big fool," continued the clergyman.— "Neither neighbor nor friend, son nor daughter, shed a tear over him. His children were eager to begin the quarrel for the ground he had sacrificed his life to earn. Of it all, he has now only enough to cover his decaying body. Economy for a noble purpose is a virtue: but in the houses of some, it is avarice, and like a wolf, devours intelligence, religion, hope, and life itself."

FOR "THE FRIENDS."

Some Account of Ezra Comfort.

An anecdote is on record of a gay young woman who had grown up a stranger to religious influence, and was devoted to the theatre, the dance, and other forms of amusements, who went to visit in a Christian family connected with a certain church. Her attention was aroused by the new life around her, and she began to ask many earnest questions. In the church was quite a party of young people who had their own prayer meeting and literary circle. To these she was introduced. She found their conversation just like that to which all her life she had been accustomed. They enlarged with zest upon the gayeties of the town, their talk was of actresses and of balls. Naturally a leader, this young lady soon took the initiative in their amusements. When she found that her companions at the Seventh-day play were Christian young women who helped to sustain the prayer meeting and taught in the First-day school, she could not understand how they could be interested in such dull work; but when they laughed constrainedly and with an apologetic remark or two turned eagerly to the discussion of the play or the party, all thought of their Christian profession as a serious or important thing, and all interest in Christianity for herself seemed to be dismissed from her mind, and she returned to her home as worldly, as indifferent, as she had come.

The late Dr. Rush, of Philadelphia, built a large and expensive house, which was furnished in the most elegant and costly style. One day when he was coming out of his house, before he had moved into it to live there, he met an elderly woman, named Mary, going by, whom he knew very well, as she sometimes did house-cleaning and other work for him. Mary was a poor widow woman, who lived very plainly, in two small rooms. She was a good, earnest Christian woman, whose religion made her contented and happy. The doctor had known her for quite a long time, and he respected her very much for her consistent, humble piety. As he met her in front of his splendid dwelling, he thought he would like to show her all through it and see what effect the sight of a house so much larger and grander than she was accustomed to, would have upon her. So he invited her to come in and see the new house. Mary went in with him. The doctor took her through the house and showed her all the beautiful things he had there. She looked at them very quietly, but did not seem to be as much impressed by what she saw, as the doctor thought she would be. When they got through, he said to her:

"Well, Mary, what do you think of the house?"

"It's very fine, sir, indeed; and I'm ever so much obliged to you for letting me see it; but it doesn't begin to compare with the house that I'm going to move into before long. Let me read you a little about this house."

Then she took a little Testament from her pocket, and turning to the last chapter of the Book of Revelations, she read some of those beautiful verses which describe the heavenly city that is to be the home of those who love Jesus; and ended by saying: "I hope, sir, you may have much enjoyment in your new house, yet you can't expect to live here very long. But Jesus says of those who enter the house He is preparing for them, that 'they shall go no more out.' I shall dwell in that heavenly home forever."

J. W.

Prayer is the vital breath of faith.

Ezra Comfort was a minister in the Society of Friends, who resided near Plymouth, Pa., and deceased on the 15th of First Month, 1820. A few years before his death, he passed through a long and suffering illness. Of his expressions during that period of trial, the following record has been preserved.

Fifth Mo. 31st, 1816.—In the morning after a night of much pain, being asked how he was, he replied, "I have suffered as much through the latter part of the night as is possible for a human frame to be supported under. I earnestly pray for patience in the time of my greatest distress. I have prayed for support. To view my complicated disorder, I think there is no prospect of my getting well again, and I have no desire it should be so. You feel very near to me, like my flesh and my bones. What am I but a little lump of dust and ashes; you must try to do as well as you can without me. I feel a hope which is superior to all the world. For many weeks past things of this world have been much changed in my view; I have seen nothing in them that was pleasing, or afforded any delight, but all has appeared as for mere necessity. I think it is not likely I shall get well again; can it be supposed that this poor shattered frame will ever again come to its former state—it's not likely, and I could earnestly pray that my kind Master would cut short the work in righteousness and release this poor wormout afflicted soul; but his time is the best time; no doubt it is for some wise purpose that He sees meet thus to try us. When this conflict is past, my crown is sure. For what cause should I wish to continue here longer? Truly you (speaking to his wife and children) feel very near to me, even as the apple of my eye. Turned to his wife and said, I feel as though thou wilt be abundantly blessed.

At another time he requested that his children and grandchildren, that were of an age to understand, should be called in. After coming into his room he told them he felt his heart flow with parental affection towards them, and said there were a few things rested on his mind to advise them against, which were prevalent amongst youth—that way of curling their hair around their foreheads, and not wearing clothes sufficient to keep them warm. Now you, dear children, are blessed with light and knowledge from on high; if you will but live up to its manifestations, I feel as though I could testify, as Jacob formerly did, that you, my dear children, will be blessed abundantly with temporal and spiritual blessings.

The physician coming in, asked him how he was; he replied, "I am very unwell, I think there is no prospect of my ever being raised on my feet again, nor do I wish it should be so. What has all the medicine done for me? I feel the pains piercing through my breast, and from one side to the other; my poor weak frame is almost wornout; my strength, my appetite and my flesh are nearly gone, and I believe I shall soon go with them. I have for many years past been endeavoring to do my heavenly Master's will according to ability received, for which I now, at times, feel such a sweet peace, that all the world and the things that are therein, appear to me no more than the drop of a bucket."

The night preceding he lay bemoaning himself, under great languor and pain, said to himself with an harmonious voice, Oh that I might be taken; then I would go with the swallow and the dove. Again he said, the state of the self-

whole and selfrighteous is one of the worst states that a man can arrive at. It is easier to convert a highwayman, than to convince one of these of his error. The time will come when all their excuses or palliations will only add to their condemnation. It will be with them as it was with one we have an account of, who no doubt stole into the marriage chamber of the king's son; when he was questioned stood speechless. So it will be with them, they will stand speechless and condemned. For it will be testified, I have long waited, I have knocked until my head has been wet as with the dew, and my locks a with the drops of the night. There is not a son or daughter of Adam, that has any ground to plead excuse, for all have had the light, and might have seen the way for themselves. I think I have seen as clear as ever I saw any thing with my outward eyes for many years past, the path that the humble Christian traveler has to walk in. I think it one of the most beautiful subjects the human mind can contemplate on, to view the first movements of those who are following their blessed and Divine Master; how they move on step by step. I have compared it to a ladder with the foot standing on the earth, and the top thereof reaching unto heaven—the angels ascending and descending upon it. This is the ladder that Jacob saw on his journey; when evening approached he lay himself down on the earth, and had a stone for his pillow. There was no self-righteousness nor self-exaltation—he was then in a humble teachable state. It was in this state he saw the ladder. When he came there he did not know that the Lord was in that place; but when he saw these things he testified that it was none other but the house of God and gate of heaven.

At a time of extreme pain he said, "I feel as if I was staked up, and the least motion of my body feels as though I was set on fire;" and then interceded: "Oh, gracious God, leave me not in this time of conflict."

At another time he said, "I have seen our gracious Redeemer has a Church on earth, and I have been permitted to join with them; and I earnestly wish that Church may be kept clean and unspotted from the world; that it may be fit to be presented to the Lamb. Now I request that at the interment of this poor lump of dust there may not be any great invitation given. A few honest-hearted friends to assist in laying my poor remains in the silent tomb will be sufficient. I also wish there may not be any great provision made at that time. I think I have seen in some instances where too great provision has been made; like as it were unto a feast. I have thought it was by the influence of the powerful custom of the world! that they were led into it. I wish to be buried in a plain simple manner."

At another time his daughter-in-law came in and sat by him; he said to her, "Thy coming in, dear daughter, renewed a feeling affection for thee which I have often felt, for thy great kindness and attention for years past in waiting upon us, thy aged parents. I mention these things that thou may remember I have a heart of gratitude, and for thy encouragement. Now it looks likely that I shall be taken before thy mother, I wish thee to be encouraged to continue thy kind attention to her, as she may have many afflictions and infirmities to pass through; and as these come on with old age, her mental faculties may fail. I wish thee to keep thy good resolutions which I believe thou hast entered into, and pass by these infirmities, and thou wilt assuredly have thy reward; for she is, most as-

surely one of the servants of the most high God."

A little after his sister requested him to take a little medicine; he replied, "I do not wish to. I am not alarmed, neither do I repine or murmur at my situation, but I rejoice in remembering that the way to life is through death." Two of his little grandchildren came into the room and sat by his bed-side. He earnestly looked at them and said, "Oh that these dear little children may become the Lord's children."

(To be continued.)

FOR "THE FRIEND."

Minerals Found in Gneiss.

The proprietors of the gravel turnpike road which runs from Camden through Moorestown, N. J., recently determined to substitute stone for gravel on a part of it, and made a contract for that purpose with a man, who obtained his stone from a quarry of close-grained, hard gneiss, which has been worked for many years at Frankford, Philadelphia. The stones selected for this use were some ten inches in thickness, with one tolerably level face; and were so arranged in the paving as to have a flat face on top to receive the wear of the travel.

As I wandered along a portion of the pike, where the paving was being performed, I observed on some of the stones, comparatively smooth surfaces, thickly covered with beautiful, needle-shaped radiating crystals. Stimulated by this discovery, a visit was paid to the quarry whence they came; and there, through the kind assistance of one of the proprietors, I was able to obtain some beautiful and interesting specimens of this crystalline mineral. It was mostly in comparatively thin scales, and looked as if the cracks in the gneiss had, at some distant period, been filled with a fluid containing in solution the materials of the mineral, which had crystallized there, and thus filled the cavities with its beautiful and splendid white crystals. In some places the crevice had been so narrow that only a very thin layer of crystal had been deposited. In others there was a thicker deposit, and the acicular crystals had radiated from points on the opposite faces of the rock, so as to present a double set of groups.

Some weeks after, I was again in Frankford, and walking along one of the streets where the extensive grounds around a dwelling were enclosed by a long stone wall. As I passed by this, I observed several of them were marked with the same groups of radiating crystals that I had seen in the quarry, from which I suppose the stone came.

This mineral is called *Stilbite*. It is a silicate of alumina, with a little lime and still less soda, and a portion of water. It is found in great abundance on the Faro Islands and in Iceland. Large translucent crystals have been obtained in the mountains of Hindostan. In Nova Scotia, it forms in one place a perpendicular vein from 3 to 4 inches thick, and from 30 to 50 feet long. Its colors are white and flesh-red. Some of the specimens obtained there are extremely beautiful.

My satchel soon became so heavily laden with stones, that it was difficult to handle. But before leaving, the proprietor invited me to inspect some specimens which had been picked out by the workmen and deposited in a little building on the premises. I could not well resist the kind invitation to add to my load some fine specimens, especially a quite massive one in which one face of the gneiss was closely covered with small transparent crystals, which I sup-

posed at the time to be rock crystal or quartz. With some difficulty and help, I succeeded in reaching home safely with my load of minerals. I subsequently found, on closer examination, that what I had thought to be quartz crystals, instead of ending in a point, were cut off or bevelled at the summit, and that my heavy mineral was *Apophyllite*, so named from the highly foliated character of some varieties of it. In composition it differs from *Stilbite*, in containing no alumina or soda, their place being supplied by lime, with which is joined a little potash.

I was also indebted to the quarryman for a specimen of molybdenite found in the gneiss. It is a compound of sulphur and molybdenum, and is metallic in appearance, somewhat resembling plumbago.

Several other minerals are said to be found in this quarry, but on this visit I met with no others of special interest.

J. W.

FOR "THE FRIEND."

The account in THE FRIEND of Eleventh Month 25th, of the present volume, concerning Friends' Boarding School, Ohio, the erection of the buildings, &c., recalls many circumstances connected with that (to us) memorable event; to some of these it may be allowable briefly to allude, not in a boasting spirit, but to commemorate the many favors experienced, and for the information of interested friends, especially the rising generation, who are now reaping the advantages of the Institution, humble though it be compared with many others.

At Ohio Yearly Meeting, held at Mount Pleasant, which closed Tenth Mo. 1st, 1874, a committee was appointed "Immediately to take measures, in view of its importance at the present time, to endeavor to procure ourselves with a Boarding School." "To circulate subscriptions within our limits, and whenever, in the judgment of the committee, a sufficient amount of funds is obtained to warrant the prosecution of the work, that they proceed to select and purchase a site," which was limited to Stillwater Quarterly Meeting, as being most central, "and erect thereon a plain, substantial building, sufficiently commodious to accommodate seventy-five or eighty scholars."

Before leaving Mt. Pleasant that committee met, and appointed an Executive Committee, and nominated two of their number to solicit subscriptions; who set out the next week, and canvassed the Yearly Meeting (that part in Ohio) fully; nearly every family was called upon or seen, and it was thought Friends generally contributed according to their ability. Some heads of families subscribed in their own names, while others chose to divide the amount given amongst the members of the family, that the children might feel they had a share in the work. A lively interest was manifested by both old and young. One Friend of fourscore, living much alone from choice, being somehow overlooked, sent for the solicitors, saying she wanted to give something for the cause, if but "the widow's mite," as she felt it to be.

Soon the amount was ascertained, and, including donations kindly furnished by Friends of another Yearly Meeting, without which aid we must have failed, the committee felt justified in beginning the work.

In the selection of a site they felt they were favored, for on looking round at various situations, a home feeling settled all to the spot chosen: which time has but confirmed and strengthened to have been the right place. Work was soon

begun; a laundry was erected during the winter, into which the Friend, appointed to superintend the work, with his wife, moved in the Fourth Month, to have charge of boarding the workmen. Here then was a busy scene for several months following. It was a time of much hard work, mentally as well as physically, for some anxiety and expectation. Many friends from a distance, as well as near at hand, came to view the progress, and aid if they could, wherever needed. "Little deeds of kindness" too were not wanting, and were appreciated, as shown when some brought the cooling beverage, butter-milk for the workmen to drink, which was dealt out with a ladle by a little boy, who said, "a thankee a drink!" It was remarkable that no accident occurred amongst so many, beyond a slight hurt on the hand of one laborer, nor did sickness prevail to any extent.

For a time in the spring "rain impeded the making of brick a full month," and many discouragements were encountered all along, but "perseverance overcame many difficulties," and the work went steadily on. Hard points in prospect lessened or vanished when met. Some things seemed provided or turned up just at the time needed. One instance may illustrate this. It had been a problem how best to raise the bricks and vast amount of material, as the building went up. An idea came to one of the helpers one night as the subject kept sleep away, which being communicated to the superintendent next morning gained his assent; and a little machine unknown to him before, was found near at hand, admirably adapted to the purpose, and was kindly offered by the owner.

This was procured, and daily used for many weeks,—*the day after they were done with it*, the man sent for it for his own use. None, indeed, can number the favors received in various ways, and this was noticed even by the workmen. "You Friends must be a favored people," said the foreman plasterer, "for I never saw a building go on like this has."

When autumn came, and so much remained to be done, the faith of some Friends began to fail, and to think it could not be finished in time for winter school; but that of others rose for the occasion; and the work went on, animated by the desire to accommodate the many candidates waiting for admission to its portals the coming winter. The time had been set to open school first of Twelfth Month, but was extended to the First Month; as that period drew near, and things began to look favorable, a new anxiety presented. A *dry spell* had taken the place of the spring rains, and the tank and cisterns, upon which the water supply depended, (since greatly improved) stood empty and useless, waiting for the wished for rain, without which the school could not open.

A week before the time, however, the welcome rain came pattering down, and the joyful sound as it descended the pipes was heard with thankful hearts. In the matter of furnishing the house too, after it was finished and cleared, by volunteer interested men and women, we received kind assistance from both home and absent friends; and often since, in our needs, prompt aid has been extended; to all the tribute of thankfulness is due, both to the donors and "to Him, from whom all blessings flow."

When the "Building Committee" came to settle with the Superintendent of the work, they deemed it right to offer him two hundred dollars in addition to the stipulated sum, in consideration of the extended and laborious duties and cares that had devolved upon him and his

efficient wife. This they generously declined to accept.

To the Treasurer, too, who had performed, free of charge, the duties of that responsible position, and rendered much extra service in various ways, they gave one hundred dollars, which he accepted on condition that they would allow him to add it to the "Benevolent Fund," which was accordingly done.

Again, in the officering of the school, and the house as well, "a Hand unseen" was manifested, in that the various places were filled by the right persons, showing it is well to look to Him who can supply all our needs, in matters both great and small.

At length the time came, the long looked for time, as seemed to some, and on the 3rd of First Month, 1875, fifteen months from the appointment of the Building Committee, the school went into operation.

Though many fears had been entertained in regard to the occupancy of the house so soon, it proved, with the judicious care used, to be a healthy and prosperous session. It has since proven to be a healthy location; and we trust the institution has been a blessing to many of our dear young friends; though not apparent in all cases, we may hope the good received there will eventually grow, and "be found even after many days." Let us hope on, hope ever!

A few sessions since the opening of the school, there have been more than the number of pupils it was designed to accommodate; and most winter sessions it has been well supported. In summer it is nearly always small, owing much to the necessity many Friends are under of keeping their children at home to assist in farm and domestic duties. But it is likely there never has been a session when the number of pupils would not have been greater if the MEANS to send them had been at hand.

"Our Benevolent Fund," started many years ago, has grown by additions of donations from our own members, and also from Philadelphia friends, until it is helpful to many, as is the "Student's Fund" of more recent origin.

It seems the liberality of distant Friends is again being appealed for what we may hope would prove "a good cause," and thus add to our long list of favors received. Our own members might be reminded that as people "like best to help those who try to help themselves," so we should not relax our endeavors to do all we can, according as ability is given.

"The liberal man deviseth liberal things," and we trust such have their reward, at all events in the consciousness of having "done what they could." S. H.

OHIO, Eleventh Month, 1889.

THE "voice of the Lord" is the guide of the Lord's people. The Scriptures say much of the importance and the benefit of heeding the Lord's voice. A part of the blessing connected with the command is, however, lost when we restrict the province of that Voice, and limit its guidance to purely religious concerns. The voice of the Lord is to be listened for, not only in the sanctuary and in relation to our spiritual interests, but equally on the most practical occasions of life. It instructed the disciples in so small a matter as on which side of the ship to cast their net in order to catch fish. It should direct all the business plans and all the social visits of to-day. "Lord, what wilt thou have me to do?" ought to be the Christian's constantly recurring question. The least duty providentially indicated, secular as well as sacred, is the

Divine call to action; and a prompt obedience is the only allowable response. Thus living, we shall have the fulfilment of God's promise to those who "do his commandment," "good success,"—as God estimates success.

FOR "THE FRIEND."
SATISFIED.

"The fear of the Lord tendeth to life: and he that hath it shall abide satisfied." Proverbs xii. 23.

Satisfied, yes satisfied!
Thus, God's children may abide:
All our restless anxious care,
He will kindly for us bear.
Resting at his side, will teach
Loving messages to each.

If we walk less near to Him,
Then the pathway growth dim:
If we fail his will to know,
Shadows fall, and clouds hang low:
Only near our Master's side,
Can we journey satisfied.

If, in watchfulness we cease,
Lost shall be our gift of peace;
If in serving, weary he,
Then, unsatisfied are we;
Living joys, alone attend
Those kept faithful to the end.

In his likeness we should grow,
And his power within us know,
Overcoming, making meet,
Bringing often to his feet:
Teaching some new truths there,
Learning, perhaps, thro' tears and prayer.

Gently chiding love too fond,
Pointing upwards, and beyond:
Breaking idols, if they stood:
In our way for future good:
Saying, in Me is supplied
All thy needs, and satisfied.

He as Helper, Guide and Friend,
Will each trusting child attend;
When we think it rough and steep,
Point unto his wounded feet.
When we view some transient loss,
Bid us grieve his bitter cross.

And thus treading in his fear,
Doth our vision grow more clear;
We above earth—most belov'd
Waiting treasures manifold.
For, the "tried gold" cannot dim,
But is safely hid with Him.

And if poor, He bids us buy
Growing rich from his supply.
As our righteousness we loathe
He with garments pure will clothe,
And at last we may abide
With Christ ever satisfied.

1889.

FOR "THE FRIEND."
TO THE LITTLE ONES.

We walk by faith and not by sight:
In man is placed a saving light;
The light of Christ doth shine within,
And shows to him his every sin.

This faith, to us, by God, is given
To guide us on our way to heaven;
Then glory be to Him on high,
Who giveth us the victory.

Through Jesus Christ our risen Lord,
By whom we have access to God,
He is the Fruth, the Light, the Way
That leads from death to endless day.

Our loved ones die, we feel their loss,
But if, in life, they were our cross,
Their trials then will all be o'er;
The'll live upon a shining shore,

Be clothed with garments pure and white;
The Lamb of God will be their light;
Eternal praises, there they'll sing
To God on high, the Heavenly King.

And "Little ones,"—where'er you are,
Seek earnestly the Morning Star,
That in your loving hearts will shine,
Make each to say, "The Lord is mine."

Then turn to God in heart-felt prayer,
And He'll give strength your cross to bear,
He helps us in this world of strife
That we may win a crown of life.

If faithful unto death you live,
A crown of life the Lord will give;
And they who see your light to shine,
Will glorify the Power Divine.

"I pray for you, that angels bright
May guard you ever, day and night,"
And when on earth your work is o'er,
Will bear you to that heavenly shore,

Where you a Saviour's face will see:
From pain and sorrow you'll be free;
Will walk with saints who dwell above,
And reign with Him whose name is Love,
J. S. G.

NORTH DARTMOUTH, Mass.,
Eleventh Mo. 26th, 1889.

FROM "THE LONDON FRIEND."

Two Ancient Documents.

DEAR FRIEND:—I have been directed by the Middle Division of Somerset Monthly Meeting to send to THE FRIEND copies of two ancient parchment documents which have been for many generations in the possession of successive Registrars (or Registers, as they were then called) of Friends at Street. One bears more especially on the history of the Society in this neighborhood; while the other is of a wider interest, being the order of James II. for the liberation of Friends from taking oaths.

I enclose copies, trusting that thou mayest find room to print them in full.

Thy friend, sincerely,

ROGER CLARK.

STREET, Somerset, Tenth Month 6th, 1889.

FIRST DOCUMENT.

After a long night of apostasy wherein many had followed the blind watchmen and such leaders who had caused them to erre by their lies and their lightness, and darkness had covered the Earth and grossed the people, and many who had desires and breathings after the Lord had long wandered in barren mooraynes from one profession to another and sought their food in desolate places, the Lord remembered his covenant with the seed of Abraham, and caused the everlasting day starre to appear in the Northerne part of England, and in the yeere one thousand six hundred fifty and five, sent severall of his faithful servants and ministers from the countyes of Westmoreland or Lancaster, or p^r thereabout, into the county of Somerset and other p^r of the nacon, who preached the everlasting gospell in the power and demonstration of the Spirit Christ Jesus, the Light of the World, the way to the Father, and spake as they were moved by the Lord, and as the Spirit gave them utterance. And many people in the county of Somerset and other p^r of the nacon received the truth in the love of it, and were turned from the darknes to the light, and from Satan's power to the power of God. And in the yeere one thousand six hundred fifty and six, many people in the foresaid county of Somerset began to wayte on the Lord in the sylence of flesh, and denyed the world's worship, teachers, paym^t of tyths, maintayning the Steeple Houses (the which the world and their teachers call churches), respect of persons and severall other vayne customs, and gave one and the same lan-

guage to high and low, rich and poore, and refused to bow or put off the hat to any.

And divers were moved of the Lord to go to the steeple houses and bear witness against the world's teachers and worship and warned them to repentance, for which causes many were cruelly beat, halod before Rulers, Magistrates, suffered the despoiling of their goods, and cruel bonds, and imprisonment, even to death, according to what was before prophesied and declared in the scriptures of truth. And in the same yeere a meeting of the Lord's people (whom the world in reproch then called Quakers) was settled at Streate and in severall other places, and a generall Monthly Meeting at East Lidford in the said county of Somerset.

But the priests stirred up the rulers against them and there was great persecution because of the word.

And many of the Lord's faythful servants were persecuted and cast into pryson for the testimony of Jesus. And in the beginning of the yeere one thousand six hundred fifty and nine, those men who were called the Parliament of England and the then Protector, determined . . . [torn out] . . . reported] utterly to suppress the sayd people call . . . [torn out] . . . by banishment or otherwise, and the priest and many ri . . . [torn out] . . . people rejoiced much in the expectacon of the accomplishment of . . . [torn out] . . .

But the Lord remembered the low estate of his servants and beheld the rage of his enmyes and laughed them to scorne, and caused that Parliament to be broken in pieces, and by the army then commanded by Lieutenant-Generall Fleetwood who deposed Richard 'Cromwell the protector, and called the Long Parliament of England who had conquered and put Charles Stuart the late King to death, and turned the Government of England from monarchy to a commonwealth, which Parliament Generall Oliver Cromwell through deceit and tyranny had for some yeeres past intercepted.

And in the said yeere one thousand six hundred fifty and nine about the fourth month, the same people called Quakers, who were many of them imprisoned for non-payment of tyths, and other matters of conscience sake, were by that Long Parliament sett at Liberty.

This observe: that on the seventeenth day of the first month, 1658-9, when the Parliament had determined to suppress and destroy the foresayd people called Quakers, the Lord sent one of his servants to the Goale at Ivelchester to declare to the Lords prysoners there, that their deliverance was at hand, which was in a short tyme after accomplished by the Long Parliament as afores

And these people being redeemed out of the world and wholly separating from the world's worshipes and vayne customs, in the yeere one thousand six hundred fifty and eight, provided themselves a burying in the parish of Street afores^d to lay their dead in, and a Register to record marriages and births and deaths; and so the Truth prospered, and the Lord added to the church daily such as should be saved, who walked in the everlasting Light of the Son of God and the light of the World, the way to the Father.

Added in different handwriting.

These things are briefly written and left upon Record by us for them which shall come after, that the children yet unborn may behold the wonderful works of the Lord, and declare his noble acts to their children. That his loving

kindness and tender mercies to the children of men may be held in everlasting remembrance, whereof he hath made us partakers, commanding his Light to shine out of darkness, which hath shined in our hearts, and hath given us the knowledge of God in the face of his Son Jesus Christ, of whose coming and Glory we are witnesses, to whom be honour and everlasting praises forevermore. Amen.

Added in different handwriting.

This Register was kept by Jasper Batt, of Streate, until about the fifth month, 1659. And then Arthur Gundry of Streate afores^d was by consent of the people of God in and about the same parish of Streate, and of . . . [torn out] . . . Meeting chosen and appointed to be their Register.

Signed. Jasper Batt, John Anderson, Henry Moore, Abraham Gundry, Henry Gundry, Edward Taylor, Arthur Gundry.

Added in different handwriting.

The 7th day of y^r 12th month, 1667, Arthur Gundry, of Streate, dyed who was y^r afores^d Register; and Henry Gundry was by consent of the meetings aforesayd chosen and appointed Register.

SECOND DOCUMENT.

The order of King James the Second for the Quakers to serve offices without taking oath.

To the Lord Mayor of London :

WHITEHALL, November 6th, 1687.

MY LORD:—The King is informed that Edward Brooker, Henry Jefferson, and Joseph Tomlinson, being Quakers, are by Mr. Barber, Steward of Southwark, put upon serving severall offices, as constables and the like, which they are willing to do, but the oath being tendered to them, from which they think themselves to be exempted by the King's declaration for liberty of conscience, they are threatened to be fined or otherwise molested by their refusal to take them.

His Majesty commands me to let your Lordship know that his pleasure is that the said Edward Brooker, Henry Jefferson, and Joseph Tomlinson, and all other Quakers, should now and for the future be allowed to serve the said offices without taking any oath, and also that they be not fined or otherwise molested on that account. And his Majesty would have you give orders thereon accordingly.

I am, my Lord,

Your Lordship's most humble Servant,

(Signed) SUNDELLAND.

How dependent we are on the atmosphere about us; yet how little thought we give to our indebtedness to the atmosphere! Life or death is in the air we breathe; but whether it is life or death is not ordinarily in our minds as we move on in our daily occupations, helped or harmed by our every respiration. Nor is it alone the natural atmosphere which is all in all to us, in its realm, as a means of life-giving or life-taking. In our home life, in our school life, in our social life, in our business life, in our church life, we are more dependent on the atmosphere of that life than we are accustomed to consider. We are helped or hindered in our course by every breath of the atmosphere about us there. How grateful we ought to be for a pure and invigorating atmosphere in any one of these realms! What prominence we ought to give to the character of the atmosphere of the realm in choosing a school or an occupation for one of our children, or a home, or a line of business, or a church, for ourselves!

KILMANY MANSE, May 7, 1813.

My Dear Patrick: In the last conversation which I held with you relative to your future prospects, I was quite aware how natural it is to fix our anticipations, and to regret that these should be pushed forward a year or two beyond what we had previously calculated in our own minds. I trust that you will sometime or other obtain a comfortable settlement, but what I am most anxious to press upon you not merely as a point of prudence, but as a point of Christian principle, is a submissive accommodation to present circumstances. Time elapses sooner than we have any idea of, and it is our wisdom not to throw away our peace by fretful or anxious impatience.

I have often heard the phrase, that a man loses so much of his life who suffers so many years of it to pass away without reaching an independent establishment. If it be due to his own illness, the phrase is accurate; if due to the necessity of circumstances, I maintain it is quite an unchristian perversion of language. He does not lose life, he only loses that which our Saviour—the justness of whose computation no Christian will deny—says is less than life: "Is not the life more than meat, and the body than raiment?" The great purposes of his being may be carrying on; his soul may be ripening for eternity; the good work begun in his heart may be prospering; the salutary lessons of patience and contentment may be practising; and, in short, to say that life or any part of it is losing because you are not drawing toward an earthly competency so fast as you could wish, is making the 'meat which perisheth' take the precedence of that which endureth unto everlasting life.' It will give me pleasure to understand that these sentiments are not merely admitted by you as true, but actually proceeded upon. Be assured that the wished-for object will not be longer in coming about, that the time before it is filled up with contentment and piety."

THOMAS CHALMERS.

A Fairy Flower.

In 1878, Dr. Beccari, travelling in Western Sumatra, wrote that he had discovered an extraordinary plant. The letter seems very calm and modest at this day, eleven years afterward, when we also can feel something of the emotion with which the writer must have been thrilling: "I have little time to spare—only to tell you of a botanical discovery which I think of some interest. It is a gigantic aroid. The tuber of one which I dug up is nearly five feet in circumference. Two men could hardly carry it; they fell down and the tuber was broken. I will secure some more, and meanwhile I send you seeds."

It does not appear that Dr. Beccari succeeded in bringing any tubers of his plant to Europe, but the seeds arrived, shaped like an olive, bright red, an inch and a half long. They reached the hands of Marchese Cossé-Salvati, who planted them, and in the next year presented a seedling to Kew Gardens. That alone survives, so far as is known. Year by year it has grown and flourished, demanding a larger and larger pot, in the Victoria Regia tank. Regarding its single leaf as a tree trunk, and the three veins thereof as branches—a most pardonable error certainly—the unlearned would have felt not the slightest astonishment had any one informed them that it was 45 feet in circumference. But the object they thought a trunk was, indeed, a ten-foot leaf-stalk, and the three "branches" as thick as a man's thigh, which parted from it at

that altitude, were veins or ribs of the leaf, nearly four yards long. Sufficiently startling, already, had the ingenious pupil suspected what stood before its nose.

But savants everywhere waited patiently for greater wonders, and this year they have their reward. Early in May the flower bud began to push, not unexpected, for the leaf, which should have been advanced at that date had made no sign; even such a monster could not put out foliage and inflorescence the same year. In the first week or so it grew an inch a day, then two inches, then three inches, until in the second week of June it rose and swelled almost visibly. The excitement, as may well be believed, became intense.

On Friday last the huge object began to uncurl, to stretch itself, to show its deep maroon lining, and to spread its great toothed rim. No question now that the flower was majestically beautiful—as beautiful as such a vast bulk could well be. The official agitation, as one may say, swelled from hour to hour. Blessed among mortals were those who saw this wonder—unhappily they were few, and these mostly unable to appreciate what they saw beyond unintelligent marvelling. The uncurling completed itself at 8 P. M., when but two or three were present, besides the personnel of the Gardens. And they, it must be admitted, made hasty observations, flitting in and out with handkerchiefs to nose. For the direst prognostics were fulfilled. As the true flower expanded—little points the size of a pin's head, to which all that magnificence was a mere shield and appendage—the Victoria House filled with—in fact, a stink such as all the fish condemned at Billingsgate on a summer day raise at noon on the morrow. The director himself, men whisper, sped through the house with winged feet. He was overwhelmed with joy or something.

We must remind the reader that *Amorphophallus Titanum* belongs to the order of Arums, so familiar in our hedgerows. Its inflorescence has the same shape, magnified to a degree which algebra alone could estimate. From the spathe, or encircling frill, rises the spadix, or column, clothed at its base with minute flowers, which mature into seeds, as every schoolboy knows. The stature of this giant from head to foot was 6 feet 9 inches—they hope to do better next time, but it is a fair beginning. The spathe was three feet deep, four feet across; the spadix five feet long, ten inches diameter at the base, narrowing to a blunt point as it grew older. A grand "piece of color" was the bell-like spathe for those who had the courage to look down into it—maroon-purple, and has been said, tinged with a violet, velvet-like sheen, indescribably beautiful.

This lining had a superb effect, pouring over the edges greenish white, boldly toothed and crumpled. *Amorphophallus Titanum* would be a rage, a frenzy among amateurs who can undertake plants of that scale were it not for the—perfume. Nearly all uninitiated spectators who paid their brief visit asked an explanation of that drawback. It would have been enough formerly to say that all the large Aroids have the same attribute in unpleasing variety; some prefer to smell like the death-pit at Commaise, and some like a kjokken-moat of the ichthyophagi. If more be asked, the vile odor must be useful, both for protection and for survival. Every fly in the Victoria House gathered about the spadix, instantly fertilizing its tiny blooms.

And most of the great Aroids flower on the ground, with a very short stalk. All their bulbs we believe, are edible when cooked. Cattle, therefore, would be apt to devour the bud and pigs the tuber if they were not checked by some means.

Antonio Delight.

Many people in Chicago felt the shock of a sudden sorrow when they took up the morning papers and read the sad announcement: "Tony Delight is Dead." It had not been known that he was ill. During the previous day he had been at his place of business, and in the evening he sat with his household at the door watching the light of day fade from the sky, not knowing that to him belonged at that very hour the full meaning of the Saviour's saying: "The night cometh." Retiring to his room, he suddenly realized the approach of death, and in a few moments was gone.

But a multitude of readers scattered over the land will ask: "Who was Tony Delight?" We might answer this question by saying that he was a most signal illustration of the power of God's grace. Born of Catholic parents on an island adjacent to Spain, a runaway from home when a lad, then a rover upon the seas, he finally came to Chicago, where he became known as the proprietor of a successful barber-shop and as a gambler. That he plunged into all the vices of this latter class, that he was an adept in all the deceptive arts of the gaming table, and was a hardened man, he himself and others have sufficiently testified. But at length sickness entered his home, and a little daughter lay dying. It was then that the sorrowing father at last listened to the words of the Gospel, and as he listened he felt the strange moving of the Spirit in his heart. When the child was laid away in the grave the father was a new man. Old things had passed away, all things had become new. The old haunts and the old companions were at once given up. A. Delight was now at church and at prayer-meeting. Like Paul of old, he straightway began to testify what God had done for him, and to his last hour he never wavered of the story of God's grace as experienced in his own life.

But a difficulty in his business affairs at once presented itself. He had always kept his barber-shop open on Sunday, and this was the custom. To close was to lose a large patronage, not only on Sunday, but on all other days. The Sunday receipts alone were sufficient to pay the rent. But the question was immediately settled. "I said to myself," was his remark to the writer, "this is one of the Ten Commandments, and if I break it I might as well break all the rest." The shop was closed. Some customers left; the men around town laughed and sneered. They said: "You will soon get over your religious craze." Numerous friends took a more serious view and said: "You will ruin your business." But the shop, though one of the largest in the city, was never after that open on Sunday. This question settled, a far more important one presented itself, namely, how could he serve God and save men, and to the practical solution of this question A. Delight gave the rest of his life. His success was remarkable. When the writer asked him to address his people a few months ago, he brought with him three men who followed the address with their testimony. These men had once been wretched, ragged, drunkards, and in a maudlin and despairing condition wandered into A. Delight's meetings. His words of Gospel truth and tender sympathy

took hold of them. He took them into his care, fed them, clothed them, found them employment. They were saved and are now prosperous in business, happy in their homes, and earnest and faithful in Christian work. But these were only three out of a great number. Every week the meetings were held and every week men were reached. There was hardly a time when this faithful and devoted man did not have somebody in hand whom he was feeding, clothing, nurturing in Christ. The expense connected with the meetings and of caring for men until he could find them employment was large, but was borne with the greatest cheerfulness.

It was a principle of action with A. Delight that the details of an enterprise must be carefully attended to, and that these must not be omitted because they involved numerous small expenditures. He frequently said, "I find that I must be faithful in order to succeed." By this he meant that he must be faithful in prayer, in confessing his short-comings, in seeking for help and God's crowning blessing, and also in doing all that could be done to make a meeting successful. If it seemed clear that issuing circulars would bring more people to a meeting, the circulars must be issued. Not to do it was not to be faithful. To be faithful was to be just as inventive and active in the conduct of religious work as in business. In other words, A. Delight had the rare grace which enabled him to consecrate the business enterprise of this remarkable city to the work of the Lord, and while daily attending to a large business, he was also accomplishing a work which few pastors equal.—*The Advance*.

Natural History, Science, &c.

Vegetation of Hot Springs.—The vegetable life of hot water consists mostly of Algae. They have been found growing in water heated to 200°, although a lower limit of temperature is more usual. The fine silky threads of vegetable matter often become encrusted with mineral substances, which have been held in solution by the hot water. The color of these Algae has been found to vary with the temperature. In an examination of the hot springs at Yellowstone Park it was found that the vegetation was white at 185°; pink at 181°; pale yellow at 164°; different shades of green between 135° and 130°; red at 110° and brown at 90°.

Animal Life on Surface of Ocean.—The young of nearly all marine animals live for a period near the surface of the water. F. C. Herrick in the *American Naturalist* says: "If one spends a few hours in the Gulf Stream on a calm day or night, he cannot fail to be impressed by that vast stratum of living beings which this great ocean current bears hourly upon its bosom. Once when off our southern coast, we sailed through a school of Mudeuse, which must have covered many square miles of ocean. They were little brown bells, the size of thimbles, and the indigo water was peppered with them. We encountered them at about 4 o'clock in the afternoon, and for more than an hour their number did not sensibly diminish. But at night the dark waters glow with the phosphorescence of these minute and obscure beings whose presence, one would not suspect by day, unless he had microscopic eyes. Through every mile that the ship ploughs her way, her bow encounters a steady stream of shooting stars. Every movement in this living water precipitates a shower of sparks, and every spark is due to an organism."

Cherry Trees.—Among the remarkable trees of which Germantown boasts are some large, wild specimens of the cultivated cherry, of which quite a number exist in this section, much larger, it is said, than are to be found in any other portion of Pennsylvania. The eminent Professor Asa Gray once said that, "if every human being on the American continent were to be taken out of existence and the whole work of his hands were cleared away, so that not a trace remained, subsequent historians could prove that the Caucasian race existed here by the flowers that would be found growing here."

It is said that the wild cultivated cherry trees of Germantown would prove the soundness of the eminent professor's views. These cherry trees of the cultivated species are now found wild everywhere, their white blossoms in early spring being a chief feature of the woods of Pennsylvania, and these trees have originated generally from cherry stones scattered by birds, chiefly the robin, stolen in marauding on the fruit of the early settlers.

Taste, as a Test of Substances.—The experiments of E. H. S. Bailey and E. L. Nichols upon the delicacy of the sense of taste indicate that the impression derived from bitter substances far exceeds that arising from any other class. The order as to the substances experimented upon is bitters, acids, saline substances, and sweets. The potency of quinine is very remarkable. Men who tasted could detect on the average one part of it in 390,000, and women one part in 456,000 parts of water, and to sugar it stood in potency as very nearly 2000: 1.

The Big Horn or Wild Sheep of the Rocky Mountains.—During a recent topographical expedition to the Sierras of Chihuahua (some eighty miles south of El Paso) the surveyors came across a herd of *Cimarrones*, or big horn sheep, that made a break for the gate of a defile, and finding themselves intercepted by the scouts of the expedition, dashed back through the camp, upsetting tents and pots, and then fled across a broad lava field with a swiftness that suggested the leaping ability of wild deer, whom, indeed, the *carnero cimaron* resembles in its color and general form. In shyness the big horn even surpasses any known variety of the deer-trove, so much so, indeed, that it seems a puzzle how our forefathers could manage to capture the raw material of their herds, if the wild sheep of the Caucasian highlands resembled his North American congeners.

Hunting in the East.—Among the many strange customs of savage nations, not the least curious are the ceremonious observances in connection with the hunting and killing of wild beasts.

The boldest native hunters of British India would shudder at the thought of leaving the carcass of a tiger till they had singed off its whiskers to the very roots, without which precaution they believe the ghost of the dead beast will haunt them in their graves. In many parts of Russia the killing of a wolf is not thought complete without cutting off the head and right forepaw. The Laps and Finns, whenever they kill a bear, surround the body with loud lamentations. One hunter then asks the dead beast, "Who killed thee?" and answers, "A Russian," when all the rest exclaim in chorus, "A cruel deed—a bloody deed!" hoping by this means to divert the bear's resentment from themselves to the imaginary Russian. The tribes of Northern Siberia never kill a Polar bear without extract-

ing its two largest teeth, which, in their belief, is the only safeguard against its coming to life again.

Items.

Kansas Yearly Meeting.—The *Western Friend*, says, Kansas Yearly Meeting began, this year, with a session of the Meeting of Ministers and Elders, at Emporia, Kansas, on the 24th of Tenth Mo, 1889.

The Yearly Meeting, proper, began on Sixth-day the 25th. Reports were present from all the Quarterly Meetings. The Representatives were nearly all present.

Epistles were received from all the Yearly Meetings in the circle of correspondence but Ohio, no Epistle coming to hand from that meeting. The Representatives reported that they were united in proposing the name of Cyrus W. Harvey for Clerk, and Lester Channess for assistant; and the proposal was united with by the meeting. Some vacancies occurring in the Meeting for Sufferings by death and otherwise, Lester Channess, Enoch Kenworthy and Malhon Stout were appointed to fill them.

Andrew Hinshaw, address Emporia, was appointed one of the correspondents of the Yearly Meeting.

Cottonwood Quarterly Meeting reports that, Rebecca Elliott has been recorded a minister of the Gospel.

The Book and Tract committee report a distribution of 12,000 pages of tracts, and quite a number of Friends' books, and Testaments.

The committee on Religious Labor made a satisfactory report, and a new committee was appointed to continue the labor another year.

Much interest is still taken in the education of the youth. In order to secure the funds already donated to aid poor children to obtain an education, the Yearly Meeting appointed Trustees, with directions to incorporate the Yearly Meeting.

The Minutes of the Meeting for Sufferings showed that that body had had a concern for the young people of the Yearly Meeting which had resulted in the preparation of an address to them. The address was read and approved, and ordered published with the minutes, and recommended to the attention of Friends in both meetings and families.

The Yearly Meeting adjourned to meet at Spring River next year.

No Friends were present this year with minutes. Mary A. Gardner and Jesse Tucker, elders of New England Yearly Meeting, were in attendance.

The attendance of the public on First-day was about as large as usual when held at Emporia.

THE FRIEND.

TWELFTH MONTH 14, 1889.

From time to time we have met, in the more spiritually minded of the religious newspapers, with articles or expressions, condemning some of the methods of raising funds which have crept into use in some religious denominations, which appeal for their success to love of amusement or other inferior motives.

Within a few days two pamphlets have been received on this subject, one of these written by Archibald G. Brown, a minister of London, is a vigorous denunciation of this abuse, under the title "The Devil's Mission of Amusement." Of this more than 100,000 copies have been circulated, and now an American edition of it is issued by Fleming H. Revell, 12 Bible House, New York, in a pamphlet of 32 pages, containing an introduction by C. H. Spurgeon and a prefatory note by G. C. Needham. This will be furnished, post-paid, for 35 cents per dozen, or \$2.00 per 100.

In speaking of "amusement" in the church, the writer says, that during the past few years, "there has been a steady 'down-grade' in this

respect from 'speaking out' as the Puritans' did, the church has gradually toned down her testimony; then winked at and excused the frivolities of the day. Then she has tolerated them in her borders, and now she has adopted them and provided a home for them under the plea of 'reaching the masses and getting the ear of the people.' The devil has seldom done a cleverer thing than luring to the Church of Christ that part of her mission is to provide entertainment for the people, with a view to winning them into her ranks."

So far as the editor is informed, the members of our Society in Philadelphia Yearly Meetings in their efforts to raise money for Society purposes generally use the most simple, direct and cheap plan, of making direct contributions for the object, according to their means and zeal; so that there might seem to be but little occasion to comment such a pamphlet as that above noticed to the attention of our readers, except for distributing in quarters where such a caution is more needed. Yet, the changes which have been introduced in some parts of the Society of Friends, the reasons advanced in defence of them, and the tone of remarks in which some persons indulge respecting the need of conciliating our younger and more loosely attached members, show that the same downward tendency is at work in our borders, and that there is a need for the religiously concerned members to be on their guard.

Our views respecting Divine worship require our members in their gatherings for this purpose, to feel after the presence of the Holy Spirit and to wait in reverence upon it, for its enlightening and qualifying power. This silent exercise and wrestling in spirit is often irksome to those of little religious experience. So, to please and attract such, singing has been introduced in some places; and for a similar reason a demand has arisen for an educated and trained ministry which may be able to gratify the itching ear with able, intellectual discourses. The disposition to yield to these demands, seems to us to manifest a want of faith in the power of Christ's religion to redeem the world; and to display an ill-advised yielding to the spirit of worldliness, which must be injurious to true religion.

What our young people and all others need, is full submission to the regenerating work of the Spirit of Christ—in other words, bearing his yoke and carrying his cross, without which no one can be a follower of Christ and enter his kingdom. It is of little importance that the programme should be interesting and attractive which is provided for their entertainment in meetings professedly for worship; for the main object to be sought is the experience of the work of Grace on the heart.

The old Scripture commandments are still in force—"Be not confirmed to this world; but be ye transformed;"—"Have no fellowship with the unfruitful works of darkness, but rather prove them;"—"God forbid that I should glory, save in the cross of our Lord Jesus Christ, through whom the world is crucified unto me and I unto the world."

Having received from Western correspondents letters referring to a large apartment house recently built by Vice-President Morton; and which has connected with it a restaurant, which furnishes wines and other liquors to those of the guests who desire it, as is done at many hotels; we have endeavored to ascertain the true state of the case.

The information respecting it was wired from

Washington on the 25th of Tenth Month, and furnished to the Press of the country the next day. The impression was received by some at the time that a drinking saloon, as usually understood, had been opened in the building. This was denied by its owner, and this denial is confirmed by *The Voice of New York*, one of whose reporters visited the establishment, examined the liquor license, and took copies of the documents on file in the Commissioners' office at Washington. The reporter states that the original application for a license was withdrawn on the 25th of Tenth Month, and that a new one was afterwards filed in the name of J. R. Keenan, who acts as manager of the house. The reporter purchased a bottle of wine, to satisfy himself that liquors were sold on the premises, but he says, "The Shoreham is not yet a saloon in the ordinary, vulgar sense of the word. The common saloon paraphernalia were not visible when I called there. Meantime, the temporary concealment of the wines and liquors does not interfere with the selling. That business goes on unrestrained, judging from the elaborate wine-list furnished to all comers."

So far as we are at present informed there is nothing peculiar in the case, to excite the degree of public interest it seems to have awakened, or to distinguish it from the thousands of other cases in which the owners of property become more or less connected with the manufacture and sale of intoxicating drinks; except what arises from the prominent political position of the owner of the building. Yet in common, we suppose, with a multitude of others, we regret that L. P. Morton did not seek some investment of his funds which would not have involved an indorsement of the liquor business.

SUMMARY OF EVENTS.

UNITED STATES.—The President's message was read in both Houses of Congress on the 3rd instant. The document excited less attention than such papers usually do, for reasons which are thus succinctly stated in the *Public Ledger* of this city: "The Presidential candidate laid, in his letter of acceptance, and subsequently in the address he made during the progress of the campaign, with great particularity, proclaimed his entire sympathy with the platform. President Harrison's message was found to be when it appeared, precisely what it was anticipated it should be, and what that consistency required that it should be; it was the Republican platform of 1858 amplified and reaffirmed."

Jefferson Davis, ex-President of the Confederate States, died on the 6th instant, in New Orleans, aged 81 years. The interment took place on the 11th.

On the 7th instant, an English syndicate purchased 56,000 acres of coal and mineral land in Marion County, Tennessee, for \$2,212,000. It is stated that the syndicate will build a town with the \$1,687,000 cash surplus which is left to operate with.

A dispatch from Middleborough, Kentucky, to the *Manufacturers' Gazette*, on the 29th ult., states that coal and timber land, near that place, has been sold to English capitalists. The price is said to have been \$1,500,000.

The weather throughout Northern New York on the 3rd instant, was intensely cold. At several places in the Adirondacks the thermometer registered from 10 to 16 degrees below zero; Saranac Lake is frozen over. The thermometer at Montpelier, Vermont, registered from 10 to 14 degrees below zero. The Kennebec River, in Maine, is frozen over. The ice is firm and solid.

A telegram from Prescott, Arizona, says the heaviest rain storm ever known in that section has just ended. The fall for five days was 4.76 inches.

Chicago has over 5000 licensed liquor saloons.

Ohio had 31,000 deaths last year, 5000 more than in the Adirondacks; the thermometer registered from 10 to 16 degrees below zero; Saranac Lake is frozen over. The thermometer at Montpelier, Vermont, registered from 10 to 14 degrees below zero. The Kennebec River, in Maine, is frozen over. The ice is firm and solid.

14 of typhoid fever; 14 of convulsions; 12 of apoplexy; 9 of paralysis; 9 of inanition and 9 of marasmus.

Markets.—U. S. 4½, 104½; 4's, reg. 120; coupon, 120; Canada 7's, 114 & 127.

COTTON ruled steady on a basis of 10½ cts. per pound for middling uplands, but demand was light.

FEED.—Winter barn, \$12.50 a \$13.50 per ton, as to quality.

FLOUR AND MEAL.—Western and Pennsylvania a/c \$2.50 a \$2.75; do., do., extras, \$2.85 a \$3.25; No. 2 winter family, \$3.30 a \$3.65; Pennsylvania family, stone ground, \$3.75 a \$3.90; Pennsylvania roller produced, \$4.00 a \$4.25; Western winter, clear, \$4.00 a \$4.20; do., do., straight, \$4.25 a \$4.45; winter patent, \$4.50 a \$5.00; Minnesota clear, \$4.50 a \$5.00; do., do., straight, \$4.75 a \$5.00; do., do., patent, \$4.85 a \$5.15. Rye flour was steady but quiet at \$3.15 per barrel for choice. Buckwheat flour ranges from \$1.80 to \$1.90 per 100 pounds for new.

GRAIN.—No. 2 red wheat, 70½ a 79½ cts. do., do., white, 70½ a 79½ cts. No. 2 white oats, 29½ a 30 cts.

BEEF CATTLE.—Extra, 4½ a 5 cts.; good, 4½ a 4½ cts.; medium, 3½ a 4½ cts.; common, 3 a 3½ cts.; fat cows, 2½ a 3 cts.

SHEEP.—Extra, 6 a 6½ cts.; good, 5½ a 5½ cts.; medium, 4½ a 5½ cts.; common, 3½ a 4½ cts.; culls, 3 a 3½ cts.

LAMBS.—With a light run of stock and a good demand, prices advanced &c. on all grades: Extra, 7 a 7½ cts.; good, 6½ a 6½ cts.; medium, 5½ a 6 cts.; common, 4½ a 5½ cts.; culls, 4 a 4½ cts.

FOREIGN.—A meeting of the directors of the London held in Manchester on the 3rd instant, a resolution was adopted to demand urgency at the coming session of Parliament for a bill embodying the "one man, one vote" principle.

Resolutions were also adopted favoring a shortening of the term of Parliament; a reduction of the period of residence enabling a man to vote to three months; compulsory powers to acquire allments; the abolition of the duties on tea, coffee and cocoa; a direct popular vote on the liquor traffic and the dissolution of the Church of England.

Henry M. Stanley with Emin Pasha, arrived at Baguano on the 4th, and at Zanibar on the 6th inst. The same day of his arrival Emin met with a very serious, if not fatal accident. Being near-sighted he misjudged the height of a balcony parapet, overran it, fell into a banquet in St. James, at Bath. When found his right eye was closed and blood was issuing from his ears. His body is terribly bruised.

Preparations are proceeding for the reception of H. M. Stanley in England, on a great scale. The Royal Geographical Society is taking the lead, and proposing to offer him a banquet in St. James, at Bath. English publishers are competing for his coming book, and one offer of \$200,000 is reported to have been made.

Late advice from Zanibar confirm the report of the massacre of Dr. Peters' party. The camp was entered by the Somalis at midnight, and not a single member of the expedition escaped.

The Paris *Autorite* says that an English company has applied for a concession to build a bridge across the English Channel.

Earthquake shocks were felt on the 8th instant in this country, but were of only a light nature, causing no loss of life or damage to property. Mount Vesuvius is in a state of eruption.

The Russian Government has determined to push at once the construction of the new military railway way across Siberia, the road to connect at Yokohama with the Canada Pacific Railway and ocean steamers. The most difficult part of the route will be through the Ural Mountains.

A famine is threatened in eight southern districts of India, owing to a total failure of the crop.

It is interesting to follow the career of a letter recently written by E. F. Kephart, a missionary in Liberia:

"I never saw such poverty among God's people as there is in Liberia. . . . The Christian nations are pouring in and gin in upon this poor people. The steamer that comes from Europe has had on board 10,000 casks of rum (each holding 50 to 60 gallons), 11 cases of gin, 400 tons of gunpowder, and 14 missionaries—all on their way to Africa to convert the heathen. The German line has nine steamers that ply monthly between Germany and Africa. They always

have the same kind of a load, with the exception of the missionaries. I learned that much of this rum came from Boston, and that the people, it is said, do not yet know of Don Pedro's deposition and the establishment of the republic.

Dr. John S. Billings, in a recent lecture, estimated the population of the world at between 1,500,000,000 and 1,600,000,000, of whom, he said, there are in Europe over 350,000,000, and of European stock in other countries, 100,000,000; in all about 450,000,000 as against 150,000,000 in 1788.

RECEIPTS.

Received from Joseph Arnsfield, Agent, London, England, £26, 5s., being £2 for himself, vol. 63, 4 copies; 1s. for *My Harper*; to No. 27, vol. 63; 15s. for Stephen Cumberland, to No. 52, vol. 62; and 10s. each for Alice Alexander, Mary Ashby, John Bellows, Robert Bigland, Philip H. Bracher, Richard B. Brockbank, Alfred M. Box, Mary Burton, John Botwinley, Robert H. Clark, James Colton, John Cheal, Sarah Cook, George C. D. DIED, at his residence near Damascus, Columbiana County, Ohio, on First-day, Eleventh Mo. 3rd, 1859, JERU L. KITE, in the 71st year of his age. He was one endowed with a good understanding, useful, and widely remembered by his neighbors and friends; he endured great suffering through a protracted illness, with Christian fortitude and patience, and we trust, through releasing love and mercy, has been gathered to eternal rest.

On the 6th of Eleventh Mo. 1859, after a short illness, MILLS GATHERY, in the 34th year of his age, a member of Upper Springfield Monthly Meeting of Friends, Columbiana Co., Ohio. This dear friend was concerned to uphold our Christian doctrines and testimonies, and evinced by his steady deportment that he was under the preparing Hand for usefulness in the Church. He was beloved and respected by our Friends, who have a comfortable hope that their loss is his eternal gain.

At the residence of her brother-in-law, in Millville, Pa., Seventh Mo. 12th, 1859, RACHEL HEACOCK aged 60 years, daughter of Enos and Mary Heacock, deceased, died. She was beloved by all who assembled in our Meeting. The last few months of her life she was a great sufferer, which she bore with patience and Christian resignation, saying, "we must bear the cross if we obtain the crown," also "that rest would come in the end," and eventually resigned to the Divine will, expressing a willingness to depart with the assurance that through the mercy of God in Christ Jesus, she would enter into rest. The light of her example leaves those who mourn her loss an incentive to press on, and follow her, as she followed Christ, that they may be like her in the end.

It is believed her purified spirit has gone.

THE FRIEND.

FOR "THE FRIEND."

Incidents and Reflections.—No. 202.

[The following interesting account, furnished by a friend, is introduced into this series of narratives.—J. W.]

JOHN WARREN OF ALBION, MAINE.

The writer was lately in the company of a Friend from New England, who related the following incidents in the life of his friend John Warren, formerly of Nova Scotia, with whom he once travelled as a companion in religious service. He received these particulars from the lips of John Warren himself.

While yet a lad, John Warren served on shipboard, as a sailor-boy. Thus engaged upon the ocean, he was at times tenderly visited by the convictions of Divine grace. Submitting his heart to these, he was clearly shown, without ever having heard of such a people as the Society of Friends, that it was his duty in addressing one person, to use *thee* and *thou* as the language of simple truth; and to conform his dress to an appearance of entire plainness and simplicity. Another boy on the ship was visited by the contriving power of Divine love; and was, as John Warren said, "a good boy, and grew up to be a good man." Some remarkable experiences in this boy's subsequent history, will be given later on.

At length returning to the place of his home in Nova Scotia, John Warren felt restrained from returning to a sea-faring life, by a voice which had told him to take care of the flock about his own home. His brother James was drawn into sympathy with John's religious exercises, and was similarly led. They at length heard of a people 300 miles distant, called Quakers or Friends; who were said to maintain the same testimonies of which they had been convinced. James became so earnestly concerned to attend one of their meetings and see what principles they professed, that he walked 300 miles, to Vassalboro, Maine, for the purpose. While on the journey he became much discouraged, and sat down on a log to consider his condition. While thus engaged he heard the word so distinctly commanding him to take off the buttons from his coat, that he dared not resist. Accordingly cutting off the buttons, he threw them on the ground. Then he was bidden to pick them up, which he did, and passed on his

way with a light heart, feeling clear that it was his duty to proceed to Vassalboro. There was no Friends' meeting then established in that town, and he would have had to go on to Lowell to find one. But he soon heard that a Friends' meeting had been appointed to be held in Vassalboro, under a concern of Joshua Evans, a minister from New Jersey. James Warren went to the meeting, where he was bowed in reverent silence for a considerable time. At length Joshua Evans rose, and began with the words: "My friend, thou didst right in leaving thy home, thou didst right in cutting off thy buttons, thou didst right in throwing them down, thou didst right in picking them up again." Then he proceeded to enlarge on the principles professed by the Society of Friends, and under such convincing authority that James Warren was fully satisfied that they were of the Truth. The meeting having passed, he declared that he had heard and seen enough, without going farther for a Friends' meeting. Assured that he had found a people who were in spirit and faith his people, he returned to his native province.

In course of time John Warren moved to Albion in Maine, becoming a member of the Friends' meeting in that place. He became an able minister of the gospel, in demonstration of the truth and of power; but he knew not how to read or write. For some time he labored silently under a prospect that it would be his duty to go to England in religious service. One day as he was sitting by the fire on the hearthstone, a minister from England, who had been walking up and down the room, stopped, and remarked that he would give quite a sum of money if he could have John Warren's picture taken just as he sat there before the fire, to show to his family in England. But soon the Friend dropped his head, and presently remarked: "Never mind. I shall see the original there."

This was confirming to John Warren's mind of the duty he had been secretly feeling to go to England in gospel service. At length he felt clear to lay his concern before his Monthly and Quarterly Meeting. It was commended thence to the Yearly Meeting held at Newport. One of the elders seemed to feel a hesitation about releasing so illiterate a person to minister in England,—one who could neither read nor write. He remarked: "We had better send the Friend to school, before we send him to England." The subject was not immediately concluded; and later on in the meeting John Warren was drawn to preach in such life and power, that his gift in the ministry was clear beyond a doubt to the elder who had hesitated, so that his mind was changed, and he declared, "Let him go. He has been to a greater schoolmaster than I have!"

To return to the boy who was his companion on board the ship. The friendship between him and John Warren continued throughout their maturer years. Becoming master of a ship, at one time on a voyage to the West Indies he felt inwardly a sudden call to order all sails taken in. As the weather was clear and serene, he put the call aside. Presently and unmistakably

it was repeated. He spoke to the mate of his feeling, which the mate laughed at as a whim not worth noticing. The captain retired to his cabin as if to rest; but finding the voice a third time commanding him to furl all sails immediately, he went upon deck and declared that he must be obeyed. All hands was called, and set to work taking in sail. When the sails were about one-half secured, so terrific a blast of a hurricane came upon the ship, that she was thrown on her beam ends, and every rag of sail that had not been tied down, was blown away. The ship at length righted, and was brought to port in the West Indies. Thence they sailed to England, and were afterwards well on their course to America; when during the night-season the captain heard the monition which he had learned to recognize, commanding him to put about the ship, and sail in the opposite direction. He found his peace consisted in obeying, and so the ship was put about, and a careful lookout ahead was kept; but nothing was seen to justify their strange proceeding, till about day-break, when they found themselves sailing among planks and broken pieces of a ship, and men clinging to them, to prolong their lives in the water. They rescued fourteen thus found, and carried them safe to Boston.

This captain was in the habit of paying a visit to John Warren once a year. On one of these occasions he felt drawn to go and see an aged man residing, perhaps, some forty miles distant. They were strangers to each other, and on sitting down in the room, they became silent, until the old man said: "Thy coming reminds me of an account I have heard of a man who by listening to the voice of the Master, had the sails of his ship furled just in time to save himself and his crew from a watery-grave; and on his return, by listening to the same voice, he saved fourteen shipwrecked men who were floating in the waves, and brought them safe to port. Then looking up at his visitor, he exclaimed: "And thou art the man!"

Instances like these lead to the reflection that "He who showeth man knowledge," does not throw away his extraordinary manifestations of truth upon men on whom they are likely to be wasted; upon those who, on repeated offers of light and truth in "little" things, have so slighted them that their heart waxes gross, and their ears dull of hearing. But it is they who have yielded to the secret convictions of his Spirit,—who while they have light walk in the light, that become children of the light and of the day; so as to be entrusted with those apparently extraordinary discoveries to which they have previously learned faithfulness, as sheep knowing their shepherd's voice. Wonder-working favors or successes do not usually come all at once. They are rather as crowning blessings to long years of hidden growth and simple faithfulness to the witness for Truth.

WHAT will become of the glory of all flesh, when God shall enter into judgment.

FOR "THE FRIEND."

Some Account of Ezra Comfort.

(Continued from page 155.)

At another time he said, "I have felt for some months past that this trying time was coming, and I have fervently prayed that I might be favored with patience and resignation, which have been mercifully granted in some of the times of my greatest distress. The incomes of the love of God have been such as to overbalance my pains and allay them so that my soul has rejoiced, whether life or death may be my lot I feel content. Will not the Judge of all the earth do right? As the heavens are higher than the earth, so are his ways higher than our ways, and his thoughts than our thoughts. I have been favored to see a little into the excellency of and glory in heaven, with its order and harmony; a soul ravishing prospect it was. Whether I shall be permitted to join them now or not is yet much hid from me."

At another time of great distress he said, "Oh the burning and pain in my breast. I wish you to be resigned, and give me up, and not strive by your prayers to keep me, for to go would be great joy and rejoicing to me: I see something that is pleasing or desirable in this world."

In a time of extreme pain he said, "I cannot help mentioning what a pity it was that the wise men of the East, who saw the star and followed it for a time, then turned aside to enquire of the great men of the world where the young child should be born. In so doing they were perplexed; for one cried one thing and others another; but when they returned the star appeared to them again and they rejoiced. Oh the thankless goodness of the Divine Being. I think I have seen this to be the situation of too many in the present day; they turn aside to enquire of the wisdom of the world, and thereby miss their way. When if they would but keep their eye single to the light, which is that bright and morning Star, which our dear Saviour declared He was, of the root of David, to which if attention was paid by the children of men, it would lead all up to the city of God."

After a short time he said, "I fear that patience, which I have so earnestly prayed for, will not hold me out. Oh gracious God, if it be possible let this cup pass from me; nevertheless not my will but thine be done." Again said, "I have known what sickness and pain was, but I have never experienced it like unto this. There are thousands and tens of thousands in the world who have not yet known the length and the breadth of pain. I know the way to overcome is through faith and patience. I know also, that the way to life is through death."

At another time he said, "I long, and I hope the time is near that my poor soul may take its flight. Yea, be carried into the bosom of the church triumphant in the heavens, where there is no need of the light of the sun or of the moon, for there, there is no night, but it is all light and love. No doubt it has been for some wise and unforeseen purpose that I have been thus distressed. I have, since lying here, had several opportunities of discharging myself for which I have felt peace. But oh the difference there is in mankind: some can feel from whence these communications come—others appear to be as hard as the nether mill-stone; but that ought not to make any difference to us, when we feel anything as a debt, we ought to endeavor to discharge ourselves. I intend to speak as long as breath is afforded me, when I feel any thing arise on my mind in the light to communicate."

Again he said, "My state may justly, as to the outward, be compared to that of the wicked, they cry and cry again for help, but there is none afforded them, for the door of mercy is shut because they have refused to hear Moses and the prophets. I have cried in the bitterness of my soul, but there is yet none sent for my relief; yet nevertheless my hope is steadfast in Him whom I have trusted; and in Him my faith is unshaken. Thou, my dear wife and companion of my youth, and you, my dear children, strive to keep in the patience; you have once known what a poor mortal man can go through."

At another time when a friend came in and sat by him, he said, "I am glad to see thee, there is a remnant to whom I feel my heart nearly united. I have at times felt such a flow of love towards them since lying here, that I have thought if my strength and voice would have admitted, I should have been glad to have seen them assembled in my room. But I am content if they will but keep close to that light which has manifested itself to them; it will preserve them in all times of trial and distress, and finally lead them up to the city of God." Again he said, "As my cords are lengthened, my afflictions are strengthened. I can say in true sincerity, 'O Lord, take my life from me for I am not better than my fathers.'" A friend coming in and asking him how he was, he replied, "My afflictions are great." He was asked if he felt peace? to which he replied, "Oh yes; I should be in a dreadful situation if it were not so. I think I have at times felt an unshaken hope, sure and steadfast."

At another time he said, "No marvel that I, a poor frail mortal, should, in my great agony, pray if it be possible this cup should be taken from me, when the dear Lord himself prayed the Father that the cup might be taken from him; yet centred in resignation." Again said, "Suffer me to bemoan myself, O Lord, forgive my offences in so doing, if it be an offence to thee." Again he said, "I have been looking and watching daily, and almost hourly for my departure, but when it will be is yet much hid from me."

He awoke one morning and said, "I never beheld such a morning before. I thought last night that I was in Sodom in great distress, encompassed about with many sloughs and slime-pits, and I saw many fall in them which never rose again. And I beheld Abraham's little company and felt all my power renewedly animated to press through and over all; and I was enabled to join them, on returning out of those great difficulties, with that great High Priest Melchizedec, who pronounced us blessed of the most High God that we were in possession of heaven and earth. I now feel comfortable; I have no pain or distress."

At another time he said, "I have been dreaming that I saw a company of the angelic host coming to me. I was in hopes when I saw them that there would be something done for my relief. I did not request them to build me an house in the land of Shinar, but I wished them to build me a little tabernacle as a covert from the heat and storm; but they left me. Then I remembered there was no such a thing to be in this side Heaven. I awoke and felt my inner man strengthened and renewed."

At a time when he was very weak and could scarcely raise his voice so as to be heard, he said, "From my feelings I think I cannot continue here much longer. I have said and done all I can." After a time, being asked if he would take some nourishment, replied: "I feel great weakness, but want no other nourishment than

that which will nourish the soul up to eternal life."

After several days of great weakness and languor, in which time his voice was so gone as to render it difficult for him to be understood, being a little revived he said, "It has been eight weeks this day since I have lain here and passed through much suffering. I was in hopes I should have been released before now, but I am endeavoring to keep in the patience, and be resigned. My soul can at this time magnify and praise his great name who is over all; and through my afflictions I think I have never felt a greater reducedness of self. I have seen that the mountain of the Lord's house is established above the tops of the mountains; this house are those who are walking in true humility before Him; who are not trusting in their own abilities or self-sufficiency. These have their swords beaten into plough-shares, and their spears into pruning hooks. The prophet saw those in his day; I have no doubt it was a soul ravishing prospect, that there would be one glorious Captain over his people, and their souls running by Him. I have seen that this great and merciful One has swayed his righteous sceptre over all nations, kindreds, tongues and people under Heaven; and there are yet a remnant who are following this glorious leader, who have drawn near unto Him with the cords of true love. My heart overflows with love at this time."

(To be continued.)

The Religious Factor in Education.

In the religious world of fully half a dozen lands, there has within the past few years been coming, gradually but steadily, into public prominence the problem of the religious element in education. In general it can be said, that the conviction is growing, especially throughout Protestantism, of the necessity of making the inculcation of the principles of Christianity a matter of leading importance in all genuine education.

Matthew Arnold, in his address on Common Schools Abroad, delivered before the University of Pennsylvania, says:

"In England religion is excluded from the official program of the popular schools. If it is taught, it is taught outside of the official school-hours, and subject to private and local regulation. Religious liberty, it is said, requires this. If religion is taught at public expense, what religion is it to be? If it is the religion of the majority, the minority are aggrieved. Religion, therefore, must not be a prescribed school matter at all."

But the convictions of thoughtful Christians in England will not be regulated by such an official program. Beside the "Board" schools, *i. e.* the regular public schools of the land, private or "voluntary" schools with religious education, have sprung up everywhere. The *Times* recently declared that the cry against the existence of the voluntary schools, as such, is dead, for the immense development of these schools since 1870 has killed it.

Two years ago a Royal Commission was appointed to examine thoroughly the workings of public and private schools in England. Leading representatives of the various religious communities were selected, among them the Bishop of London, Cardinal Manning, Sir John Lubbock, the Rev. R. W. Dale. Three volumes of evidences have already been issued, and a fourth, of about four hundred pages, is forthcoming, constituting the report of the majority. From

the sketch of this Report, as given by the *London Times*, it is seen that the commission strongly urges the importance of religious and moral instruction in schools, and make suitable recommendations in this direction.

In France, under the Republic, the influences have all been against State encouragement or aid to religious education in any schools, high or low. Indeed, in many cases, the opposition of those in authority has amounted to aggressive hostility. Each year makes it more difficult to pass the religious budget, and one by one the higher religious schools, both Catholic and Protestant, are being deprived of the customary State subsidy. As a result, voluntary schools, with religious education, have developed rapidly in France. According to the "Year Book of Public Instruction," lately issued, France, including Algiers, had at the end of the year 1880-'81 in all 81,130 schools. Of these, 67,517 were public—i. e., State schools, without religious training, and 13,613 were called "free"—i. e., independent of State control, but under management of religious bodies. This shows an increase of no less than 479 "free" schools in a single year.

A similar state of affairs is seen to exist in Holland. There, too, as throughout Northern Europe, the Church authorities had control of the schools until comparatively recent times. In 1878 a new law was passed, entirely divorcing religious instruction from schools managed by the State, but at the same time permitting the establishment of private schools with religion as a branch of instruction. The Protestants in Holland have evinced a remarkable zeal in this work. At present they have 460 private schools of this kind, with an attendance of 77,000 pupils and a teaching force of 1,100, male and female.

In Italy the school problem is modified by the general religious problem of the day. The Government has seen to it that the instruction there given shall at least not be hostile to the new order of things and friendly to the Papal restoration idea. Accordingly, schools have been established by the friends of the latter movement, especially in Rome. It seems, too, that but few tangible results have been attained, since at bottom the differences between the policies of the Quirinal and of the Vatican are political and not religious in character.

But it is in Germany where this problem is most complex in character, and probably most difficult of solution. Germany, as a land, has always made religious training one of the leading features of her educational system, in schools of all grades, up to the University. The question only is as to the extent in which religious influences shall control the school as such. Formerly, down to the Falk era, in 1873, with its May laws, the pastors and religious superintendents virtually controlled the whole school, so that, e. g., in natural sciences, history, etc., nothing could be taught antagonistic to religious interests. The May laws did not do away with religious instruction, but only with the superintendency of the schools by the religious authorities.

While provisions are still made for the religious training of the youth, by pastors, religious instructors and others in Luther's Catechism, biblical history, etc., and in the gymnasia and other higher schools "religion" is a prominent branch of instruction, yet the general conduct of these schools is no longer under religious influences as they were before.—*The Independent*.

A Family of House Sparrows.

One evening in the latter part of the Fifth Month, 1878, on my return from my work in the field, I was somewhat surprised on being informed that a family of emigrants from the South was making preparation for a summer encampment amongst the shade trees in our front yard. As I stepped round to see what authority they had for thus intruding on our hospitality, I was met by a spruce little gentleman in drab, whose deportment and observations were such as to remove all thoughts of objection, and the result of the interview was that I gave him full permission to occupy any portion of our premises at his pleasure.

Now the true state of the case is simply this: A pair of house sparrows (*Thoenithra socialis*) had arrived during the day, and were busily engaged building their nest on a low branch of one of the Norways, where they subsequently reared a brood. They also built a second time that season; in each instance rearing a family of three.

When the little ones were sufficiently fledged to leave the nest the father would bring them to a bench at the kitchen door (the mother always following), and as soon as any one arrived with crumbs, he would fly into their hands, fill his bill and proceed to feed his charge—the old lady receiving from him her portion with the others—which process was frequently repeated during the day. Thus the first season passed by very pleasantly until the middle of the Ninth Month, when they all took their departure for their winter home.

As the spring of 1879 came round, each one was eagerly watching for the return of our favorites; when one pleasant morning in the Fifth Month, the familiar voice of a "chirp" was again heard at the door, and glad hearts and willing hands were at once ready to respond to his call; so that he was soon installed in his old position—partaking of our breakfast and feeding his dame, who never ventured on our hand but a few times. She might have been more familiar had he not been so exceedingly attentive to her, for if she was standing almost within reach of the crumbs he would pick them up and feed her before she had time to feed herself.

When the hail-storm of Sixth Month 5th passed through this neighborhood with such destructive force, their brood was nearly ready to fly. The careful mother sat on the nest till it was torn from under her and the little ones dashed to the ground. We gathered them up and cared for them to the best of our knowledge, but one of them died. It was so late the next day before the old birds made their appearance, that we supposed they had perished. However, about noon the mother arrived and the father returned in the evening. We presented them with their two little ones; and whether they could count or not I am unable to say, but they appeared greatly rejoiced at the meeting.

He is very observant. One morning I offered him a piece of bread that had a trifling stain of molasses on it; he would not touch it, but flew away; I called him back but still he would have nothing to do with it. I afterwards got a clean piece, of which he freely partook, and carried away a portion to his mate, as usual.

Either of them mostly responds to our call if within hearing, and does not trill down; he to alight on our hand if held out; she on some perch near by, where he carries her food. If he is very hungry his cries and actions are quite

intimate, and if not waited on at once he will flutter in your face to make you take notice of him.

He is easily recognized from having lost all the toes off his left foot. Any one seeing the above and meeting with the little wanderer, would very much oblige me by forwarding such information, as I would like to know where he makes his winter home.

When the wild, stormy blasts of the winter are over, I had often seen him sit on the land:
But dearest of all is the bright little rover,
Who rests from his journey to feed from my hand.
The song of the robin and thrush are inspiring,
The red bird and violet grace the green trees,
But his gentle nature, so humble—rejoicing
Above his gay comrades—entreats him to me
Some few like my plain little "Friend" I have met with

And those who best know them must value their ways;
As virtue but seldom parades her own merits,
Nor modesty vainly her glory displays.

Through the long months of summer no laird of the castle
Is so domestic more cheerfully bears;

Whilst his lady, too coy to partake of our bonny,
With their shy little nestling his gallantry shares.
In love I will fondly bestow him my blessing,
For a laird where the songsters of summer may dwell,
As his frail, feeblest form I am fond of caressing,
And smothering his plumpness, I bid him farewell.

To Him who in wisdom ordained thee thy station,
Who clothed thee in blue and set thee forth for all;
Who mappest thy way through the wastes of creation,
Without whose remark not a sparrow can call;
Till the groves of East Bradford and Brandywine
valleys,

Again their green mantle of verdure shall wear
The gems of the harvest, the embryo fruitage,
With thee and thy friend I consign to his care.

CALLEN S. COPE,
WEST CHESTER, Chester Co., Pa.

FOR "THE FRIEND."

True Ministry.

There is a feeling in my mind to bring into view the nature of true ministry, according to that sense that rests with me. It may be for the help of some who are drawn forth to exercise on behalf of their fellow-members in religious faith, as well as at times on account of their selfish feelings, as well as those who are not of this fold, but for whom there is a felt sense that Christ died that they might become likewise of the number of the flock of Christ's companions by the renewing and quickening power of his grace and their obedience and submission therunto.

Dear Friends, dwell low in that seed of life begotten in the soul, and in wisdom rise above or go beyond its leadings and its teachings, but seek to know thy stillness and entire subjection of heart and mind unto God, through Christ, willing or ready to be used or laid by, as the blessed Master wills.

Swick I beseech you, to enforce Divine truth as it is brought home to the mind, by the strength of your minds and language to the hearts and consciences of others, but wait to feel that perfect subjection of self in the utterance of Divine truth to the mind and will of God, that simplicity, integrity and love godward may mark the utterances of the lips used to utter the words of truth for the edification and instruction of others.

Beloved friends, we are but servants in waiting upon the Master to know his bidding; and it is the answering his mind and not the gratification of our own spirits that should lead, govern and direct our way, if we are to move aright and with acceptance in the Divine sight.

To please our fellows with pleasant speeches, or with the exactitude of language as to Divine

truth, is not the essence or any part of true ministry. For that which has its rise in the fountain of life opened in the soul will not be wanting in matter or in spirit, and will find its answer in the mind to which it is directed by the unerring Spirit of Truth, upon whom we are all to wait to know his teaching in our own minds.

To be brought into stillness before God as to the working of our own minds is a very precious attainment, and one worth seeking with the whole heart and soul, in order to know the government of God in any measure set up in us.

And if, beloved friends, it is a blessed attainment to know in any degree the subjection of our inner selves to God through the indwelling of Christ and his Spirit, what must that fulness be, which we are invited to seek and press after?

Of this one thing I am fully assured, the purity of our ministry will be in accordance with the purity of our own natures by the power and renewing of Divine grace in our own souls.

The words of our Blessed Saviour are very instructive, a fountain cannot send forth sweet water and bitter, neither doth a tree bear two kinds of fruit, for the tree is known by its fruits. Therefore to preach Christ effectually to others there must be the subjugation of ourselves unto Him.

This will bring to the washing pool, and to the close heart-searching work as to our own condition in the sight of God, before we engage again and again in the work and service of God.

And, dear friends, it is not the many words or the few, but the living reality that is felt to accompany the words, that is of value. It is knowing the seal of Divine approbation resting in and upon the mind that is the all-important thing to know, and that which gives lasting peace and contentment.

Need I add, that of which I write cannot be bought with money, neither can the learning of the wise impart it; but the little child in spiritual experience may know it, who is willing to dwell in the secret place of the Most High and to abide under the shadow of the Almighty. Such become sharp thrashing instruments in the hands of the Almighty, and such might we become if we stood more in the simplicity, and purity, and whole heartedness of the child born from above.

The baptism too, beloved friends, that brings heretofore is not that of water, but it is a fiery baptism by the Spirit of the Lord, that burns up and destroys the impurities of our natures and brings into the new nature born from above.

And that feeding by which the soul is nourished is not by elementary bread, but is the bread of life which comes down from above, of which if the soul eat and thereby lives here on earth, it shall never die.

O, then, to know more of that pure and holy nature begotten in our hearts by which the contrary is done away, to know the lamb-like, Christ-like nature growing up in us, bringing forth through us the fruits of its own kind, to the praise of his grace, by which we stand accepted and acquitted in God's holy sight.

A living ministry can only be preserved among a living people, kept alive by the renewings of grace day by day, until the fulness come and all are gathered thereunto and comprehended thereby. And the living strife for the preservation of their own nature, lest any should rob them of their heavenly treasure, through unwatchfulness and sloth, lest an enemy sow tares among the wheat, and the former spring up and choke the latter.

So, dear friends, the injunction is still needed

given by the Blessed Master, watch and pray that ye enter not into temptation, whether it be as regards the ministry of the Word, or in other ways in our daily life; for the enemy of our soul is ever on the watch to draw away from God and from the ways of righteousness.

As that which was contrary to the mind of God got entrance into the mind of man and so drew him aside; it is by the arising in us into perfect dominion of that life, spirit and nature which is of God that there can be a coming back into the condition of perfect acceptance with God; for that only which is of God can bring into acceptance with Him. Therefore it is that it is not the saying but the doing of the will of God that is accepted with Him, or in Scripture language, "Not every one that saith unto me Lord, Lord, shall enter the kingdom, but he that doeth the will of my Father which is in Heaven." The true spirit of all true ministration, whether it be by word or by deed, is the doing of the holy will of God.

And now, beloved friends, can this be done, but by the Spirit of God's dear Son and only begotten having place and dwelling in us? And can He dwell there if there be rival lords and gods that have place and way with us, drawing away into affections and desires first, and then into acts that are contrary to his holy nature, will and purpose?

O how many have been drawn away and enticed by the gilded baits of Satan! And there is safety for none out of the Lord's keeping; and how can we expect the Lord to keep us if we are unwilling to do his holy will. Therefore let us heed the Word nigh in the heart and in the mouth that gently whispers, this is the way walk thou in it.

Your companion,
CHARLES W. THOMSON.

PHILADELPHIA, Eleventh Month, 1859.

FOR "THE FRIEND."
THE NEW DAY.

He hath made everything beautiful in His time. R. V.
Ecclesiastes III. 11.

He hath made every thing beautiful in His time,
Umber and arroy now lie in fleecy fold,
While cloudy banners usher in the dawn,
With crimson tapers, and broided edge of gold.

The silver mists lie low, like placid lake,
Far reaching up the valley's winding way,
And on its bosom, white as sails, seem to make
A sunny deck, to welcome in the day.

One glint of light! The mist lake troubled seems,
The sails, all wreath and shatters float afar;
And where the sunlight, through the hill-gap gleams,
Lies cross day's portal like a shadowy bar.

A glad sound from out the hedge! One note
A signal; rousing, raptures choral throng;
And down the wooded hills and valleys float
A glad outburst of rippling, joyous song.

The daisies nod and beckon as the breeze
With playful touch lifts up each drooping head,
And sleepy herds come from beneath the trees,
And up the dewy pathway slowly tread.

Far sounds of waking busy life are heard;
A bleating lamb—a birdling's troubled cry—
And waiting sympathy at once is stirred;
Shore cows, and mother bird, make quick reply.

Yes, beautiful indeed, Lord, thou hast made
Thy world with nod and marvellous and wise;
Foundations of the morning thou hast laid,
And in dark hearts hast bid "the Day Star rise.

More glorious by far that dawn shall be
Eternal beauty marks that happy day,
When mists shall lift, and cloudy phantoms flee,
As Christ, the world's "true light" shines on our way.
Seventh Month, 1859.

THE PILGRIM'S RESPONSE.

BY F. MERRICK.

Young Mr. Worldly: "And so you are getting old. You must be sad as you see the lengthening shadows darkening upon your path."
Aged Pilgrim: "Nay, my young friend, but you mistake. I am a happy old man. And why should I not be?"

"I travel toward the sun,
Behind the shadows lie;
Hope gilds my pathway through the tomb
To mansions in the sky.

"Peace like a river flows
Serenely calm and clear;
I lean upon my Saviour's breast,
And feel that heaven is near.

"The past may cause a sigh,
The future wakens joy;
For me a 'place' has Christ prepared,
And bliss without alloy.

"That 'place' is in the 'house
Of many mansions' fair;
The 'Father's house' where all the guests
His richest bounties share.

"'Fullness of joy' is there;
There pleasures never end;
There song and service freely given
In holy raptures blend.

"There Christ himself has gone,
With Him his saints shall rise;
Beloved disciples near his throne
Shall there have his glory see.

"With Joy I hasten on,
I bid the past farewell;
Why linger 'mid earth's transient joys,
With Christ so soon to dwell.

"Still brighter shines the path;
With richer radiance blest;
Thus brighter shines the western sky
As sinks the sun to rest."

—Christian Advocate.

FOR "THE FRIEND,"
Trust in the Lord.

The Scriptures abound with many precious promises to those who trust in the Lord, and lean not to their own understanding, nor to the understanding of the natural man. So, I feel constrained to bring some of them to view; and I do it in love and good will, for the benefit and encouragement of the weary Christian travellers who are asking the way to Zion, with their faces thitherward, saying, in effect, like the returning Jews did after their captivity, come, let us join ourselves unto the Lord in a perpetual covenant that shall not be forgotten. For this is what we want, a perpetual covenant that shall not be forgotten when the present excitements are over. For they that trust in the Lord shall be as Mount Zion, which cannot be removed, but abideth forever. So commit thy ways unto the Lord, and trust in Him, and He shall bring it to pass. And bring forth thy righteousness as the bright and thy judgment as the noonday. So blessed is the man that maketh the Lord his trust and respecteth not the proud, nor such as turn aside to lies. So, trust in the Lord, and do good, and verily thou shalt be fed both temporally and spiritually. For it is the willing and obedient heart shall eat the good of the land. So, let us "not trust in ourselves, but in God, which raiseth the dead; and He will raise us up into newness of life, if we trust in Him. But cursed is man that trusteth in man and maketh flesh his arm; while blessed is the man that maketh the Lord his trust.

Then why should so many trust in man and lean on the arm of flesh for support, and depend

on their own carnal understanding and strength in relation to the deep things of God? But so it is; and many amongst us who profess to be a spiritually-minded people and to trust in the Lord, have so far forsaken the old paths as to join in with the weak and beggarly elements of the world, as to trust in the wisdom and learning and eloquence of men, and join with the giddy throng around it, in attempting, like the Babel-builders, to build a city and a tower whose top may reach to heaven, and thereby make us a name. And at the same time, while they profess in words to trust in God, in works they deny Him. And the building they are erecting and which is making such a fair show in the world, is ending in confusion. And ere long it may be said of it, "Babylon the great, the mother of harlots, is fallen." For I do believe that this Babel of confusion is the mother of all the false births which have so abundantly been brought forth of late. While the Jerusalem which is from above is a quiet habitation, and the mother of all the true-born children of God. D. H.

DEBLES, IND., Tenth Month 11th, 1859.

FOR "THE FRIEND."

A Myriapod.

I received a letter from an intelligent correspondent, dated Eleventh Month 11th, describing a species of worm which had appeared in considerable numbers on her premises, and subsequently some specimens of it. The letter says:—

"For several weeks we have noticed on our front porch and on the walls of our house, a brown crawling insect, about an inch long—slender, cylindrical, hardish, with numerous feet attached to the under surface of the body. When not in motion they curl up. Yesterday, after the sun came out warm, they appeared in greater numbers than heretofore. I had thought they might come from under the porch, but yesterday there were many of them crawling up the stone at the foot of our terrace under the iron railing along the pavement; and as their motto seems to be "Excelsior" they came up the steps, and continued to ascend every perpendicular they met with. To-day I found some very near the roof of the house. We swept them up off the roof of bay windows and balcony, &c. They do not march in crowds, but each goes its own way, impelled by similar instincts.

"With the aid of Packard's 'Guide to the Study of Insects,' I think I have found them to belong to the order of Myriapoda, division *Chilognatha*. Kirby goes rather more minutely into the description of species, and from his work I am inclined to think our visitors are the *Julus terrestris* or Gallew-worm. I feel quite well satisfied that it is a *Julus*. I do not remember ever seeing these creatures before; and as I have no fondness for what are commonly called worms, one of my great weaknesses being an aversion to them, I do not particularly like their inclination to come and stay about and over my house. Nothing bad is said of them, but rather the reverse. Kirby says, 'very little is known with respect to the habits and instincts of the animals belonging to these orders.' Packard says, 'In the spring the female deposits her eggs in masses of 60 or 70, in a hole excavated for the purpose under the ground.' 'That they hatch in three weeks.' 'This is fall,—and why do these little crawling things climb so high just as winter is approaching? Do they

expect to find cracks or holes to creep in for the winter; then return to the earth in the spring to lay their eggs? I hope very few will do this."

The specimens received were submitted to a naturalist friend, who confirms the judgment of my correspondent, that the worm belongs to the genus *Julus*, but he was unable to determine the species. It is said to be very common in stony meadows and in cow-fields. Their bodies are cylindrical and the feet are numerous—some species have 120 pair—and are so weak that the animal seems to glide along on the belly, the feet moving like a wavy fringe on each side. They inhabit moist and dark places and feed chiefly on decaying vegetable substances, sometimes on decaying animal substances.

The climbing habit, as described by my correspondent, is one that I have not seen mentioned elsewhere. J. W.

FOR "THE FRIEND."

Guilford College.

New Garden Boarding School of Friends was opened under the care of North Carolina Yearly Meeting, in the year 1837, and has been in successful operation ever since, being the only school of its character that run through the late war, and it has been a power in the South, not only in educating our children, but also in promulgating the doctrines of the religious Society of Friends. The Trustees about two years ago seeing the demands and work of the school growing so much, felt it right to take out a new charter under the name of *Guilford College*. The first year of the college has been a successful one, and by the year's work the Trustees see more clearly the position it is called upon to occupy in our religious society, and in the State for good. The public expects the Trustees to carry into the college work the same thoroughness that has characterized the institution through its history, and they are under the strongest obligations to do this. The college although young, has the opportunity to take the lead among the colleges of the State in scientific work. The fact of its being the only college in the State of co-education with the sexes, gives it a history we believe for good. *Guilford College* does not exist to make money, but as a Divine mission going out to the youth of our Yearly Meeting as well as others who are willing to come under its discipline, and to this end the Trustees and members of North Carolina Yearly Meeting are earnestly engaged in increasing its endowment fund to \$50,000.

There has recently been raised in our own limits \$7,000, many of our friends subscribing even more than they were able to afford. A friend of another Yearly Meeting has subscribed \$5,000, conditionally, that the \$50,000 be raised.

We now lack \$12,500 of having the above amount, and my wife Mary Jane Bundy and myself have consented to spend some time soliciting for the completion of this endowment, and do bespeak a kind consideration of our errand to our friends. We will be in Philadelphia for a time, and will be glad to give any information we can in reference to the outlook of the college. It is out of debt and is on a solid basis financially.

Thomas Scattergood, 22 North Front Street, Philadelphia, Pa., has kindly agreed to receive and forward to E. Mendenhall, Treasurer of the Trustees, any donations that friends are willing to contribute, as it is not likely that we can see all that are willing to give something.

JESSE M. BUNDY.

The Dream of Pilate's Wife.

BY ASH-HEALD MOULTON, &c.

Dreams are mental facts which can be as fully and as clearly substantiated as any other facts in the realm of mind. Philosophers who have made the attributes and functions of the human mind a special study, are agreed on two points: first, that dreams occur in partial sleep; and secondly, that whatever knowledge a man is capable of acquiring during his waking hours may be communicated to him in a dream. In perfectly sound sleep, while the vital functions, respiration, circulation, secretion and absorption go on apparently in full force, the bodily senses are suspended and we have no consciousness of mental activity. In superficial sleep the bodily senses are but partially suspended and there is a certain amount of mental activity of which we are more or less conscious at the time, and of which we have a more or less subsequent remembrance. While the predisposing causes of dreams are diverse, as a rule, they are referable to some peculiar condition of the body or mind.

Dr. Porter, in his interesting work on "The Human Intellect," cites the case of Dr. Gregory, who states that on applying a bottle of hot water to his feet on retiring to rest, he dreamed that he was walking up Mount Etna, and found the ground insufferably hot. Benjamin Franklin declared that he often saw in dreams the bearing of political events which he could not see when awake. Samuel T. Coleridge tells us that on one occasion he fell asleep in his chair while reading, and during that sleep, which lasted about three hours, he dreamed his famous poem Kubla Khan. So distinctly was the whole poem impressed upon his mind, that when he awoke, he seized his pen and wrote it down, and gave it to the world just as he dreamed it. Unfortunately, he was called away before he had reduced it all to writing, and when he returned, after an hour's interruption, the balance had fled from his mind; consequently the poem, as we possess it, is incomplete.

While it is true that the great majority of dreams are meaningless and foolish, still many of the wisest and best men of every age agree that some dreams are supernaturally sent by God to warn, instruct, encourage or comfort men. Two things are stated in the Bible in regard to dreams. The first is that God sometimes reveals his will and purpose to men in dreams. Thus He spake to Jacob, Joseph, Pharaoh, Solomon, Nebuchadnezzar and many others both in the Old and New Testaments. And the second thing is, that God expressly commanded the Jews to put to death any man who professed to utter a prophetic dream, when that dream tended to lead the people to idolatry.

Three dreams are recorded as having been given to save Jesus from being murdered. The first was given to the wise men who came from the far East. After they had presented their offerings and adorations at the cradle of the infant Saviour, God instructed them to return to their country by another way. Then an angel appeared to Joseph in a dream and instructed him to take Mary and the infant Jesus and flee into Egypt, and remain there until he should receive permission to return.

On the day of Christ's condemnation Pilate's wife sent her husband this message: "Have thou nothing to do with that just man, for I have suffered many things this day in a dream because of Him." No one doubts the fact that instruction and warning were sometimes given to men in Bible times through dreams. Does God

ever furnish instruction and warning to men now through this same channel? Let me sight one case which Dr. Bushnell, among others, relates in his book entitled "Nature and the Supernatural," and for the truth of which he vouches. Appreciating the fact that the recital of the cases he furnishes might be regarded as an evidence of mental weakness, he says:—"Enough that consciously to myself it requires a much stronger balance of equilibrium and a much firmer intellectual justice, saying nothing of the necessary courage to report these facts without any protestations of dissent or discredit, than it would be to toss them by with derision in compliance with the more conventional notions and correct judgments of the times. I shall, therefore, dare to report as true facts which neither I nor anybody else has ever so much as a tolerable show of reason for denying or treating with lightness."

The case which he relates is this: Captain Yount, who had resided in California for forty years and had accumulated large wealth, had a dream in a midwinter's night in which he saw what appeared to be a company of emigrants arrested by the snows of the mountains, and imperilled by cold and hunger. He noted the cast of the scenery, marked by a huge perpendicular rock. He saw the men cutting off what appeared to be tree-tops rising out of the deep gulfs of snow; he distinguished the very features of the persons, and the look of their particular distress. He awoke profoundly impressed with the distinctness and apparent reality of his dream. At length he fell asleep and dreamed exactly the same dream. In the morning he could not expel it from his mind. Falling in shortly with an old hunter comrade he told him the story, and was only the more deeply impressed by his recognizing, without hesitation, the scenery of the dream. This comrade had come over the Sierra by the Carson Valley Pass, and declared that there was a spot in the Pass which answered exactly to his description.

By this statement Captain Yount was decided. He immediately collected a company of men, with mules and all necessary provisions. The neighbors laughed the meanwhile at his credulity. "No matter," he said, "I am able to do this and I will, for I verily believe the fact is according to my dream." The men were sent to the mountains, one hundred and fifty miles, and there found a company of emigrants in exactly the condition in which they appeared in the dream. The names of the persons rescued, and their residences, were furnished Dr. Bushnell when on a visit to the Pacific Coast, and the people in that region bore testimony to the truth of these facts. In Job it is said:

"God speaketh once,

Yea, twice, though men regarded it not.

In a dream, in a vision of the night,

Where deep sleep falleth upon men

In slumbering upon the bed;

Then He openeth the ears of men

And sealeth their instruction."

Platée's wife "suffered many things" in her dream. Was the veil of secrecy that conceals futurity from mortal eyes withdrawn, and did she see the unacted history of her husband down to its close? A little while after the death of Christ, Platée was, according to tradition, deposed from office; banished by the Emperor to Vienna, where, reduced to poverty and worn out by remorse, he committed suicide. Did this wife see her husband stripped of his official robes, disgraced, banished to Rome, crazed by remorse, and at last commit suicide? Did she see the

preternatural phenomena that attended the crucifixion? and was her womanly heart touched with the torture and sufferings of the innocent victim? Did she see all the horrors which accompanied the siege of Jerusalem when Titus moistened its red-hot ashes with the blood of its citizens? God alone knows what the things were which she suffered, but they were great enough for her to despatch a message to her husband, warning him and pleading with him to have no hand in the murder of Jesus.—*The Presbyterian.*

JOHN GRIFFITH made some remarks in a meeting of ministers and elders, showing the difference between the ministers of the letter and those of the Spirit—that the letter, without the Spirit, kills that which is begotten of God in the hearts of the people; and that it is the holy power, efficacy and demonstration of the Eternal Spirit which render effectual the Holy Scripture, outward ministry, and all other means ordained of God for the comfort, help and preservation of his people. He said, "I have observed, that the ministers of the letter were most of all concerned for the external appearance of their ministry, viz: that the words and doctrine may be curiously adapted, not to disgust, but rather to please those who have itching ears. On the contrary, the ministers of the Spirit are least concerned about the outward appearance of their ministry—having no doubt, if they are careful in the spring, ground, and moving cause, which they know should be the constraining power of the Holy Spirit, the other will be agreeable thereto: seeing that power is able to render the most low and simple expression, in man's account, exceedingly efficacious."

The non-professional world is always more exacting of the professions than the members of a profession are likely to be of each other. It is the professional man who feels most keenly the limits of his own science and of his own power. The average patient expects more of the average physician than the physician himself would expect of the most accomplished and distinguished member of his profession. So, too, the world is more exacting in its expectations of what a Christian should be, and how a Christian should appear, than Christians themselves are likely to be. Not that the world has a higher standard of Christ-likeness than the Christian has, or ought to have, but that the professing Christian, knowing the incessant struggle and toil and warfare of the Christward life, is more likely to condone the failures of his brothers in Christ. Just because the world is so exacting, it thereby offers to the Christian an increased opportunity to show himself a witness for Christ. And because of its exactness the Christians should be doubly guarded of his actions in the presence of non-Christians. And yet it is in the presence of the world that the Christian is least likely to manifest himself as a Christian. The Christian is most likely to appear at his worst in the presence of the world; it is there that he is least likely to seem Christ-like. The world may care little for his professed principles as Christian principles, but the world expects and demands that he shall live up to those principles. It is not in the sanctuary, not at the prayer-meeting or the Lenten service, that the Christian has the best opportunity of witnessing for Christ; but it is in the presence of the unsympathizing, but the no less critical and exacting, world.—*S. S. Times.*

Natural History, Science, &c.

A Sorrowful Census.—On authority of the Smithsonian Institution, the Washington *Post* states that while twenty years ago there were 8,000,000 buffaloes roaming over the plains and mountains of the Far West, to-day there are but about 500 head in existence; they are but 85 head of wild buffaloes—25 in Texas, 20 in Colorado, 26 in Wyoming, 10 in Montana, and 4 in Dakota; 304 are alive in captivity, and about 200 in the Yellowstone Park, under the protection of the Government. It adds that there is a rumor that there are about 550 in the British possessions north of Montana. Eighteen years ago last May the writer went from Leavenworth, Kan., to Denver, Colo., on the Kansas Pacific Road. In one part of the route for twenty-seven miles he was not out of sight of buffaloes, which were grazing in little companies not far apart from three to hundreds. The Chief of the Judges of the Territory of Wyoming estimated that we saw more than 20,000. Englishmen and others were wantonly shooting them from the train, and this work has gone on with the above-mentioned result. The buffaloes were a noble race of animals, and we agree with a paper which calls the report in the *Post* "A Sorrowful Census."—*Christian Advocate.*

Peach Rot.—The Quarterly Bulletin for Ninth Mo., 1889, received from the U. S. Department of Agriculture, contains a valuable article on "Peach Rot," by Erwin F. Smith. It is caused by a minute fungus (*Monilia fructigena*) which attacks the fruit of plums, apricots, peaches, cherries and other stone fruits.

In damp weather it grows with great rapidity, and a rainstorm of 24 hours, accompanied with a warm atmosphere, is sometimes sufficient to infect a large part of the crop of an orchard. The threads or mycelium which constitute the growing part of the fungus, spread through the flesh of the fruit, and penetrating the skin, develop on its outer surface small ash-gray spore tufts, which send out spores in immense numbers. These are distributed by rain, wind and other agencies; and a few diseased fruits are enough to spread destruction to thousands that were before sound.

E. F. Smith states that in the Delaware and Chesapeake Peninsula, which is preëminently a peach-growing district, the loss to the crop of peaches in 1889 was more than 500,000 baskets.

He found that the dried-up fruit, which had been injured the previous season by the fungus, and had withered and remained hanging to the trees, when softened in the following spring by the prolonged rains, showed that the fungus was still alive and capable of producing a fresh supply of spores which could inoculate the new crop of peaches just forming. Hence he advises, as the most probable means of diminishing the ravages of this pest, that all fruit growers should carefully gather such withered fruit remaining on the trees at the end of the fruit harvest, or that had fallen to the ground, and destroy it by burning or burying in the earth. Moreover, he recommends, that if at any time during the season a hot or rainy spell supervenes, and the fruit shows a tendency to rot before it is ripe, men should be put into the orchard immediately, with instructions to remove every trace of rotting fruit.

Parasites on Bats.—There is a popular impression that bats and swallows carry around and distribute bed-bugs. Dr. Joseph Leidy has often examined these creatures without finding any. He has, however, found a species of *Cimex*

in a swallow, that one might readily mistake for the genuine article. He has also found an allied parasite on bats from Panama Bay.

Willow Hoop-poles.—Hoop-poles, or sticks for making hoops, for kegs and barrels, are getting comparatively scarce, and yet, small an item as it seems to be, it is no mean one in general commercial prosperity. The French, with their usual knack of endeavoring to raise everything on their own land, and buying as little as possible from other countries, finding their native forests giving out, took to planting a species of willow *Salix vitellina*, largely for hoops. So successful have they been, that besides raising all they want for their own use, they export largely to British markets. Scotch herring barrels are now chiefly bound with French willow hoops.

An Ancient Image.—Prof. Wright, of Oberlin, O., has sent to *The Independent* an account of a remarkable find of an image carved out of pumice stone, obtained while boring for water at Nampa, Idaho, a station on the Oregon Short Line Railroad. He says:—

"The circumstances under which the Nampa image was found are as follows: M. A. Kurtz, an educated and competent man, was engaged in boring an artesian well. After penetrating the surface soil 60 feet, 15 or 20 feet of lava rock was encountered. Below this for upward of 200 feet there was nothing but alternate beds of quicksand and clay; then coarse sand was struck in which the image came up, then below was vegetable soil and then sand rock. Thus it is evident that the image lay buried to a depth of about 300 feet, beneath deposits which had accumulated in the lake formed by some ancient obstruction of the Snake River Valley, and that over this accumulation there had been an outflow of lava sufficient to cover the whole and seal it up.

"In reply to letters of inquiry as to the possibility that the image had fallen in from the top or been thrown in, Kurtz says the well is tubed from the top with heavy six-inch wire tubing, section after section having been added as the whole was driven down, so that nothing could have fallen in. As to the theory that the image was thrown in, Kurtz well says that in that case, filling on the top of the water and sand, it would have been ground to pieces by the sand pump. Furthermore, when subjected to the inspection under a magnifying-glass by Professors Haynes and Putman, it became at once evident that it is not a clay image, but that it has been carved out of fine and rather soft pumice stone, and that the reddish coating over it was such a film of oxide of iron as would form only after long exposure in peculiar conditions. In this case also, small particles of sand were cemented into the crevice between the arm and the body. All this shows that it is no recent affair, and that it cannot be a hoax.

"If anything further were necessary to establish its genuineness, it is found in the testimony of Corning, the General Manager of the Union Pacific lines in that division, who was on the ground the day after the discovery, and had ample opportunity to inquire into the facts. Corning is well known in Boston, and is referred to by President Adams as 'a graduate of Harvard College, and a thoroughly trained man, whose evidence he would take as conclusive in regard to the facts.' Dufts, a prominent citizen of Nampa, and the driller and helper, were the only persons present when it was found, besides Kurtz. Kurtz had been on hand, closely watch-

ing the progress of the well for several days, and ran the contents of the pump through his hands as it was dumped out. He had the image thus in his hand and supposed it was a twig; but on dipping it into a barrel of water and washing it off, saw what it was. In answer to further inquiries, Kurtz informs me that no drill was used in the hole below the lava, that the valve in the sand pump is about three-and-a-half inches in diameter, and that many clay balls, as he calls them (some of which he has sent me) larger than the image, came up in the pump without being broken. Thus the facts seem to be well established."

Items.

Sunday Breakfast Association.—The object of this Association is to ameliorate the condition of the poor, and promote Christianity and Temperance, by giving a free breakfast on the morning of the First-day of the week, and holding religious services. The 11th Annual Report states that the number who have partaken of food during the year was 42,480.

During the year, 1923 of those who attended the meetings have taken the pledge of total abstinence.

Connected with the work is a sewing school for girls, held during the winter on Seventh-day afternoons.

Indian Policy.—The *Council Fire*, which represents the views on Indian questions of the *National Indian Defence Association*—in reviewing the Report of the Commissioner on Indian Affairs, says: "We think that the only proper means by which the Indians can have their form of government dissolved and citizenship substituted, is by such a system of education as will give them an intelligent comprehension of our system of government, and, therefore, of the superiority of our form of government over theirs. We think also that the allotment of lands in severalty should follow an educational training that would fit the Indians for the radical change from their system of land-holding to ours, and not precede such training."

Shinnecock Indians.—Dr. John Iomah, chief of the Shinnecock tribe of Indians, and his wife, recently visited Washington in the interest of their people. This tribe is but a remnant—sixty-seven persons—which live on Long Island, ninety miles from New York city. They still own and occupy, in common, 3,700 acres of land, most of which is in cultivation, corn, rice, potatoes, buckwheat, beans, &c., being their principal staples. The men of the tribe have for many years been very efficient allies of the United States. Life-saving 8,000 of them have lost their lives in their efforts to save the lives of people shipwrecked upon their coast. Dr. Iomah and his wife say that the present mode of holding their lands is best for their people. If they were divided in severalty the whites would get them.—*Council Fire*.

Methodist Book Concern.—The *Christian Advocate* says the clear profits of this publishing-house, from 1836 to 1882, have been more than two and-a-half millions of dollars.

Temperance of Japan.—Dr. Felix L. Oswald, in *The Voice*, says: "The mental vigor of the Japanese nation is largely due to the curious fact that almost all of the Oriental races, the natives of the Japan archipelago have never been enslaved by the stimulant habit in any of its degrading forms. They drink tea, a little coffee here and there in the larger cities, and in the seaport towns frequented by Chinese traders, a small percentage of the population use wine. In Japan, however, no one has ever managed to get a foothold on the soil of this sea-girt country. A large plurality of the rural population stick to water, and use tea only as a holiday beverage—a degree of teetotalism equalled only among a few hill-tribes of opium-furnished China, Siam and Hindostan. The natives of Kamataka get drunk on a dist-stool extract, and the Tartars on fermented mare's milk, and even the starving Druses, in the highland-fastnesses of Mount

Libanon, waste their scant resources on an intoxicating preparation of fox-glove juice.

Teasing.—There is a time, before the child has developed enough to be able to choose, when the parents must make choice for it. These choices must be final, and not changed by any sollicitations of the child. We call this process forming right habits in the child. An infant may be taught to lie quietly in its crib and go to sleep without being rocked or sung to, and it may be taught to expect and demand being rocked or sung to sleep. A child may be indulged in eating between meals, or in munching candy and sweets, until it expects and demands the indulgence. A child may be encouraged in its whims and caprices until they control it.

A teasing child is the natural reflection of an unwise, vacillating, weak mother. The mother who knows what is good for her child, who is firm in her convictions as to what is good for it, and who abides steadfastly by those convictions is very unlikely to have a teasing child. She leaves no room for the disposition to tease to grow.—*Schohol*.

It is related of a certain elder in the Presbyterian Church who lived to advanced age, that leaning on the top of his staff, his voice trembling with emotion, and tears rolling down his wrinkled face, he would say: "I cannot understand why my children are not saved." Yet, at the same time, he would confess that he was stingy and mean and worldly-minded, and had been so for seventy years, and one who knew him well declared that he had taught his children to look on money as the chief end of life. Are there not parents in other denominations lamenting the apparent failure of the promises of God to them and their children, when the secret of their trouble is their own failure to keep the covenant which they have made with God? It is probably too late now for them to do anything more than repent and find forgiveness for their own neglect; but those who are younger should take warning lest the evening of their lives be overshadowed with similar clouds.

THE FRIEND.

TWELFTH MONTH 21, 1880.

There are some persons who yield themselves as willing followers of the Lamb, when visited by his Spirit in their early years; and who continue through life to walk in the path pointed out for them by their Heavenly Guide—thus devoting themselves to the service of their Divine Master, and setting a noble example for others to imitate.

There are others who also partake of the gracious visitations of the Almighty, and do not entirely reject them; but for want of full dedication, pass through life in a halting, hesitating way, desiring to be reckoned among the followers of Christ, yet often yielding to temptation, and so are not fitted for much service or usefulness in the Lord's vineyard. They are like trees which have met with much hard usage, been twisted by storms or accidents and lost many of their branches, so that their beauty is marred; but which yet retain some life in their trunks. How sweetly does Isaac Penington set forth the long continued compassion of the Good Shepherd, even to such halting ones, in the following letter:

He that is weak and foolish among the lambs, continually ready to wander, both out of the pastures and from the fold, and thus to betray his life into the hands of the enemy; he who is continually scattering and squandering away what the Lord in mercy gathers for him; who, through drowsiness and carelessness hath lost the benefit of, and forfeited the sweet and tender visitations of the Most High, and is now become dry, dead, barren, thick, earthy; O my God! let that soul feel the stirrings of the springs of life, and find some encouragements from thee, to hope in the free and large mercies of the Shepherd of Israel; who casteth not off his sheep because of their wanderings, because of their backslidings, because of their infirmities, because of their diseases, nay, not because of their hardness; but pursues them with his love, findeth them out, visiteth with his correcting hand according to their need, wordeth with his sword, and melteth in his fire, until He hath made them tender and pliable, and then He pours in the fresh oil of his salvation and sweetly healtheth them.

O my friends and brethren in the pure life! be faithful to the Lord in returning Him all the incomes of his spirit; follow on in every drawing of his love, walk with the virtue of it lasts upon your spirits. Walk with Him all the day long, and wait for Him all the night-season. And, in case of erring from Him, or sinning grievously against Him, be not discouraged; for He is a God of mercies, and delighteth in pardoning and forgiving much and very often. What tender mother can be more ready to forgive and embrace the child, that appears broken and afflicted with her sore displeasure! Yea, He gives brokenness, He melteth the heart, that He may be tender towards, and embrace it in his arms of reconciliation, and in the peace of his spirit.

O my dear companions and fellow-travellers in spirit towards the land of the living! all the motions of the life are cross to the corrupt part—well in the life, draw the yoke close about your necks, that you may come into unity with the life, and the corrupt be worn out. Take the yoke, the cross, the contrariety of Jesus upon your spirits daily; that that may be worn out which hinders the unity; and so ye may feel your King and Saviour exalted upon his throne in your hearts; this is your rest, peace, life, kingdom, and crown forever.

We have received a communication from one of the officers of the Chesapeake and Delaware Canal Company, referring to the statement respecting Henry V. Lesley in "Incidents and Reflections," No. 199, in THE FRIEND of Eleventh Month 30th.

From this it appears that there are several things contained in that statement which are incorrect; and that there is not as much ground to believe in the sincerity of H. V. L.'s repentance as it would indicate.

This is published not out of any ill will to the poor man, but in the interest of historical accuracy.

We have received from the publishers, Garrigue & Bros., 608 Arch Street, Philadelphia, a small book of selections from the writings of Jennie Smith, bearing the somewhat peculiar title "*Gold and Silver Nuggets*."

We have not gone over the whole book, but find that it contains many pious sentiments,

which may furnish food for profitable thought to those who will reflect on what they read.

SUMMARY OF EVENTS.

UNITED STATES.—President Harrison on the 4th instant, appointed David J. Brewer to the United States Associate Justice of the Supreme Court of the United States. The Senate Judiciary Committee has ordered a favorable report on the nomination. A citizens' meeting in Philadelphia has adopted a resolution protesting against the confirmation. The temperance society has the objection of the Brewer to the Supreme Court because as United States Circuit Judge for the District of Kansas, he gave the decision that the State had no right to close breweries without compensating the owners for the depreciation in value incidental to such Prohibition. He also decided that it was not the process of law, in the meaning of the 14th Amendment to the Constitution of the United States to close breweries by injunction, but that brewers were entitled to jury trials. That would make enforcement practically impossible.

"Whatever Speaker Reed may be," says an Independent Republican contemporary, "he is no laggard." This is said with regard to his prompt appointment of five of the committees of the House, including three of the most important ones, to wit: the Ways and Means, Appropriations and Elections. T. B. Reed was elected Speaker on the 2nd instant. On the 4th instant, or exactly a week later, he had done that which his predecessor had not done in many weeks. The promptitude with which he moved in this matter occasioned great surprise in the House.

The Cherokee Commission has concluded that it is useless to treat the other negotiations with the Cherokees for the purchase of their lands, and are now arranging for the removal of other Indians to the unoccupied Cherokee lands. The Commission will notify Chief Mayes of this decision, and will ask him to file his resignation. President Willard is in Albany.

During a theatrical performance in the Opera House at Johnston, Pa., on the night of the 10th instant, a cry of fire was raised and there was a terrible rush down the narrow stairs. Twelve persons are reported killed and 50 injured.

A steamer arriving at New York from the South report "an exceedingly large number of floating wrecks" in the path of vessels bound north and south, and at the Hydrographic Office it is said that, unless something is done to clear the seas of such dangers, a marine catastrophe will surely result. A number of men of excessive size, the biggest—had of twelve—is reported. His heart is affected, and little hopes of his recovery are entertained. He lives in Connecticut, where a cigarette law was passed last winter.

In consequence of the danger from uninsulated electric wires mounted on poles, in New York city, resulting in several fatal accidents, Mayor Grant, under authority of the Court, has been cutting down such wires the past week.

Deaths in this city last week numbered 566; 14 more than during the previous week and 35 more than during the corresponding period last year. Of the foregoing 185 were males and 181 females; 48 died of consumption; 28 of old age; 28 of diseases of the heart; 25 of pneumonia; 17 of diphtheria; 12 of convulsions; 11 of apoplexy; 10 of marasmus; 8 of cramp; 8 of scarlet fever; 8 of mania; 8 of inflammation of the brain; 8 of apoplexy and 8 of casualties.

Markets.—U. S. 4 1/2's, 105; 4's, reg. 126; coupon, 127; currency 6's, 115 a 125 1/2.

COTTON was quiet but steady, at 10¢ ets. per pound for middling up.

FEED.—Winter bran, \$13 a \$13.50; do, fair to good, \$12.50 a \$12.75.

FLOUR AND MEAL.—Western and Pennsylvania super, \$2.50 a \$2.75; do, extra, \$2.75 a \$3.00; No. 2 white, quiet, \$3.25 a \$3.50; Pennsylvania family, 2's, \$4.00 a \$4.25; Western winter, clear, \$4.00 a \$4.20; do, no, straight, \$4.25 a \$4.45; winter patent, \$4.50 a \$4.80; Minnesota, clear, \$3.50 a \$4.00; do, straight, \$4.25 a \$4.75; do, patent, \$4.75 a \$5.15. Eye flour was quiet but firm, \$8.15 a \$8.25 per barrel. Buckwheat flour was steady at \$1.80 a \$1.90 per 100 pounds for new.

GRAIN.—No. 2 red wheat, 80 1/2 a 81 cts. No. 2 mixed corn, 39 a 39 1/2 cts.

BEEF CATTLE.—Extra, 4 1/2 cts.; good, 4 1/4 cts.; medium, 3 1/4 cts.; common, 3 a 3 1/2 cts.; fat cows, 2 1/2 a 3 cts.

SHEEP.—Extra, 5 1/2 a 6 cts.; good, 5 1/4 cts.; me-

dium, 4 1/2 a 5 cts.; common, 3 1/4 a 4 cts.; culls, 2 1/2 a 3 cts.

LAMBS.—Extra, 6 1/2 a 7 1/2 cts.; good, 6 a 6 1/2 cts.; medium, 5 1/2 a 6 cts.; common, 4 1/2 a 5 cts.; culls, 3 1/2 a 4 cts.

HOGS.—Extra Chicago, 5 1/2 a 5 1/2 cts.; good Western, 5 1/2 a 5 cts.; common Western, 5 a 5 1/2 cts.; State, 4 1/2 a 5 cts.

FOREIGN.—A despatch from London announces the death of Robert Browning on the night of the 12th instant. He had just published a new volume of poems.

The London Post of the 16th instant, discusses the Mokoland affair, and asks how Portugal reconciles her claim to the whole district with the action of Serpa Pinto. The Post admits the gravity of the situation, the main result of which, it says, will be to precipitate a settlement of the old dispute.

The Lisbon papers accuse — Johnston, the British Consul at Mozambique, of availing himself of a Portuguese "safe conduct" to pursue anti-Portuguese propaganda among the natives.

On the 12th instant there was an explosion in the Belmez mines in Spain. Fifteen injured have been brought to the pit. The number of dead is unknown, but it is thought to be large.

An epidemic has been spreading over Russia, and Europe generally. Although the victims of the disease suffer much, it is rarely fatal.

Deplorable accidents continue to reach Odessa from several districts in the Volga provinces of Russia. The failure of this year's crops in that region is the cause of the distress. The Government has ordered the holders are now selling most of their stock for food. According to a despatch, "unless the Government comes to their aid, and that quickly, a famine is inevitable. The poorer peasants and laborers are utterly impoverished, and absolutely without means of subsistence for the future."

The Ex-Emperor of Brazil, now in Portugal, has received a telegram from Rio Janeiro informing her that all her jewels have been stolen, and that the police are investigating the case. This loss will be a serious one to the Imperial family. In the collection of jewels were comprised the finest Brazilian diamonds there are in the world. If the Brazilian Republic should decline to continue Pedro's income, the loss of these treasures will be severely felt, as they were looked upon as the chief immediate resource of the family.

Don Pedro and the Republican authorities in Brazil have made some correspondence by cable on the subject of the settlement upon the ex-Emperor of a large sum of money as a retiring pension or solace. Don Pedro has uniformly maintained since his exile, that he would not accept the gratuity that it was at first reported had been voted him. He has even spoken of it with some irritation. He has adhered to his purpose in the final answer, just sent to Rio Janeiro through the Brazilian Legation, which is to the effect that Don Pedro declines to accept any sum beyond that authorized by the laws of Brazil.

A thrilling accident occurred to the Canadian Pacific through express train in the mountains along the Columbia River, on the 7th instant. "A rail gave way at a point on the mountain side, high above the river. The engine passed over safely, but the two coaches following swung about and toppled over. The hand was nearly perpendicular, and the cars would have tumbled several hundred feet below into the flowing river had it not been that the coupling twisted around and held the tremendous weight. There were the two cars, one with its load of passengers, suspended between heaven and earth. The weight of the engine and the balance of the train, prevented the suspended cars from drawing the whole train down. The suspense was dreadful. The frightened passengers were crowded in their perilous position until the train had built a platform around and under the escape the hanging cars, enabling all to make their escape. The place where the accident occurred is considered the most dangerous point on the mountains."

FOR "THE FRIEND."

Incidents and Reflections.—No. 203.

WORLDLINESS.

It has long seemed to the writer, that the costly and ornamental style adopted by many congregations in the erection of places for worship, indicates a yielding to the spirit of worldliness, which is inconsistent with the self-denying spirit and religion of Christ; and that the effect of it is injurious to the promotion of his cause in the earth.

In one of the letters of Dr. Mutchmore to *The Presbyterian*, he relates an occurrence in Scotland, which is instructive. A house for worship had been located in a fashionable place, into which had gone a large congregation of people, who used the church to promote their social position. It was the sanctuary where the efforts were all for quality, style in dress and person. If they were not objects of worship they were of admiration. It was thought that this high-tonedness would certainly attract wealth and nobility. But they had reckoned without calculating the force of God's way of working, which is that "the weak things of this world shall confound the mighty."

A nobleman of wealth, birth and honor was hastening to this building for it was to be a great occasion. Two of the most eminent men of the kingdom were to be present. The foreign missionary cause, in which he was greatly interested, was to be presented. As he reached the vestibule the plate was being passed for the offerings, the elder dressed in faultless style. The plate he carried was filled with bills and sovereigns. He hastened to welcome the Earl, who was standing within the audience-room, waiting for the eminent elder, whom he knew, to give him a seat.

As he neared the Earl a modest, timid, elderly woman, whose face had been chastened by sorrow, whose hair was arrayed in what seemed to be faded widow's weeds, came timidly near. She was poor, but bore the marks of Christian ladyhood, she had lifted her hand and laid a penny, the only one on the plate, amidst the heaps of shining gold. It was a lone thing in the midst of wealth, a poverty-stricken copper among glittering crowns. The elder, tenderly enough in manner, lifted it from the plate and handed it to her saying, "Pardon me, we don't take coppers

to-day." And then said to the Earl, "It will give me great honor to conduct you to a seat." The Earl made no reply, his eyes were fixed on the sadly retiring form, in whose eyes he thought he discerned falling tears. He, after a moment, said, "Pardon me, I think I will go and worship with the old woman whose penny you rejected," and without further words departed, greatly to the embarrassment of the elder and the minister, who had esteemed it a great honor, for the Earl had never been there before.

The minister asked what had occurred, was offended because he had waited a moment for a seat? It cast a gloom over all expectations. The elder could give no satisfactory reason, but the words lingered strangely and accusingly in his ears, "Pardon me, I think I will worship with the old woman whose penny you rejected." It was not until the elder had retired at night that the secret flashed upon him, after the review of the day which had him a great success in raising money and in soul-stirring eloquence from the great preachers. But none of them quite satisfied the elder's troubled heart and perhaps wounded vanity, that he had missed the honor of conducting the Earl to a seat. "Pardon me, sir, I think I will worship with the old woman whose penny you rejected," at last it flashed across his mind in the Saviour's words, "Verily, I say unto you, that this poor widow has cast more in than all they which have cast into the treasury; for all they did cast in of their abundance; but she of her want did cast in all that she had, even all her living."

The instructive autobiography of Joseph Pike, one of the early members of our Society in Ireland, shows the care he felt to guard against a spirit of worldliness, and to be a good example to the flock. He began life with but little property, and engaged in trade in a moderate way, in which he prospered. He says: "Notwithstanding I had at times prospects of considerable advantage, by which, in human probability, I might have derived much more profit than I did; yet, if they seemed to be attended with hurry or incumbrance, or would be ill examples for others to follow, I have often declined the prosecution of such prospects, notwithstanding I had stock wherewith to do it."

"A prospect of very great profit offered itself of buying in tobacco, there being abundance of it in town [Cork] which was imported and paid only the old duty; but it was considered, that as soon as the Parliament sat, they would lay the high duty on it again. It was variously conjectured, as the debates thereon continued for some time; however it made those who had tobacco on hand generally willing to sell at the present prices. During this time my cousin, Samuel Randall, proposed for my consideration, the propriety of our purchasing a large quantity, saying it should quickly be decided, as others would purchase. I considered it, and was of the same opinion with him, that there was a likelihood of making a great deal, and no apparent danger of losing, but I had also con-

sidered what the people would say, namely, "Here are Samuel Randall and Joseph Pike, rich Quakers; they are grasping and covetous; they cannot be content without turning monopolizers."

"Though the thing was just in itself, and others might do it without reflection, yet we could not, for the people would not only reflect upon us, but by our means upon Truth also; and for this reason it was better to decline it. This presently met with his approbation, for we were both of one heart and one mind, in anything that affected the honor of Truth; and for that, reason alone we gave it up. In a day or two, another person bought most in town, by which it was generally believed he made several thousand pounds; for by the next post, news came from Parliament that the duty was laid on; and thus we missed this large sum for Truth's sake, and I never repented it to this day; for if it were to do again, and that I was sure of getting the same profit which the other person did, I would still decline it for the same reason."

The difference between a man who is worldly-minded and one the main bent of whose life has been to serve the Lord is well illustrated by an anecdote told of a woman who was visiting an aged man, a friend of her father, and one who was associated with him in early life. The old man was one who had obtained all that this world can give. Now he inquired of the state of his friend, whom he knew to be in circumstances of far less external comfort than himself. As he listened to the story of his patience in suffering, and of the cheerfulness with which he could look forward either to a longer pilgrimage in this world, or to the hour of death, he exclaimed, "Yes, yes; you wonder I cannot be as quiet and happy too; but think of the difference, he is going to his treasures; and I—I must leave mine."

A similar lesson is taught by the remorse felt on his death-bed by a wealthy man, whose conscience told him that his life had been ill-spent. He exclaimed, "It is a life devoted to money-getting that I regret. It is this which weighs me down and makes me despair of the life hereafter."

In a paper read before a Ministerial Union in Philadelphia, in the Ninth Month of 1886, R. C. Matlack recalled a striking incident, which was communicated to the New York press a few years before by a deeply humbled minister. One of the leading members of his church was greatly distressed in his last sickness on reviewing his mode of living, and reflecting upon the large amount he had spent upon his family, and the comparatively small sum he had given to the Lord. In every way the pastor endeavored to comfort him. He spoke of his having always given cheerfully, and as much as others did. He reminded him that the best of us are unprofitable servants, and must look to the mercy of God in Christ as our only hope. The troubled man found no peace or comfort, but grew more and more uneasy, distressed and agonized

as his end drew near. At last taking the hand of his pastor he said, "Brother, I am going to the Judge unprepared to meet Him, because you have been unfaithful to me. For years I have lived, and taught my family to live, largely for this world. We have denied ourselves nothing, but spent thousands on personal comforts and luxuries. My business energy and time and money have been mostly devoted to self-pleasing and gratification, and how can I meet my Judge and give an account of stewardship? I am beyond recovery. Do what you can to save other professors who are in the same current of worldly self-indulgence and extravagance which is sweeping them to destruction."

J. W.

FOR "THE FRIEND."

Some Account of Ezra Comfort.

(Continued from page 162.)

A young woman came in and sat by him, she said, "Since I have lain here my gracious and Divine Master has been with me, and given me a comfortable hope that when I depart I shall be mercifully assisted or carried into heaven, where there is no more distress but it is happiness, life and love. Now, dear child, let me tell thee it is impossible to become heirs of two kingdoms. Most assuredly where there is no cross there is no crown. Now there are a few things that have become too common among dear youth, such as curling their hair around their foreheads in order to beautify them, and that of ruffling their handkerchiefs around their necks, and not wearing clothes sufficient to keep them from the cold, by which some have impaired their health for life, my even in some cases it has brought them to an untimely end. Those things for several years past, when brought to my view have grieved my heart. What have these things done for them? It has not done any thing for them, neither in their fortunes nor happiness, in any way. I have seen in the clearness from whence these things have originated; they have proceeded from that old evil root, which is *pride*, which deceived our first parents and occasioned their downfall, which has and ever will occasion a separation from the Divine Being; for these things are offensive in his Divine sight. Now what will these things do for any when they are arraigned before the bar of Divine Justice to receive the sentence of depart from me ye workers of iniquity, I know you not. Now, dear child, I mention these things for thy consideration in much love and tender affection towards thee, not knowing that I shall ever see thee again in mutability. Now for thy encouragement I am free to tell thee, I have in part had a prospect of Heaven; I may say in part, for it is not for us while here to have a full view thereof. I have seen it to be a glorious place, and He who wore the crown of thorns, who was spit upon, pierced with a spear and crucified, I saw sitting on his throne with the saints and angels around Him; when He went they gloriously marched on surrounding Him. Oh the glory and joy, the harmony and love that reign there; it cannot be one half set forth by the tongue of mortals. The fresh remembrance of these things do so affect me, I can hardly mention them. Oh! the prospect is so glorious. I have been earnestly solicitous for many years, that my fellow-mortals might submit themselves to the teachings of the cross of Christ. I have seen a little into the glory, pomp and splendor of this world, or the great and rich men of the world; what a great driving, hurry and bustle they are in, bringing their ships from far to ob-

tain this great splendor; but alas! when the time comes that they are summoned to give an account, the sentence will be, depart from my presence, ye that loved these things more than me. Now, dear child, I have felt my heart to flow with love toward thee, believing thou art an innocent young woman. Do not call these little things that I have mentioned to thee: they are by some called little things, but remember, they that despise the day of small things shall fall by little and little. I think I have felt my mind measureably clothed with Divine impressions to mention these things. Now I feel a degree of that peace, which I trust I shall ere long be in the full enjoyment of, with the saints and angels in Heaven, there forever to remain singing high praises to the Lord God who sitteth on the throne forever and ever."

Again a young woman came in and sat by him; he said, "Dear child, if I should never see thee again in mutability, strive with all thy heart to serve thy great Creator, and then He will discover all the by-ways and crooked paths, and will finally lead thee up into the realms of everlasting peace."

B. W. coming in to see him, he said, "I feel as though I could weep heartily, but the time of weeping is nearly at an end by reason of my great weakness. I have been looking and looking for the end of my afflictions; for most assuredly I am a man acquainted with affliction; yet notwithstanding through all I have felt an anchor of hope. The billows of affliction have rolled over my head; yet that precious anchor that has been my helper from my youth up, has been underneath to stay and support my little bark that it has not yet been swallowed up."

He again said, "Oh my distress and afflictions are so great! how is it possible for me to bear up under them. I feel as one of the poorest mortals on the face of the earth this day; the Lord for some cause only known to himself, has chastened me as with a rod of iron. I have thought of Cain when he was thrust out from the Divine presence, who said, my punishment is greater than I am able to bear. Oh gracious God, forsake me not! lift up the light of thy countenance again upon me, which thou hast given me at times to feel, since I have been under thy chastening hand, which has been as an anchor to my soul, which has been my support. Be pleased to be with me, and keep me under the hollow of thy hand, and under the shadow of thy mighty wing, then I shall be able to bear whatsoever thou may be pleased to lay upon me the little remainder of my stay here, that when I go hence to join the happy saints, I shall be released from all sickness; then I shall join in everlasting anthems of praise to thee the Lord God and the Lamb." He then broke forth on this wise: "Oh I now feel my soul at this time to join them in songs of hallelujah and high praises to Him that sitteth on the throne, who is worthy thereof forever and ever. Amen."

Again he said, "I have been made sensible that my offerings have been accepted and are gone up into the treasury." In the evening of that day said, "I know not what this night will bring forth—I have a glorious prospect before me." Next morning he appeared to be in great distress, his son-in-law, B. W., sitting by him, he said to him "the time seems long that my afflictions are lengthened out." B. replied, "there were others that had lain long wasting away—life seemed to spin out." He replied, "Yea, I know it; but when the time comes that we shall be released and united with that glorious company of saints in the Church Triumphant, all this

time will then seem as but a day, or an hour. I have seen as clear as if they were before me, and I could see them with my outward eye, that there are thousands and tens of thousands, out of all nations, kindreds, tongues and people, who are going up to the mountain of the Lord; and the prayer of my soul at this time is that they may hold out through all unto the end; that their faith may be kept; that one of their stakes may not be broken nor their cords loosed, till they ascend up the mount, even to the City of Zion, where we shall all unite as brethren and sons in the redeeming love of the Lamb. These are they who have known their swords beaten into plough-shares, which is their nature brought into a culturing, teachable state; and their spears into pruning hooks, which is a state of industry, doing what is required of them to do. Here is no exaltation of self—Oh no! but their wills are brought into subjection. I have also seen that there are thousands and tens of thousands that know not the way, nor are ascending up this mountain, nor will ever come into the Lord's house. My heart has been much affected on account of these; some of them high professors, too, who sometimes undertake to teach others. Those who do not know their own strength will be brought into subjection or crucified with the Lamb; their swords and spears are not beaten, but they are whetting them up, they are full of pride and high-mindedness; these are not those who have gone through tribulation, their robes are not becoming washed in the blood of the Lamb."

(To be continued.)

Cairo.

To prepare for this visit to Cairo I satrated myself with the contents of many guide books and books of travels, read missionary letters for years, and listened eagerly to travellers' tales.

As soon as possible we plunged into the street and were absorbed in the ceaseless crowd. The streets are very narrow and irregular, like all those of Eastern cities, which greatly increases the confusion. Of sidewalks there are none worthy the name in the principal Arab quarters. Donkeys and camels without number are continually forcing their way through. Different races of men, with their costumes, languages and cries, move in and out, and the wild masquerade dance is the only figure of speech which will convey any idea of the scene. Yell in languages entirely unlike those of Europe, loud, hoarse, and dissonant, threaten the tympanum of every foreign ear with rupture. It requires an hour or two to discern the lines of order in the general chaos. A great agricultural fair, when the crowd is entirely beyond the accommodations of the place, is the best type an American can get of this motley city on market days.

I will mention some of the most peculiar characteristics of the scene. The barber shops are all open to the street, and in the course of a few hours' walk perhaps a hundred barbers could be seen shaving the heads of their customers, which they do with great rapidity. In the street, in advance of coachmen, run men, and by the side of donkeys' attendants, with camels, whose drivers are constantly yelling to persons to get out of the way. They specify the part of the body in danger of collision, and scream at persons to take care of their feet; such cries as "Your left side," "Your right side girl," "Your back, lady," all in Arabic. Water carriers are working their way about, a few selling the water, but the majority giving it at

a benevolent act, being paid by some person who tells them to do so. They utter cries equivalent to "May God recompense me." When they are accompanied by employers, they cry, "God forgive thy sins." All the vegetable sellers are continually yelling in the same way. Instead of crying the names of their wares, as is common in countries with which we are familiar, they use such expressions as "God will make thee light, O lemon!" meaning that He will make the baskets that hold them light. Wandering cooks go about with their kitchens set them up anywhere, cook their fish, puddings, and whatever they have, and their customers sit down cross-legged along the side of the street.

Almost all the mechanics work with their doors and windows open, and many of them in the street. It is very curious to see what excellent work they do with their primitive tools. Auctioneers run to and fro calling out their wares and their last bids. Peddlers carry tables on their heads and set them up wherever they please. All is done in the best of humor, but with a great deal of voice and gesture. The peddler of roses cries, "The rose was a thorn, but the sweat of the Prophet caused it to blossom." Beggars add to the confusion by screaming, "I am the guest of God and the Prophet;" and, toward night, "My supper must be thy gift, O Lord." Here and there little eddies are formed in the crowd by those who go about collecting a ring of spectators and performing feats of leg-ambulation.

In mid all this a funeral procession may come, pushing its way through, preceded by camel-bearing bread and water to give to the poor at the tomb, though when the deceased was poor this is not done. Then come singers chanting the usual formulas, and the friends, finally, the pronouncing crowds. The bier is carried upon the shoulders of the people, and the body covered with shawls, and not in any coffin.

I omitted to state, in speaking of donkeys and camels, that the most astonishing cracking of whips to be heard in the world goes on continually. Some of them sound almost as loud as pistol-shots, and every one who has a whip does his best to make the loudest possible crack. The common method of travelling about the city is upon donkeys. The person who hires the donkey mounts it, and the donkey-boy runs by his side, never appearing to be in the least degree weary.

These are but a few of the elements of the confusion taken almost at random. I should certainly have lost my head if I had not visited the Stock Exchange in New York a few times.

Amused by all this, I went to the gardens, even though, of very placid looking people sitting in the dots of the coffee-house, of which the number in Cairo is countless, drinking their coffee, or smoking with those peculiar pipes that have an arrangement for the smoke to pass through water, and then to be drawn through tubes from six to ten feet in length. These look as serene as if upon the shady bank of a stream on a midsummer's day.

From above the uproar falls at certain hours the cry of the Muezzin from the minarets of the hundreds of mosques calling the people to prayer, and the great majority respond to them; but a very few minutes are devoted to the act. In the bazaars many of the dealers who do not happen to have a customer on hand can be seen reading the Koran, the effect of which is quaint. The crowd rushes by, and this man sits cross-legged, not more than three feet from them, entirely ab-

sorbed in his devotional book, but he is ready at a second's notice to drop it, his abstracted look disappears, and an eye keen for a bargain takes its place.

In the letters on Morocco, I spoke of taking the first lesson in the language of turbans, and anticipated, on reaching Cairo, the opportunity to master the science, but a great change has taken place within a few years. "White" Arabs from the earliest times have distinguished their religious divisions, families, and tribal connections by the color of their turbans. It is now impossible to decide absolutely upon any general principle. The descendants of the Prophet called *Sharif* wear green turbans, but they are now often worn by pilgrims to Mecca. Scholars and priests generally wear a very wide turban of light color, and non-Mohammedans wear turbans generally dark, the Copts taking the blue, and the Jews the yellow color; but even this, though dating from a decree four hundred years old, is not now a certain method of identifying the wearer.

It is stated that an orthodox turban worn by a Mohammedan is seven times as long as his head, so that it can be used as his winding sheet, and that wearing it may remind him of his mortality. But I have seen many that could not be of those dimensions.

The crowds that fill the streets where business is done would deceive a stranger as to the population of the city. When one steps out of those streets he finds very few people during business hours; the women are in their houses, the men go to their places of trade. In the middle of the day, if it is at all warm, business ceases as if by magic; but about two o'clock, the *siesta* being finished, the rush begins again and continues till late in the day. The view of these scenes never palled nor grew monotonous during our various visits to Cairo. Two or three hours a day could easily be spent observing it, and it fully justifies the writer who described it as a mosaic of the most fantastic and bizarre description.—*J. M. B. in Christian Advocate.*

FOR "THE FRIEND."

The following letter of the late Thomas Kite, to a young woman who had engaged in the employment of teaching, contains hints that may be instructive to others:—

Philadelphia, Sixth Mo. 4th, 1825.

Dear Anne.—Thy letter afforded me satisfaction, though it has remained some time unanswered. I have felt a lively interest in thy welfare, and a desire that thy talents for usefulness might be beneficially extended; and it is a source of gratification to me to believe my wishes in this respect are answered, and that thou art filling the important station of a teacher with credit to thyself and advantage to those under thy care. Yet I do not doubt thou art sensible of some deficiencies,—which is a profitable feeling, because it preserves the mind in a state willing to improve. The admonition of Paul to Timothy, though referring to the circumstances of the latter as a minister of the Gospel of Christ, may be accommodated to the situation of all who teach others.—Take heed to thyself, and to the doctrine thou teach. Take heed to thyself, to the state of thy mind, to thy example. The capacity of regulating others depends very much upon our being ourselves regulated by the Spirit of our Holy Redeemer; the ability to guide and form aright the susceptible minds of children upon our being guided and formed ourselves under the influence of his power. I wish thee, dear Anne,

to take heed to thyself; and not only so, but to the doctrine. It is of great importance that the sentiments instilled into the youthful mind be sound and correct; and although thou mayst not think it thy province to deliver to the children thy sentiments on controverted points, yet occasions sometimes occur when our opinions on important points are elicited; hence the necessity of "taking heed to the doctrine." I believe thou wilt consult the interest of the dear children, by preserving them, so far as thy influence extends, from the contagion of sentiments, which, unhappily, too much prevail, and which are calculated to weaken the faith of those who imbibe them in the Divinity of the Lord Jesus Christ, the authenticity and inspiration of the sacred records of the Old and New Testaments, the innate depravity of man, the necessity of regeneration, the atonement and mediation of Christ, and the sanctifying operations of his Spirit.

Do not misunderstand me. I do not want thee to embark on the stormy ocean of religious disputation, but merely wish, that with prudence and caution, by precept and example, thou wilt endeavor to inculcate a reverence for the Scriptures and for Scriptural truth. In the expansion of human intellect and the progress of scientific research, it seems difficult to conceive the extent to which new discoveries in science and art may be pursued; and this is well, kept in its proper place; it enlarges the empire of mind and contributes to the comfort of man. But in religion the case is different; there the old way is the only safe way, and human reason leads but to bewilder, and dazzles but to blind; "the path which has led the righteous of former generations to eternal felicity, is the only path which can lead us to the same heavenly inheritance. That path is Christ,—Christ, once in the flesh, always in the Spirit. "I am the Way, the Truth, and the Life," saith He, "no man cometh to the Father but by me."

When I took up my pen I had no presence of a subject to write upon, but merely the general feeling of affectionate well-wishing. The serious turn my letter has taken has been wholly unexpected. Under the same feeling of love with which I commenced, I close it, remaining thy friend,

THOMAS KITE.

No language is so subtle, yet so unmistakable, as the language of sympathy. It shows itself by signs invisible to all except those who suffer and who sorrow; and to all except these it is a language inaudible. A true-hearted mother who had borne nobly a biting grief in the loss of her children, casually met, in subsequent years, another to whom she had no formal introduction, and of whose history she knew nothing. "I have seen that lady once or twice before," said the bereft mother to her husband, "and I know she must have lost children; she has never spoken to me on the subject, and I have for two or three years wondered who she is; but I know from her manner toward me that she must have lost children."

Who but one so afflicted could have perceived the signs that the mother saw, or have heard the voice of sympathy that she heard? It is something to be able to speak that unambiguous tongue,—to have one's mere presence a balm to wounded hearts. But it is a power that comes only through having suffered. It is a language learned only in the school of pain and sorrow. It is obtained only at great cost; but once obtained, it is always worth more than its cost. No one need suffer or sorrow in vain.—*S. lected.*

FOR "THE FRIEND."

An Awakening Sermon.

The following narrative is extracted from a letter written by the late Abigail W. Hall (then Williams), to her mother, Hannah Williams, in the Third Month, 1844. Abigail was at that time a teacher in Westtown Boarding School.

"Sarah Emien dined with us last Fifth-day. I walked home with her—how weak and tremulous she did seem; perhaps she was rendered more so by her deep exercise and labor in meeting that morning. It was a day that will long be remembered by many of us; as it will be interesting to you to hear, will try to give a pretty full and correct account as near as I can.

"Our meeting assembled that morning as usual. Thought there seemed during the fore part of the meeting a good deal of unsettlement, particularly on the boys' side. About the middle of the meeting Sarah arose, laid off her bonnet, proceeded along the aisle about two-thirds of the way—opposite the fourth and fifth bench from the last, laying a hand on the back of each; her back turned to the girls—face the boys. In this position she stood, it seemed to me, for several minutes, during which time profound silence reigned, and the feeling which prevailed was awful. She then commenced—

"I believe it is in the authority of my dear Lord and Master, Jesus Christ, that I am constrained to come and stand thee before you, on this side the house. Oh! how has my spirit been grieved this day with the lightness and frivolity of some of your spirits. I have been made to fear that the vials of the Almighty are ready to be poured out on the heads of some of you, for your irreverence towards Him. You have dishonored^d your exercised teachers and turned into contempt their labors." With something further, then proceeded: "Though you are now young, your bones full of marrow and veins with blood, which is your life, yet ye may suddenly be brought low—brought into judgment. Have ye not seen instances of it, in this very house? set forth the awfulness of an unprepared death; to be brought before Him whose eyes were as a flame of fire—the hand-writing (or their sins) on the wall appearing against them, believed one more visitation was in mercy extended." And Oh, how did she plead with them to join in: "Can ye bear with me; I am a mother, and from the very bottom of my spirit I feel for you. With something further; then returned to her seat.

"Great stillness prevailed for, I suppose, fifteen minutes, when she knelt. 'We have all need of mercy, that our sins and transgressions be forgiven; but O, dearest Father, more especially would we at this time intercede with thee for the wayward, the untoward, the disobedient, and may we not say hardened, sons. Spare them, O Lord, a little longer; lengthen out to them the day of thy grace that they be not cut off.' "Some of us this morning have been made to believe that for some present not many days, perhaps not many hours, are allotted for the great work of regeneration to be perfected." "Bow thy heavens and come down; cause their hearts to melt as wax before thee, that they may receive again the impression of thy image, which has been defaced by iniquity. Inspire them, we pray thee, for a desire for thy saving grace; make them to cry out from the inmost

recesses of their hearts, 'What shall I do to be saved?'

"Concluded with a very fervent intercession, that impressions which had this day been made might fasten as a nail in a sure place, by the Master of assemblies; that we might all yet be brought together in worshipping thee, in the silence of all flesh.

"The meeting closed under a covering of great solemnity, and which lasted for some time. Among the girls not a whisper was to be heard, and many of them were much affected; and as they sat scattered over the collecting room; several of them wept aloud. Such a scene I never remembered since being here. May it not prove as the morning cloud or early dew with any of us, for we have need all to lay it to heart."

Our Gallery—Northern District Meeting.

WRITTEN BY JOSEPH KITE.

[The following lines, descriptive of some of the worthies who belonged to the Northern District Meeting of Friends in Philadelphia, 50 or 60 years ago, were found, after his decease, among the papers of the late Joseph Kite, author of *The Arm Choir*. They are inserted in *THE FRIEND*, with the hope that they will interest some of its readers who still retain a remembrance of some of the persons therein described.]

OUR GALLERY.

Gone are our Princes! and the common lot
Records their lives,—they were and they are not!
Man bows submissive as Death's shaft is hurled,
Ere long conqueror of an handful world!
Dust seeks its dust! Thee from the freed spirits know
A union with their Head, commenced below.
Here, of the well of life they joyful sang:
There they partake the fount from whence it sprang!
The worthies of an earlier day had fled
To join the mighty army of the dead:
Emien and Savery, Scattergood and Jones,
Whose trumpets filled the ear with gospel tones,
No more were here beside the altar foud,
Nor to the people gave a certain sound!
Who first amid the gathered flock I came
To the North Meeting; still a living flame
Burned on the altar; still a chosen few,
Could the remembrance of past days renew:
Though glorious lights had passed the heavenward
track

Their beaus reflected came in glory back!
Though oft we mourn for better days gone by
When our forefathers, of stern probity,
Stood as a rampart, throwing back the tide
Of coming billows, threatening dangers wide,
Yet seen not all is lost. Are there not now,
Here many hearts no Bul learn to bow!
Souls firmly wedded to a suffering Lord,
And gifted servants to proclaim his Word!
We may not name them though we find world name—
"Well done" at last will be their well earned fame!
Their warning voices still upon the wall,
Their warning voices to the careless call;
Happy the children of our time will tell,
To their descendants, while their bosoms swell,
How nobly stood the worthies of this day,
With armor burnished, fitted for the fray;
How battled they with an attacking front,
Bearing the conflict's most appalling brunt.
Here they may mourn our worthies are laid low,
And fear that Israel no more such shall know;
But He who holds creative power, can still
Call into being servants of his will.
In every age a remnant will be found
To do his bidding, in his Grace abound;
Go in and out before the people, clad
In that bright armour that makes Israel glad.

JERUSALEM CURTIS.

Mid briars and thorns a gandy flower-bush grew;
Bowed bruised to earth, abroad its odors threw;
For soon a storm swept through the bright parterre,
And tempest darkness filled the troubled air;

Its painted leaves then lay upon the ground,
Buds of its being strewed the earth around:
Proudly awhile it fluttered in its pride,
With its gay branches glowing at its side;
The Gardiner laid the fairest scions low,
And on the poor straggled bush few shoots to show,
But a sweet fragrance all unknown before,
Did from the world's stried soil balsam pour.

Jerusha Curtis^d in her hour of joy
Lived to the world, scarce tasting of alloy.
Her children held her with a powerful tie,
Who on the poor straggled bush drew from the sky,
Mercy removed her idols, stained the view
Of worldly pleasures, as it gently drew
Towards the Saviour,—till she humbly stood,
A living witness of his cleansing blood.
Then for his cause she raised her voice of praise,
And died in hope,—rejoicing in his ways.

LEONARD SNOWDEN.

Thy meek kind look,—thy penetrating eye,—
Thy earth-loved form,—thy thought ascending high,
Thy steadily gathering to the house of prayer,—
Thy reverend waiting on the Master's side,—
Thy honest dealing,—sympathetic press
That sends the mourner help in deep distress,—
Thy quiet movement through the crowded mart,
That shared thy presence, but held not thy heart,—
Thy self-denial, yet ever proud smile,
That o'er thy features beamed and lit the while—
Lives in remembrance—though no more we dwell,
On that dear contentance we loved so well.
Cast on a sea of trouble, when the light
Of angry elements in struggling might,
Brought secret disaffection into view,
Calmly thou didst thy troubled path pursue
So firm, yet gentle, in thy Master's cause
Kind, yet unbending, steadfast to his laws,—
The very men who did their Lord reject,
Scarce knew to treat thee with marked disrespect.
Still Leonard Snowden had a certain place
With men far entered in the sceptic race.
In placid eve his sun went down in peace,
And he was gathered where all conflicts cease.

EDWARD RANDOLPH.

Strong in thy will and purpose, earlier life
Saw thee a combatant in martial strife
Where drums and trumpets fired the angry mood,
With honors fire, and garments rolled in blood!
Another warfare it was thine to know,
A strife more arduous, with an inward foe,
To know a victory over wrong desire,
In warfare made possible by a consuming fire.
May we not hope a conqueror in this field,
Did Edward Randolph know his foes to yield;
O'er the last enemy victorious prove,
Through Him who lent the armour of love?
The final combat ended, loosed amain,
The passport gained through struggling and through
pain.
Safely, we trust, thy weary feet have pressed
Through swelling Jordan to the land of rest!

ANN MAULE, MARTHA ROSE, SARAH SMITH AND
ISRAEL MAULE.

Others through quiet seas have laid their prow,
Where scarce a ripple could their courses show;
Yet they as safely in the haven rest,
As when waves followed and the spray cascaded.
The quiet Mary knew the gospel springs,
As much as Martha chafed with many things.

Such was Ann Maule,—such Martha Rose, if they
But passed through life in the appointed way;
Such Sarah Smith, if studious to fulfil
The known requisites of a commanding will.
Such Israel Maule, clean-handed, and with heart
Ready to suffer his allotted part.

Ann Maule, an overseer, died Third Month
13th, 1833, in her 90th year.
Martha Rose was an overseer, Sarah Smith a
minister.

Israel Maule, an elder, died Eleventh Month
25th, 1828, in his 50th year.

Jerusha Curtis died on Third-day, the 18th of Fifth
Month, 1839, aged about 31 years, after a long and suffering
illness. She died amid afflictions, which tended to her purification. She was an honest minister
of the gospel, who brought the Truth for a price and sold
it not.

This beloved elder died the 20th of Sixth Month, 1822,
aged about 31 years and three months.

^dSome of the boys have shown a very naughty spirit lately toward some of their teachers.

MARY TAYLOR.

Faithful and continually and bravely,
 Against adverse billows with her friends to toil,
 Bearing her own cross, and rose descensions wild,
 And souls and jets were cast at Bethlehem's child,
 Was Mary Taylor steadfast for the Truth,
 Her age's stay, the promise of her youth.

Mary Taylor, an elder. During the Separation being faithful to the ancient principles of the Society, she was a mark for the arrows of the enemy at Green Street Meeting.

JANE SNOWDEN.

When by the resurrection of thy Lord,
 Quicken'd to preach the everlasting Word,
 Awestruck and trembling;—with each period's swell,
 Heav'n's symphonic answering, rose and fell:
 No idle prating for the talking's sake,
 Nor balanced words a cadenced note to make,
 Fresh gush'd thy offerings from the Fountain Head;
 And He that opened guided as they sped;
 Sent its appropriate streams where'er He chose,
 As Shiloh's waves to the Lord's March's throes;
 The word of Jordan to the stiff and proud,
 Bethesda's healing to the lame and bowed,
 Long "tarrying by the stuff" thy wearied frame,
 Not of the public altar could attain,
 Where others minister'd; but Grace had given
 To thee a bolder reaching up to heav'n;
 Like Bethel'den's there the ark was found—
 A little Bedlam at thy hearth-stone found.
 Absent in person from the worshippers
 Jane Snowden knew their spirits joined to hers,
 As life was ebbing flow'd the Gospel strain—
 The two disciples that to Emmaus came,
 As day was sinking in the reddened West,
 And recent scenes bewildered and distressed—
 Whom the dear Master joined upon the road,
 Opening the Scriptures till their spirits glow'd,
 Her tongue brought solemnly to view,
 And from the passage sweet instruction drew.
 Thus in her gift she labored to the last,
 Till time was finished and probation past!

This beloved minister died Fourth Month 18th, 1837, in her 85th year. For a very interesting account of her death, see THE FRIEND.

(To be concluded.)

The Sphagnum Swamp.

It lies back from the roadway, in a ravine to the eastward from Sandy Bank, the latter a relic of a once continuous formation, long ago largely gone seaward with the rush of waters from melted glaciers. I had gone forth in search of some old stronghold of the quiet creatures with which the obliterating instinct of man is forever at war—some lingering fastness of nature into which the accursed pick and hoe and mowing-machine had not carried death and destruction. I found the Sphagnum Swamp. Here were still to be found creatures that might raise in a thoughtful mind a doubt whether God did not, after all, have some other object in the making of the world than the facilitating of Smith's crop-raising, or the preparing of timber for neighbor Jones's saw-mill. What is the market value of the fringed carex? In what bourse of all the world is quoted the price of the cinnamon fern? Yet these were there; yea, verily, and seemed well nourished, as if they were really of some account in the economy of things!

The swamp I visited on that afternoon in June is of the sort to be found now and again among our hills. Eastward lies the stream called Crum Creek, and into that sweet brook runs the water which here wells up from the ground nearly on the divide between Crum and Bidley. The subterranean moisture oozes out of three different places, making a little wilderness of wetness, a great sponge, a home for sphagnum and carexes and their companions. The dry slopes which surround this sappy place are fa-

vorite haunts of the huckleberries and briers. At the foot of the slopes, alders and hazels and andromedas, they that love to dip their feet in water, hank the edges of the swamp, and make the half shade so gratifying to the osmundas, the blazing star, the Solomon's seal.

With what unerring precision does each species find out for itself the exact spot which suits it! Here near the trickling overflow from a spring that lay clasped by the roots of a great maple, I found the three-toothed orchid. It is safe to say that in this vicinity this is the one and only place suitable for it. No consumptive is half so sensitive about his habitat, his atmosphere, the sun total and several particulars of his environment, as is this little orchid. A beam too much of sunlight, a drop too little of moisture, and it dies the death. But here it was at home, and doubtless had been, in all its generations, for a thousand years. How small one feels in the presence of such ancient landholders! One's chatter is shamed into silence before their quiet dignity.

Hard by the orchid I saw a little bunch of dried grass. A tug at this brought forth a raging bumble bee. This lone founder of a colony had here excavated for itself a hole in the bank the size of a croquet ball, into which it had packed grass enough to fill a pint cup. Now I wished to examine the nest, but feared the bee; but she, being only one, and on that account at a disadvantage, instead of launching herself at my head, after the manner of bees, lay on her back and went pivoting round with a buzzing noise (intended to be very terrifying), evidently in an attitude of defense. So out came the grass, which seemed to have been put in with some sort of method, like a bird's twigs in the nest. The longer strands were on the outside, and in the centre of the ball was a lot of chopped grass or inner bark, making a soft little nest. The cavity was quite regularly globular, and the walls were nearly smooth. I noticed when I pulled the door-bell, that the bee came out over the top of the ball of grass.

It was amusing to see the next move of the bee. Half crazy with rage, she hurried into the cavity and examined the walls of her dwelling, feeling them here and there with feet and tongue. Finding them intact, she issued forth and clambered into the heap of grass, which promptly parted and threw her on her back. This added fuel to her fire of anger. However, after a deal of buzzing and complaining, she mounted her hay cock again, and seizing a wisp, bore it quickly into the hole, returning immediately for a second. When one's house is thrown out the window, one's only resource is to carry it back. And so we leave her. A week later the damage I had done was already half repaired.

Alas, the beauty of the great osmundas ferns! Here they were in that vigorous green that told of a well-nourished root. Near fronds four feet in length, growing in a circle, making a dark green vase with outlines unsurpassed for beauty by any costly ceramics. In one species the spores are born on a spike rising from the centre of this vase, in color a lively cinnamon, which adds much to the beauty of the plant.

Near the upper end of the swamp is a mimic cypress forest, a colony of the *Episcopus subulatum* of the botanists. Could one suddenly become as small as one's little finger, a walk through this grove of horse-tails would give him a fairly accurate idea of a landscape of the age of coal; for these are the degenerate descendants of the giants of old whose grave are the mines of

anthracite among our Pennsylvania mountains. Here also grows the wild strawberry, now ripening into that rich color foreign to its cousins of the gardens. Some bunches were short in the stem, and the berries of these lay cushioned in moist, soft sphagnum. Others were lifted up, and there they hung like a spray of jewels. As I stood admiring these gems of the swamp, I heard a rustling of the thin grass, and soon perceived a box-tortoise laboriously approaching. He passed by several bunches of berries with short stems, and paused in the attitude of invitation before a high-stemmed cluster. Praying thus for some five minutes, he then put forth a flipper and somehow drew the stem toward him. At this interesting stage I was compelled to assume a more endurable position, and in doing so I attracted his attention. He simply stopped with his foot in *statu quo*, apparently petrified with astonishment. I now underwent another long wait, but to no purpose. Not a muscle of the creature moved, save only the muscles of his eye. This member rolled a little occasionally, but was mostly kept focussed on me. Seeing that the banquet would not take place so long as I remained, I politely withdrew. Though I had not seen the tortoise eating, I knew henceforth that this berry garden was his delight.

The blue shadows from the hills had grown long, and the crest of the ridge toward Media was rimmed with yellow light. I was compelled to leave the rich spot I had but half explored, and to reserve for another day a more close acquaintance with the little yellow prinrose, the spiranthes, the wee-swall blackberry, the wild phlox, and others, each worthy of attention.

As I came over the hill, ten thousand white daisies surrounded me on every side, and every daisy was inclined—some more, some less—toward the descending sun, looking a farewell to their fountain of life. In the morning they will greet him with faces to the east. Bright sun-worshippers, you and I have something in common! In this manner, once upon a time, did my forefathers incline themselves before the day star in his risings and his settings.—T. Chalkley Palmer, in the *American*.

Pastoral System Among Friends.

In *The Western Friend* for the Eleventh Month, there are some remarks suggestive of serious thought on the present and probable future workings of the Pastoral system, which point to difficulties that may not have been foreseen by those who favored its introduction among Friends. From the article referred to the following paragraphs are extracted:

So far, the choice of these "pastors" has been made by majorities, on the popularity of the candidate. His tenure of office depends on the fickleness of the unspiritual and worldly spirits holding the balance in their majorities. To retain position or to get his pay, the pastor must stand in with and please these. If the system prevails, the day is not far off, when many of the leaders who have so urged its adoption will find their own punishment in this fickleness of majorities. Some are already finding it so, and are so set aside in their home meetings that they are practically superannuated and discarded, at a time of life when under the beautiful order of Friends they would have been more beloved and respected on account of age, uprightness and faithfulness; than at any other period of their lives. We are assured by personal friends of two such that they are greatly pained by their situation;

one of them so much so that he stated his case, as if in search of sympathy to one not of his own body of Friends. It may be hard to be thus "turned out," like an old horse to do the best they can or die; but these cases are only the beginning. What will it be in a few years more as these leaders grow old? We think we know what. As soon as this system gets entrenched in disciplinary enactments, these old leaders, knowing that this superannuation confronts them, will then begin to arrange for the support of "pastors" so set aside. These "captains of thousands" and "captains of fifties" will take the "best of your fields" and the "best of your olive yards," until you "shall cry out" in your oppression, said the Lord to Israel when they were foolish enough to demand a king to rule over them; so will it be with this new government among Friends. There is no middle ground. One part of this world's system of ministry, makes the whole necessary. This is the lesson of ecclesiastical history, and it is as wicked for Friends to ignore this as it was for Israel to reject the Lord and demand a king.

The dignity and party feeling aroused where meetings are divided in their choice of a pastor, will very soon make a court of appeal necessary. This involves the power to assign, remove or distribute. So it is only a brief time when a power must be created that outranks the "Pastor."

There are many still left, some in nearly every meeting who now see what they regard as the certain growth in the future of burdens and bosses. And when they see this and recall the "good words and fair speeches," with which they have been drawn along to endorse so many things, they feel just as if they had been designedly deceived. As they see these things, their "murmuring increases." Standing between the parties who really wish a "Pastor," as critics they are an element of power and disunity. The more they do this the more they are condemned and denounced as "rebels to the church" and "hinders of the Lord's work." But now that they know that the trend of things is to make them "hewers of wood and drawers of water" for these "captains," that the talk of charity which fooled them for years was only paying a way to reach their pocket-books, the denunciation now only increases the dissatisfaction and the murmuring.

There is another class, little considered as yet in this pastoral controversy, who are likely to prove to be a very important element in the solution of this question. We refer to the ministers who are superseded by these "Pastors." In many meetings there are from one to eight of these.

With Friends' views of the Headship of Christ, Divine guidance, fresh anointing, and liberty of the Spirit, we know of no parallel to the anomalous position of these underling ministers in these meetings. To see from one to eight of these underlings as is the case in places, who once knew how to wait on the Lord, in the solemn order of spiritual worship and eye Him to know their duty and the time to do it; now so dead that they are willing to sit and eye the Pastor, to get a beck or a nod, that their time has come to say their little say, instead of looking to the Lord for his life, is so unpeakably shameful that we cannot express it.

But many of these underling ministers feel their disgrace. Many more where no "Pastor" has been set over them see the coming disgrace, if the system prevails. All these, in whom the inward sense of Divine life is regarded as the true authority for their ministry, feel in their

souls that the system is an outrage on the guidance and liberty of the Spirit as Friends believe it. They have in memory the days of their humility, when they "waited on their gifts;" when in the life they "inherited substance;" when the things of Christ were shown to them by his Spirit; when the springs of life were open in their souls; when they sought with prayer to move in his power; when the moving of the Spirit was the evidence for service; when the peace that flowed in their souls was the reward of faithfulness; when none but Christ could put them forth or go before them; when the Lord opened the door and no man could shut it.

But for these underlings those days are gone by. They now go "bound in Spirit to Jerusalem." They must labor with an "eye service" as men pleasers. They see and feel the limitations of man multiply around them. They see the Divine guidance thwarted by human ordering. They know in their hearts that those who so exercise authority over them are unbelievers in a ministry that waits for power or guidance. They know that these pastors have no faith or trust in the openings or anointing as the right qualification for the ministry, for they practice and counsel against it. No wonder that these underling ministers now suffer; that they are cramped in spirit; that they murmur and have little heart in their work; for they see this "abomination of desolation in the holy place." They see it exalted over the leading of the Spirit claiming the right to direct it.

As the Lord "raised the hearts of Israel" to go and rebuild Jerusalem, so may he "raise the hearts" of these in this new oppression, that they may lift up a standard in Babylon, and return and build anew the ministry of our people, that this modern usurper is seeking to destroy.

If these ministers will courageously join as they ought with the membership who, as "hewers of wood" must be the burden bearers in this system, and cooperate with leaders like Richard H. Thomas, of Baltimore, and Joel Bean, of California, who are thoroughly alarmed at the outlook, in a united effort to throw off the yoke of these "captains" and bosses, they may yet escape the shame that awaits them, and deliver the Society from the power of the most dangerous movement ever devised for the destruction and subversion of the spiritual ministry of Quakerism.

Natural History, Science, &c.

The Culture of Fish.—Col. Marshall McDonald, United States Fish Commissioner and Captain J. W. Collins, of the schooner *Grampus*, have returned to Wood's Holl, from a visit to the New Bedford Board of Trade, at the invitation of the Hon. Charles S. Randall. Colonel McDonald addressed the Board there, saying that, by a brief account of the work of the National Commission at the station at Wood's Holl, he could give his hearers some idea of what is being done at the remaining twenty-two stations, of which it is a type, in studying the laws of the cultivation of the sea.

The speaker first alluded to the Commission's artificial propagation of shad, which, he said, since 1880 had resulted in an increase of 2750,000 in the value of the annual catch of shad on the Eastern Atlantic coast. This figure is double what the Commission costs. A similar good work is being done for the salmon fisheries on the Pacific coast.

In answer to questions concerning shad in the Pacific Ocean, Col. McDonald said that a shad fishery had been created through artificial means

there, so that shad are now as plenty as any other sea fish, except salmon, in the Western rivers. The male shad return to the coast when two years old, but the females do not return until they are three or four years of age. They then weigh from three to four pounds, and are ready to spawn. Where shad are more abundant than fishermen they sometimes attain a weight of ten or eleven pounds. Now a five-pound shad is a rarity, although they grow larger in Pacific waters. Shad feed principally upon worms and young crustaceans.

The Colonel then went on to say that the artificial hatching of different fishes, including cod, will soon reach 300,000,000 a year at Wood's Holl alone. The remaining New England station is at Gloucester. Before any steps of importance can be taken with any species of fish, its habits and food must be known. These studies occupy the summer, while the hatching is carried on at the stations from November to March.

Much interest was manifested in Col. McDonald's remarks about the lobster, which he styled the hog of the sea, because it will eat any kind of animal food. The Commissioner has been asked to do something with the lobster by those who fear that it is being exterminated, but the Colonel considers the mother lobster a better hatching apparatus than the savants can devise. The best work to be done for this fish, he said to protect the egg lobsters either by having reserve districts or by altogether prohibiting the catch and sale of egg lobsters. He favored reserves at places where there is considerable tidal current, as this would distribute the young lobsters in different directions. The matter is so legislating upon by the several States.

Experiments are now in progress in the propagation of lobsters at the California stations on the Pacific coast. It is thought they will do well there, as the water is not so warm in summer and not so cold in winter as it is on the New England coast. Nothing is yet known about the age of the lobster, but it is expected that the California experiments will throw some light on this point.—From the *New York Times*.

Expulsion of Seed.—In Mexico there is a small *Euphorbia* tree, named *Hura crepitans*, which ejects its seeds from the capsules with a very loud and disagreeable noise. Dr. Schrenk, of Mount Carmel, Ill., has discovered that the *Euphorbia Marginata* of the Western plains—the "Snow on the Mountain" of our gardens, does the same on a smaller scale. The seeds on expulsion are thrown six feet.

The Round-Tailed Muskrat.—This animal is a native of Southern Florida. It constructs its nest of grass. These are often elegant pieces of animal architecture, of a pear shape. They are provided with two openings situated at the opposite sides, leading from the one chamber within, and connecting with underground passage-ways, which extend a considerable distance and generally have their exit on the edge of a pond, where the animal finds the succulent grass on which it feeds, and which grows in the water. To procure the best portions of it the muskrat constructs a platform of large sticks upon which it sits and feeds at leisure.

A Tree's Record of its Life.—It is not known to every one that a tree keeps a record within its stem of the character of each successive season since it began its growth. If a peach tree, for instance, be examined after it has been cut down, the ring of wood formed in each year will show by its amount whether the summer of

that year was warm or dry, or otherwise favorable or adverse; and by the condition of the wood, the character of the winter will be denoted. Severe early frost will leave a layer of soft, decaying wood; and later frosts will be indicated by a change of color, if nothing more.

If a summer has been so dry as to cause a total rest between the growth of June and September, the annual ring for that year will be a double one, and sometimes barely distinguishable as one, but liable to be taken, by a not very close observer, for two different years' growth.

At a late meeting of the Botanical Society of Edinburgh, Sir Robert Christison gave the results of measurements of large trees of different species, made annually on lines of girth marked permanently with paint. In the very unfavorable season of 1879 the deficiency in summer temperature was nearly ten degrees. In seven oak trees, of different species, the deficiency in annual increase of girth was ten per cent. In eleven other deciduous trees, it was 42 per cent, and in seventeen pines it was 20 per cent. Different species of the same family giving very nearly similar results.—*Veek's Magazine.*

Tubercles on Leguminous Plants.—A field of red clover will give, by analysis, more nitrogen than is found in the soil. It is not believed plants draw much, if any, nitrogen from the atmosphere through the foliage, though the labors of Darwin among insectivorous plants show that the sticky glands of plants may sometimes absorb nitrogenous material from insects the glands have caught. Whatever indicates light on the question is therefore welcome to chemico-biology. It has been noted that roots of many Leguminosae have curious tubercles that do not seem to be either of insect or fungous origin. In some cases these tubercles are very curious. In the *Mimosa julibrissin*, they are half as large and nearly as rough looking as a head of fruit of a "button-ball." M. Hellriegel believes they are caused by bacteria. It has been suggested that the use of the tubercles in the economy of the plant may be to prepare nitrogen. It is now known in those curious cases known as symbiosis, that fungi prepare nitrogen on which the plant feeds while sustaining the fungus.

Indestructibility of Cedar.—In the excavations of the palace of one of the Assyrian kings, some fragments of cedar beams were found by Layard, which have since been transported to England, and are now preserved in the British Museum. Carntrons, keeper of the Botanical Department of the Museum, has made a careful microscopic examination of the wood-cells of these beams, and confirms Layard's opinion that they were cedars from Lebanon. Thus these fragments have withstood the wear of time and the destroying chemical influences for perhaps thirty centuries, and are still the fragrant, incorruptible wood of the temple. Other woods may be ridged with worm-holes; no worm will touch the cedar. Giant eucalypti and sequoias may be "rotten to the core a thousand years before their fall;" there is not, and never has been, a false-hearted cedar.

Items.

Haddonfield Quarterly Meeting.—At the meeting of the joint committees of Haddonfield Quarter and Philadelphia Yearly Meeting, held on the afternoon of the 11th of Twelfth Month, a concern was felt on account of some of the younger and middle-aged members of the Quarterly Meeting, persons of good abilities and well disposed in a general way, but who had not so fully submitted to the require-

ments of the discipline, particularly in the matter of dress as to carry the appearance of consistent Friends. Hence their fellow-members could not so freely make use of them in church services, as they would otherwise be glad to do, because such use would seem to imply a relinquishment on their part of the testimony to plainness and simplicity which the Society had in common from its rise.

The concern that their members might not be contented with a mere profession of the Truth, but that they might become living witnesses of the power and efficacy of the Grace of God seemed to be the prevailing theme in the vocal exercises of the Quarterly Meeting, the next day. It was brought forward in different forms of expression by several speakers, whose exercises seemed harmonious, as well as lively and appropriate. We were exhorted to bring all the tithes into the storehouse, and prove the Lord therewith, whether He would not open the windows of Heaven and pour us out a rich supply of spiritual blessings.

The declaration of the Apostle Paul to the Ephesians was recited, into every one of us is given Grace, according to the measure of the gift of Christ, so that the 'weak in ourselves' through the power of that Grace, we may be enabled to perform our measure of service in the church, and work out the end of our existence.

The responsibility that rests upon every one for the improvement of the talents committed to them, was seriously felt, we suppose, by many present; and desires were awakened for a greater degree of faithfulness and dedication to the Lord's cause might mark their future course of life.

It was felt to be a favored and a profitable meeting.

A Friends' Meeting.—The *British Friend* in publishing from *The Christian* the following incident, states that the writer of the article in *The Christian* had accompanied a little band of Russian Malakans, some of them fleeing from persecution in their native country, and who, having heard of Friends (with whose religious tenets they have much in common), had expressed a wish to attend one of their meetings for worship.

After the meeting an opportunity was agreeably embraced for interchange through their interpreter (who also was one of them) upon Friends' views on worship, ministry, and those called the ordinances; the interview closing with the expression of the desire that the Divine blessing might attend both the visitors and the visited.

While reading Andrew Murray's chapter on Worship in the Spirit, in "The Spirit of Christ," the latest of the invaluable series of books on experimental doctrine, we are reminded of a recent visit to a Friends' meeting. It was on a week-day, in the room for "Meetings for Sufferings." Few were present, and we sat for a long time in silent and conscious weakness. Then one spoke, not in power of speech or of spirit. Another pause, and then a prayer. A sister remarked that a Scripture which she had in her mind before she came had been referred to both in the address and in the prayer, and she thus discerned their unity in the Spirit. An aged brother said a few weak words. A stranger prayed in a foreign tongue. There had been prolonged silence between each exercise, and after one more of considerable duration, this feeble gathering dispersed. It had been a humiliating time.

We went to another meeting, where there was bright singing, with musical accompaniment.—Everything was short and bright and cheery, with no awkward pauses; for the hour was filled up in quick succession with prayer or praise, exposition and exhortation, report and testimony. It was a cheerful time.

Yet there had not been more of worship in spirit and in truth than in the former meeting; perhaps not so much. There the weakness was evident; but it was concealed. The humiliation, the chastening of spirit had been good. As we meditated afterward on those two meetings of saints, we found the impression left by the earlier one to be deeper, more lasting, and more medicinal (Jer. xlv. 11). It may be that in conditions of revival, even from ourselves by an unbroken continuance of exercise, we may

hinder ourselves from becoming worshippers in spirit and in truth, such as the Father of Spirits seeks to worship Him.

Dymond on War.—Theodore Neild in the *British Friend*, says that 96,000 copies of Dymond on War have been printed in that country—of which 10,000 were sent to Australia and New Zealand.

American Ministers in Europe.—The *British Friend* of Twelfth Month 2d says:—Samuel Morris and Thomas P. Cope are now visiting Friends in France, having started on Eleventh Month 19th, after which they propose to return to England, visiting in the Southern counties during the winter months. They have met with cordial welcome wherever they have been.

"Thou may'st readily imagine that amidst our various avocations, business, assisting the younger children in their lessons, our joint and separate readings, we have little time to be idle; and this, next to religion, which itself leads to industry, is the grand panacea of human life; the unemployed are the discontented; the busy, provided they are busy to good purpose, are the cheerful. Therefore, I wish thee, dear Anne, plenty of employment."—*Letter of T. Kite.*

The severity of a man's condemnation is in proportion to the light against which he sinned, and to the clearness of the recognition of a duty to resist the temptation to which he has yielded.

FOR "THE FRIEND."

The date of the opening of the first Session of Friends' Boarding School near Barnesville, Ohio, contained in an article in last week's number of *THE FRIEND*; should have been the 3rd of First Month, 1876. A. F.

Twelfth Month 21st, 1889.

THE FRIEND.

TWELFTH MONTH 28, 1889.

In another column may be found an article on the Pastoral System, showing some of the evil fruits which may be expected from its full establishment—and which, indeed, are already beginning to develop themselves.

This system is only one of the stages in that departure from the principles and practices of Friends, into which many well-meaning persons have been led who have erroneously hoped to effect greater good than they could by pursuing the old-fashioned ways in which the Society has endeavored to worship God and do his will in the earth.

There are many evidences that Friends of religious experience in the bodies which have sanctioned these changes are ill at ease in their own minds—one such is contained in a letter addressed to the Editor, under date of Eleventh Mo. 29th, by a friend, a member of Western Yearly Meeting (Progressive). In this letter, he says:—

"The manner in which our religious meetings are conducted in this part of the country is so at variance with the practices of Friends in former years, that my mind has been much tried to know what course it would be right for me to pursue, under the existing circumstances.

It will be remembered that Western Yearly Meeting was established 31 years ago by the authority of Indiana Yearly Meeting. I was present during most of the sittings of that meeting. The religious exercises of that meeting consisted of prayer, exhortation and the preach-

ing of the Word. Much time was given for silent meditation and devout adoration. In the Ninth Month last, just 31 years from the date above-mentioned, I went into the same meeting-house. And what a contrast! A minister of our Society was standing in the gallery with a hymn-book in his hand, repeating stanza after stanza of a favorite hymn, for the large congregation to sing.

Oh! my great Head of the Church restore us to the purity once belonging to our beloved, though now backslidden Society.

Relative to our little meeting, where my right of membership belongs, a large portion of our meetings is taken up with congregational singing, from two to five hymns being often sung in one meeting; but little time being given for silent worship. And the manner of conducting our meetings is about thus: instead of the old practice of shaking hands, the minister requests all to arise on their feet; when all join in singing the Doxology. The benediction is then pronounced by the minister, and all retire to their homes. Such is the character of the meeting which I am told it is my duty to attend and support.

Some of the members of our meeting have hired a minister to remove with his family to this place, and preach for us twice a week. And yet there are three ministers belonging to this Monthly Meeting."

A subsequent letter states that the salary to be given the minister is \$400 a year, and a house found. And the letter closes with a desire for the prayers and sympathy of all rightly concerned Friends everywhere.

One who has been trained to look with great respect on the character and principles of our early Friends; and to admire their noble testimony for the Truth; can scarcely fail to feel emotions of sadness and shame, that so many should be seduced from faithfully following in their footsteps; and is ready to adopt the language of the Apostle Paul,—“O foolish Galatians, who hath bewitched you, that ye should not obey the truth, before whose eyes Jesus Christ hath been evidently set forth, [in the precepts and example of those who were influenced by his Spirit]."

Our friend Rachel G. Steer of Tacoma, Ohio, some of whose contributions have appeared in our columns over the signature R. H., has published a small volume of verses with the title, *Arboretum*. Copies of it may be obtained through Jacob Smalley, No. 304 Arch Street, Philadelphia. Price 28 cents.

SUMMARY OF EVENTS.

UNITED STATES.—On the 15th instant, the Senate in Executive Session, confirmed David J. Brewer, of Kansas, to be associate Justice of the United States Supreme Court, by a vote of 52 to 11. The negative votes were cast by Democratic and Republican prohibitionists. Senator Edmunds, it is said, declined to vote.

Senator Hoar, on the 19th, from the Committee on Privileges and Elections, reported adversely Senator Blair's constitutional amendment giving the District of Columbia representation in both Houses of Congress and the Electoral College. At Senator Blair's request it was placed on the calendar.

In the House, on the 18th instant, Representative McKinley, from the Committee on Rules, reported a resolution, which was agreed to, for an immediate call of States for the introduction of bills. Under this call 1064 bills, many of them duplications, were introduced for reference.

On the 22nd inst. both Houses adjourned until First Month 6th.

The Choctaw Nation, in a memorial laid before the Senate, has protested against the right of way through the Indian Territory being granted to the St. Louis and San Francisco Railway.

The Legislature of North Dakota has passed a Prohibition bill, and it is stated by the Governor on the 15th inst. It will go into effect on Seventh Month 1st. Senator Fuller introduced a joint resolution for the amendment of the Constitution by striking out all of the prohibition articles. The supporters of this resolution say that many of the legislators who have the prohibition article in the constitution should that be enforced are in favor of submitting the proposition for amendment, believing that the question was not fairly presented at the last election.

The *Pittsburg Times*, of the 20th inst., has received reports from its correspondents in twenty-five counties in the Western Territory, that the wheat crop in the effect of the unseasonable weather. In several localities grass is growing as in spring; buds are bursting, and winter wheat is so far advanced that farmers fear the crop will be greatly damaged. In Fayette County it will be ruined when a cold snap comes. Fruit will undoubtedly be greatly damaged. In Fayette County the State's butterflies are fitting around; in Columbia County, pear trees are in blossom. The open winter has had a disastrous effect upon the general health. Typhoid fever is on the increase in the Ohio Valley, and a scourge of pulmonary diseases is sweeping Blair County.

A despatch dated New Orleans, Twelfth Month 20th, says:—The weather continues warm, partly cloudy, and threatening rain. Maximum temperature yesterday 76, to-day 72; making 17 consecutive days that the temperature has been 70 or above—the warmest period, at least, of Twelfth Month in New Orleans.

A cave-in occurred on the afternoon of the 22nd instant, at the Lane Mine, Angel's Camp, in Calaveras County, California, burying sixteen men. It was not believed that there was any prospect of getting them out alive.

The Eastern Beaver has issued a proclamation showing that the debt of Pennsylvania was reduced \$881,950 during the year ending Eleventh Month 30th, 1889.

On the 23rd instant, the Presbyterian Ministerial Association, in session in this city, disseminated the following:—"Does the Scripture Require Women to Keep Silent in the Churches?"

Deaths in this city last week numbered 366; the same as during the previous week and one less than during the corresponding period last year. Of the foregoing 205 were males and 161 females. The principal causes of death were: 21 of consumption; 21 of cancer; 12 of apoplexy; 10 of diphtheria; 9 of cancer; 9 of old age and 9 of debility.

Markets, &c.—U. S. 4½, 104½; 4's, reg. 126½; coupon, 127½; currency 6's, 116 ½ 126.

WHEAT.—Winter grain, extra, \$13 per ton; do, fair to good, \$12.25 a \$12.75.

FLOUR AND MEAL.—Western and Pennsylvania super, \$2.40 a \$2.75; do, extra, \$2.75 a \$3.00; No. 1, \$2.50; family, \$3.25 a \$3.50; Pennsylvania family, stone ground, \$3.75 a \$3.90; Pennsylvania roller process, \$4.00 a \$4.25; Western winter, call, \$4.00 a \$4.20; do, straight, \$4.25 a \$4.45; winter patent, \$4.50 a \$4.90; Minnesota, call, \$4.75 a \$5.00; do, straight, \$4.50 a \$4.75; do, patent, \$4.85 a \$5.15. Rye flour moved slowly at \$3.15 a \$3.25 per barrel. Buckwheat flour ran at \$1.75 a \$1.85 per 100 lbs.

BEEF CATTLE.—Extra, 4½ a 5 cts.; good, 4½ a 4½ cts.; medium, 3½ a 4½ cts.; common, 3 a 3½ cts.; fat cows, 2½ a 3 cts.

PORK.—Extra, 5½ a 6½ cts.; good, 5½ a 5½ cts.; medium, 5½ a 5½ cts.; common, 4½ a 5 cts.; western, 3½ a 4½ cts.

HOGS.—Extra Chicago, 5½ cts.; good Western, 5½ a 5½ cts.; common heavy Western, 5 a 5½ cts.

FOREIGN.—C. S. Parnell addressed a large meeting on the afternoon of the 17th, at Nottingham. He declared that there were no countries in the world which were so free from crime as the Land League movement. The object of the Home Rule movement, he said, was to regenerate Ireland, especially with regard to her industrial condition. What the movement meant was to develop the material prosperity of Ireland, build her up, open mines and reclaim waste lands," all which is to be done without any restriction being made on the Imperial

Treasury. Ireland is prepared to work out her own prosperity if permitted to do so.

Gladstone, Parnell and the other chiefs of the Gladstonian party will meet in London before the session of Parliament opens, to settle upon the course to be taken by the party in Parliament. This will be based on the lines of the agreement made by Gladstone and Parnell during the latter's visit to Gladstone at Hawarden last week.

London, Twelfth Month 23rd.—Incoming vessels report tremendous gales on the Atlantic. The Black Russia, from St. John, N. B., which arrived at Londonderry to-day, severely damaged, reports having experienced terribly stormy weather, during which two of her crew were killed and several injured. A despatch from Lisbon, dated the 17th inst., says:—"The Government is about to issue a map showing its claims to African territory. It is firmly resolved not to overstep any legitimate claims and not to abandon any. It does not raise any pretension to Madagascar, and the western limit to Zambezi is undetermined and a subject for negotiation. It makes no claim whatever to stretch across the continent.

The correspondent of the Associated Press at Berlin says in his despatch of the 21st instant: The military attitude of the Prussian Government toward England and the Zambesi dispute is recognised here as necessary to strengthen the position of the King of Portugal at home, where any accidental failure of strength at this moment would be made much of in the interest of the radical party.

The industrial revolution now spread over every part of Germany, but is worse in Hesse, Hanover, Thuringia and Saxony. In Potsdam, Stettin, Cassel, Frankfurt, Freiburg and Dresden, at least half the garrison is affected.

It is announced that Emin Pasha, who was injured by falling from a saddle at Bagamoyo, is entirely out of danger, and is making rapid progress toward full recovery.

The *Washington Star* says: Stanley's work in Africa is of higher value the more we hear of it. It appears that among the things he has set on foot are these: The Nile, the Zambesi and the Congo systems; almost absolute proof that Lake Victoria is the largest body of fresh water in the world, and that the ancient "Mountains of the Moon" have their equivalent name in the modern Equatorial mountains, the highest peak of which he estimates to be 18,000 feet in altitude, and which is entirely snow-capped for 1,200 feet.

London, Twelfth Month 19.—The latest advices from Brazil do not confirm the accounts of disaffection at San Paulo, as reported in letters of Eleventh Month 20. On the contrary, they show a decided movement in favor of separation from Brazil appears to be dying out.

Lisbon, Twelfth Month 20.—A despatch received here from Sr. Barbosa, the Brazilian Minister, declares that the originators of the revolution are all against the re-establishment of slavery, and that no plan of insurrection exists. He says, no military ambitions and aspirations in the movement, which aims only to secure civil liberty and the reform of the administration.

Rio Janeiro, Twelfth Month 22, via Galveston.—The decree relating to Don Pedro de Alencar, besides annulling the order of the confiscation of his property and forbids the return of the Imperial family to Brazil for two years. The city is tranquil.

Malieta has been proclaimed King in Samoa, and has been formally so recognized by the Consuls.

NOTICES.

WANTED—Two qualified Teachers for The Shelter for Colored Orphans, West Philadelphia.

Apply to Lydia E. Pennock, No. 2146 Gen St. Rebecca B. P. Haines, 1516 Arch St.

A State Meeting of the Trustees of the Estate of Wm. Forrest, deceased, will be held on Fourth-day, the 8th of First Month, 1890, at 4 P. M.

JOHN W. BIDDLE, Clerk.

DIED, at Oakland, near Camden, N. J., Twelfth Month 10th, 1889, REBECCA L. BETTLE, widow of Thomas Bettle, in the 82nd year of her age. She was a much beloved member of the little meeting of Friends at Newton. The interment took place in Newton burying ground on the 13th.

FOR "THE FRIEND."

Incidents and Reflections.—No. 204.

SPIRITUAL-MINDEDNESS.

Those who, through submission to the merciful visitations of God's love, are brought into an earnest concern for their own salvation, are often made to feel the supreme importance of heavenly riches—and the importance of our Saviour's injunction—"Seek first the kingdom of God and his righteousness." The truth is at times sealed on their understanding, that while "it to be spiritually-minded is life and peace," yet to be carnally-minded to love and follow with eagerness the treasures and delights of this world is spiritual death—that such a state of mind is inconsistent with the enjoyment of spiritual life. Such as seek above all else to be found doing the will of the Lord in sincerity, will know it to be a guide to them even in outward business.

Stephen Grellet relates that when a young man, an exile in America from his native country, France, he came under the power of religious conviction. He says:—

"I had several offers to engage in commercial concerns, both in Philadelphia, and from my European friends, particularly in Holland, from whom I received proposals by letters, to place me in an extensive way of business with the West Indies and Holland. But, keeping my eye single to the Lord, whose direction I sought, I could not be easy to accept any offer of this kind; for I saw that if I did, the sense of life in me, that was very tender, might easily be destroyed. I therefor preferred, for awhile, the occupation of teaching the French language. I engaged in it, it is true, much in the cross; but, having repeated evidence that it was a *right* engagement for me, it became easy to submit to it. I was at first concerned lest it should not be sufficient to procure me a living. For, from the complexion of things in France, I could not entertain any expectation that I should receive pecuniary means from that quarter. After many anxious thoughts on this head, one day, as my mind was gathered in reverent silence before the Lord, the language was strongly impressed: 'Seek first the kingdom of God and his righteousness, and all things needful shall be added.' The evidence that it was the direction of Omnipotence, whose promise is sure, was so clear, that

no doubt remained; and for months after that, I was so relieved from temporal anxiety, that I had no more thought about it than if I had not lived in the world. I was closely engaged in my school, and though I scrupulously paid every requisite attention to it, yet, during the intervals, my mind was wholly relieved from anxious thoughts about it. The one thing needful only absorbed me, whilst walking in the streets, or sitting in the house."

In the Journal of Stephen Grellet, mention is made of a visit to Munich, in 1832. He says: "Among the interesting visits made us, was one by Baron Radlin. It is about 20 years since I became acquainted with him. He was then a lovely plant. He appeared in earnest, the love of God constraining him to join himself to the Lord, in a perpetual covenant never to be broken. He tells me that he maintained his integrity for some time after our separation; but the tide of worldly prosperity rose high upon him; he was advanced to important stations in the Government, riches also increased; under these changes his heart became lifted up, and in the same proportion as he pursued the ways of the world, he departed from the way and the love of God; but the Lord in his great mercy and compassion did not forsake him; He extended over him his fatherly rod; He visited him with heavy affliction; took away his idols, and, by his refining fire kindled in his heart, removed the dross from it, and rendered it soft as in former days. [Whom the Lord loveth He chasteneth.] With tears the dear man unfolded to me how graciously the Lord has dealt with him. Now he lives, with his family, on an estate about twelve miles distant from the city, where he spends his time in retirement from the world. His wife and oldest son are like-minded with him. They sit down daily together with the younger children to read the Scriptures, and then in silence and with reverence, to wait on God, for a qualification to worship Him in spirit and in truth, and also for the renewal of their spiritual strength, through his Divine Grace, so that they may be preserved in his fear, and enabled to walk in the way well-pleasing to Him."

Lovely Henwood, a native of Cornwall, England, in recounting the gracious visitations of the Lord to her in her tender years, says, her Heavenly Father "drew me to himself, showing me that those who worship Him must worship Him in spirit. I knew no interruption to this feeling of love to Him. My soul breathed unto God, so that in reticence to prayer, I knew neither beginning nor end. Neither had I stated times of devotion, nor do I remember bowing the outward knee all the time of this highly favored season, for to breathe to God was my life and my breath. My mother would set me at some little employment, and when we were alone I used to ask her to tell me about the prophets and apostles and Jesus Christ, which she readily did, for she knew the Scriptures well. My little heart would breathe forth unto God, and rejoice in Him, to hear of all his wonderful

works to the children of men. My love increased for the souls and bodies of people, and manifested itself in little acts of kindness according to my age. If I heard any one weep, or take the holy name of God in vain, I would go into the house sorrowful, and pour forth my soul unto God in strong mental cries and supplications for their redemption and salvation."

Under the teachings of the blessed Spirit of Truth in the secret of her own heart, she continued to grow in grace, until the adversary of all good tempted her to look from this Heavenly Guide, and to copy after what others were doing. "I began," she says, "to look at the Methodists, that they knelt down and made prayers. I began to reason about it, that I had not done so, but as they did it, it must, I thought, be right. But I knew not how to do it." Then it was suggested to have a book to pray from, and she desired her mother to buy her a book that had prayers in it. "When I had obtained my book," she says, "I retired alone and knelt down to pray." I read them over and felt disappointed. My mind was not comforted or refreshed. I still continued however to use my book, because I would do as others did. The practice brought leanness into my soul, and that holy fervor towards God which had prevailed there, abated and declined, as I continued thus to act."

Possessing an attractive exterior, she was much flattered, and became vain of her person and dress. "But when about 18 years of age, she was powerfully awakened to a sense of the folly and evil of gay dress. Having learned the trade of a dress maker, she went into business in that line, but in time found it a duty to dress plainly herself, and her mind was brought under a tender concern about making gay and fashionable dresses for others. "Oftentimes," she says, "while sitting in my chair cutting out trimmings for dresses, I have wept bitterly and been in great sorrow; and this portion of Scripture, with many others, would come powerfully to my mind, 'Be not partakers of other men's sins. Be ye separate and touch not the unclean thing.' I felt that I was a partaker of other men's sins, that I strengthened the vanity I hated, and fed the pride of the human heart."

The surrendering of a portion of her business was the greater trial to her, because she had a crippled mother to support. But having yielded obedience to the Divine requirements, she writes, "I have been brought sensibly to feel, and measurably to be thankful for the present favor of heavenly care over me. I have lessened my business, and am freeing [myself] from cumber, and truly feeling that a little with the Divine blessing is enough; witness the widow's oil, and the widow's meal. I have been graciously favored to see and to feel that those who are born after the Spirit, and have taken up the daily cross of self-denial in meats and drinks, and are temperate in all things, want but very little. A little plain fare suits the Christian best."

In one part of L. Henwood's life, she had a severe attack of toothache, for which she was advised to smoke tobacco: it gave her relief, and

she repeated it whenever the attacks came on. Thus she fell into the habit of smoking, of which she says, "I found it took up my attention from a great deal of unpleasant feeling and restless inquietude which I felt within, from having negligently ceased to persevere in the path of Divine life. I continued this foolish indulgence for some years, much to the hurt of my soul and body. This simple thing, as some may call it, was a curse to me, inasmuch as it was a barrier between me and my God. It was an indulgence and gratification of the flesh, and often when I have taken the pipe to smoke, the judgment of the Lord has arisen in my soul."

Finally, being fully convinced that it was not only injurious to the body, but also to the mind, by diverting her from seeking to the only source of true comfort and support under trouble, she was strengthened of the Lord to give it up entirely. J. W.

FOR "THE FRIEND."

Quebec and the Saguenay.

A great many tourists when going down the St. Lawrence River do not continue their journey north further than Montreal, but at that city turn to the south and thus neglect what I think would prove the most beautiful and interesting portion of their trip. It is only a night's journey to Quebec on a boat equal to the night boats on the North River, and a few days spent at this city and down to the famous Saguenay will more than amply repay for the time consumed in extending the trip.

After awaking on the morning that we arrived in Quebec, we soon were out on deck, and found that our boat was rapidly proceeding down the broad stream between green hillsides and prosperous farmlands. Soon we could see far down the river the shapes of vessels and docks taking form as the morning mist slowly lifted; and then taking a short turn in the river the whole town burst upon our view. In the harbor around us were all kinds of craft, from tiny pleasure boats to big war frigates. Beyond them were busy wharves and grimy warehouses. Still further back were the tall chimneys of stores and tenements, while towering above all was a huge wall on the precipitous hillside. Then still higher up, outlined against the blue sky, was the massive citadel, with black guns peering over its walls in every direction, and commanding the surrounding country for many miles.

We walked off the boat just as soon as we could, were quickly crowded into a bus and pulled around, and up, and up, and presently landed at the St. Louis hotel. After breakfast we strolled down town again through some of the crookedest and steepest streets I have ever seen. In one place the hill is so steep that the street is not paved, but is all steps, so to speak, there being no way for vehicles; and the houses have doors opening out on to these steps right up the street for quite a distance. The streets down by the wharves are very narrow, and almost all the signs are in the French language. We then walked to the Dufferin Terrace, a promenade 1400 feet long, built on top of a great wall 200 feet above the river. From the terrace one can actually look down into the chimneys of the houses far below him. Night at our feet was spread the city, with the people apparently crawling through the narrow streets, the beautiful St. Lawrence with many vessels anchored on its peaceful bosom lay beyond, and in the

background of this charming picture were green hillsides and misty mountain tops.

Just behind the Dufferin Terrace is the citadel, and there II, and myself slowly worked up to it, standing 360 feet above the river. The view from it is very grand. Inside are acres of barracks, a huge powder magazine, scores of big cannon, and pyramids of ugly looking shot and shell. The walls are enormously thick and surrounded by immense ditches. This fort was only once captured, and that was when General Wolfe took it from the French in 1759.

A stranger in Quebec cannot but be interested in listening to the people jabbering to each other in French. Among themselves they seem to use that language altogether. It is not the pure Parisian accent, but a mixture, and here and there can be caught English words, just as the "Pennsylvania Dutch" have a language all their own. When we tried to ask questions of the people they generally seem to understand what we say, but were unable to reply intelligibly to us. So we would have to flourish our hands to each other, and wag our heads and move on, not much the wiser for our efforts. Priests and nuns can be seen everywhere. The priests wear long black robes, with quite expansive skirts, and a cord and tassel around the waist. All of the province of Lower Canada is one of the greatest strongholds of Roman Catholicism in the world. The priests rule with a rod of iron. In many districts they exact a tribute from the people of one tenth of all the crops. Their power is constantly increasing, and in the local Parliament their party is in a large majority, and can enact and enforce laws that are at times very distasteful to the less numerous Protestants. Thus it has happened that Englishmen have found themselves in the anomalous position of suffering because they were Englishmen in a colony nominally ruled by themselves.

The Calèche (pronounced Calash), is a vehicle peculiar to this interesting country. It is set up on two big white wheels, and has one broad comfortable back seat to hold two persons, while the driver sits on what we in the United States call the "dasher." The back seat is covered by what somewhat resembles a "buggy" top, and the whole thing is swung on two great bands of leather, that answer the purpose of springs. When you are once mounted and seated, and are pulled along by a sturdy Canadian nag, the slightest unevenness in the road will cause the calèche to sway and rock like a ship in a gale. The drivers of these teams were loud in their offers to take us half a day's drive for \$3.00, but on Second-day morning when we opened negotiations we found that \$4.00 were the terms, so quickly had the price been raised in anticipation of a job. Soon, however, as a special favor, we secured a team at the old price. Jesus are about the same the world over. We first were driven over the town, up hill and down hill all the time, being posted up by our talkative driver, whose presumed information regarding localities was largely founded on tradition and imagination. Then we were taken out to the falls of Montmorency, about four miles away, where the river of that name, just before it enters the St. Lawrence, is precipitated over rocks 260 feet high. It is a beautiful fall, and before the water reaches the bottom it is churned into spray and milky whiteness. One long flight of steps descend the steep rocks opposite the falls, and if one were to make a misstep on those stairs it would be a frightful tumble. All this locality

is not only exceedingly picturesque, but also abounds in the historical associations of three hundred years. Battle grounds are all around Quebec. On this drive we saw the monument on the Heights of Abraham that marks the spot where General Wolfe fell when he was capturing the city in 1759.

On Third-day morning about eight o'clock we left Quebec on the steamship *St. Lawrence*, bounded down the river of that name, and up the Saguenay. Our steamboat had the regulation staterooms, a pleasant cabin, was very comfortable, and had ample room for walking and viewing the scenery. Quebec looked very bright and charming as we swiftly rounded two British men-of-war, with their ugly black guns pointed out of their ports, and then turned down the historic stream. The river soon broadens below Quebec, but we hugged the western shore, which for miles is lined with countless little farmhouses where the humble French Canadian farmers are reared, and live, and toil, and die. What a narrow horizon there must be to the lives of these people. One wonders if they half appreciate the charms of nature that surround many of them. Doubtless the outward beauties of many of their surroundings are lacking away from the river, yet they all seem a remarkably healthy and happy and simple-hearted race. What a blessing it is the world over that poverty and work need not imply an unhappy temperament, and need not destroy cheerfulness. All along the country roads of this people are their small one-storied houses, built gable end to the east. No matter what direction the road runs their homes are planted that way, with hardly a window or door facing the east. They thus build so as to keep as warm as possible during the fearful eastern storms that assail them in winter.

(To be continued.)

Home Medication—There are people, and their name is legion, who are always dosing themselves. A new remedy is advertised, and they try it. Perhaps it is a liniment, or a pill, or an extract of some sort, or a compound, and of the constituents of these remedies those who take them are utterly ignorant. They swallow strychnine and belladonna and morphia and coca and drastics of various sorts, and tonics ditto, not knowing what they are taking; but whatever it is, they have faith to believe it will help them.

Every few days they try something new. Their toilet tables are full of little bottles and boxes, testifying to their fidelity in experimenting on themselves, to their fidelity in reading advertisements of patent medicines, and to their gullibility.

It may be that now and then a person is helped by a patent medicine or by the faith he has in it, but in the majority of cases this is not the fact, and is proved by the successive experiments with new cures. The habit of "taking something" for new cures. The habit of almost becoming confirmed, and the victim of the habit often becomes a confirmed invalid.

This paragraph is not written with the expectation of inducing those who are in the habit of dosing themselves continually to change their methods, but with the hope that those not yet in bondage to this habit may be prevented from forming it. Exercise, open air, sleep, diet, rest, food, not in the excess or deficiency—let the ailing medicate themselves with these, and there will be no drugs in their bodies to poison them.

—*Christian Advocate.*

For "THE FRIEND."

Some Account of Ezra Cornfort.

(Concluded from page 170.)

Again a friend coming in and sitting by him he said, "The word of the Lord came to the king by the mouth of the Prophet formerly, saying, go, slay Amalek and utterly destroy them; he was not to partake of any of the spoil of that old evil nation, whom the Lord declared He would have war with, until He had utterly destroyed them. Now, it appears the king went, but did not attend to the command; but from his own testimony, for fear of the people, he spared of the best of the spoil, and saved old, evil Agag alive. Now, my dear friend I had no prospect of mentioning these things when you came in, but they arose with such weight upon my mind, I thought I could not feel easy without mentioning them to thee, in order that thou may examine closely and see if there is not yet something that thou hast reserved and kept alive for thyself that ought to have been slain. The Divine Master requires our wills to be wholly given up to his will; there must be a reduction of self. Our will which is the old sinful nature must be slain. Had Saul his will thus brought into subjection, he would have performed the command, and I have no doubt he would have continued to wear the crown. Now, dear friend, I do not mention these things in order to discourage thee, for I feel that I love thee; but I mention these things to encourage thee, that thou may come forward aright in thine appointed allotment. It is a great thing to go forth in the work of the ministry. I remember how it was with me in my first appearance; my soul was often bowed in supplication, which occasioned many tears, that my offerings might be of his putting forth. Now, dear friend, if thou should find nothing in these remarks worth thy consideration, let them go; but, I felt them so impress my mind when thou came into the room, that I believed it right to mention them. From the impressions that have attended, I am induced to believe that there is something of that old sinful Agag nature within thee yet that ought to be slain, which hinders thy getting along.

At another time he said, "I have been striving for many years to build me an house that the foundation thereof might be laid sure, which I feel now to be the case, that even death, hell, and the grave cannot remove, though the old deceiver may arise with his lies and charges. He was a liar from the beginning and still remains to be so; though he may rage against my little building and cause the fiery deep with its flaming brimstone to roll against it, he cannot move its foundation for it is established. Oh, that the children of men might build their houses in Heaven, where they might dwell in everlasting love and peace.

Being informed there was one of his friends coming to see him, he replied, "I wish to be still, unless there should something arise that I dare not put by. When the power of love does arise in the soul it occasions something of a tremor, which I think ought to be felt before they attempt to stand forth in the cause of Truth. I have thought sometimes when this power has arisen in my heart, I could say as the Apostle, I felt as though I could have continued my speech until the break of day; but after these seasons are over, I feel my great weakness."

Again, after two of the members of our Society, who had been sitting by him left the room, he said, "On seeing them come in I felt the word of command to be still, which remained

with me. I saw their situation to be such that nothing short of a miraculous visitation of Divine Power could reach them. They appeared to me to be dwelling in a state of jealousy, pride and covetousness. It is those that the woful denunciation will go forth against; 'Depart from me ye cursed into everlasting fire prepared for the devil and his angels.'

At another time to a friend that was sitting by him he said, "The extreme burning and heat that I feel is not one of the least of my afflictions I have to pass through, but I have been striving for many years past, let what come that may, either heights or depths, principalities or powers, to be content; in all things to centre in resignation to the Divine will, which I have been favored measurably to feel in this time of great affliction. I have often thought since lying here, what a dreadful situation those must be in who have been living as without God in the world, having nothing to support them; when those who have been striving to serve their Divine Master have nothing to spare. I know it is a great attainment to have our wills always in subjection to the Divine will, but we ought to strive after this attainment. It was testified by our blessed Master, that He was a man of sorrows and acquainted with grief; we poor mortals cannot expect to be set above the Divine Being; under his great agony He left his disciples while He went and prayed that if it were possible this cup might be taken from Him; yet centred in resignation. A blessed example for us to follow: 'Not my will but Thine be done.' But, oh! how absurd is it for any of us in our supplications to pray that his will might be done, and we at the same time living in the gratification of our own wills. Now, dear friend, the Lord in the riches of his goodness has extended a merciful visitation to thy neighborhood, and has mercifully brought some of you in good measure to forsake the evil of your ways. You are very near to my best life, and the travail of my heart is that you may be preserved in great watchfulness and humility, for on this your happiness depends. Now, dear friend, since thou hast been sitting here, I have felt a strong desire that thou may be preserved, that thou may neither run before thy guide or lag behind; not do as some others have done, who suppose they have attained to this, and arrived to that state, and are ready to say to their brother, sit thou here, for I am more righteous than thou; Yea, and some are ready to set up their post by the Lord's post. Oh, how different is this state from that of the humble traveller, who goes bowed in great humility, eyeing that straight and narrow path by the light, and striving to keep in it. For there is a glorious highway cast up far the rude, humble traveller to walk in; that the vulture's eye hath not seen into; that is, those that are full of their own wisdom; neither has the lion trod therein; that is those that are in their own selfish strong wills. No, verily, they have never seen into that glorious highway, nor never will, which is cast up for the humble redeemed ones to walk in."

After this spell of illness, he so far recovered as to be enabled at times to attend his own meeting, though often afflicted with much bodily pain and weakness, under which he was an example of patience. He was frequently favored in lively testimony, in a particular manner the last meeting he attended. He was also drawn forth in fervent supplication at this time, which was on the First-day of the week, Twelfth Mo., 25th, 1819. The Fifth-day following he was

taken unwell, which lasted sixteen days. Most of the time he suffered much bodily pain, which he endured with Christian fortitude, but said little to any one. On being asked a short time before his close, if he felt easy to leave all, he replied: "I have nearly done with the world and with all the things that are therein." And, after some time, he said: "One hour in the Master's presence is worth a thousand times ten thousand elsewhere." He departed this life on the fifteenth day of the First Month, 1820. His remains were interred in Friends-burial ground at Plymouth, the seventeenth day of the same. In the 73rd year of his age.

Home Life in India in the Rainy Season.—The rainy season has come again, and how surprised you would be at the curious and numerous living things that are at home in our house. The most troublesome ones are the flying ants, which come in swarms as soon as the lamps are lighted. They are so disgusting, for they drop their four thin wings very soon, and they fly in our faces and crawl on our necks. The only relief from them is to set a large wash-bowl of water on the table where the lamps are. Soon there are more than you can count drowned in the water. Mosquitoes are thick and vicious. Frogs, nice, big, fat ones with heavy bass voices, croak in our best rooms. Muskrats get into our bureau drawers, scenting every thing so strong that we can scarcely breathe. Lizards glare and wink at you from the walls, even from the tables, and bats have game after game of "catcher." It is wonderful how soon one becomes indifferent to all these things. I shall miss the funny lizards when I come home again.—*Cumberland Post.*

FOR "THE FRIEND."

"Thy Kingdom Come, Thy Will Be Done."

This is the language of our Saviour to his disciples whom He was directing how to pray. And surely He would not direct them how to pray for that which is not attainable. Now the great question with each of us is, Has his kingdom come in our hearts, and is his will done there? Or, are we doing our own wills under a mistaken apprehension that it is the will of the Lord? His ways are not always our way, nor his thoughts our thoughts. Our own wills may be selfish and mislead us in relation to our duty; but if his kingdom has come, and if his will is done in us, then our wills will be in subjection to the Divine will, and his work and our work will go on in harmony together to the advancement of his kingdom, and to his glory, and not to the glory of man. But many appear to be anxiously willing to work for him, as they call it when they think they can advance their own glory by it. But be not deceived. God is not mocked. If we were shep of his fold we should knock his voice and follow him, and a stranger we would not follow, tho' they might promise us many plausible things. But let us remember that the language of the prophet to the rebellious children of Israel, "I am the Lord thy God, which teacheth thee to profit, which leadeth thee in the way thou shouldst go, O, that thou hadst hearkened to my commandments; then had thy peace been as a river, and thy righteousness as the waves of the sea."

But how was it with Israel? And how is it with us a people? They turned out to be rebellious children. They took counsel, but not of the Lord. They covered themselves with a covering, but not of his spirit, and thus added sin to sin. (Isaiah xxx, 1, 2, 3.)

They preferred to follow the kings of this world instead of the King of Heaven. So their peace failed to flow as a river, and their righteousness was lost among the nations around them. They served their idols and learned their ways and worships, which was a snare unto them. Strangers devoured their strength, and they knew it not. So they seemed to settle down under a false peace, and cry, "Peace peace," where was no true peace. But we must be careful and not take the peace of the body which the world can give for the peace of the soul, which the world cannot give or take away. The peace of body we may have by obedience to the kingdoms of this world; but it is temporal and soon passes away. While the peace of the soul is spiritual and eternal, as noticed in Job xiv, 27. So we may have a peace of the body and a peace of the soul. And they may work in harmony together in carrying out the Lord's will, and produce a peace which passeth all the understanding of the natural man. And when the kingdom of God has come in the heart no discord will be there. But "all bitterness and wrath and anger and clamor and evil speaking will be put away, with all malice. And we will be kind one to another, tender-hearted, forgiving one another, even as God for Christ's sake has forgiven us." And the lust of the flesh, the lust of the eye, and the pride of life will no longer remain, for they are not of the Father, but of the world that lies in wickedness. And we will have a joyful foretaste of that rest and peace which remains for the people of God, and which we hope to receive in more full fruition in the world to come, where the wicked cease from troubling. Then why should we not pray for God's kingdom to come and his will to be done in earth as it is in heaven. But I fear there is great danger while passing along through this probationary world of our being deceived by the enemy of all righteousness.

As he is artfully endeavoring by many enticing shows and false appearances to draw away disciples after him. But when they are made, what are they? By their fruits ye shall know them. Do they not, in a general way, conform to this world's manners, worship, dress, and language? Do they not show, in a variety of ways, that they are under the influence and leadership of the prince and power of the air, or of that light and airy nature which rules and reigns in the hearts of the children of disobedience? Is it not abundantly manifest that Christ's kingdom has not come, and that his will is not done in their earthly hearts as it is done in heaven? Do not some of their leaders, under a transformed light, go to and fro in the earth, under the cloak of religion, and under the sanction of their society walk or ride up and down in it, as Satan did in the days of Job, saying, "Thus saith the Lord," when the Lord has not spoken through them. Thus it is the leaders of the people that are causing them to err, and many are following their pernicious ways and causing the ways of the truth to be evil spoken of. But to you tribulated ones who are seeking the way to Zion with your faces thitherward, going and weeping, I might say with the apostle, "Beloved, I am persuaded better things of you, and things that accompany salvation, though I thus speak." For though the number of those who profess to be of the children of Israel, be as the sand of the sea, a remnant shall be saved. But this tried remnant has experienced God's kingdom to come and his will to be done on earth as it is done

in heaven. So "happy is that people that is in such a case, yea, happy is that people whose God is the Lord." And blessed are they that shall eat bread in the kingdom of God; for they have a right to the tree of life, which I understand to be a figure of Christ, and shall enter in through the gates into the paradise of God. D. H.

Eleventh Month 22d, 1859.

OUR GALLERY.

(Concluded from page 173.)

OTHNIEL ALSOP.

When the disciples faint, mid gloom and doubt,
Scarce in the battle held the combat out,
A living light upbore thee, in the hour
Of infidelity's dark reign and power;
Brighter and brighter in that hour of night,
Thy steady confidence diffused its light;
And oft the cheering cry thou didst afford
To those who battled for their sovereign Lord.
When dashing billows beat against thy barque,
When Death's bleak shore rose o'er time's boundary
dark.

Thou couldst proclaim, thy Captain walked the deck,
And the tossed vessel would not all be wreck!
"Instant in season" with thy gift, and true
To public service as it rose to view.

Beside thy grave the tribute just was paid,
As Othniel Alsop in the grave was laid,
Thou faithful in his ministry, he proved
A zealous servant to a cause he loved.

He died Twelfth Month 8th, 1836, in his 66th year.

THOMAS BACON.

In golden harvest; when thy sun was high,
E'er Autumn left thy branches seared and dry,
A burden-bearer, with bowed neck to feel
Allotted suffering for the body's weal;
A tender husband, and a father loved;

By Christ's armour who so lately proved,
We fondly hoped thy promise would produce,
A plenteous harvest for the Master's use;
But mortal blindness cannot judge aright.

And thou wert taken from our hopes and sight.
Thy Christian's prayer, thy prayer, the contrite heart,
Bows to the fat, though it weeps airt.
We fain had kept thee till mature years,
Our hopes to cherish and partake our fears.

True to thy principles, in virtue bold,
Thou told the stranger who despoiled the fold,
The strong man's bowels, must be close disguise,
That he was naked to discerning eyes.

Ah, blight and sear, and discord fell were found,
Where e'er this stranger prest upon our ground;
Seeds of his sowing towering weeds have grown,
And all the fruits the parent stock have shown.

Bacon, we love the memory of thy deum
The church's loss thy passage from this scene;
We deem the cause that made thy true heart break,
A wound received for thy dear Master's sake!

Thomas Bacon, an overseer, died on Seventh-day evening, the 23d of Tenth Mo. 1838, in the 49th year of his age.

TIMOTHY PAXSON.

All native talent never yet sufficed,
Thy strong mind, bowels, must be close in Christ:
Thou mayst have deemed thy wisdom but as dress,
And laid thy treasures humbly at the cross.
The world, that claimed thee much, well didst thou
know.

Oft wouldst of joys it never could bestow.
There is a lexopy that closely cleaves,
To him who daily amid money lives;
It is a leaven that will work unseen,
Till captive man learns mammon's rites unclean;
Earth's honor as a covert poison flows,
Till all the system's dread influences know;
Like some fair tree the sight with pleasure fills,
While prussic acid from its leaf distils!
Grace away in thee have conquered; we may hope
In age thy virtues had full room and scope;
But all the powers of thy body mild,
Gathered from earth were to be inclined;
That human wisdom in submission laid,
A new creation was in mercy made;
That e'er the world receded from thy view,
Old things discarded, all things become new,

That Paxson found, his earthly covering riven,
A robe of righteousness through faith was given!

Timothy Paxson, an elder, died Fourth Mo. 21st, 1839, in his 75th year.

REBECCA RICHARDSON.

Rebecca Richardson, a few short years,
Sat here amid our prophets and our seers.
Steadfast to ancient principles, she ran;
Her quiet course—pursued the gospel plan;
Employed her talent till the Master came,
Nor sought the plaudits of an empty name,
Her's the reward of faithfulness. We trust
That though the body turned again to dust,
She knew the Power that triumphs o'er strife,
Who is the "Resurrection and the Life."
As time was ebbing, thou couldst calmly say,
To a dear friend who watched thy closing day:
"In the dark valley lie the shades of night,
But all beyond are glorious beams of light!"

Rebecca Richardson, a minister, died Tenth Mo. 16th, 1840, in her 64th year. During the early period of the Separation she resided in Bucks County, and heartily joined with her friends in opposition to the unsound sentiments then promulgated by some bearing the name of Quakers.

RACHEL BARTRAM.

Caught in the gospel net, thy trappings gay,
Ribbons and boucans, all were torn away!
Self-will that stooped not to the Christian yoke,
Under the Gospel hammer crumbling broke,
The wandering spirit that went forth to feed,
Beyond the covert, in the flowery mead,
Where no eagle could find the foe at bay,
But secret enemies in ambush lay,
The Shepherd's crook caught e'er the wolf had slain,
And safely gave thee to the fold again!
The dangers of that hour had deep impress
A solemn warning in thy anxious breast:

The very day that closed thy pilgrimage,
To one so tempted thou gave counsel sage,
Told how thy startled heart heard the decree,
Mid thine own people must thy portion be,
And little deemed so soon before the throne
Ye both should answer for thy deeds here done!

Love to the Saviour, thy tenured heart,
In gentle shootings soon began to start;
The bursting seed,—the tender blade,—the ear,—
In due progression at the call appear:
The ripened harvest did the toil repay,
When heaven's keen scythe cut in haste away;
But in the garner, where the wheat is stored,
Has Rachel Bartram entered to her Lord!

Rachel Bartram, an overseer, was suddenly called hence on Third-day, Twelfth Mo. 7th, 1841, in her 52nd year.

CATHARINE SHEPPARD.

Without a thought that needed ar's disguise,
Open and obvious to the gazer's eyes,
Did Catharine Sheppard undisssembling stand,
Bearing her open heart within her hand.
No shy reserve—no double minded way—
No shadowy covering to shut out Truth's ray;
Loving the ancient path her father's trod,
Though by the cross and underneath the rod,—
Modern inventions for the ease of man,
To slip to heaven upon some other plan,
Her honest nature threw indignation by,
Choosing the path of Freedom and victory!

Catharine Sheppard, a beloved elder, died Twelfth Mo. 15th, 1842, aged 80 years.

WILLIAM HALLOWELL.

Of modest worth, of unpromising merit,
With all the uses covering a quiet spirit,
Did William Hallowell his portion share,
And unrepining a long sickness bear.
Looking for mercy to a Saviour slain,
Who rose victorious from the grave again.

Wm. Hallowell had been an overseer, till released for infirm health. He died Second Mo. 24th, 1843, in his 71st year.

* William Smith.

LYDIA DEAN.

Thy weary pilgrimage at length is done!
Through sore affliction was the victory won.
No flowery way towards Zion didst thou trace,
Through smiling gardens or through bowers of grace,
Thy rugged path the clouds' shadow lay,
Little to make thee idle on the way.
And this was merciful! Thy vision clear
Saw joys beyond, felt briars and brambles here.
The very trials urged thee on the road
To where the weary rest, and lose their load.
As did the ancient servants of thy Lord
Whose necks would not listen to the Word,
Thou shook the dust from off thy feet, to make
A true memorial for the Gospel's sake,
Lest him professors firm to earth allied,
And sought congenial spirits here—and died!
Earth was receding from thy fading sight,
When o'er thy features shone a heavenly light,
"Sweet Jesus now has come" thou joyfully cried—
And Lydia Dean was by her Saviour's side.

At meeting her certificate was received in the Third Month, 1844. She never attended the Select Preparative Meeting. Her mother said of her, "She lived like a lamb, and she died like a lamb."

An interesting obituary notice was published in Vol. xvii, page 307 of THE FRIEND.

Lydia Dean, a minister, died in 1844, in her 50th year.

The Golden Age for Islam.

BY CHARLES S. ROBINSON.

Announcement has lately been made of the death of Mary Whately, whose school was so long known to all English-speaking people coming through Cairo. This devoted woman gave herself to the instruction of heathen girls for almost thirty years. Later in her history, as the wonderful work she did attracted sympathy, boys were welcomed also, and a medical mission was added. She was a very remarkable woman. Socially in the heart of a splendid intellectual circle which used to gather in the Archbishop's palace in Dublin, when Thomas Arnold brought light and sweetness into it, and Matthew Arnold came with the vision of that fame he was to win even then upon him in his youth, she gave up everything, devoting all her private means to this one end, living her life out to its close among the Copts and Egyptians and Mohammedans, speaking Arabic like a native, making herself welcome in the harems, till a great day came when she received, not only the toleration of the pashas, but even a subsidy in money from the government whose confidence, unsolicited, had silently been won to her, Christian as she was. So, as the years passed, she toiled on. The school now contains about four hundred boys and two hundred and fifty girls. Her sister becomes her appropriate and able successor. Thus the devoted woman died calmly in her own institution, asking only that a grave might be given for her in Cairo.

The institution for girls in Beyroût is similar in work and purpose to all such Protestant schools in the Orient. Some years have passed since I visited it. The girls have had time to grow mature, make their mark, and use their influence. There can be no mistaking of the results. These pupils have done honor to their training. Some of them I learned somewhat pleasantly to know. Their subsequent histories have been interesting to me.

Those who travel in the Orient now grow more and more persuaded, as the years pass on, that the force of Islamism is breaking; the true religion as taught in the Bible is soon to take fixed hold of the people. They have lost confidence

in the old mockery. It will illustrate what I mean if, in closing, I relate an incident which occurred to our party while we stood in the Alabaster Mosk of Cairo. Wearied of architecture at last, we were lingering beside the singular tomb of the great man who founded the mosk at the first on the citadel long before this structure was erected. The monument is more than five hundred years old. It is surrounded by an iron railing, the door of which is kept heavily padlocked. Silver lanterns were burning over and around the elevated sarcophagus, whose glittering radiance lit the surface of stone until it flashed with its inlaid jewels and plates of overlying gold. Just there I had a conversation with our dragoman, an Egyptian whom I had employed on two occasions to conduct our party into Palestine, and had used as a *valet de place* in Egypt beforehand.

Noticing the carefulness with which the small railing was locked on every side, I asked if any one was ever allowed to enter the gates. He said, "No." I intimated, however, that I presumed he might go in if he desired it, being a believer, even though the people would forbid a foreigner. He replied hastily, and with an unaffected start of alarm, "Oh, no! I would never go inside there! He was a holy man. I am never so good. He lived in a better year. That was a great while ago in Cairo. Those years are gone. No man like him lives now. Those years were gold years. There is a Book at Shechem worth a great deal of money, more than I can tell. The Englishmen are trying to get it. They sent a man last summer to buy it. He offered them a hundred thousands of pounds. They could not buy it. They will have that Book by and by from somebody. Then there will be no more your religion, no more English religion, no more my religion. That Book will give the only true religion. Our men know all about it. They want the true religion the more than English want it. Our religion is not good. It was good. A great while ago it was gold time. Now it is not gold time any more."

Astonished at the high excitement of this man,—for he was trembling in every limb,—and arrested on the instant by his mistaken notion of the endeavors which the British Exploration Fund for Palestine during the year just previous had been making to secure a copy of the Samaritan Bible from the priests on Mount Gerizim, who guard it with more jealousy than is proportionate to its value, I inquired again, with eagerness of surprise, whether that Book, as he supposed, would prove the Koran to be wrong. And his answer came sadly, and was made in a quiet tone, almost like a whisper: "Yes; all our men say so. They tell every one now that Koran religion is good, but that this book will give what is the true religion. We are all bad. We want a new religion. Great while ago men were good, our religion was good, but it will not longer last for us. We shall have the true religion in the Book. Not ever your religion, not ever my religion, the true religion. Then it is the gold times will all come back again. Men will be good men then."

He then went on to relate how many of the preachers of his faith he knew who were expecting an overthrow of their church and government before long. His voice continued to grow mournful and melancholy when he admitted how wicked most of the people had become.

And I, a child of hope through grace of a living Redeemer crucified once, but now glorified

forever, a preacher of the coming and everlasting reign of Immanuel, whose kingdom will absorb and include all, am suddenly confronted with a disclosure of weakness and the admission of dotage and consternation on the part of some of its most formidable foes.

So I am apt to sit thinking of the day as perhaps nearer than an apathetic church has appeared to be imagining lately, when the King of the kingdom will be here. And sometimes softly to myself I sing this:

For lo! the days are hastening on,
By prophet laurels foretold,
When with the ever-circling years
Comer round the age of gold;
When peace shall cover all the earth,
Its final splendors bring,
And the whole world send back the song
Which now the angels sing.

—N. S. Times.

Fashionable Society.—Bishop Huntington remarks on the customs of fashionable society in the *Forum*:—"Is it not a little too bad, in a time when there is so much fact to be learned, so much work to be done and done better than it is, so much wrong to be righted, so many burdens wait to be eased, so many noble enterprises to be set forward, that ladies and gentlemen of faculty and information should array themselves sumptuously, and go to meet each other again and again, and stay together for hours, only to look at a spectacle that is without significance and bear sounds without sense; to see unreal manners and hear commonplace speech; to exchange greetings with the dearest friends only on a crowded staircase, as the two professions up and down meet and pass, or in a 'crush,' where the liveliest feeling is a fear of damaging a fabric or being mortified by a mistake; to eat and drink what could be eaten and drunk with far more comfort and safer digestion at home; to say what one only half feels to persons whom one does not half like on a subject that one does not half understand; to pick a way between frivolity and falsehood or waste through a muddy mixture of both; to cover disgust with a smile, inward protest with spoken assent or weariness with a jest, and then to go away at an unhealthy hour with nothing to remember but a habble, a whirl, a jam and a secret self-contempt?"

How often the lips un consciously utter the truth which the heart denies! It was a dry season and there was danger of the crops perishing for lack of rain, when a stranger traveling a country road, in the heat of the day. As he passed along, a man working in a field close by stopped work to exchange salutations. "A dry season!" he said, in response to the traveler's remark. "Ah, and God knows when we shall have rain!" God know—yes—God knows! When we are crushed to the earth by grief which we can hardly bear, when our souls are crying out for the strength which seems denied, when our way is blocked before us so that we cannot advance a step farther, when everything and everybody seem to be working against us—God knows. This truth, sometimes uttered carelessly by the lips of the flippant, or spoken bitterly by the tongue of the blasphemer, has been the comfort of God's saints in all time. "Though the fig-tree shall not blossom, neither shall fruit be in the vines; the labor of the olive shall fail, and the fields shall yield no meat, the flock shall be cut off from the fold, and there shall be no herd in the stalls; yet I will rejoice in the Lord, I will joy in the God of my salvation." For He knows, and He has provided for it all.

Success.

BY WAYLAND HOYT.

Behold an utmost example of success! Listen to this man: "I have fought a good fight, I have finished my course, I have kept the faith. Henceforth there is laid up for me a crown of righteousness." If ever there were triumph, it is here; and amid, apparently, the worst disaster and defeat.

For where is this Paul, thus jubilant with success?

He is a prisoner at Rome, the second time. He had been a prisoner before in this same Rome; but then his imprisonment had been much cushioned. After a short detention in the Pretorian camp, he had been allowed to go to his own hired house. And though this was but a mean room in one of the towering and crowded *insulae*, in the poorest quarter of the city, and though he must be steadily chained in it to a guarding soldier, it was still a kind of home. The rigor of the government was much relaxed toward him. He was quite free to carry on the work on which his heart was set. He could summon the chiefs of the Jews that he might preach Christ to them. He could be surrounded by a strong cordon of devoted friends. He could ply his pen as he listed. So easy were his bonds, he could write to the Philippians, "But I would ye should understand, brethren, that the things which happened unto me have fallen out rather unto the furtherance of the gospel; so that my bonds in Christ are manifest in all the palace, and in all other places; and many of the brethren in the Lord, waxing confident by my bonds, are much more bold to speak the word without fear."

Suppose a man's heart is set on money, and he exerts himself to one of the rude, wild, Western mining-places; and there money begins to flow in on him, and he sees the desires of his heart getting actualized, and he writes back to his friends, "The place is rough, but I am getting what I wanted." He is not despondent, you see; he is joyful. He can stand the hardness, because he is getting that on which his heart is set.

It was thus that Paul wrote out of his first imprisonment. His heart was set on telling God's gospel, and his place as prisoner gave him the best possible pulpit. Even in Cesar's court the word was getting told. You can hear glad notes striking all through the Epistle to the Philippians, which dates from this imprisonment.

Then, besides, in this first imprisonment, Paul was quite sure the gates of liberty would open for him; that, after he had finished duty at Rome, he could go ranging forth on his high service elsewhere. And it was so. There were delays of law then, as there are now. But at last the law's delays were done. His trial was had. It was seen that he had offended against no Roman law. He was set free,—a glad man intent on his mission, and with chances opening on every side.

But now, four or five years later, everything had changed. Nero was on the throne. He had been growing from bad to worse. He had sunk into abysses of vice. He had risen into appalling and alpine heights of cruelty. A great fire breaks out in the capital city. It sweeps through an enormous portion of it. It renders thousands homeless. It brings immense disaster. This monster, Nero, instead of giving orders to put it out, enjoys it. Seated on some

tower, at a safe distance, he plays and sings about the burning of Troy. The suspicion begins to blow about that Nero himself has had a hand in the fire. The suspicion is true, probably. There is such a whirlwind of public indignation that even Nero on his throne is frightened. It is needful to turn suspicion from himself. Nero betinks himself of the Christians. He declares them the guilty parties. The bait takes. All hatreds get marshalled against the Christians. The Neronian persecution breaks out. Christians are caught, deluged with oil, and set on fire to light at night the imperial gardens. And Paul, as the Christian most famous, is seized, and brought to Rome, a prisoner the second time.

Now it is gripping, terrible imprisonment. Now there is no hired house for him,—only the dungeon, black, damp, slimy, chilly, stenchful. Now he has no friends about him, save one only.—the faithful Luke. Amid the storm of that persecution, to visit him, to seem to be in the least identified with him, was at the risk of life. Some, like Phygellus and Hermogenes and Demas, have distinctly forsaken him. Others, like Timothy and Titus, who would die for him, are absent. He is an old, almost friendless, and deserted man.

He is penitless, too, and needing comfort. Very pathetically this appears in that request to Timothy to hasten himself to him, and to be sure to bring the cloak left at Troas, and the books and parchments. In that chilly prison the aged apostle has not sufficient covering. He wants his traveling-cloak for warmth, the books and parchments that be may a little solace himself with reading.

Besides, the apostle is sure there are no gates towards liberty for this imprisonment. He knows his doom is said. He is certain that the time of his departure is at hand.

Yet, out of such circumstances, the grandest pan of victory ever sung,—the sublimest certainty and consciousness of success. No weak bewailings; no complaints that the world has gone against him. Another says: "The characteristic of waning life is disenchantment; a sense of insufferable weariness; a sense of inevitable disappointment. We trace it in Elijah and John the Baptist; we trace it in Marcus Aurelius; we trace it in Francis of Assisi; we trace it in Roger Bacon; we trace it in Luther. All is vain. We have lived, humanly speaking, to little or no purpose. 'Are we not better than our fathers' (Elijah). 'Art thou he that should come, or do we look for another?' (John the Baptist). 'I shall die, and people will say, We are glad to get rid of this schoolmaster' (Marcus Aurelius). 'My order is more than I can manage' (Francis of Assisi). 'Men are not worth the trouble I have taken for them' (Roger Bacon). 'We must take men as we find them, and cannot change their nature' (Luther)."

But nothing of this in the aged, friendless, bookless, cloakless, imprisoned, death-confronting apostle. Only a shout of victory, only the strong gladness of success.

I have fought a good fight,—Life has been a fight. I have accepted it as such. I have not tried to blink matters. I have not skulked in the rear. I have not liked ignoble peace better than noble war. I have fought a good fight. I have thrown myself on the side of goodness, though it were the despised and looked to be the losing side.

I have finished my course.—I have not begun, grown lukewarm, stopped midway. I have pressed on. There might be Lystra mobs and

Philippi prisons; there might be scourgings; there might be suspicion; there might be shipwreck, danger by sea and land; there might be a thorn in the flesh,—some great horrid, hindering, personal trial that tormented me, and often seemed about to stop me; but I have pressed on.

I have kept the faith.—I have been true to that with which I have been put in trust; I have exercised myself to keep a conscience void of offence toward God and man; I have been no trimmer; I have not capitulated to the expedient; the truth of Christ I have dared to preach at Athens with its culture, at Corinth with its license, to Felix on his throne, to the emperor on his topmost seat, to Judizers who said that Christ was not sufficient; I have kept the faith.

Henceforth there is laid up for me a crown.—Men may think Nero yonder on his throne a man to be vastly envied, and bow infinitely better off than I; in what ample palace does he not reside, on what soft couches does he not recline, with what assiduous attention is he not fawned on, with what earthly glitter does he not blaze? But I would not change places with him. He is a defeated man. Henceforth there is laid up for me a crown of righteousness, of the Divine favor, of the peace and blessedness of heaven; such crown shall go shining on when Nero is forgotten, and his palace and my prison have both crumbled into indistinguishable dust.

The Arabic proverb says: "A fig-tree looking on a fig-tree becometh fruitful." Nothing can help life like life. Amid this mercenary world we need to gaze much on a life and a triumph like this. And as we gaze, we ought to let its mighty lesson sink into our hearts, chasten and ennoble our ideals, control our action. The lesson is this,—real success is that of character, not of condition.—*Sunday School Times.*

Natural History, Science, &c.

Manufacturers of Perfumes.—The distillation of essential oils from various species of wild plants is an important industry in southeastern France. The region of aromatic plants is a mountainous country about 100 miles in length by 50 in breadth.

The most important of the plants is the Lavender, which grows so profusely that the summer winds carry the perfume far over the hot plains below. About 125,000 pounds of oil of Lavender are yearly manufactured. The best quality is that obtained from the plants at the time of flowering,—but besides this, much of the Lavender is dried like hay and distilled at leisure during several months of the year. It requires 300 pounds of dried Lavender plants to yield one pound of the oil.

The distillation of essential oils from wild aromatic plants, the manufacture of perfumes from cultivated flowers, and the preparation of preserved fruits by the process of crystallization are three profitable industries peculiar to southern France.

Shaken Milk.—The *Medical Record* publishes an article by Dr. John K. Morgan, of Philadelphia, on the use of milk. When first drawn from the animal, it may be considered as a *vis-ing* fluid, and is more easily digested and assimilated than after it has stood for some hours, and the materials it contains have separated from each other. To those of feeble digestion, or with whom milk in its ordinary form does not agree, he recommends the practice of violently agitating it, by the use of a conical tin cup,

such as bartenders use, which fits over the top of a milk glass, so that the whole can be shaken before drinking.

Platinum.—The first person to mention platinum by its present name (which means "little silver") was Don Antonio Ullon, a Spanish mathematician, who in 1766 accompanied the French Academics, who were sent to Paris to measure a degree of the meridian, in order to determine the figure of the earth.

After his return he published at Madrid in 1748 a history of his voyage, and mentioned the abandonment of the gold mines of Choco, on account of the presence of platinum which made the extraction of the gold difficult and expensive.

The miners of Choco began to adulterate their gold with platinum, which led the Court of Spain to attempt to conceal from the world the discovery of the metal. To effect this all the gold from Choco was taken to the mints at Santa Fe, the platinum separated and thrown into the river by a special officer in the presence of witnesses.

From the great specific gravity of the metal, it being the heaviest known, together with its malleability and ductility, and the fact of its great resistance to the action of acids, alkalis and sulphurs, it is a most important material to the chemists. It is so soft that it may readily be cut with the scissers.

It has been found in various parts of the world, but the principal source of supply is the Ural mountains in Russia, and in Siberia. The whole amount obtained is but small, averaging less than 4000 pounds per annum—and apparently decreasing. As there is no known substitute for it for various uses in the arts, the price is proportionally high.

Utilizing Coal Dust.—A company has been formed to utilize the coal dust, which forms about one-seventh of the product of the mines. It is made to cohere in bricks by the use of a very small porportion of pitch, and subjected to heavy pressure.

The Hoop Snake.—An article by Nicholas Pike in the *Scientific American*, says, it is firmly believed on Long Island, that a species of snake throws itself into a circle and then rolls rapidly over the country. As such a motion is physically impossible for a snake, he attributes a belief in it to careless observation and mentions his own experience. He was out on a pedestrian excursion in Long Island with a friend, when they started a fine specimen of the Milk Snake. He says, "It darted from us in a succession of looping movements of the body, similar to those made by the measuring or geometric worms in walking. The rapidity with which the snake moves confuses the eye and renders the whole thing an optical illusion. Some time ago I had one of these creatures in confinement a whole winter. A favorite position was to raise one or two long loops and rest the head on one of them. Sometimes it raised only one loop, twisting its tail round the neck in most intricate folds and hiding its head, where it remained for days thus fast asleep."

Rainfall in Santa Croix.—Our friend, Geo. W. Taylor, of Philadelphia, says in reference to the rainfall on this island:—

"In 1850 when the writer visited the Danish island of St. Croix, the level lands and southern slopes of the hills that abound on the north side of the island were cultivated in sugar cane, while the northern side and tops of the hills were clothed with timber. In that condition of

things rains were abundant, so essential to the growth of the sugar cane. Some years after it was reported that the planters desirous of possessing more lands for the growth of cane, cleared off the timber from the hills, and that since that time, there had been a remarkable scarcity of rain, greatly reducing their crops. During the time the writer remained on the island, rain fell on every day except one. The theory is, that the vapors wafted from the east by the trade winds, were condensed by the cool air of the timber lands, and were precipitated in rain; but when the timber was removed, there was not a temperature over the island low enough to convert the vapor into rain, so that what rain fell was probably in the night. I think we may reasonably infer from this result of removing of the timber, that it is best for the owners of land, where timber is now abundant, to beware of its too free destruction. And that in the woodless regions of the West, it would be an advantage to plant trees extensively."

Items.

Concern for the Young.—At a Meeting for Sufferings, held on the 20th of Twelfth Month, the subject most prominently before the meeting was a concern for the religious welfare of the younger members of our Society. It had claimed attention at a previous meeting, and been referred to a committee, who suggested in their report that attention should be taken to see that our members generally should be furnished with copies of the *Book of Discipline*, the *Christian Adverser* issued from time to time by the Yearly Meeting, and a *Brief Account of the Rise of the Society*, prepared by the late Thomas Evans, as an introduction to the *Friends' Library*.

This proposition was fully united with; but it was also in the minds of the members present, that, in addition, it was desirable for concerned Friends to have personal intercourse with those who were the objects of concern. Visits paid under a feeling of love and interest, sometimes will produce a more full and kindly response in the hearts of those visited, than can be effected by books alone.

The cultivation of feelings of sympathy and interest in each other between the old and the young, was felt to be important; yet the fact was not overlooked, that a growth in grace must depend on the visitations of the Holy Spirit. It was through submission to these, that our predecessors in the Truth were taught the principles of Quakerism, and it is only through these that true Quakers can be made in our day, so that the church in which we are engaged, may be earnest in prayer as the Lord leads his servants for the pouring forth of his Spirit on sons and daughters, by which they may be weaned from too much love of worldly pleasures, and be made to seek diligently for Heavenly treasure.

Selling Navy Yards.—The Secretary of the United States Navy will propose to sell such of the United States Navy Yards as can not be profitably utilized for the building and repairs of naval vessels. That seems sensible. Why keep them in ill-repute and lose the interest on their value for commercial purposes, and spend money in repairs on them or let them rot down. Common business thrift would compel any owner but a government to use or sell them. And yet we hear the cry for new vessels, new fortifications and greater armaments everywhere. *Cui bono?* To spend millions on such things is to waste what they can then pay an enormous interest on that cost to keep them up—or else let them run to decay and ruin. If new fortifications are built they must be manned. To man such fortifications as now recommended would require a new army of 75,000 men 100,000 in all to be fed, clothed and paid to live in idleness; to be a standing menace to peace; to furnish politicians an argument for war; to give the government a new pretext for taxing the industrious and thrifty, and to furnish contractors a new temptation to corruption. Let us have the reasons for a great army

and navy. Look at the first: *National pride*. Is militarism then the chief ingredient of patriotism? Cannot a citizen feel an honest pride in the size, wealth, liberty, happiness and peace of his country? Must a nation become a great boastful boisterous nation before it can gain the respect of its citizens?—*American Adv. of Peace.*

Ministers Blowing Guns.—Oth, war, my children, what a terrible thing is it! There are men clothed and authorized by the rate, trapping and prancing steeds, by the empty terms of honor and glory, until they forget, in the outward tinsel and show, the real ghastly horror of the accursed thing. I have seen a Christian minister blessing a cannon which had just been founded, and another blessing a warship as it glided from the slips. They, the so-called ministers of the Gospel, blessed the engines of destruction which cruel man has devised to destroy and tear his fellow-creatures. What would we say if we read in Holy Writ of our Lord having blessed the battering rams and the catapults of the legions? Would you think it was in agreement with his teaching?—*From "Month's Work."*

Effects of the Saloon.—The *School Journal* says: The great foe of the school-room is the saloon; one deals with education, the other with alcohol. From 1875 to 1879, France, the consumption of alcohol increased from 2,700 to 3,875 litres; the increase of crime from 172,000 to 195,000; the insanity from 57,000 to 52,000; so in Belgium, so in Italy. Norway used to be famous for its drunkards. From 1814 to 1879, the amount of alcohol used per head decreased from ten litres to four; crime has decreased in the same ratio. Here are things the teacher must let his pupils know.

Secret Societies.—Our friend, Josiah W. Leeds, has prepared the following circular, to which we gladly give space in the columns of THE FRIEND.

To my Fellow Members of the Society of Friends:

The religious denomination of the United Brethren, like that of the Society of Friends, has been in the past opposed to secret societies, but within a few months it has met with the disaster of disruption, owing to the inroads of secretism.

The late Swedish minister of the Iowa Wesleyans, in view of the above fact, earnestly counselled its members to stand firmly by their testimony against secret orders, lest a similar disaster befall them also.

A United Presbyterian journal recently observed: "In some congregations, the manner in which our principles against secret societies is administered is simply an evasion."

The Swedish Lutherans, in their own land, have kept aloof from the secret orders, but, coming to this country, they have been largely drawn into the lodges. That eminent minister and member of the Swedish Parliament, Dr. Waldenström, who has just gone back from a visit to the United States, replying to a letter of inquiry from the editor of the *Christian Advocate*, says: "I have seen no native land stand, in so far as I know, as one man against secret societies, if I except a few who belong to the Good Templar Lodge. I have never heard of a believer who is a Freemason. The believers I know, who have been connected with the lodge, have left it. Furthermore, what I know of the lodge is such that I cannot understand how one who is a member of the lodge could possibly remain in it, lest he lose his faith and a good conscience."

And now with respect to Friends, who have made a high profession as to truth and openness, the enemy of our peace, stability and usefulness has undoubtedly, whilst we have slept, advanced upon us. A late letter from a greatly concerned member in the West, known to me, contains the following: "I have been extensively ignored. In my own meeting of over four hundred members, we have Masons, Odd Fellows, Grand Army of the Republic, Sons of Veterans, &c. Now how stands our testimony against war, oaths, and secret orders? This is by no means, I regret to add, an isolated case."

A member, known to me, having gone up the lodge and in the card playing to which he had been admitted, feels that he cannot now do enough for the Lord who has mercifully revealed him from the ways of darkness and sin, and brought him into his own marvellous light.

Finally, the revelations of the Cronin-Clan-na-Gael trial, now in progress, should determine every one who makes profession of religion to be faithful to the essay with every secret order. May the accompanying compilation (the author's reprint of the essays of Secret Societies) be of benefit to some who have gone astray in this regard, or who, having united in membership with us have not cast off the incubus of the lodge; and may it likewise incite to a more conscientious faithfulness in our members generally to greater fidelity in maintaining that position concerning secretism, held by us from our first religious Society, which it may be a shame for us in the least degree to surrender.

JOSIAH W. LEEDS.

THE FRIEND.

FIRST MONTH 4, 1890.

The close of one year and the commencement of a new one, seems a suitable time to carefully review one's situation and past experience, and to consider what errors and faults that have marked the past can be avoided in the future.

The discipline of the Society of Friends advises that Friends carefully inspect the state of their affairs at least once in a year, and make their wills and settle their outward estates while in health. Of the wisdom of this advice, there can be no doubt. For want of knowing the real situation of their affairs, many have gone on living in a scale of expenditure beyond their income, and thus have involved themselves in difficulties from which they could not extricate themselves.

Some whose family expenses have not exceeded the profits of their business, or the receipts from their investments, may find on examination that an undue portion of these have been expended on personal gratifications, or needless indulgences, and that the claims of benevolence, or the requirements of the church have not been responded to as liberally as should have been done. While their earthly treasures may have increased, they may be conscious that they have not been enough concerned to lay up treasures in Heaven.

Of far greater importance than the care and preservation of outward estates is the spiritual condition of each one of us. How solemn is the language of our Saviour, "What shall it profit him, if he gain the whole world and lose his own soul?" Is there any subject of inquiry of more tremendous importance than to know whether we are filling up our measure of duty and service and growing in grace as the time passes on? As there are many who, under the convictions of conscience, must confess that they have been slothful and negligent, or even disobedient servants, and that to them belong blushing and confusion of face. May it please our merciful Heavenly Father to awaken all such to a true feeling of their dangerous condition, and to renew the visitations of his Holy Spirit, so that they may be stimulated to work diligently, while the day of mercy lasts, through his Divine Power operating on their minds!

SUMMARY OF EVENTS.

UNITED STATES.—Despatches from Chicago and other points in the west and northwest, on Twelfth Month 28th, indicate for the Twelfth Month, temperatures which baffle the recollections of the "oldest inhabitant." The great lakes are as free from ice as in midsummer, and even on Lake Superior boats continue to ply between Duluth and Port Arthur. At Chicago the temperature reached nearly 60 degrees, and at Waverly, Iowa, on the sunny side of the streets, it reached 70°. Out-door sports were indulged in at Chi-

ago. At Gallion, Iowa, the grass is growing, dandelions are blooming, lilacs in leaf, and maples budding. Similar spring-like temperatures prevailed throughout the Atlantic coast districts and the Mississippi Valley.

Peach trees are reported to be in nearly full bloom in several orchards in the Orange county, New Jersey. The fruit of the late-blossomers, which they never before saw the like in Twelfth Month. Pear trees in various parts of the county are giving signs of blooming.

A State official, who has just returned to Topeka from a trip throughout Northwest Kansas, reports that the thousands of bushels of corn are being burned for fuel in some counties the market price of corn is less than 15 cents per bushel, while coal is from 25 to 35 cents per bushel. The corn crop on hand is immense. In all the principal corn producing counties it is stacked up in great racks without protection of any sort, it having been impossible for the last thirty days to obtain cars to move it in.

The people in Sherman County, Kansas, have made an appeal for aid. The houses of the settlers for the most part are mere shells and the crops in many cases have been failures. Many of the settlers live five miles from the railroad, and should now continue to fall it is said that it would be almost impossible to reach them. The Board of Trade of Wichita will take a meeting to decide upon what measures to take.

The supply of spruce gum in Northern Maine, which had been regarded as inexhaustible, is reported to have given out.

The latest reports from the Angel's Camp disaster, near San Andrea, California, mentioned in last week's Summary, that there are at least 17, and probably 19, men buried in the mine. There are little signs of recovery among the bodies. The miners are now at work taking out ore, and the work of developing the mine will probably be resumed very soon. It is probable that the work will be directed to the spot where the bodies are buried.

There are 40 light-houses on the coast of Maine. The Governor of Pennsylvania issued Twelfth Month 19th, a charter for the new city of Johnstown. It includes Grabtown, Conemaugh, Woodvale, Prospect, Millville and Cambria, these boroughs having a population of at least 16,000.

The Governor of New Hampshire on the 28th ult., issued a proclamation, calling upon the civil officers and "all good citizens throughout the State, to unite in one supreme effort for the enforcement of its prohibitory liquor laws.

Henry W. Grady, of Atlanta, Ga., who was taken ill during his recent visit to Boston, Mass., died in Atlanta Twelfth Month 22d. He was only 38 years of age, yet he was one of the most prominent and dearly loved men in the South. Although his father was killed in the Confederate service, he labored faithfully to remove the sectional feeling between the people of the South. He also labored with much zeal and effect in the cause of total abstinence; being one of those most largely instrumental in establishing local option in various counties in Georgia. Truly the removal of this true patriot was no ordinary loss.

At the census taken last week, the number was more than during the preceding week and 55 more than during the corresponding period last year. Of the foregoing 205 were males and 199 females: 51 died of consumption; 37 of diseases of the liver; 33 of pneumonia; 26 of typhoid fever; 2 of old age; 15 of cholera; 11 of small pox; 11 of group; 11 of apoplexy; 11 of bronchitis; 11 of inflammation of the brain and 20 of diptheria.

Markets, &c.—U. S. 115 1/2; 4's, reg, 120 1/2; coupon, 127; currency 65, 84's 126.

FEED.—Corn sold in a small way to spinners on a basis of 10¢ per bushel for middling upland.

WHEAT.—Winter bran, choice, 13¢; do, do, fair to prime, \$12.25 a \$12.75.

WHEAT AND MEAL.—Western and Pennsylvania super, \$2.50 a \$2.75; do, do, extras, \$2.75 a \$3.00; No. 2 winter family, \$3.25 a \$3.50; Pennsylvania family, stone ground, \$3.75 a \$3.90; Pennsylvania roller process, \$4.00 a \$4.25; Western winter, clear, \$4.00 a \$4.20; do, do, straight, \$4.25 a \$4.45; winter patent, \$4.50 a \$4.80; Minnesota, clear, \$3.50 a \$4.00; do, straight, \$4.00 a \$4.50; do, patent, \$4.50 a \$5.00; 15¢ of common small white lot, \$3.15 a \$3.25 per barrel. Buckwheat flour was dull at former rates, say: 1.75 a 1.85 per 100 pounds for new.

GRAIN.—No. 2 red wheat, 80¢ a 81¢.

WHEAT.—No. 2 mixed corn, 30¢ a 31¢.

BEEF CATTLE.—Extra, 5½ a 5½ cts.; good, 4½ a 5 cts.; medium, 4 a 4½ cts.; common, 3½ a 3½ cts.; fat cows, 2 a 2½ cts.

SHEEP.—Extra, 5½ a 6 cts.; good, 5½ a 5½ cts.; medium, 4½ a 5 cts.; common, 4½ a 4½ cts.; culls, 3½ a 4 cts.

LAMBS.—Extra, 7 a 7½ cts.; good, 6½ a 6½ cts.; medium, 5½ a 6½ cts.; common, 5 a 5½ cts.

HOGS.—Extra Chicago, 5½ cts.; good Western, 5½ a 5½ cts.; common Western, 5 a 5½ cts.

FOREIGN.—The Earl of Zealand, the new Viceroy of Ireland, in reply to a number of addresses which were presented to him on the 30th ult., said he was rejoiced that the condition of Ireland was so far different from what it was when Lord Londonderry, the late Viceroy, was welcomed to Dublin in 1836. The happy results that had been achieved induced the Governor to persevere. He expressed his confidence that, with the assistance of further progress towards the prosperity and contentment which all desired.

The Marquis of Salisbury is seriously ill.

There are 1300 women printers in Paris.

The town of Aci Reale, in Sicily, was shaken by an earthquake on the 26th ult. Several houses collapsed and many persons were buried under the ruins.

The Austrian Government will reinforce its staff of secret agents in Italy, watching the Irredentists.

A French and Belgian syndicate is about to build a French Congo possession, with the object of working the copper district of Katanga. The engineers who will have charge of the construction of the road will shortly start for Africa.

The charter of the South African Company was gazetted Twelfth Mo, 20th. It gives to the regions west of the company's operations as immediately north of Bechuanaland, and west of the Portuguese possessions, and north and west of the dominions possessed by the Transvaal Company.—This includes therefore the vast tract of Central Africa north of the Zambesi, to the River and west of the dominions of the Government. It is not the policy of England to limit the operations of the company is bound by the conditions of the charter to oppose and discourage the slave trade and the trade in ardent spirits.

Portugal, Germany and Italy will shortly send a collective note to the Provisional Government of Brazil protesting against the Government's scheme in regard to the naturalization of foreigners resident in Brazil.

Lisbon, Twelfth Month 25th.—Despatches from Rio de Janeiro, received in cipher, describe the newspaper *Confedez*, contain important and interesting facts about the political upheaval reported there as having occurred on the 15th inst. From the information obtained in the cipher telegrams it is undoubtedly correct that the Provisional Government found itself confronted by a very formidable and active opposition, among the members of which were numbered many soldiers, a good contingent from the navy, backed up by several officers from both branches of the service, while numerous citizens also joined the revolution in favor of the monarchy. These banded together and paraded the primary streets in an aggressive position, and their sentiments, and very serious fighting resulted. The revolt was not suppressed until the morning of the 20th inst., when the regularly organized troops overcame and dispersed the Monarchists. The Provisional authorities arrested quite a number of persons participating in the revolution. The President Diaz and his Secretary of the Interior are reported to be considering a plan for the suppression of gambling of every description in Mexico.

NOTICES.

WESTWOOD BOARDING SCHOOL.—The Committee who have charge of this institution, meet in Philadelphia on Sixth-day, the 10th of First Month, 1890, at 11 A. M.

The Committee on Instruction meet the same day at 9 A. M., and the Committee on Admissions at 9.30.

WM. EVANS, Clerk.

FOR "THE FRIEND."

Incidents and Reflections.—No. 205.

Dr. Leifchild illustrates the forlorn condition of those who are living without any worthy object to occupy their time and thoughts, in his narrative he gives of a Frenchman whom he met at Brussels, about thirty years old apparently, who had been staying there several months, had abundance of money, was regular in his habits, but had no particular object in view, and seemed like a man who knew not what to do with himself, and who in answer to his inquiries, gave the following account of himself:

"I was left, at a very early period of my life, heir to a very considerable estate, the annual revenue of which soon came to be at my disposal. I had an eager desire to travel, which I gratified, and spared no expense for the accomplishment of my object. I have visited Europe and the East, have been in both the Indies, and through Switzerland, France, and England. I have met with but few disasters, and with but little interruption to my health, while, as yet, my resources are unimpaired."

Dr. Leifchild says: He surprised me by the extent and accuracy of his information. I found by his ready answers to questions relative to places which I had seen, that he was perfectly correct in his statements. He had read much, indeed all the books that came in his way, till he found authors only repeating each other in different modes of expression. "And now," said he, "I am at a loss what to do. I know not where to go or what to see that I am not already acquainted with. There is nothing new to sharpen my curiosity, or to stimulate me to exertion: I am satiated. Life to me has exhausted its charms; the world has no new face for me, nor can it open any new prospect to my view."

Such a man might well look upon his life as a failure; and such would be the estimate placed on it by most thoughtful persons. But ought we not also to regard as failures the lives of all those who, whatever their activity in worldly pursuits, neglect the *one thing needful*—the preparation for another state of existence. An anecdote is recorded of a man of high standing, a lawyer, a politician, a man of talents; and, as the world estimates, a man successful in all his undertakings; who was suddenly arrested by disease, and brought to the close of life. He

was asked by a friend how he felt as he looked back upon his past life; and the answer, coming from a man of sense and thought, with eternity full in his view, was striking and memorable. "With all its success, I now see and feel that my life has been a failure. I have not gained one of the great ends for which life was given, and now it is too late to gain them."

How strikingly contrast with this, the feelings expressed by George Whitehead, at the conclusion of the account of his life, written about the 75th year of his age. He says:—

"Manifold exercises, trials and tribulations, hath the Lord my God supported me under and carried me through, in my pilgrimage, for his name and truth's sake, more than could possibly be related in this history; having spent a long time, even the greatest part of my life, from my youth upward, in the testimony, service and vindication of the living, unchangeable Truth, as it is in Christ Jesus, my Lord; for whom I have suffered many things, both in body and spirit, as also by reproaches and calumnies, and sincerely labored in his love, who has supported me, and hitherto helped me in the gospel of the Grace of God, and of his dear Son, Jesus Christ, even the gospel of life, salvation and peace, to them who truly believe; and yet I esteem not all my sufferings and afflictions worthy to be compared to the glory set before me. For all which I must ascribe blessing, honor, glory, power and dominion to the Lord God, and the Lamb upon his throne for ever and ever.

"And when by the grace and assistance of my heavenly Father, I have finished the work He hath given me to do; I firmly believe and livingly hope in the Lord, I shall die in the Lord Jesus Christ, and ever live with and rest in Him, in his heavenly kingdom. O my soul, enter thou into thy rest, even thy eternal rest, from thy manifold labors, travails and sufferings; for the Lord thy God hath dealt bountifully with thee: glory to his excellent name forevermore."

The case of the Roman Emperor Tiberius, furnishes a striking example of the inability of merely sensual indulgences to satisfy the spirit—Farrar says of him: "The Roman Emperor Tiberius was infinitely the most powerful of living men, the absolute, undisputed, deified ruler of all that was fairest and richest in the kingdoms of the earth. There was no control to the power, no limit to his wealth, no restraint upon his pleasures. And, to yield himself still more unreservedly to the boundless self-gratification of a voluptuous luxury, not long after this time he chose for himself a home on one of the loveliest spots on the earth's surface, under the shadow of the slumbering volcano, upon an enchanting islet in one of the most softly delicious climates of the world. What came of it all? He was, as Pliny calls him, '*Tristissimus ut constat hominum*,'—confessedly the most gloomy of mankind. And there, from this home of his hidden infamies, from this island where, on a scale so splendid, he had tried the experiment of what happiness can be achieved by pressing the world's

most absolute authority and the world's greatest indulgences into the service of an exclusively selfish life, he wrote to his servile and cringing Senate, 'What to write to you, conscript fathers, or how to write, or what not to write, is in all the gods and goddesses that own my worship; *in my I feel that they are daily destroying me*, if I know.' Rarely has there been so abundant to the world a more overwhelming proof that its richest gifts are but 'fairly gold that turns to dust and dross.'

The family of Delavals, in Ireland, were remarkable for their excessive devotion to amusements and pleasures (so-called) of a worldly and not very refined character. It is no wonder, therefore, that they soon passed out of sight. Edgeworth relates of Sir Francis Delaval, who died at a comparatively early age, that he expressed himself in the following instructive manner:

"Let my example warn you of a fatal error into which I have fallen. I have pursued amusement or rather frolic, instead of turning my intelligence and talents to useful purposes. I am sensible that my mind was fit for greater things than any of which I am now, or of which I was ever supposed to be capable. I am able to speak fluently in public, and I have perceived that my manner of speaking has always increased the force of what I said. Upon various useful subjects, I am not deficient; I am in useful information; and if I had employed half the time and half the pains in cultivating serious knowledge which I have wasted in exerting my powers upon trifles, instead of making myself a conspicuous figure merely at public places of amusement, instead of dissipating my fortune and tarnishing my character, I should have become a useful member of society and an honor to my family. Remember my advice, young man! pursue what is useful to mankind. You will satisfy them, and what is better, you will satisfy yourself." J. W.

The ancient writers of Greece and Rome are the idols of modern times in most countries in Europe and America. To the youth in the middle and upper classes of society they are the books of education in our public schools. And in what veneration are they held! From them the youth imbibed a pagan morality that, far from being peaceable, gentle, and easy to be entreated, full of mercy and good fruit, more resembles that "which is earthly, sensual, devilish." This morality, instead of inculcating humility, meekness, benevolence and peace—those essential attributes of the gospel—is selfish, proud, ambitious, savage, hates other nations, and seeks distinction on the field of battle. With such sentiments have the greater part of the statesmen come from the school and college into the Senate and the Cabinet. Such is the morality most commonly found in the speeches of public men, and the maxims generally recommended accord much more with the sentiments of the Grecian and Roman classics than with the spirit of Christ.—*Dr. Boogie.*

FOR "THE FRIEND."

Quebec and the Saguenay.

(Continued from page 178.)

Here and there as one goes down the lower St. Lawrence there are between the forests, after leaving the cultivated country, a series of little hamlets with their tiny white houses clustered around a Roman Catholic place of worship. Branching off from these little villages, the country roads wind up the steep hills through rocky and poor looking fields, until all is lost in the distant and wooded horizon. Finally we stopped at St. Paul's Bay, (almost every town and street in this section of the world is named after some saint or other) and it was the most novel landing place I have ever seen. The tides are so changeable that a box-shaped wharf has been built almost half a mile from and not connected with the shore, and so adjusted that the steamers can always land passengers and freight under any conditions of the tide. Then small boats convey them across from the wharf to the land. Further down the river we stopped at Murray's Bay, which is picturesquely situated and is surrounded by many cute little cottages nestled at the foot of the steep hills and under bold rocks. Down at Riviere du Loup, a party of Indians came down to the wharf, and solemnly placing themselves in a row with their baskets full of wares in front of them, they waited with stolid countenances for customers—they formed quite a pathetic picture. Suddenly a squaw had the misfortune to drop a basket in the swift current of the river. Not one sign of uneasiness was manifested by the loser or her companions; but one of the braves seized a boat-hook and fishing the almost lost basket out of the water he returned it to the owner with such a look of triumph and a broad smile that showed some emotions are possible in the Indian breast. Soon this scene was left behind, and we were steering across the wide river bound for Tadouac, some 10 or 12 miles away. Tadouac is at the mouth of the Saguenay, but we saw little of it, as darkness had now closed around us and obscured the romantic scenery on every side.

Upon awaking on Fourth-day morning we found that we were anchored in the Saguenay River, having been unable to proceed on account of the fog. We were in an amphitheatre of beautiful hills running back from a rocky shore, and the fog was rolling away over their wooded tops as the morning's sun forced his rays upon the lovely scene. The air was redolent with the perfume of spruce and pine, and the swift current that ran by us was of ink blackness. Soon our ship's officers began to give orders in French—the windlass was manned, the anchor was slowly pulled above the waters, the engine commenced to wheeze, and we once more were proceeding on our little voyage up the deep, the beautiful, the mysterious Saguenay.

About 8 o'clock we reached Chicoutimi, but here, unexpectedly, another delay occurred; so, as we could not leave until afternoon, our boatload of tourists started out to do the town. Once upon the dock we were surrounded by swarms of men, who drove us sturdily horses attached to muddy backboards. Unfortunately these Jehus did not seem able to talk English, so we walked off in search of the Chicoutimi Falls, which are considered one of the attractions of the town. They are not much to look at, excepting the rare color of the water. It is of a clear rich amber shade; and as it is broken into countless fragments and dashed into snowy foam, it presents an unusual and pretty sight. When we wanted to go back to the boat we hailed a farmer com-

ing into town, and after exhibiting a "quarter" and holding up two fingers, and pointing towards the landing, we finally consummated a bargain and were quickly taken to our destination. He was a jolly old man, that grizzly Canadian, and he made his horses travel. After our short ride we locked into the open doors of the cathedral, a rather plain building with bare stone walls inside, and the stiffest of pews, and a showy altar, and six gaudy images of church dignitaries. Those who entered could see a crutch and cane which are exhibited as the relics of miraculous cures made a year ago. These have attached to them an inscription in French, which concludes with "Honage and thanks to St. Ann, long live St. Ann." The latter expression seems rather comical in view of the fact that St. Ann has been dead about 2000 years.

At one o'clock we started down the river, through scenery not unlike that of the Hudson, and during the afternoon ran up Ha Ha Bay, which might be considered a body of water laying in a huge rent in the mountains and running back as an arm of the Saguenay some 10 miles. We steamed by some magnificently towering rocks that descend almost perpendicularly into the water, and which in many places are so smoothed off as to indicate glacial action at some period of their history. Up at the head of the bay is the village of St. Francois; and while exchanging freight we ran ashore and investigated the funny little old town. The children here, as usual, offered bouquets of grass or wild flowers, hoping to win a few pennies from their hasty visitors. One fair-haired little girl of four or five years, interested me; she seemed such a little mite to be trying to earn money.

Our captain understands English very well, and is quite approachable; he seems only too happy to give all possible information about this wild and interesting section. He says the Saguenay for 70 miles from its mouth to Chicoutimi is unfathomable, except that in a few places bottom has been found 1200 or 1300 feet below the surface. Indeed the river seems to be one mighty crevice that has been formed by some stupendous convulsion of nature, and through it the dark and glassy waters roll down to the St. Lawrence. But the two greatest wonders in all this region, the crowning attractions of this strange and wonderful stream, are capes Trinity and Eternity.

The big red sun was sinking like a ball of fire into our wake as we passed them. Cape Trinity is a sight worth going many days' journey to see. It has three crowns, one of which is marked by a gigantic cross, and another by a statue of the Virgin Mary, which zealous Catholics have placed far up on the mountain. At one side of the cape there is a sheer precipice of 1800 feet, and this still further descends below the water 1200 more, making a drop of 3000 feet altogether. Our boat ran right up to the base of this stupendous rock, and as we looked up at its awful face and thought of the depth of water beneath us, we could not but be impressed with the majesty of the Creator's work when He thus instructs us by the cold and enduring stone. Then our steam-whistle was blown to catch the echo between the two capes. This echo is an excellent one: the sound was tossed back and forth until it gradually died away in a tremulous murmur, as if the mountains were protesting against having their solitude invaded. Cape Eternity is also a magnificent rock standing 1700 feet above the water. Darkness now rapidly surrounded us, so no more could be done than pace the upper deck and drink in the whole-

some air that was wafted over from the sombre and fragrant forests.

The streams that empty into the Saguenay are waters for sportsmen to revel in. Trout abound everywhere; from two to three pounds are very frequent sizes—so voracious fishermen tell me—while occasionally big game of five or seven pounds in weight are landed. We frequently saw young ducks race through the water at a rapid rate. Salmon are taken all around here, and are splendid eating. Camping out parties from the United States often visit this section, and are assured of excellent fishing, and then after a few weeks, return home to describe the beauties and peculiarities of Lower Canada.

Our boat was nearly half a day late in getting back to Quebec, much to the annoyance of some Englishmen who wanted to catch a steamer for Europe, and of some Americans who were anxious to make the afternoon south-bound trains. We reached Quebec just in time to attend to some necessary errands, and while doing so left our baggage on the boat in charge of the baggage man. That was a grand mistake. When we returned to get our effects the steamboat was not in view, but unexpectedly had been removed to another dock. Here was a dilemma!—our baggage "spirited" away, and 20 minutes to hunt it up and get it across to another ferry. If, fled one way and I rushed another. Our inquiries as to the whereabouts of the delinquent were met by volleys of unintelligible French. Finally the delinquent boat was found, men were almost bribed, the perspiration rolled, checks were fumbled, baggages were coerced, the trunk and valise were rescued, and they were safe. As we pulled out of the valley in which Quebec is situated, we cast a last look at the quaint and picturesque city, with her terraces, her spires, her citadel, her old-fashioned ways, and the majestic St. Lawrence flowing at her feet.

FOR "THE FRIENDS."

John Bell, of London, England, wrote a little supplement to the Life of his wife Deborah Bell, which was published in Friends' Library, vol. 5, from which the following is extracted. The instruction contained in it is worthy of attention by every one concerned in the ministry.

"During our residence at Bradford she accompanied me twice into Cumberland, and also into several parts of Westmoreland and Lancashire, where her service was very acceptable to the churches. After our removal to London, she was divers times at Bristol, Bath, and some other meetings thereabout; once at their Quarterly Meeting at Bristol, where she had good opportunities, and was of great service, as divers of them afterwards told me. She had many invitations to pay them another visit and spend some time with them—alleging she might be of great service to their youth, with whom she had great place; but she was steady, and ever careful not to be drawn by anything but the openings of Truth. Her concern was to be led into all her services by the Spirit of Christ, which only can enable ministers and make them serviceable in his Church. Often observing to me in our private conversation, that a weighty thing it was to travel, to publish the gospel and preach the doctrines of the Kingdom of God; and that all ministers had need to be very steady, and often retire and wait diligently upon the Lord, to see their way clearly opened in the light of Truth, and to be led into all their services by the Holy Spirit, that certain guide by which none were ever led astray; and she had observed for want of this care and steadiness, other mo-

tives had prevailed with some, and they had suffered loss."

FOR "THE FRIEND."

The Seed of the Kingdom of God.
